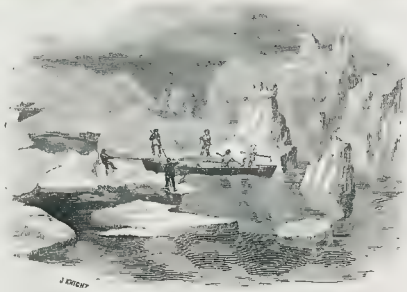
The children of the National Schools have united to purchase two small windows of stained glass for the porch; and it is hoped that soon the remainder of the chancel windows will be filled with stained glass, and the organ replaced under the tower arch. It is proposed to add a tower screen to part off the vestry. The tower arch and the other stonework on the inside have been cleared of whitewash, and restored with the plastering, &c., throughout. The floor of the church is laid with plain red and black tiles. The walls are flint, lined with brick, and the masonry is in Bath stone. The restoration has been conducted under the direction of Mr. Joseph Clarke, architect; and the contractor was Mr. Myers. It is expected that the cost will not be less than £3000.—*Builder*.



GUTTA PERCHA BOAT, EMPLOYED IN THE LATE VOYAGE OF THE "PRINCE ALBERT" IN SEARCH OF SIR JOHN FRANKLIN.

On the other side of the river the same deficiency of water does not exist; and this is partly owing to the bad level of the Surrey side, and the requirements of the "high water service" above mentioned, which, we understand, renders necessary, in some cases, the cutting off of some branches before the heavy demand occasioned by a conflagration such as that of Wednesday can be supplied.

The question is, what would remedy the great evil here complained of, our fires increasing in number and in destructive character every year? We have but one answer; the establishment of a system of constant water supply at high pressure, with jets and hose at frequent intervals, which, upon the first appearance of an outbreak, may be introduced into the house through a window even, and choke the "devouring enemy" with his first mouthful. The system has already been tried, and it is now in operation in Philadelphia, in Liverpool, in Oldham, in Hamburgh (the new part of the town), and other places, with strikingly beneficial results. We take three brief extracts from the evidence above referred to in support of this position, and then conclude, recommending the subject to the earnest attention of the Legislature

Mr. Emmott, manager and engineer of the Oldham Waterworks, says—"In five cases out of six the hose is pushed into a water plug, and the water thrown upon a building on fire, for the average pressure of water in this town is 146 feet; by this means *our fires are generally extinguished, even before the heavy engine arrives at the spot*."

Mr Newlands, town surveyor of Liverpool, after describing the operation of the jet system, says:—"Serious fires are now seldom heard of, for before the flames can gain head, the jets can generally be played upon them, and this is the only time there is any chance of subduing them."

Mr. W. Lindley, engineer, in reference to Hamburgh, says that in the new part of that town, where the jet system is applied, fires when they occur are invariably put out before the engines arrive; and adds that "the saving of money alone, by the prevention of fires, would be worth the whole expense of the like arrangement in London."

GUTTA PERCHA BOATS.

(To the Editor.)

THE value of Gutta Percha, as an article applied to boats, could, perhaps, never have been better tested than during the late voyage of the *Prince Albert* in search of Sir John Franklin; and I feel very great pleasure in giving my humble testimony to its undoubted merits. Having, in almost every instance, had charge of the Gutta Percha Boat, in the various examinations of the coast we made, and in rough passages through the ice, I had good and ample opportunities of giving her a fair trial, and the result was highly satisfactory. As an article with which I had previously been but little acquainted, I was at first cautious in the extreme, whenever I was away in that peculiar boat; but at last, I preferred her to any other, and would not have hesitated to have gone any distance for any length of time in her. The men (old whalers, long accustomed to the ice) in like manner gave her the preference, and considered her far superior for such service to the ordinary boats generally used.

The first trial she received was off the Greenland coast, when we were surrounded by icebergs. I proceeded in her to a large berg, for the purpose of procuring water, and it was found that she pulled lightly, and swam as buoyantly as we could wish. The various pieces of ice that she unavoidably ran against did her no injury, and they glided past her without leaving the slightest indentation as a mark of the contact.

On the night of the 17th July I again had an opportunity of testing her qualities. In searching for the Danish settlement of Upernawick, I proceeded in her for several miles through the various inlets and channels abounding in the "Woman Islands." On one occasion I had her pulled up high on the rocky beach, while landing to examine; and I could not perceive the slightest mark of a scratch, from the rough nature of her bed, such as an ordinary boat would have received if I had attempted the same with it. Upon returning to the ship, we ran through a small stream of rather close ice, and I was agreeably surprised to find how quietly the Gutta Percha appeared to slip through it, and how well it resisted the different attacks it received. As a memorial of our visit, and the value we attached to the article of which our boat was made, the inlet we were then making our way through was called "Gutta Percha Inlet;" a name it will no doubt always retain, and be remembered by among whalers.

Frequently after this the boat was in use, and principally among heavy ice. Indeed, when one boat alone was required, the Gutta Percha Boat was that invariably used. Every one saw its superiority to the ordinary boats; and it was kept incessantly at work, boring, breaking, and crossing the ice at all times.

But the severest trial it endured, and endured successfully, was on both my visits to Whaler Point, Port Leopold. To those unaccustomed to the nature of such ice as was there met with, it will be impossible fully to conceive the position a boat was placed in. The mere transit to and fro among loose masses of ice with the sea in a state of quiescence would have been quite enough to have proved or not the value of Gutta Percha Boats; but when, as in the present case, those masses were all in restless agitation, with a sea rolling in upon an opposing current, it might have been well excused—and without deteriorating from the previously attested goodness of the article—if it had not been able to have resisted the severe shocks it received. My first visit was difficult enough, but the second was far worse; and nothing but the exigences of the service would have warranted me in attempting to force a way as I did. My dependence, however, was upon the already well-tried qualities of the boat. Sliding through and over the ice; sometimes lifted completely out of the water by the sudden contact of a restless floe; and at others thrown sideways upon an adjoining craggy piece, I think it would have been next to impossible for any other kind of boat to have been otherwise than crushed or stove on the instant. The Sketch I have forwarded to you will convey some faint idea of this. (*See the Engraving.*) The weather was rather foggy, and it was very

NEWMARKET COURSING MEETING.

ALTHOUGH we are free to confess, our incentive in taking a trip to Newmarket on the 10th of this month, so as to witness the coursing that came off on the day following, was self-gratification, still, when there, we did not lose sight of the chance of affording our readers some proof of our attention to them: to this end we obtained permission to have correct sketches made of the subjects of Illustration.

Each of the dogs depicted was a winner; namely, Mr Holmes's b. b. Mocking-bird carried off the Cup.

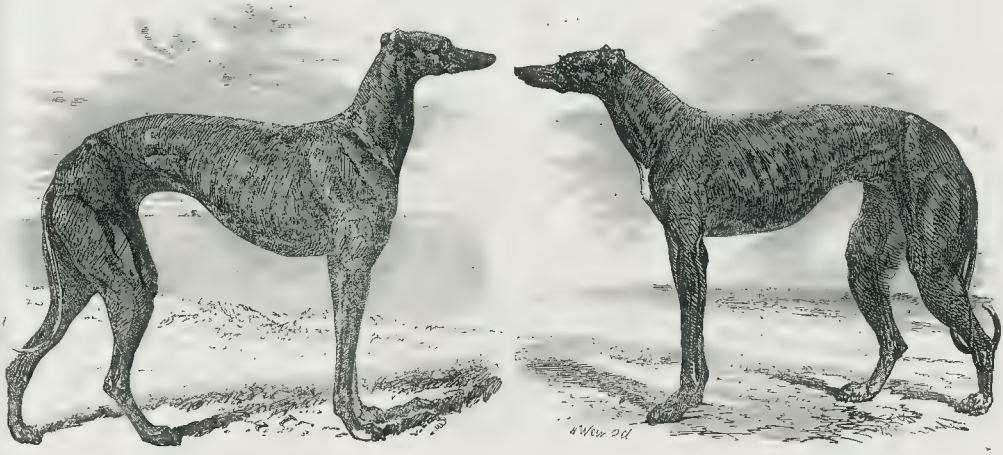
The Oaks Stakes were won by Mr. Round's b.-and-w. b. Lola Montes.

The Port Stakes were made portable to Lord Stradbroke, by the speed and gameness of his b. b. Manto.

Of the relative perfections in point of symmetry, of the three, we leave our readers to judge; we merely vouch for the correctness of the Sketches

We are quite aware of the value to be attached to such shape and make as indicates powers of speed and endurance in the greyhound as well as in the racehorse; but we are equally aware that such promise is not always realised when either animal comes to the surer test of a trial with others. One thing, however, we may venture to judge, as regards greyhound or racehorse—no shape in either animal is disagreeable in the eyes of an owner, if either, or both, can "go in and win."

MR ROUND'S "LOLA MONTES."



LORD STRADBROKE'S "MANTO."

MR. HOLMES'S "MOCKING BIRD."

early in the morning. The men were fatigued with their night's work, and I was anxious to give them a little rest on the shore, as well as again to examine the locality. Accordingly, I endeavoured to get across the barrier of ice that intervened as well as I could; and the position of which the Sketch gives an idea—was one where the boat is suddenly jammed between two floes, but is raising herself upwards by the gutta percha resisting the first blow, and sliding along and over the lowest piece on its left bow. One man is assisting her by trying to haul her along; two others are guarding her ribs with boat-hooks and ice-poles; another prising her stern off from a small berg; while I am directing the movements necessary to get her onward. My published journal will give my more details, and it will only be necessary for me to say here, that she got across and came out again without the slightest injury; and, though we, of course, took all the necessary care to prevent that injury, yet my conviction is that no other but the Gutta Percha Boat could have accomplished it.

I am, &c.

W. P. SNOW.

CALENDAR FOR THE WEEK.

Sunday, Feb 23.—Sexage. 2nd Sunday.
Monday, 24. St Matthias. Duke of Cambridge born, 1774.
Tuesday, 25.—Sir Christ. Wren died, 1723.
Wednesday, 26. —Napoleon embarked from Elba, 1815. Cambridge Term div.
Thursday, 27.—Gas introduced into London streets, 1823.
Friday, 28.—Brunswick Theatre fell, 1828. Montaigne born, 1533.
Saturday, March 1.—St. David. Hare-hunting ends.

TIMES OF HIGH WATER AT LONDON BRIDGE,

FOR THE WEEK ENDING MARCH 1, 1851

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.	M. A. h. m.
7 35	8 15	8 55	9 35	10 15	10 55	11 35

MR. JOHN PARRY'S ENTERTAINMENT.—Mr. JOHN PARRY will give his NOTES, VOCAL and INSTRUMENTAL, on MONDAY next, at St. James's Hall; Tuesday Glasgow; Thursday, Edinburgh; Friday, Glasgow; and on Tuesday March 4th, at the Hall.

DISTIN'S CONCERTS.—MR. DISTIN and his SONS performs on the SAX HORNS in the following towns—Hertford, MONDAY Evening; Ware, Tuesday; Hitchin, Wednesday; Bedford, Thursday; Wolverton, Friday; Aylesbury, Saturday; Mr. H. A. Brown, Agent. All letters to be addressed to HENRY DISTIN, 31, Cranbourne-street, Leicester-square, London.

MUSICAL UNION.—The Record of 1850, and the Tickets for 1851, will be issued to Members a few days. Subscriptions now due to be paid to Messrs. CRAMER and CO., without delay, to prevent inconvenience to the Treasurer. Early notice is requested of Nominations.
J. ELLA, Director

MR. ALFRED PHILLIPS has the honour to announce the LAST THREE WEEKS of his present highly popular LITERARY, VOCAL and SCENIC ENTERTAINMENT which will be followed by an entirely NEW ENTERTAINMENT now in active preparation.—On MONDAY, and during the Week, being the 1840th consecutive representation, at the ROYAL ADELPHI, ST. MARTIN'S-LANE, Afternoon at Three, Evenings at Eight o'Clock. Stalls, 3s; Reserved Seats, 2s.; Area, 1s.

APOLLONICON.—TUESDAY, THURSDAY, SATURDAY: Morning, 3 o'Clock; Evening, 8. Engagement of Miss Poole, Mr and Mrs. Oswald King, and Miss Stennett, who appear each Morning and Evening in addition to the usual Apollonicon Performances. Admission 1s., 2s. and 3s. Carriages at 4 and 10. ROYAL MUSIC HALL, adjoining Lowther Arcade.

HOLY LAND.—NEW DIORAMA. The Painters of the Panorama of the NILE beg to announce that they will open in a few days, at the Gallery of the New Society of Painters in Water-Colours, the Eighth Grand MOVING DIORAMA of SYRIA and PALESTINE, conveying the spectator from Egypt on the route of the late tour to Mount Sinai, and through Edom to Jerusalem; thence to the cities of the Mediterranean, past Acre, Tyre, Sidon, and Beyrout, to Lebanon, and through Galilee to Samaria.

THE NILE.—PANORAMA of WONDERS, Egyptian Hall, PICCADILLY.—A Grand Moving Representation of EGYPT, NUBIA, and ETHIOPIA, the most picturesque, and magnificent, ever exhibited. Open every Night at Eight o'Clock, with Lecture by Mr. Bingham, as usual. At Twelve o'clock, with a Lecture, by Selim Aga, a native of Central Africa. Stalls, 3s; 2d, 2s; 3d, 1s.; Balcony, 1s.

EGYPTIAN HALL.—OVERLAND ROUTE to OREGON and CALIFORNIA.—A GRAND MOVING DIORAMA, EXHIBITING every day at 12, 3 and a quarter to 8 o'clock. Will open, in a few weeks, an entirely New Moving Diorama, illustrating the Overland Route, from the City of St Louis, on the Mississippi, to the Shasta Nevada Mountains in the city of Shasta-town, through the great Gold Washings to the City of San Francisco; extending through 4500 miles of country. Admission 1s.; stalls, 2s.

NOW OPEN.—TOURIST'S GALLERY.—HER MAJESTY'S CONSERVATOIRE, HAYMARKET.—Mr. CHARLES MARSHALL'S Original and Unique DIORAMA, illustrating the grand Routes in a Tour through Europe, which will now be exhibited daily at Three and Eight o'Clock. Admission to Stalls, Reserved Seats, and Private Boxes may be secured at Mitchell's Royal Library, and at the Box-office of the Tourist's Gallery.

UNPRECEDENTED SUCCESS.—Impossible to be Rivalled!—SALLE ROBIN, 228, PICCADILLY, opposite the HAYMARKET. SURPRISING PERFORMANCES of FANTASTIQUES. THIS EVENING, and every following Evening, at Eight o'Clock M. and Mme. ROBIN will appear; and on Wednesday, Saturday Morning at Two o'Clock, a Morning Performance.—Tickets as usual, at Mears, Mitchell's, Sam's Andrews', Ebers', &c.

NEW DIORAMA, "OUR NATIVE LAND."—GALLERY OF ILLUSTRATION, 14, Regent-street.—The NEW MOVING DIORAMA, illustrating "Our Native Land, or, England and the Seasons," is now EXHIBITING DAILY in the Lower Gallery, forming a separate Exhibition from the Polyphonic Hall or Lecture Morning at 2; Evenings, at 7. Doors open half an hour before each representation. Admission, 1s.; Stalls, 2s.6d.; Reserved Seats, 3s.

THE EXHIBITION of MODERN BRITISH ART, at the Gallery of the Old Society of Painters in Water-Colours, S. Pall mall East, is NOW OPEN, from 10 in the morning until dusk.—Admission, 1s. Catalogue, 6d
Gallery 5 Pall-Mall East. SAMUEL STEPHEN, Secretary

THE HIPPOPOTAMUS, presented to the Zoological Society by H. H. the Vice roy of Egypt, is exhibited daily at their GARDENS in the REGENT'S Park, from 9 o'clock till Four o'clock. Visitors desirous of seeing the Animal bathed in the water are requested to go early. Admission ONE SHILLING (on Sundays, SIXPENCE

ROYAL POLYTECHNIC INSTITUTION.—LECTURES [illegible] Roberts, Esq., Hancock to H.R.H. the Prince of [illegible] M.A. of Merton College, [illegible] Dudley at Three. The [illegible] HARP, at the Evening Lectures by J. [illegible] at Four o'Clock. Lectures by J. [illegible] CONSTRUCTION, with its Rapid Progress [illegible] by Dr. Bachhoffner, on VOLTAIC ELECTRICITY, in which will be exhibited [illegible] of injured parties to incur a responsibility beyond their means. Sooner or later such a functionary will have to be appointed in this country; and any ministry that shall bring the matter to bear, will earn a title to the gratitude of all classes, and to honourable mention in the page of history among the reformers of our criminal jurisprudence. The Government has also, we rejoice to see—although the subject is not new, and not national—resolved to abate the nuisance of the live cattle market in Smithfield, and has obtained leave to bring in a bill for the removal of that notorious "plague of London" from its present site, and for the appointment of a Commission, with powers to erect a new live and dead meat market beyond the present limits of the metropolis. The Corporation of London, through the agency of their Recorder, are resolved, it appears, to oppose this measure, and to show themselves less in favour of common decency, and exhibit less regard for the public health, than the Corporation of the old City, which, more than six hundred years ago, made Smithfield a cattle-market—not because it was *in*, but because it was *out* of the City boundaries. We do not anticipate, however, that their opposition will be successful, or that London will much longer continue to exhibit, every Sunday and Monday throughout the year, a scene of inhumanity, danger, and filth, disgraceful to a civilised community.

The Ministerial measures for the reform of the administration of justice in Chancery and for the registry of deeds are also in progress; and it is greatly to be hoped that no past accidents, no weary speechification about Topsy, and no less wearisome repetitions of the old and a thousand times refuted fallacies upon the advantages of clear head to the toiling millions of this country, will interfere with the final settlement of these urgent matters of public business. Young as the session is, the members manifest by far too much inclination to speechify upon their own crotchets, to the loss of the public time and to neglect the public business, when a member happens to be in possession of the floor whose subject is not exactly to the taste of his auditory. There has already been one count out; and what made it worse was, that the question brought forward was one of the very highest interest. Mr. Poulett Scrope's lifelong and able exertions in behalf of the poor ought to have assured him a respectful hearing on such a subject as the assimilation of the Poor-Laws in the three great divisions of the Empire; and it is not creditable to the House to have suffered a "count out" upon such an occasion.

SEVERAL notices of motion have been given, which show that the Ministers, unless their career be prematurely shortened, intend to proceed with the real business of the nation with all convenient rapidity. On Monday next, the Premier himself, in fulfilment of his pledge, and in especial justice to his constituents in the city of London, is to bring forward the question of the removal of Jewish disabilities, so as to place the professors of the Hebrew religion on the same footing as was occupied by the Roman Catholics prior to the aggression of Pius IX. and the Cardinal of St. Paderstinus. It cannot be expected that the discussion of that difficult question will be other than impeded by the recent discussions on the more engrossing, embarrassing, and irritating subject of the Papacy. But, however inconvenient the introduction of the matter at the present time may be, the Minister was bound to bring it forward in justice to his own character, and the question imperatively demands a decision in the present session. Sir George Grey has obtained leave to bring in a bill to amend the law relating to criminal prosecutions, and to make better provision for the apprehension of offenders. This is a matter of high importance, and the Government deserve credit for taking it up, although it is perhaps to be regretted that they have not considered themselves justified in going a little farther in the same direction, and appointing a public prosecutor. It is hard upon individuals, who have sufficiently suffered from depredation or other wrong, to be compelled not only to incur a loss of time, but a further loss of money, in prosecuting; and it is hard upon society, that notorious malefactors should have a chance of escape from well-deserved punishment, by the natural unwillingness of injured parties to incur a responsibility beyond their means. Sooner or later such a functionary will have to be appointed in this country; and any ministry that shall bring the matter to bear, will earn a title to the gratitude of all classes, and to honourable mention in the page of history among the reformers of our criminal jurisprudence. The Government has also, we rejoice to see—although the subject is not new, and not national—resolved to abate the nuisance of the live cattle market in Smithfield, and has obtained leave to bring in a bill for the removal of that notorious "plague of London" from its present site, and for the appointment of a Commission, with powers to erect a new live and dead meat market beyond the present limits of the metropolis. The Corporation of London, through the agency of their Recorder, are resolved, it appears, to oppose this measure, and to show themselves less in favour of common decency, and exhibit less regard for the public health, than the Corporation of the old City, which, more than six hundred years ago, made Smithfield a cattle-market—not because it was *in*, but because it was *out* of the City boundaries. We do not anticipate, however, that their opposition will be successful, or that London will much longer continue to exhibit, every Sunday and Monday throughout the year, a scene of inhumanity, danger, and filth, disgraceful to a civilised community.

The Ministerial measures for the reform of the administration of justice in Chancery and for the registry of deeds are also in progress; and it is greatly to be hoped that no past accidents, no weary speechification about Topsy, and no less wearisome repetitions of the old and a thousand times refuted fallacies upon the advantages of clear head to the toiling millions of this country, will interfere with the final settlement of these urgent matters of public business. Young as the session is, the members manifest by far too much inclination to speechify upon their own crotchets, to the loss of the public time and to neglect the public business, when a member happens to be in possession of the floor whose subject is not exactly to the taste of his auditory. There has already been one count out; and what made it worse was, that the question brought forward was one of the very highest interest. Mr. Poulett Scrope's lifelong and able exertions in behalf of the poor ought to have assured him a respectful hearing on such a subject as the assimilation of the Poor-Laws in the three great divisions of the Empire; and it is not creditable to the House to have suffered a "count out" upon such an occasion.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 22, 1851.

WHENEVER a Ministry that loves the sweets of office totters in its place, on account of the strength of the Parliamentary opposition to its measures, there are always sure to be rumours of a dissolution. The reason is obvious; and, if the Parliament have attained the age of three or four years, the rumour generally has the effect of strengthening the wavering allegiance of those among the hangers-on of the Ministerial benches who have neither popularity nor length of purse sufficient to justify them in hoping for their re-election. The rumours of an approaching dissolution that are now current, have, in all probability, no better foundation than this, and are, apparently, intended to catch a few stray votes, and prop up a falling Administration. With a Budget that cannot be carried, and with an opposition strong enough even on so vague and unsatisfactory a motion as that of Mr. Disraeli on agricultural distress—to approach within sight of being a majority; with the Irish Liberal members shaken in their allegiance to the Whigs; and without any enthusiastic support in the country to recompense them for Parliamentary coldness or hostility, it is difficult to see how the Ministers can "jog on," unless it be by the toleration of their opponents, or the present immaturity of any plans for superseding them. We have, however, no faith in their intention to dissolve Parliament. They have absolutely nothing to dissolve upon. There is no cry that they can raise; for, on the only question by which they could possibly gain a little extra support by an appeal to the constituencies—that of the Papal aggression—they are already strong enough in the House to carry their measure. Upon all other questions they are positively without a plea on which to appeal for assistance. It is more likely, therefore, that, if defeated on the Budget, they will resign, and leave to their successors—whoever they may be—the responsibility of a dissolution, or the preparation of some financial scheme that shall satisfy, not alone the Parliament, but the country.

Sir George Grey has obtained leave to bring in a bill to amend the law relating to criminal prosecutions, and to make better provision for the apprehension of offenders. This is a matter of high importance, and the Government deserve credit for taking it up, although it is perhaps to be regretted that they have not considered themselves justified in going a little farther in the same direction, and appointing a public prosecutor. It is hard upon individuals, who have sufficiently suffered from depredation or other wrong, to be compelled not only to incur a loss of time, but a further loss of money, in prosecuting; and it is hard upon society, that notorious malefactors should have a chance of escape from well-deserved punishment, by the natural unwillingness of injured parties to incur a responsibility beyond their means. Sooner or later such a functionary will have to be appointed in this country; and any ministry that shall bring the matter to bear, will earn a title to the gratitude of all classes, and to honourable mention in the page of history among the reformers of our criminal jurisprudence. The Government has also, we rejoice to see—although the subject is not new, and not national—resolved to abate the nuisance of the live cattle market in Smithfield, and has obtained leave to bring in a bill for the removal of that notorious "plague of London" from its present site, and for the appointment of a Commission, with powers to erect a new live and dead meat market beyond the present limits of the metropolis. The Corporation of London, through the agency of their Recorder, are resolved, it appears, to oppose this measure, and to show themselves less in favour of common decency, and exhibit less regard for the public health, than the Corporation of the old City, which, more than six hundred years ago, made Smithfield a cattle-market—not because it was *in*, but because it was *out* of the City boundaries. We do not anticipate, however, that their opposition will be successful, or that London will much longer continue to exhibit, every Sunday and Monday throughout the year, a scene of inhumanity, danger, and filth, disgraceful to a civilised community.

The Ministerial measures for the reform of the administration of justice in Chancery and for the registry of deeds are also in progress; and it is greatly to be hoped that no past accidents, no weary speechification about Topsy, and no less wearisome repetitions of the old and a thousand times refuted fallacies upon the advantages of clear head to the toiling millions of this country, will interfere with the final settlement of these urgent matters of public business. Young as the session is, the members manifest by far too much inclination to speechify upon their own crotchets, to the loss of the public time and to neglect the public business, when a member happens to be in possession of the floor whose subject is not exactly to the taste of his auditory. There has already been one count out; and what made it worse was, that the question brought forward was one of the very highest interest. Mr. Poulett Scrope's lifelong and able exertions in behalf of the poor ought to have assured him a respectful hearing on such a subject as the assimilation of the Poor-Laws in the three great divisions of the Empire; and it is not creditable to the House to have suffered a "count out" upon such an occasion.

COURT AND HAUT TON.

THE COURT AT BUCKINGHAM PALACE

We announced, some weeks since, the intended Levee and Drawingroom and a series of levees before Easter. The official intention of this arrangement appeared in the *London Gazette* of Friday week; and the appointed days are as follows: The first Levee, Feb 26; the second Levee, March 6; the third Levee, March 26. The Drawingroom will be held on April 3.

The most interesting incident of Court life during the past week has been the investiture of the Marquis of Normanby with the Order of the Garter, which took place with the usual formalities on Wednesday.

On Monday, the Queen and Prince Albert went to the Building for the Exhibition of the Works of Industry of all Nations at Hyde-park. Her Majesty, the Royal Highness were accompanied by their Royal Highnesses the Prince of Wales, Prince Alfred, the Princess Royal, the Princess Alice, and the Princess Helena, and were attended by Lord Charles Murray, Lieut.-Col. Hon. Alexander Gordon, and Mr. Birch. In the evening, her Majesty honoured the Haymarket Theatre with her presence.

On Thursday the Judge-Advocate-General had an audience of the Queen, and submitted to her Majesty the proceedings of some courts-martial. Her Majesty was afterwards visited by her Royal Highness the Duchess of Kent. His Royal Highness Prince Albert visited the Model Lodging-houses for Families, in Streatham-street, on Thursday afternoon. In the evening the Queen and the Prince honoured the performances at the Princess' Theatre with their presence.

Lord Byron has relieved Lord Duncannon in the duty as the Lord in Waiting to the Queen; and Sir Frederick Stovin has relieved Lieut.-Colonel Hon. Robert Boyle in his duty as Groom in Waiting to her Majesty.

THE ORDER OF THE GARTER.

The Queen held a Chapter of the Most Noble Order of the Garter on Wednesday afternoon, at Buckingham Palace.

The Knights Companions, robed in their mantles, and wearing their collars, passed from the Garter-room through the Picture-gallery, into the Green Drawingroom, where, by command of her Majesty, they were called over by Garter King of Arms, when the following Knights Companions answered:—His Royal Highness the Duke of Cambridge, the Duke of Wellington, the Duke of Devonshire, the Marquis of Exeter, the Duke of Richmond, the Marquis of Lansdowne, Earl de Grey, the Marquis of Abercorn, and Earl Spencer.

The officers of the Order were robed in their respective mantles, and appeared with their different badges. There were present the Prelate, the Bishop of Winchester; the Chancellor, the Bishop of Oxford; Garter King of Arms, Sir Charles G. Young; and Gentleman Usher of the Black Rod, Sir Augustus W. Clifford, Bart.

The Queen, who wore the full habit of the Order, and his Royal Highness Prince Albert, robed in the mantle and hood, and wearing a so the collar of the Order, were conducted by the Lord Chamberlain to the Throne-room, in which the Chapter was held.

The Knights Companions being seated at the table, the Chancellor signified to the Chapter her Majesty's pleasure that the Garter should be given to the most Noble Order of St. George's, at Windsor, should be filled. The Knights Companions then proceeded to the election, and the suffrages having been so elected by the Chancellor, were by him presented to the Queen, who commanded him to declare, and he accordingly declared, that the Most Honourable the Marquis of Normanby had been duly elected a Knight of the Most Noble Order of the Garter.

By the Sovereign's order, his Lordship was received at the door of the Chapter Room by the Marquis of Abercorn and Earl Spencer, the two Junior Knights Companions present, and was conducted by them to her Majesty, preceded by Garter King of Arms (bearing the insignia of the Order upon a crimson velvet cushion) and by the Gentleman Usher of the Black Rod.

The Marquis knelt near the Queen, and Garter King of Arms, on his knee, presenting the Garter, her Majesty, assisted by his Royal Highness Prince Albert and his Royal Highness the Duke of Cambridge, the two senior Knights Companions present, buckled the Garter on his Lordship's left leg; the Chancellor pronouncing the usual admonition. Garter King of Arms next presented, in like manner, the Collar of SS. Liveband and George to the Queen, and her Majesty, assisted by Prince Albert and the Duke of Cambridge, put the Riband over his Lordship's left shoulder, the Chancellor pronouncing the admonition. The Marquis kissed her Majesty's hand, and having received the congratulations of each of the Knights Companions, retired.

The Chair being ordered, Garter King of Arms, by her Majesty's command, again called over the Knights Companions present, with the officers of the Order, retired from the presence of the Sovereign with the usual reverence.

His Royal Highness the Duke of Cambridge had an audience of the Queen, and delivered to her Majesty the insignia of the Most noble Order of the Garter, and of the most honourable Order of the Bath, worn by his Royal father, the late Duke of Cambridge.

The Bishop of Oxford had an audience of her Majesty after the Chapter.

The Countess de Neuilly, and the Duke and Duchess de Nemours, paid a visit to her Royal Highness the Duchess of Kent, at Clarence House, St. James's, on Saturday last.

Her Royal Highness the Duchess of Kent, attended by Baroness de Speth, went to Claremont on Monday last, to visit the Duchess de Neuilly and family. Her Royal Highness returned to town in the afternoon.

Her Royal Highness the Duchess of Kent visited her Royal Highness the Duchess of Gloucester on Sunday, at Gloucester House.

The Marquis and Marchioness of Londonderry and Lady Adelaide Vane have left town for Paris and the south of France. The noble Marquis will be within a few hours' call in the event of his presence being required in the House of Peers; and the family will return to London after the Easter recess.

Lady John Russell had an assembly on Wednesday evening, at the private residence of the Premier, in Chesham-place. His Royal Highness the Duke of Cambridge, his Grace the Duke of Wellington, the Archbishop of York, and a brilliant circle of the aristocracy were present.

LADIES' CARPET FOR THE GREAT EXHIBITION.—This beautiful work was exhibited to the ladies executants and their friends on Thursday, at the Society of Arts. By some mismanagement, the carpet was not properly suspended until the room was filled by the ladies and their friends; but, upon the opening of the veil of work, a most lovely carpet immediately itself. The work, in our opinion, may be considered superior to any foreign production, on account of its exquisite flowers and foliage, as well as for the beauty of the tints employed in the geometric portions of the design. It does not appear certain that the use of a wire to produce border, instead of the red one originally proposed, has added covers to the carpet than a quantity of light which is detective in the exposition; otherwise the grandeur obtainable by an entirely united with the original design would be preferable. Especially was attention drawn to the main feature of the carpet, a [illegible] being of the finest work, instead of an unpleasant design in relief, as if a ceiling of the most elaborate architectural labour had been laid down on the floor. The flags are [illegible] remarkable, inasmuch as [illegible] a category of crowning the path of distinguished personages has passed into an usual expression. At the former meeting the Lady Mayoress of [illegible] presiding as patroness, it was resolved that her Majesty should be requested to accept the work. Previously, it was known that this carpet was designed, was invited to give an account of the ideas by which he had been influenced in the composition of the drawing, but was prevented from reaching the chair by the congratulations of the fair assembly.

EXTRAORDINARY GEM.—The artistical department of the Great London Exhibition will shortly receive an invaluable contribution from the Earl of Rosslyn, who has consented, at Rome, while collecting for the nursery of his gems, whether after the antique or of his own designing, and his productions, precious alike by the rare beauty of the materials, and the classic taste with which they are wrought, are justly considered the most splendid ornament of those cabinets which are fortunate enough to possess them. The chevalier is now about to send to London a piece of workmanship which will be probably marvelled at by even the most practised connoisseurs. It is a cameo itself of merits a separate description, on account of its extraordinary size and beauty, being a cornelian of three straits, about 4½ by 3½ inches, an Orientalgem, which for the last century or less than 600 [illegible] adopted by him to a repeat [illegible] of the celebrated sardonyx cameo in the Paris collection, representing [illegible] Caligula, and Livia Drusilla, and [illegible] beauty was such that she was worshipped after death under the name of Venus Zephyritis; nor has the chisel of the modern engraver belied her ancient reputation for loveliness. The gem, now completed after three years' labour, offers a [illegible] representation of the Royal pair, and will, doubtless, be the means of [illegible] their history, and of handing down their features to the admiration of ages to come.

THE HOP TRADE.—Mr. Frewen and Mr. Fuller have introduced a bill to alter and amend the act of the 54 George 3, for preventing frauds and abuses in the trade of hops, and to make further provisions relating to hops. The bill provides that the owners of hops are to cause bags or pockets to be marked with their names, under a penalty of £20. A similar penalty is to be inflicted for wrong lops of different qualities.

SALMON-FISHING IN IRELAND.—Mr. Anstey has introduced a bill, making it illegal for any person to draw, fish for, or remove the gravel, sand, stones, or [illegible] of the bed of any [illegible] river, except on [illegible] of the bed or soil [illegible] £5,000. A clause provides that the [illegible] was [illegible] two [illegible] Mr. [illegible] seconded. A warrant for the apprehension had been issued at that time by the commissioners at Somerset House, and it was placed in the hands of the parish constable for execution. That functionary failed to execute his commission, but information of the defaulter's return having reached the commissioners, a new warrant was prepared and put in force. It is believed that Mr Stone's sureties will not be able to pay a shilling of the deficiency, and the £1300 has been a second time raised by the parish.

METROPOLITAN NEWS.

TRIBUNAL OF COMMERCE FOR THE CITY OF LONDON

On Wednesday a meeting of the representatives of commercial firms in the City took place at the Hall of Commerce, pursuant to a requisition presented to the Lord Mayor, signed by upwards of [illegible] merchants, bankers, traders, and others, stating that the [illegible] would deserve much benefit by the establishment of a tribunal [illegible] to decide, through the aid of which, disputes, simple in their nature, and often resting on the nature of the trade, might be settled without an appeal to more and legal definitions, which resulted too frequently in the ruin of well-intentioned men.

The Lord Mayor presided and was supported on the platform by Sir J. Duke Bart., M.P.; Mr. J. Musgrave, M.P.; Mr. A. Anderson, M.P.; &c.

Mr. F. Lyne proposed, and Mr. J. M. Fraser seconded, the following resolution:—

That the existing [illegible] applied to commercial cases in this country is attended with delay, uncertainty [illegible] and involves the discussion and decision of practical questions by Judges and lawyers who have not the requisite information to know [illegible] and that, in the opinion of this meeting it is desirable that a tribunal of commerce should be established in the city of London.

Mr. Rumy, in support of the motion, stated, as instance he had known of the evil effects of the pres nt system, that in 1824, a large house, which had suspended payment for no less than £270,000, were ultimately compelled to go into the Gazette, and paid a dividend of 13s. 4d. in the pound, though not till 1845, and after £45,248 had been spent in law charges alone (Hear, hear.) And ar how had stopped for about two millions, who even fully paid 17s. in the pound. In order to induce [illegible] to stop at a resolution which would enable them to manage their own affairs.

The resolution was carried unanimously.

Mr. A. Anderson, M.P., proposed a resolution to the effect that various bodies of men, such as members of the Stock Exchange, corporations, and companies, as well as Jews, Quakers, and others, [illegible] submitted to arbitration, and recommending the establishment of a tribunal after such a practice in the city of London.

Mr. Smith seconded the resolution, which was also adopted.

Mr Macgregor, M.P., observed, that when employed under her Majesty's Government in France, he was astonished at the facility with which differences in trade were settled, without any one to step in to make the worse appear the better cause. (Hear.) The tribunals of commerce for the [illegible] of Seine, it was known, disposed of more cases in one day than did the whole civil courts of the country in one month. He concluded an able and eloquent address by moving the adoption of a memorial and the appointment of a deputation to wait on the Prime Minister and President of the Board of Trade on the subject.

This having been agreed to, several other gentlemen addressed the meeting, and a committee was appointed to carry out the foregoing objects.

THE WINDOW-TAX.—On Wednesday evening, a meeting of the [illegible] of estates of the various parishes took place, a the Corn House, Marylebone. Mr Nic olay in the chair. The Chairman said, the metropolitan deputies had been called together to consider two most important questions—it to metropolitan sewage and the window-tax; but, considering the importance at the present moment of entering upon the latter question, he thought the question of the metropolitan sewage would be adjourned to that occasion. There could be no doubt that all present were unanimous in their condemnation of the late measures brought forward by the Chancellor of the Exchequer—Lord Duncan, the Minister, and the Badger, and declared that, whatever [illegible] he would with his colleagues press for the total repeal of the impost. He would with his colleagues give the additional repeal of the [illegible] they did not [illegible] to the [illegible] to the [illegible] to the

THE NEAPOLITAN FISHERMAN'S FAMILY.—PAINTED BY RINDEL.

FAVOURING gales around him blowing,
Sunshine streaming on his way,
Early in the summer morning
Went the fisher o'er the bay
On the cliff his wife and children,
Watch afar the white-sailed t;
Gale blow steady, seas be ready!
Waft him safely, load his net!

Now, at noon, they wait his coming,
Patient and devoid of fear;
Certain that no storm shall ruffle
Seas so glassy, sky so clear.
And the infant sleeps contented;
And the child upon the grass
Lies her length, with half-closed eyelids,
Smiling at the clouds that pass.

And the mother, pleased and happy,
Counts her beads and says her prayer,
Scarcely conscious of the action,
Dozing in the drowsy air.
Dreams and fancies flit before her,
Vague as vapours tost by wind,
Floating in their changeful colours
Through the quiet of her mind.

Happy climate! happy people!
Living in the present hour,
Basking in the noon sunlight,
Careless as the birds in bower.
May no storm of life or ocean
Turn your pleasure into pain!
Gale blow steady, seas be ready!
Waft the fisher home again!

C. F. H

DESIGNS FOR THE PEEL MONUMENT, EXHIBITED IN THE TOWN-HALL AT BURY, LANCASHIRE.

THE PEEL MONUMENT,
BURY.

The several models sent by the competing sculptors for this memorial to the lamented Sir Robert Peel, have lately been placed in the Town-hall at Bury, for inspection; and, whether as regards the reputation of the competitors, the general excellence of the designs, or the artistic taste displayed in their arrangement, the Bury exhibition is entitled to precedence of similar collections of designs at Manchester, Leeds, and the other towns where steps have been taken with the same interesting object.

Bury, it is well known, is the birth-place of the late Sir Robert Peel. It is a manufacturing town in Lancashire, with a population, at the last census, of about 30,000 souls, and about eight miles distant from Manchester. Within a few days after the decease of their lamented townsman, subscriptions of upwards of £2100 were entered into for the erection of a Monument to his memory, and a Committee was appointed to carry out the project. In due time a circular was sent to various eminent artists, stating that it had been determined that the Monument should consist of a colossal bronze statue, upon a suitable pedestal, and that it should be erected in the old Market-place, being the most central part of the town.

The Committee then stated that they were desirous of receiving designs for the statue, not, however, intending to offer any premium, or to incur expense for models or drawings, and reserving to themselves the power of approving or rejecting any designs which might be submitted to them. The models were to be made to scale, and not to exceed four feet in height. The total cost of the design was not to exceed £1,000, exclusive of the expenses of the erection and of the railing; and the designs were to be forwarded to the secretary on or before the 1st of February, 1851.

By this date, several Models were received. They have been arranged in part of the Town-hall at Bury, a large range of building in the Italian palatial style, recently erected in the Market-place, after the designs of Mr. Sydney Smirke, A.R.A., which combines in an eminent degree, beauty of design and internal convenience: for this edifice the town is indebted to the liberality of the Right Hon. the Earl of Derby, the Lord of the Manor. It comprises the estate-offices of the noble Earl, a Court-house, town's offices, police-station, and a large banqueting-hall, 75 feet by 39 feet, with a vestibule.

The roof of the hall in which the greater part of the models are placed, is circular and panelled: and the light, coming from above, renders it admirably adapted for the exhibition of works of art. After ascending a handsome stone staircase, we enter the vestibule, which is draped with a heavy dark maroon cloth: here are placed designs for sculpture by Bally, R.A.; Macdowell, R.A.; E. A. Foley, and Jones; besides two architectural models. Passing through the vestibule to the hall, we find it divided by two high semicircular screens of the before-named maroon cloth, in front of which the remaining models are arranged in a crescent at each end. Our Sketch will give an idea of this arrangement, which is very effective, and possesses the advantage of throwing an equal light on each design. The hall contains Models for sculpture by Bally, R.A.; Macdowell, R.A.; J. H. Foley, A.R.A.; Calder Marshall, A.R.A.; Behnes, Durham, Duckett, E. A. Foley, Hogan, Jones, Lough, Manning, Milnes, Marochetti, Noble, Theed, Thomas, and Weekes; and two architectural designs by Duckett and Truefitt. The two last, together with the two architectural models in the vestibule, by Bonner and Chatwood, are inadmissible according to the instructions of the Committee. We observe, that, unlike the plan pursued elsewhere, there has been a perfect absence of anything like mystery in this competition. There are no mottoes attached to give a colour of secresy, every artist's name being affixed to his work. We congratulate the inhabitants of Bury on the excellence of their exhibition, feeling assured that they will possess a Statue which will be an ornament to the town, an honour to art, and a worthy memorial of departed greatness.

On Friday, the 14th, the Committee met, and, after a scrutiny of several hours, the majority decided in favour of Mr. E. Bally, R.A.

We understand that a great many votes were recorded in favour of several other celebrated artists. We trust Mr. Bally will produce a Statue which shall not only be, as are all this eminent sculptor's works, beautiful and artistic in outline, but also characteristic of the individual, Sir Robert Peel.

We understand that Mr. Bally has been requested to meet the Committee at an early day, in order to receive his final instructions.

THE MOORLAND STREAM.—PAINTED BY H. JUTSUM.—EXHIBITION OF THE BRITISH INSTITUTION.

FINE ARTS.

The Moorland Stream. Painted by H. Jutsum.

This picture is, in our estimation, Mr. Jutsum's most successful contribution to the Exhibition of the British Institution, noticed in our Journal of last week. In the Catalogue is appended to "The Moorland Stream" the following beautifully descriptive epigraph:—

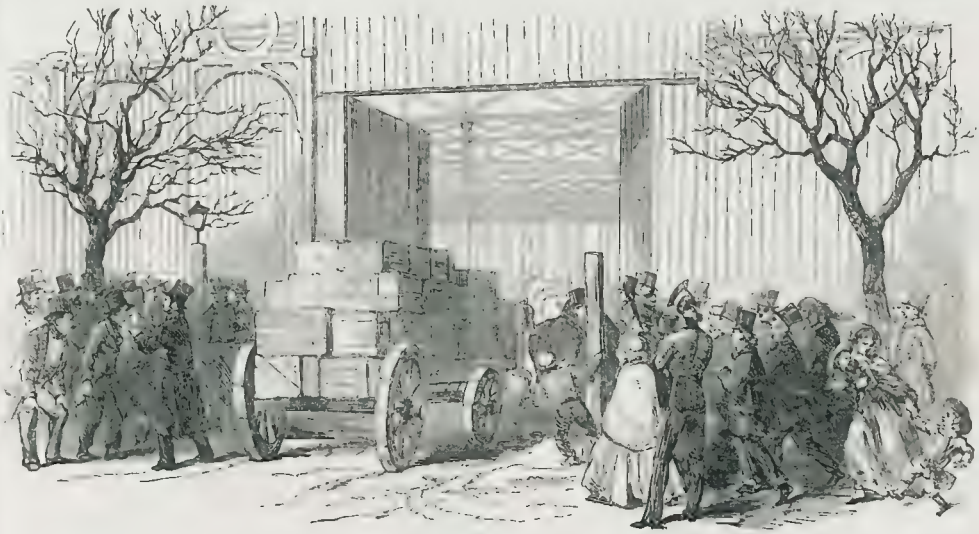
And where the murmuring brook,
Lulled by its own sweet music, seeks repose,
Amid the leafy shade; then swiftly glides,
Sparkling in sunbeams, o'er its pebbly bed.

This is one of the best landscapes, if not the best, in the Exhibition: the transparency of the water, the beauty of the foliage and distance, and the clever handling throughout, combine to make this an exceedingly charming picture.

THE GREAT INDUSTRIAL EXHIBITION.

We have this week engraved the entry of some of the productions of the Zollverein into the interior of the Crystal Palace, on Tuesday. Naturally, the curiosity of the loungers, who seem to inhabit the Park all day, was strongly excited by this arrival, and the police had much to do to prevent an ingress of eight-seers (foreign and English, who spring up at any given spot) to the *entrepôts* of the Building. The waggons proceed to the transept under the lynxeyed authority of the Custom-house officials, where they are unpacked by the Sappers attached to the service of the Exhibition. The portals of the Building are watched with an Argus-like jealousy and strictness.

The Crystal Palace seems to increase in favour with the Court and the people. On Sunday last, between the hours of two and four, a competent statist has declared that a mass of her Majesty's liege subjects was passing and repassing the south transept window at the rate of between 240 and 260 persons per minute, or about 14,000 to 15,000 per hour. On Saturday the Prince Consort conducted the Countess de Neuilly (ex-Queen of the French), the Duke and Duchess de Nemours, and suite over the interior of the Building. The illustrious visitors were especially interested in the various arrangements. The



RECEPTION OF GOODS AT THE GREAT EXHIBITION BUILDING, IN HYDE PARK.

space appropriated to France attracted their notice, and with good reason, for the late King of the French and his family especially encouraged the various Parisian expositions which were held during his reign.

On Tuesday morning her M. [illegible] and his Royal Highness Prince Albert, accompanied by the Prince of Wales and other branches of the Royal family, paid an early visit. The Royal party were much entertained, and were present at the re-examination of several different packing-cases and their contents by the Custom-house officers and staff of the Exhibition. Her Majesty frequently expressed her satisfaction at the progress of the decorations, &c., as well as the previous steps for the custody and custody of the goods, &c. The contrivances for conveying the packages were brought into the centre of the transept, under charge of a Custom-house officer, who unbundled and marked them. The [illegible] then borne off on trucks, by some Sappers, to the compartments [illegible] the country which has forwarded them: [illegible] house and the Great Exhibition awaits them. [illegible] were opened by another party of Sappers, who, in the words of the *Times*, with military determination, saw it every thing before them until the goods lay revealed. This will be the usual course of the reception arrangements. Metal-work, small machinery, works of art, a set of trays, specimens of carving, earthenware images, [illegible] cheese, lace, or gloves, parasol-handles, and articles of general merchandise, speedily appeared, and were passed on inspection.

Goods from the Zollverein, Canada, Switzerland, and Bavaria are already within the walls of their respective compartments. The piece of sculpture noticed last week, as the first arrival from abroad, was a bronze lion, weighing some four tons.

The Canadian cases have been opened. Specimens of furs, white pine, and timber in logs, &c., are remarked.

We have here to commend the aptitude and intelligence with which the force of Sappers are now entering upon the duties entrusted to them. So quietly and precisely do they obey instructions, that their assistance is properly considered as of material consequence to the punctual fulfilment of the arrangements on which they are concerned.

Mr. Owen Jones's decorations of the galleries are gradually being effected. The effect of the blue, red, and white on the girders gives an elegant distinctness, which is of the very best taste. The yellow stripe in the columns may yet be made brighter and more [illegible].

The flooring of the galleries being marked off with red paint into the particular spaces for the various exhibitors—for instance, we recognised in the south-west division, by its allotment for precious metals, amongst the names inscribed, those of Messrs. Garrard; Lambert and Rawlings; Smith, Nicholson, and Co.; with their reserved spaces. The whole of the eastern portion of the gallery in Area is floored; and the compartments for foreign countries being now definitely divided, the erection of the counters has only to be accomplished. The active superintendent (Mr. Cochrane) who represents the contractors, Messrs. Fox and Henderson, has guaranteed that the whole of the counters to be furnished by the Executive Committee shall be ready within the next three weeks. The eastern refreshment court will also be completed next Wednesday. The most extraordinary progress which was observable in the construction of the Building is continued in the fitting up and completion of the interior; and it will be unquestionable if exhibitors generally do not respond to the zeal and energy which have marked the preparations under the control of the Executive Committee and the contractors. It is incumbent on us to repeat our admonition respecting the delays of the non-arrival of machinery, after our customary vaunting and self congratulations respecting our superiority over other countries in this department, it will be a national disgrace if our machine manufacturers, from apathy or neglect, fail to keep their promise as to the delivery and setting up of their promised specimens. Messrs. Platt and Co., of Oldham, have worthily taken the lead in preparing the foundations, &c. for the completion of extensive machinery of cotton-spinning machinery from that district. their agent daily attends to forward the necessary preliminaries for the occupation of the vast space allotted to the firm; and their positions and early attention to the wants of the Exhibition, deserve this special notice. The small town of Dunfermline will have its counters and stalls completed first of the contributing towns of the United Kingdom for the shelving, &c. has been already prepared and shaped for its particular space. Coventry also, has commenced the arrangement of its space in the galleries. Carpenters are busily engaged in constructing the stalls and counters for the foreign compartment, on which a large force will be concentrated forthwith.

The experiments on the 15th to test the strength of the gal eries, both under a dead or inactive weight, and also under a variable or live load, were highly satisfactory; its perfect success must somewhat disturb the alarm sts, wises (scientifically supported, of course) have declared the downfall of the building, in fair weather or wind, or wind, either singly or combined in effect. The official report, which we somewhat abridge, thus notices the results of the test.

A few simple figures explain the basis of calculation upon which the dimensions of the several parts composing the galleries have been determined. The points of a support occurring at the angles of squares of 24 feet, the area of each of these squares is equal to 576 square feet. From various experiments made by Mr. Brunel and others, the average weight of a number of persons standing in a confined space rarely exceeds 80lb per square foot; by packing ones closely it might be brought up to 70 lb. or 80 lb.; but by locking arm in arm, the heavy pressure of gathering them into the smallest compass, an average of 1 cwt. per square foot could not be obtained. One cwt was assumed as an amount certain to cover any unforeseen accumulation of circumstances, that no hay of gallery 24 feet square could possibly be called upon to carry a load equal to 20 tons. The arrangement of the flooring, 2½ inches thick, is such as to distribute over four girders. Every girder having been submitted on the ground to a measure of 15 tons, half the *maximum* weight, each was capable of supporting any load even by at the points upon which the floor rests upon it will be manifest that a very large margin has been left for contingencies arising from any motion liable to be communicated to such a load. The immediate object of the experiment was to ascertain by visible signs to a severest character to what extent oscillations could be conveyed to the gallery by the regular motion of a living load, and whether sufficient provision had been made to meet such contingencies. The heavy timber framing, the construction of a perfect bay of gallery, with its floor, binders, girders, and connecting pieces, in every respect complete and similar to the actual gallery, supported upon four pedestal and temporary foundations, and the whole of the platform, the full width of the platform, led up to it and down from it, so that a row of men, as wide as the gallery, might be able to march up and down in close column. Three hundred workmen were first assembled by the contractors, and allowed to cover the platform and the planks connected with it. They were then compressed into the smallest standing space. The last term on the planks represented the share of pressure which would be produced by the crowding of adjacent bays of gallery. The amount of deflection was inappreciable. The men then walked rapid-ly and irregularly, but ran over [illegible] the floor—allowing play to the timbers and the wrought iron-work—was certain ly developed, and it became apparent that the quality of elasticity was of the greatest value in protecting the construction of the galleries from surges. Thus, in the severest test which could possibly be applied—when the men, standing closely packed together, continued jumping simultaneously for several minutes—all such, in the regular alternation of motion, as is likely to be played by and down, the extreme deflection of any of the girders that could be ascertained at any moment did not exceed one-quarter of an inch. Further, to ascertain the effect of perfectly rigid or solid shocks, the men, in a compact mass, were thrown on the ground, in close column, were marched over and over, and round and round, and were, finally, made to mark time in the most trying manner. At the climax of vibration, the motion did not, by the self-acting [illegible] present, exceed that common in ordinary London houses at evening parties. A minute examination of the platform, &c. subsequently showed that no permanent injury from the strains imposed upon it. The test was satisfactory. The galleries, it must be remembered are only 6 feet wide, the counters occupying the central portion most liable to strain. Uniform duration, beauty, and economy in covering the tests applied on the 15th must entirely dissipate every apprehension. Her Majesty, Prince Albert, and the Royal Family, with their suite, attended by the Earl of Granville and Mr. W. Cubitt, C.E., of the Commissioners, Mr. I. K. Brunel, Mr. Locke, M.P., Mr. Field, and other eminent professional gentlemen, Col. Reid, C.B., Mr. Cole, Mr. Dilke, Mr. Bowring, Dr. Lyon Playfair, Mr. Wyatt, &c., were present.

Preparations for the supply and construction of the great central fountain in the transept, by Messrs. Rowe, of the Strand, are visible. Contributors of sculpture, or any decorative additions to this portion of the building, will be kindly amply accommodated.

The Royal Agricultural Society will not hold their Cattle Show in Hyde-park, as originally suggested: the Rangers of Hyde Park is said to have expressed unfavourable feeling. This, however, will not interfere with the arrangements of the implements, &c., which we afforded last week. Some agricultural implements have already arrived.

Dr Lyon Playfair's elaborate classification of objects (which apparently divides articles to be exhibited under the heads of their particular uses or purposes) is formed principally for the convenient distribution in the Building, and for the assistance of the juries who will have to determine the merits of the contributions in each class. We shall, from time to time, present specimens of the mode of classification adopted.

The Royal war-steamer *Gorgon*, bearing the contributions of the Sardinian Government, started from Genoa on the 9th inst.

It is doubtful, by accounts from Vienna, whether the young Emperor of Austria will visit the Great Exhibition, but a special Minister will certainly accompany the industrial specimens of Austrian exhibitors.

The Lyons Chamber of Commerce has arranged with the Central Committee of Paris respecting the exclusive right of exhibiting their products claimed by the manufacturers themselves of Lyons against the retail dealers in silk stuffs. The central station of the Lyons wares will take place in all its intended [illegible] at the Great Exhibition. Delay, however, is still sought by some of the French contributors, but assuredly their application will not succeed.

Regulations are to be specially published by the [illegible] authorities respecting the heavy traffic and conveyance [illegible] visits of strangers to the [illegible] by the Court of Aldermen, from the Royal Commissioners, as to the admission of foreigners to public establishments, such as the gaol of Newgate (at present open to written orders). A memorandum has been transmitted from Chevalier Bunsen to the Royal Commissioners on the subject, and the matter is referred to the City Committee of general purposes.

The *Glasgow Daily Mail* states that nearly the whole of the large sum of money (£700) stolen from a gentleman in Glasgow, on Monday (last week), has been recovered through the exertions of the local police.

MUSIC.

MONTHLY CONCERTS OF ANCIENT AND MODERN MUSIC.

Mendelssohn's "Elijah" was performed at the fourth concert, at St Martin's Hall, last Wednesday night. On the whole, the choruses did not need the studies and precautions that had been anticipated. In correct intonation and delicacy of light and shade there is still every room for improvement. To have attacked such a work as "Elijah" is, however, highly creditable to the intelligence of the Upper Singing Schools. The solos were awarded to Mr. Lockey, Misses Williams, Kearns, Gill, and Kent; Messrs. Lockey, Herberte, Rushland, and Weiss. Of Miss Williams in the contralto part, and of Mr. Lockey in the tenor, it is quite unnecessary to write, so well known and appreciated is their admirable singing. Mrs. Anderson, who had for a principal concert-singer, and Mr. Weiss, who, for the first time in London, essayed the difficult part of the *Prophet*, were both successful. The *débutante* is a pupil of Sir George Smart; she is gifted with a fine organ a grace or easy-ease compass, with effective high notes, so requisite for the "Elijah." With experience and confidence, she bids fair to take a good position. Mr. Weiss has added to his reputation by his impressive interpretation of the part of "Elijah;" the text was rendered by him conscientiously, and if he can acquire a little more decision in accent, and more flexibility in the florid passages, his version would leave nothing to be desired. At the next concert a Credo by Bach will be introduced, and Mr. Gounod's "Sanctus" will be repeated, by general desire of the subscribers.

MUSICAL EVENTS.

The Amateur Musical Society gave their second concert last Monday night, at the Hanover Rooms.

At the Royal Musical Hall, in Adelaide-street, in addition to the attractive performances on the Colleoniade, under the direction of Mr. Grattan Cooke, Miss Poole, and Mr. and Mrs. Donald King have been engaged as vocalists: the Italian operatic concerts of Signor Montelli are on the off-nights of the Apollonian evenings.

Miss Eyles gave a *soirée musicale* last Monday, at the Whittington Club. The concert was well attended. Miss Eyles has a sympathetic mezzo-soprano organ, and sings with taste and feeling. She was encored in a charming aria from the "Sleeper Awakened," "Gone—he's gone!" the florid passages in which were artistically executed by Miss Eyles, who was also encored in Rodwell's pretty ballad, "Come, Mary."

Mr. Topliff delivered a Lecture on Congregational Singing, at the Newington National School-room, last Tuesday.

Mdlle. Conlan, at the Queen Anne-street Rooms, last Tuesday, gave an evening concert, for the benefit of a distressed family, at which Miss Bassano, Miss Messent, Miss Ransford, Madame Montresi, Signor Montelli, &c., assisted.

At the first of Mr. Lucas's attractive Musical Evenings, Mr. W. S. Bennett performed a MS. Andante, with variations, by Mendelssohn; and, with Mr. Lucas, Beethoven's Sonata in F, for piano and violoncello. The quartets were Haydn's No 74, Spohr's Op. 43, and Beethoven's No. 17; Salmon and Danese being first and second violins, and Mr. Hill the viola.

Dr. Elvey's new Anthem and Haydn's "Creation" were repeated at Exeter Hall, by the Sacred Harmonic Society, last night, under Mr. Surman's direction. The ensemble, in consequence of the success of Dr. Elvey's anthem "In the day," have resolved to propose to the society to give two annual prizes for the composition of anthems, with full orchestra. If this experiment should be successful, as it deserves to be, we would suggest to the committee not to stop at anthems, but to open prizes for a cantata, and even for an oratorio, so as to afford our composers, in default of a national opera, some chance of distinction in this sacred school.

Next week will be a busy one for the professor and amateur. On Monday Mr. Charles Hersley's new oratorio, "David," which was performed by the Liverpool Philharmonic Society for the first time—much to their credit, be it recorded—will be executed at Exeter Hall, under the composer's direction. The principal vocalists will be Misses Birch, Williams, and Eliza Birch; Messrs. Lockey, T. Williams, Weiss, and Whitworth. Mr. C. Hersley will preside at the organ. The band and chorus will be first-rate in quality and quantity. Much interest has been excited by this oratorio. The performance will be honoured, it is believed, by the presence of Prince Albert—a graceful compliment to the young and rising musician. Handel's "Messiah" will be performed as the [illegible] Institution, Mile-end, next Monday. Of Classical Chamber exercises there will be five next week; namely, on Tuesday, at Mr. Hill's; at St. Martin's Hall; Mr. Lindsay Sloper, at the Queen Anne-street Rooms; and the first of Mr. Sternd le Bennett's pianoforte performances, at the Hanover Rooms; on Wednesday, M. Rousselot, at the Queen Anne-street Rooms, and, on Friday, Mr. W. Ree, at the same place. The Sacred Harmonic Society will perform Handel's "Saul," under Costa's direction, at Exeter Hall, on Wednesday night. The Melodists Club will make next Thursday. On Friday evening the London Sacred Harmonic Society will perform Handel's "Jephtha." Next Monday night Henrich Werner, the boy pianist, and Mdlle. Tilmar, will give concerts at the Music Hall, in Store-street.

Ernst and Mdlle. Angri have met with a brilliant reception in Scotland, especially at Glasgow, where the marvellous playing of the violinist, and the exquisite vocalisation of the singer, have excited enthusiasm in an excellent idea, and will no doubt, be imitated rapidly by the music dealers.

The 113th Anniversary Musical Festival of the Royal Society of Musicians will be celebrated by Freemasonry, on Friday, the 7th of March; the Earl of Carlisle in the chair. As is usual on these occasions, there will be a great display of vocal and instrumental talent, the most distinguished *artistes*, native and foreign, having promised their gratuitous aid.

Mdme. Pleyel and Mr. Hudson will commence a provincial tour with their musical entertainment, next Monday, at Birmingham.

At Mr. F. Chatterton's concert at Greenwich, Messrs. Cooper, Goffrie, Hill, and Ransford played quartets; and Miss Eliza Birch, the Lockwood family, performed: Miss Louisa Pyne, Miss Eliza Birch, and Mr. Allen were the principal vocalists.

Mr. and Mrs. Sims Reeves made their appearance at the Dublin Theatre Royal last Monday night, with the greatest success, as *Edgardo* and *Lucia*; Herr Meigis being *Enrico*, and Signor Poloni *Raimondo*. On Tuesday, Mr. and Mrs. Sims Reeves performed as *Elvino* and *Amina*, in Bellini's "Sonnambula." The Dublin audiences are great supporters of the Italian Opera.

FOREIGN MUSICAL NEWS.

Letters from Paris state that M. Gounod's new three-act opera, "Sappho," is in active preparation at the Grand Opera-house. Mdlle. Poinsot, who so recently made such a successful *début* as *Rachel*, in "La Juive," will be included in the cast of "Sappho," with Mdme. Viardot; M. Gueymard will be the tenor, and M. Bonnehée the baritone. As France is thus affording a chance to M. Gounod, Germany is following the example of England, by producing his sacred compositions. The "Sanctus," which created such a sensation at Mr. Hullah's monthly concerts, will be performed at the Aix-la-Chapelle Musical Festival.

Gardoni's reception at the Parisian Italian Opera, on his return from Madrid, was very enthusiastic; he played *Rienzo* in the "Sonnambula," and was in excellent voice. Scria and Sims Reeves performed as *Elvino* and *Amina* in Bellini's "Sonnambula" last Thursday, with Gardoni as *Fernando*, Mdme. Sontag as *Miranda*, Lablache *Calchon*, and Mdlle. Rosati as *Ariel*.

There are no less than fifty candidates, namely, MM Batton, Benoist, Berlioz, Clapisson, Félicien David, Grisar, Martin d'Angers, Nodermeyer, Panseron, Ambroise Thomas, and Zimmerman, for the vacant seat in the Académie des Beaux Arts.

The Italian Opera-house at Athens was opened with Bellini's "Puritani" Meyerbeer's *Robert le Diable* and *Les Huguenots* performances at the Theatre, in the concert-rooms, and in the church in honour of the late Spontini. The French Minister of the Interior has ordered that the bust of the deceased composer shall be placed in the foyer of the Grand Opera-house in Paris.

The *News et Gazette Musicale* of Paris states that the project for a treaty of international copyright between France and Austria has been definitively drawn up and agreed upon, and only awaits the signature of the Princes. The *Revue* adds that a treaty of the same nature has been long ready between England and France, and it is much to be regretted that inexplicable delays have occurred to prevent its being put in execution.

The Paris Society of Musicians has opened a new concert-room in the Bazaar "Bonne Nouvelle;" the saloon was decorated by MM. Philastre and Carebon. M. Prudent, the pianist, gave the first concert in the new room.

The audiences from Brussels dwelt on the extraordinary effect produced by MM. Schaeven, Scheers, and Standlies, three pupils of Berlioz, who play together (an unison) concertos and fantasias on the violin. De Beriot has also four pupils who perform solos with equal success, as if indeed there was but one bow in action.

THE CENSUS.

The forms and schedules are now in course of being forwarded to the District Registrars of England and Wales, constituting upwards of 2000 officers, who are engaged for the occasion a staff of enumerators numbering about 100,000. These persons will forthwith receive their instructions for taking the Census on Monday the 31st of March.

A schedule will be left with every family, and is to be filled up by the occupier of each house or part of a house, or by some one of the members of such family, or other person residing therein, or in case of the absence of such occupier or person in charge of such house or apartment, by the person making the return for the portion of the house upon a separate household schedule.

Persons who refuse to give correct information incur a *Penalty of Five Pounds*, besides the inconvenience and annoyance of appearing before two Justices of the Peace, and being convicted of having made a wilful mis[illegible]ment of age, or of any of the other particulars.

EXAMPLES OF THE MODE OF FILLING UP THE RETURN.

No.	Name and Surname.	Relation to Head of Family.	Condition.	Sex.	Age last Birthday.	Rank, Profession, or Occupation.	Where Born.	If Deaf and Dumb, Blind, or Imbecile or Idiot, at the Census.
1	George Wood	Head of Family	Married	M.	45	Farmer (of 11 acres, employing 4 labourers)	Kent, Dartford	—
2	Maria Wood	Wife	Married	F.	44	Farmer's Wife	Middlesex, Chelsea	—
3	Emily Wood	Daughter	Unmarried	F.	22	Farmer's Daughter	Kent, Chisle[illegible]	—
4	Alan Wood	Son	Unmarried	M.	20	Farmer's Son	Kent, Chislehurst	—
5	Florence Wood	Daughter	[illegible]	F.	14	Scholar	Kent, Beckenham	—
6	Jane Holmes	Visitor	Widow	F.	79	Annuitant	Canada	Blind
7	Eliza Edwards	Servant	Unmarried	F.	24	House Servant	Kent, Gravesend	—

THE THEATRES.

HER MAJESTY'S

The appearance of the Opera prospectus as anticipated with much [illegible] as a speech from the Throne [illegible] however important may be the publication of the day—whether the Chancellor's budget be declared or the Anti-[illegible] aggression Bill be published, whether the Treaty of Vienna be cast to the winds, or France be in her hundredth crash, the operatic programme will be read and canvassed in every circle. Nor would Mr. Bunn or Charles Dickens, so prolific of Palmerston, no manifesto of the Germanic Diet is pursued with more avidity. Speculation is hazarded as to the singers who will return; also as to the new *artistes* who are to undergo the ordeal of a London *début*, and, above all, as to the new works that will be produced. The lessee and director of Her Majesty's Theatre has most assured y'd spayed infinite tact in his present appointment; whilst his subscribers have had the gratifying assurance of the return of the brilliant vocalist Mdme. Sontag, who has been achieving such triumphs during the winter season at Paris, and of the re-engagement of the comely, with the lovelicst voice ever heard, the incomparable Alboni: and with these two celebrities are associated Parodi, who has created such a sensation recently in New York, despite of the kind *bravos* of Mr. Hudson's Mdme. Florentini, and those useful *artistes* Mdme. Gunhan and Mdle. Bertrand. The list of favourite tenors and basses comprises the unrivalled Lablache, the excellent baritone, Signor Coletti; Samuel F. Lablache and Lorenzo; Signor Gardoni, whose success at Madrid has been transcendent, and who re-appeared last week in Paris with the greatest success; Signor Calzolari, who has won immense popularity in Paris this winter, is a thoroughly trained artist; and our own Prince of tenors, Mr. Sims Reeves.

Thus much for the category of *artistes* known to us; now, as to those who are new to this country.

First, there is Mdlle Caroline Duprez, the daughter of one of the greatest tenors of any age or country, the famed Duprez. This youthful *artiste*, whose mother, in the way, was Italian, will make her *début* in her own country, has been quite triumphant at the Paris Italian Opera, as our letters have frequently recorded. It is not only that Mdlle. Duprez is a most accomplished vocalist, but she is distinguished by that which has been especially her paternal origin, as an actress of impassioned feeling. Following up his system of introducing the reigning stars of Italy, Mr Lumley, who has presented Madame Medolini and Madame Frezzolini, will now endeavour to bring before the celebrated Madame Barbieri Nini; and if this *artiste* should still [illegible] [illegible] [illegible]

bandoleiers, monster vases, glasses, lamps, ancient musical instruments, &c., the whole is like a resuscitated Nineveh.

"ARAB, the Prodical" will be seen here very soon; for, although there is ample room for fault-finding, there are real points of novel in erest, and Mr ARCHER SMITH'S appropriate appeal at the close, when he was unanimously called for, that he had done in a month what had occupied the Paris management one year, was scarcely needed. We intend to illustrate the speaking next week.

ST. JAMES'S THEATRE.—Mr. LOVE's entertainments announced for Monday will, no doubt, prove attractive. The reputation of the gentleman has been on the increase for many years, and he is now unquestionably the best ventriloquist we possess. The art, by his practice, has acquired a higher standard than it formerly had, while the versatility which he displays in his performance enables him to awaken an unprecedented range of feelings. Some of these are curious portrauts. Frequently, also, Mr Love contrives to suggest a moral lesson, or to call attention to a scientific truth.

COLOSSEUM.—Active preparations are now making at this establishment for exhibiting HORNER'S original panoramas of "London by Day" and "Paris by Night," which, will, doubtless, prove attractive to the great influx of strangers expected this year.

NAPOLEON BONAPARTE.

A diorama illustrating the career of Napoleon, called a "Pictorial Biography of the Emperor," was exhibited for the first time on Monday, at the Apollonicon Rooms, St. Martin's-lane. It presents some twenty *tableaux*, consisting chiefly of battle scenes. Among the scenes selected, are the Bridge of Arcola, the Field of Austerlitz, the Coronation in Notre Dame, and the Departure of the exile for Elba. The pictures are by divers artists, but all have been painted under the immediate direction of Mons. de Condé, who, as (Madame de Condé) delivers a lecture in French and in English at different parts of the day. Though not claiming any great merit on the score of art, the subjects chosen are treated in an interesting and instructive manner.

IRELAND.

THE ROMAN CATHOLICS AND THE PAPAL AGGRESSION.—A formidable agitation against the proposed measure of the Government appears imminent. It is thought by the Roman Catholics that, should the bill become law, it will interfere with their religious liberties and the discipline of their Church, if not with its existence, by abrogating the ecclesiastical authority exercised by their bishops. This is the view taken even by many Roman Catholics of the higher class, who have invariably held aloof from political agitation; and among the clergy it is said the opinion prevails that the temporal functions of the bishops will be practically abrogated if the act is extended to Ireland. Amongst the laity a very general movement is in progress throughout the country. Meetings are to be held in the parishes to petition against the bill. Some meetings have been already held for that purpose

SPECIAL MEETING OF THE ROMAN CATHOLIC BISHOPS.—The Roman Catholic Primate, Dr Cullen, has issued circulars to all the prelates—twenty-eight in number—requesting their attendance at a general meeting in Dublin, to deliberate upon the measures to be adopted in consequence of Lord J. Russell's bill.

RUMOURED APPOINTMENT OF AN IRISH CARDINAL.—There is no foundation for the statement, published by a Limerick journal, that the Pope has conferred dignity of a cardinal on Dr. Cullen, the Roman Catholic Primate, and that Dr. Kirby, president of the Irish College at Rome, has been appointed coadjutor Bishop of Dromore.

DUNGANNON ELECTION.—The Hon. Stuart Knox, brother of the late representative, Lord Northland, was returned, without opposition, for this borough on Friday (last week)

ABOLITION OF THE VICEROYALTY.—The guardians of the South Dublin Union held a special meeting on Saturday, for the purpose of petitioning against the abolition of the Viceroyalty. This was the first of a series of meetings which, it is expected, will be held throughout the country for the same purpose, by boards of guardians and grand juries

UNIVERSITY COMMISSION.—The authorities of Trinity College, Dublin, have received intimation from Government that the Commission of Inquiry into the state of the University is to consist of the following members:—The Archbishop of Dublin, the Bishop of Cork, the Right Hon. Richard Rosse, Chief Justice of the Queen's Bench, Mr. Commissioner Longfield, and Mr. Cooper, of Markree.

NOVEL EXPORTS FROM DUBLIN.—The large castings for the great bridge over the Wye, at Chepstow, for the South Wales Railway, are being executed by a firm in Dublin, which, we believe, is the first instance on record of castings of any magnitude being made in Dublin for works in England or Wales. The enterprising firm who are doing this work have lately made in Dublin all the castings for the Brighton Railway Company, required for the extension of their passenger terminus at London-bridge, and have exported to England, during the last two years, upwards of 400 tons of castings

COAL SCHOOL OF DESIGN.—The Lords of the Committee of Privy Council for the Board of Trade have appointed Mr Robert Scanlan Head Master of the Cork School of Design, at a salary of £300 per annum. Their Lordships, in compliance with the recommendation of the Royal Commission, have also been pleased to raise the salary of the Second Master, Mr. Knight, to £150 per annum

Negotiations are in progress for the transfer of the Dublin Royal Exchange to the corporation, that building having long since ceased to be used for any commercial purposes.

Last week, Arthur Sampson, Esq., J P, Drummone House, Ballykelly, in the north of Ireland, agent to the Worshipful Company of Fishmongers, had no fewer than seventy-five sheep worried to death in one night! He has had one hundred others wounded, most of them severely. Mr. Sampson has succeeded in poisoning a number of the savage dogs who killed the sheep.

MR. ANSTEY AND HIS CONSTITUENTS.—Mr. Chisholm Anstey has contradicted the statement of his rumoured resignation of his seat in Parliament for Youghal.

NATIONAL SPORTS.

The Liverpool Spring meeting has so many claims on the "sympathies" of the racing, steeple-chasing, and coursing fraternities, that the calendars if not literally, are virtually, "black." Thus the coursing gat-erings will be confined to Ilston on Tuesday and Wednesday, and Colton (Bromsgrove) on Wednesday, and the steeple-chasing to Honeybourne-Arden on Monday. Of course, we speak irreconcilely of Liverpool, which offers three days' diversion, commencing with the long-talked-over Lord Sefton's Coursing on Tuesday, Wednesday being devoted to racing on the flat and "across the country," and Thursday to the all-decisive courses for the stakes commenced on Tuesday—it promises to be an interesting week, but "nothing wonderful."

TATTERSALL'S.

MONDAY.—The room was well attended this afternoon, but the business was brisk only on a few horses; viz. Rhesus, Greedan, Newminster, Constellation, and Serus. The following were the averages at the close:—

LIVERPOOL SPRING CUP.
6 to 1 agst Bloth.

LIVERPOOL STEEPLECHASE.

10 to 1 agst Sir John	12 to 1 agst Van Hove (c)	20 to 1 ——— Fugitive
10 to 1 ——Abd-el-Kader	14 to 1 ——Peter Simple	25 to 1 ——Venom
10 to 1 ——Maria Day	20 to 1 ——Rasen	25 to 1 ——Sorrity (c)
10 to 1 ——Hal-ris	20 to 1 agst Maurice Daly	

SOUTHAMPTON RACE STAKES.—20 to 1 agst The Cocktail (c).

CHESTER CUP.

11 to 1 agst Rheusa	20 to 1 agst Black Doctor	1000 to 45 agst Rea (c)
27 to 1 ——Harriet (c)	50 to 1 ——Nancy (c)	1000 to 10 Spot (c)
30 to 1 ——Montagne (c)	1000 to 45 ——Sir Richard (c)	1000 to 10 ——TarnWadlin(c)

METROPOLITAN HANDICAP.—12 to 1 agst Cossa

DON.

6 to 1 agst Greedan (t)	12 to 1 agst Newminster	30 to 1 agst Storm
6 to 1 ——Prince Monbrise	22 to 1 ——Lecuarnine (t)	40 to 1 ——Confessor
12 to 1 ——Mountain Sylph colt	25 to 1 ——Constantine	50 to 1 ——Thrasea
	25 to 1 ——Marlboro' Rock	100 to 1 ——Serus (t)

10,000 to 400 agst Lady Gersdale colt (t)

OAKS.

12 to 1 agst Stella (c) 12 to 1 agst Iris (c)

THURSDAY.—A dull afternoon, and the "sayings and doings" (more of the former than the latter) with no other influence than to make Vain Hope and Rhesus look very "tottery."

LIVERPOOL STEEPLECHASE.

10 to 1 agst Sir John	10 to 1 agst Maria Day	15 to 1 agst Fugitive
10 to 1 ——Rasen	12 to 1 ——Peter Simple	20 to 1 ——Sorrity (c)
10 to 1 ——Abd-el-Kader	12 to 1 ——Van Hope	25 to 1 ——Carrig
	30 to 1 agst Farnham	

LIVERPOOL SPRING CUP

5 to 1 agst Pampe (t)	6 to 1 agst Bosh	7 to 1 agst Charlie

CHESTER CUP.

	33 to 1 agst Wild Rover	
14 to 1 agst Rheusa	30 to 1 ——Knight of Avenel	40 to 1 agst Seaman

TWO THOUSAND GUINEAS STAKES.

Even ——Nougat 5 to 1 agst Mountain Sylph colt

OAKS.

6 to 1 agst Greedan (t)	10 to 1 agst Prince Monbrise (c)	12 to 1 agst Mountain Sylph colt
	10 to 1 agst Confessor (t)	100 to 1 agst Artiste (t)

A return to the House of Commons, just printed, regarding poor-law relief in Ireland, states that in the quarter ended December, 1849, there were 855,106 persons on the relief list. In the following year the number was reduced to 251,279; and in the quarter ended the 31st of December last was 209,736. In the quarter ended December, 1848, the ordinary expenses for the relief of the poor amounted to £426,045; in the next year, to £242,976; and in the quarter ended the 31st December last, to £147,217

The Earl of Rodney has given much of his farm tenants in Kent as are dissatisfied with the present amount of their rent the option of having their holdings valued by a competent surveyor, with the view of fairly adjusting the rent to the present circumstances of agriculture

General Narvaez, the late Prime Minister of Spain, has gone to reside at Paris, and has taken up his quarters at the Hôtel Bristol, Place Vendome.

The remains of the late Lord Bexley were on Monday interred in the family vault in the parish church of Bexleyheath

CHESS.

TO CORRESPONDENTS.

T. P. (Exeter).—You will see your error on examining our solution

T. T. (Dublin).—Received, with thanks.

Q. P.—The King must not take the Kt in the position given

R. H. (Leeds).—Your solution of No. 367 is correct.

M. (——).—Herein, you will agree with us, that the rule you object to is absolutely imperative. Without it, too pawn would last for two or three years

BRAHMIN.—You appear to us to be quite right. Some move, perhaps, was omitted by the transcriber

J. L. C. Ashford.—The key move to Mr. Amlee's very pretty Enigma is 1. B to Q R 5th. The other moves are right.

SOLUTIONS OF PROBLEM No 367, by M. F., Mars, O P Q, Boldonia, J S Rios, of Stalingrad—are correct

SOLUTIONS OF PROBLEM No 368, by H M, D R, of Londonderry; A B A, Bold-on, Tyro, Fidelis, Fidelis 2, Country Lawyer, J M, of Sherborne, Van J, Rotterdam, Rev H J H, J M, J L, Rampside, R T, of Blair-hp, Woodcock, O Step Type of Dublin, R F, of Dorking; W W F, H B, of Annandale—are correct

SOLUTIONS OF PROBLEM No 369 by Sir Edmund, W G B, Rev. H. Alfred and Conway; [illegible] W J S—are correct

[illegible] Solutions have been received from [illegible] Kt to K B 4th, J H H, Mr. Jones, Kenmare, County Kerry, Sir Edmund, P G H, Rev. Mr. Slade, Alfred and Conway, A S, of Worcester, J E Rios, of Stalingrad, Jack of Shrewsbury, Belaire, R R, Derwent, W S, of Sherborne, J F H H, Yarmouth Bec, Alpha—are correct. A others are wrong.

YUBA.—Stalemate is a drawn game

H B W.—Now under consideration

J W J F.—Much too easy

*** The greater part of our Chess Correspondence must this week remain unanswered, from want of room.

SOLUTION OF PROBLEM No. 369.

THE CHESS TOURNAMENT OF 1851.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—Inclosed you will obliged me, through the medium of your columns, as the recognized organ of the Chess-Players of the United Kingdom, a few remarks on the composition of the Committee of Management, selected by the St. George's Chess Club, to arrange and conduct the Chess Tournament, to be held during the summer months of the present year in the rooms of the above society, which I have written for the partial principals of my brother Chess Amateurs in the provinces, whose attention I beg respectfully to request thereto.

I am, Sir, yours sincerely,

Halifax, Feb. 18, 1851. EDWARD CROWHLM

"To the Members of Provincial Chess Clubs generally, and specially to those composing the Yorkshire Chess Association.

"GENTLEMEN,—In a brother Chess amateur, I beg respectfully to request your kind and candid attention to the following observations on the Tournament projected by the St. George's Chess Club:

"The idea of a grand Chess Congress and a Tournament, where the Chess-champions of every quarter of the globe should meet together to contest for general prizes, and reduce their rival pretensions to superiority to the only infallible test, the actual encounter on the board, has been long a favourite project amongst Chess-players of every rank, and more particularly so since the interest created by the great match between M. St. Amant and Mr Staunton which ensued, the English player on this throne of Chess, predecessively occupied by De la Bourdonnais, Deschappelles, and Philidor

"The anticipated at ondance at the Great Exhibition this year of immense numbers of people from all parts of the world, are, and to present perhaps the most favourable opportunity of bringing about this long cherished desideratum of the Chess world; and the St. George's Chess Club, the most numerous and influential body of Chess-players ever brought together, composed of noblemen and gentlemen from all parts of the United Kingdom, and, therefore, in every sense of the word, the National Chess Club, very properly took the initiative in the good cause, and appointed a committee to carry out the grand design, soliciting at the same time the active co-operation and assistance of all the Chess clubs and Chess amateurs throughout the kingdom

"To the names of the noblemen and gentlemen composing this Committee of Management I beg to ask your particular attention, having appended to each names the county or district which each member of this national committee appears more immediately to represent.

"His Grace the Duke of Marlborough, representing the Chess-players of Oxfordshire and his central counties.

"The Right Hon. Lord Cremorne, representing the Chess-players of Ireland.

"The Right Hon. Lord A. Hay, representing the Chess-players of Scotland

"The Hon. H. T. Liddel, M.P., representing the Chess-players of Northumberland and the north of England.

"J. M Gaskell, Esq., M.P., and M. Wyvill, Esq., M.P., representing the Chess-players of Yorkshire and the Yorkshire Chess Association

"C. R. M Talbot, Esq., M.P., representing the Chess-players of Wales

"Captain Kennedy, M.P., representing the Chess-players of Brighton and the South of England.

"Sir Charles Marshall, B. Smith, Esq., A. Fonblanque, Esq., and H. G. Catley, Esq., representing the Chess-players of the metropolis

"H. F. Buckle, Esq., the winner of the Chess Tournament at the Strand Divan, in 1849

"W. Lewis, Esq., the eminent Chess writer, the tutor of M Donnell, and the rival of Deschappe lles

"H. Staunton, Esq., the present holder of the Chess sceptre.

"In these last named may be fairly taken to represent Chess-players generally, without reference to locality or country, having won more than European fame.

"Could any committee—I confidently appeal to you—be more fairly constituted, more national in its character, both individually and collectively, or more fully entitled to the confidence and support of the Chess-players of our country? And when we remember, also, that all these are members of one central club in the metropolis, and possess, in the institution with which that club is connected, ample and suitable accommodations for all the purposes of the Tournament; and, from being members of the same club, and in daily intercourse, have moreover in themselves that unity of purpose, combined with unity of action, which is essential to carry out any great project, I feel sure that all Chess-players in the provinces will, follow the example of Mr Newham, of Nottingham, a justly-acknowledged champion of the Midland Counties, in proceeding, by their liberal contributions, the success of an undertaking fraught with so much interest to every lover of the Royal game.

"I am, gentlemen, yours, sincerely and faithfully,

"Kerr Cottage, Hanbar Pth 18, 1851." "EDWARD CROWHLM.

ASSUMPTION OF ECCLESIASTICAL TITLES.

The following is the "Bill to prevent the Assumption of certain Ecclesiastical Titles in respect of Places in the United Kingdom," which has just been introduced in the House of Commons by Lord John Russell. (The words printed in *italics* are proposed to be inserted in committee.

Whereas, by the act of the 10th year of King George IV., chap. 7, after reciting that the Protestant Episcopal Church of England and Ireland, and the doctrine, discipline, and Government thereof, and likewise the Protestant Presbyterian Church of Scotland, and the doctrine, discipline, and government thereof, were, by the respective acts of Union of England and Scotland, and of Great Britain and Ireland, established permanently and inviolably, and that the right and title of archbishops to their respective provinces, of bishops to their sees, and of deans to their deaneries, as well in England as in Ireland, and been settled and established by law, it was enacted, that, if any person, after the commencement of that act, other than the person thereunto authorized by law, should assume or use the name, style, or title of any bishop of any province, bishop of any bishopric, or dean of any deanery, in England or Ireland, he should for every such offence forfeit and pay the sum of one hundred pounds: and whereas it may be doubted whether the recited enactment extends to the assumption of the title of archbishop or bishop of a pretended province or diocese, or archbishop or bishop of a city, place, or territory in England or Ireland, not being the see, province, or of some of any archbishop or bishop recognised by law; but the attempt to establish, under colour of authority from the see of Rome or otherwise, such pretended sees, provinces, or dioceses is illegal and void, and the assumption of ecclesiastics, titles in respect thereof is inconsistent with the rights intended to be protected by the said enactment: and whereas it is expedient to prohibit the assumption of such titles in respect of any places within the United Kingdom, and to enact the penalty hereby by the Queen's most excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present Parliament assembled, and by the authority of the same, that—

1. If, after the passing of this act, any person other than a person thereunto authorized by law in respect of an archbishopric, bishopric, or deanery of the United Church of England and Ireland, assume or use the name, style, or title of archbishop, bishop, or dean of any city, town, or place, or any territory or district (under any designation or description whatsoever), in the United Kingdom, whether such city, town, or place, or such territory or district, be or be not the see or the province, or co-extensive with the province of, a archbishopric, or the see of, or co-extensive with the see of, a bishopric, of the United Church of England and Ireland, or any deanery, or co-extensive with any deanery, of the said United Church, the person so offending shall, for every such offence, forfeit and pay the sum of *one hundred pounds*, to be recovered as directed by the recited act

2. Any deed or writing made, signed, or executed after the passing of this act, by or under the authority of any person, in or under any name, style, or title which such person is by the recited act and this act, or either of them, prohibited from assuming or using, shall be void.

3. Where by the assurance, transfer, will, limitation, or declaration of use or trust, or other instrument, made or executed after the passing of this act, any real or personal property, or any profit or advantage to be had therefrom, is assured, given, or made applicable, or expressed or intended to be assured, given, or made applicable, directly or indirectly, for or towards the endowment or maintenance of any archbishopric, bishopric, or deanery instituted or in any wise designated or described as an archbishopric, bishopric, or deanery of any city, town, or place, territory, or district in the United Kingdom (except the archbishoprics, bishoprics, and deaneries of the said United Church), or for any purpose connected with or referring to the maintenance or constitution of any archbishopric, bishopric, or deanery (except as aforesaid) so instituted, designated, or described, or of the titular province, see, diocese, or limits thereof, or where by any such assurance, transfer, will, limitation, declaration, or other instrument, any real or personal property, profit, or advantage, or any power, authority, or discretion whether for private or personal benefit, or for charitable or other purposes), to be exercised over or in relation to any real or personal property, or such profit or advantage is assured, given, or vested, or expressed or intended to be assured, given, or vested, to or in any person by any name, style, or title of archbishop, bishop, or dean, which by the recited act and this act or either of them such person is prohibited from assuming or using, or to or in any person who in such assurance, transfer, will, limitation, declaration, or other instrument is in any manner designated, mentioned, or referred to as being or claiming to be, or as being called or known or reputed to be archbishop, bishop, or dean, under any name, style, or title which such person is so prohibited from assuming or using, or to or in any other persons therein described as chaplain or other subordinate of the person so designated, mentioned, or referred to, or to or in any person in anywise described by means of a reference to a name, style, or title of which by the said act and this act or either of them, the assumption or use is prohibited, all the real or personal property, profit, or advantage aforesaid, or such estate or interest therein, as but for this enactment would accrue and pertain to the person in whom the purposes aforesaid, or would have vested in or entured to the use of the person in whom the same is so expressed or intended to be assured, given, or vested, by virtue of any office or liquidation found, vest in and enure to the use of Her Majesty, and shall and may be disposed of and applied as Her Majesty shall be pleased by warrant under her sign manual to direct, whether for the purposes to apply the same according and pursuant to the intent and purpose declared in and by the instruments hereinbefore mentioned or otherwise; and all such powers, authority, and discretion as aforesaid, so far as the same but for this act and might have been exercised by the person in whom the same is so expressed or intended to be vested, may be exercised by such person and in such manner as her Majesty may be pleased by warrant under her sign manual to direct.

4. Every person who may be liable to be sued for any penalty imposed by this act shall and may plead and set either of them, and in any proceeding in equity in relation to any such assurance, transfer, will, limitation, declaration of use or trust, or other instrument as hereinbefore mentioned, or in relation to any deed or other trust, matter or thing aforesaid, may, in compellable to answer upon oath, notwithstanding his liability to such penalty, by the same manner as if no such liability existed; provided, that no answer of such person in any such suit or proceeding as aforesaid, in any matter disclosed or made known only by means of such answer, shall be admitted as evidence against such person in any action for the recovery of such penalty.

FACTORY INSPECTORS' REPORTS.—The half-yearly reports of the factory inspectors have been issued. They have reference to the half year ending October 31. In their joint report, the inspectors refer with satisfaction to the amending act of last year for defining the working hours of young persons and women. They state that the amending act has had the effect of allowing much of the excitement which existed throughout the manufacturing districts for the long period during which the fifth system was practised to subside. They have great regret to report an increase in the number of accidents, which partly arose from inexperienced hands being employed in the different factories for the great activity which has so generally prevailed throughout the United Kingdom. The inspectors are of opinion that many accidents would be prevented if newspapers were to apply articles in the strong and energetic manner which in the half-year there were 336 informations laid for infringements of the several factory Acts, of which 316 resulted in convictions. The fines paid amount to £336.

THREATENING THE SECRETARY OF STATE FOR IRELAND.—On Wednesday, at the Westminster Police court, a man of gentlemanly appearance named Samuel M'Carthy, was brought up on a charge of sending a threatening letter to Sir W. Somerville; but as it appeared that the letter had been written under a false impression that a person who had insulted defendant's wife was the right hon. Baronet, and as the defendant made an humble apology to Sir W. Somerville, who waived further proceedings in the matter, the charge was dismissed.

LAUNCH OF THE TURKISH STEAMER "SHAFFEK."—Another Government vessel, of 750 tons, for the Ottoman service, was launched from the building yard of Messrs. John and Robert White, shipbuilders, at the port. She is intended for the Ottoman packet-service, and designed to carry the mails between Constantinople and the ports on the Black Sea. This makes the fourth large steamer built for the Turkish Government by Messrs. White.

In the afternoon at Portsmouth, Mrs. Wyndham Carew performed the ceremony of naming the vessel and she glided majestically from her cradle.

WELLS, SOMERSET.—The Lord Chancellor of England has been pleased to place the following gentlemen in the Commission of the Peace as magistrates for this ancient city and borough of Wells, viz. Edward Kelsh Wells, Esq. (the Mayor); John Bellour Plowman, Esq. (Alderman), John Ivey, Esq., and Joseph Parsons, Esq.

THE CONSEQUENCES OF THE PUBLICATION OF THE FRENCH GOVERNMENT.—The Legation of the Oriental Republic at Paris has announced that the conditions for the formation of a military colony at Monte Video have ceased, but with so much restriction as to by confining the engagements with reserve sub-officers. This compensation is imposed by the French Government, which, however, leaves to the Oriental Embassy the apparent credit of having volunteered the indemnity

DIORAMA OF THE TOUR THROUGH EUROPE.

THE Diorama so denominated, exhibited at her Majesty's Concert-room, Haymarket, under the title of the Tourist's Guide, is one of the happiest ideas of the kind now commended to public notice. It displays to the spectator the three most likely routes that the English tourist might be expected to take in the travelling season of the year. The first route is direct from the Thames to Hamburgh, and thence to Constantinople, presenting a series of magnificent cities; the free city of Hamburgh itself being an object of no common attraction. Berlin, Dresden, Prague, then follow in succession, leading to the Danube and the striking Walhalla, founded by Louis of Bavaria. Ratisbon, Pesth, and Buda next present themselves, and, last of all, Constantinople. These series of each scene are well and judiciously arranged as to give variety and illustration—ships, towers, palaces, and while for colour, light, shade, and perspective, each painting is admirable both in regard to taste and effect.

MARSHALL'S MOVING DIORAMA OF A TOUR THROUGH EUROPE.—"DEPARTURE OF THE 'JOHN BULL' STEAMER."—EXHIBITED IN THE CONCERT-ROOM OF HER MAJESTY'S THEATRE.

The second scene presents the route from Rome to Mont Blanc in Switzerland. The Imperial City blazes on the view; then Venice, Lago Maggiore, Monte Rosa, Isolas, Gondo, the Simplon, Interlacken, the Jungfrau, the Wetterhorn, Lauterbrunnen, Geneva, Montanvert, and the Mer de Glace, lead to the very foot of Mont Blanc. This chain of Alpine and Swiss landscape—in its glory and gloom, with its snow-storm and its avalanche, its pastoral beauty, its lakes and canals, its gondolas and still life, its bustle and its desolation—all produce an alternation of surprises that must afford a visitor the most exquisite delights.

The third route is occupied with the Rhine scenery from Bingen to Cologne. It were impossible to describe within reasonable compass the objects that in this series crowd upon the eye. Nature and art, river and village, rock and fastness, sky and town, wave and steamer, all successively, or in combination, press upon the view, while the well-known associations linked with each spot fill the mind with pleasant fancies.

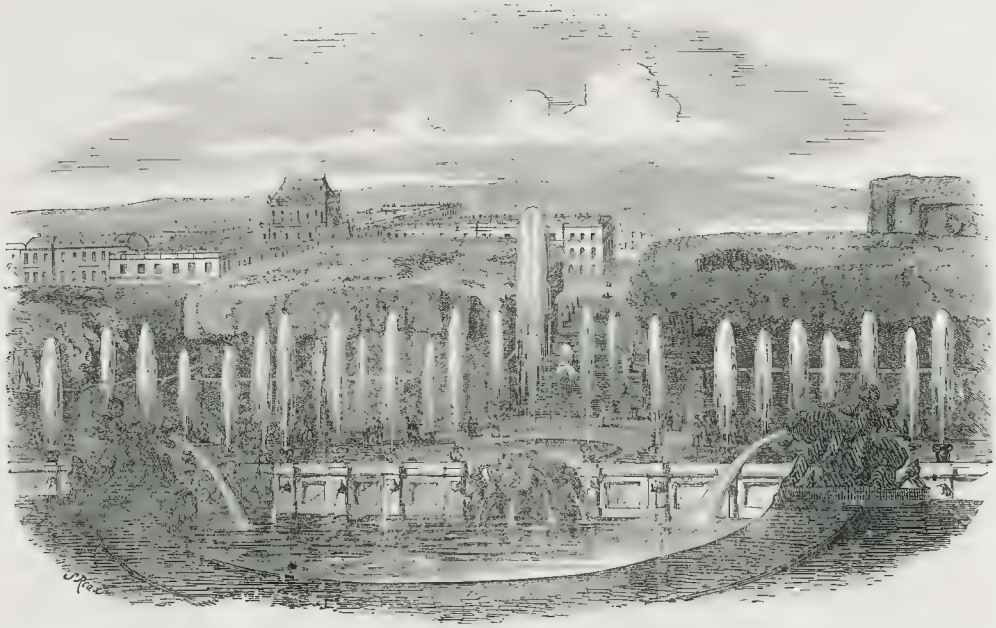
For these delightful pictures the public has to be grateful to Mr. Marshall, whose execution of them is as admirable as the scenes themselves are memorable. The exhibition is accompanied by descriptive notices, delivered in good taste by Mr. W. S. Woodin.

M. CAMBON'S PANORAMA OF VERSAILLES.

M. C. Cambon is the celebrated *artiste* of the Grand National Opera of Paris, some of the most splendid scenes having been painted by him—such as the superb ball-room scene in "Gustavus III.," the scenery of "Guido and Ginevra," "Le Diable Boiteux," "La Jolie Fille de Gand," and "The Huguenots." He takes credit, also, for the Coronation scene in the fourth act of "The Prophet," and the scenes in Auber's last opera, "L'Enfant Prodigue." Not content with these laurels, the biographical notice which precedes the description of the present panorama, states that the "Opéra Comique, also, is indebted to the renowned artist for the scenery of several of its operas, among which may be reckoned 'The Valley of Andorre,' 'La Dame de Pique,' &c.," and that "the best fairy pieces of the National Circus Theatre have been painted by him, and La Scala also decorated the magnificent theatres of Gand and Antwerp, as well as the elegant and rich mansion of Anthony de Rothschild, in London."

Such are the claims of M. C. Cambon, whose panorama of Paris, St. Cloud, and Versailles was opened to the public in Leicester-square (Linwood Gallery) on Friday last. The pictures are worthy of his reputation. They consist of three *tableaux*, illustrating the beginning, middle, and end of the series; the last realising the grand Water-works of the Gardens of Versailles, represented with real water; the other two being the Interior of Notre Dame, and a view of Paris taken from the Pont des Arts, one of the bridges across the Seine. These *tableaux* are all most effectively executed.

The pictures consist of the Triumphal Arch de l'Etoile, Champs Elysées, le Cirque National, l'Elysée Bourbon, Place de la Concorde, the Admiralty, la Madeleine, Tuileries Garden, Colonne and Place Vendôme, Tuileries Palace, Place du Carrousel, the Triumphal Arch of the Carrousel, the Seine, the quays, the Louvre, with its *Galerie*, the Pont Neuf, a distant view of the towers of Notre Dame, the village and palace of Meudon, St. Cloud, the Castle, Diogenes' Lantern, and Versailles. All are deserving of praise for their accuracy and picturesque effect. The scenes must be familiar to a large number of the spectators, who will, doubtless, appreciate both attributes; though it remains to be proved whether our night-seeing public will prefer these representations to those less known and more distant.



CAMBON'S MOVING PANORAMA—"THE FOUNTAINS AT VERSAILLES."—EXHIBITED AT THE LINWOOD GALLERY, LEICESTER-SQUARE.

SCENE THE LAST, FROM THE NEW DRAMA OF "SIXTUS V.," AT THE OLYMPIC THEATRE.]

OLYMPIC THEATRE.

THE practice of preferring translated to original pieces is extending on the English stage. On Monday night a version of one of the dramas of the Théâtre Historique, in seven *tableaux*, was ventured on these boards. The adapter for the occasion was Mr. Dion Boucicault, who, in the manipulation of his historical romance, has shown his usual tact and talent, except that he has studiously abstained from throwing any brilliancy into the dialogue, either in the form of wit or poetry. The main purpose has evidently been to exhibit the action in *tableaux*, and to make the writing subordinate to the painting and the *pose plastique*. This end has been effectually accomplished.

The anecdote of SIXTUS V., on which the plot of the play is made to turn, is only a tradition. Ranke tells us that there is no historical basis for it; nevertheless, as a traditive fiction, it typifies the character of the reforming Pontiff. The *Curé* and *Montalto* is, in this drama, made the "cloak-enclouded" providence of a love tale. One *Adrien Peretti* (Mr. Leigh Murray) has dared to aspire to the hand of *Bianca Colonna* (Miss Louisa Howard); but he is scorned by her father and brother, the *Count Colonna* (Mr. Norton, and *Fabio* (Mr W Farren, jun.) Encouraged by a rough, good-natured friend, *Hugo*, surnamed the "delicate" (Mr. Henry Farren), *Adrien* perseveres in his suit, and, in fact, succeeds in getting married by one *Anselmo*, a mysterious monk, really the *Cardinal* himself in disguise But the family of the bride are in pursuit, and a conflict ensues, in which *Fabio* is slain. The *Countess Colonna* (Mrs. Leigh Murray), on seeing the corpse of her son, prostrates herself on the earth; but the stern *Count* secures his disobedient daughter. The group we have indicated forms the subject of the third *tableau*, and is, to our mind, the most original of the seven. It concludes the second act with great applause.

Confined in the convent of Ave Maria, *Bianca* is compelled, notwithstanding the avowal of her marriage, to take the veil. While the ceremony is being performed, her husband and his friend enter; the former rushes to the altar, and tears the veil from the countenance of his wife. Great is the pious horror of the multitude. Crowds rush down the steps, and all is confusion. *Adrien*, however, escapes. His bride yet remains in the power of his enemies She is confined in the abbey of St. Ursula. But he and his friend engage the Zingari in their cause, get into the abbey, make the guard drunk, penetrate to the crypt, and find *Bianca* apparently dead, laid out on a tomb She revives, but the *Abbess* appears, and, though the Zingari effect an entrance into the chapel, and the *Cardinal* claims the accused for the Inquisition, the victim still remains in the power of her tormentors But on the morrow the scene changes *Montalto* has made his way to Rome; the conclave sits for the election of Pope; the judgment against *Bianca* proceeds; the *Countess* moves heaven and earth for her safety, but all in vain, until the decrepid, infirm old man is declared the Pope elect. What *Montalto* could not do with all his might, *Pope Sixtus V.* can effect with a word. Assuming the erect attitude, the new Pontiff shows himself a strong and determined man: dissolves the convent of St. Ursula, and restores the lovers to each other.

Mr Farren, as *Montalto*, had a character especially suited to his powers and style of acting. Mr. Murray was graceful and valiant in his bearing: and Mrs Murray, as the *Countess*, exhibited more force of passion than we had expected, in some of the situations she was really great. To Mr. H. Farren, also, we must award considerable merit for his *Hugo*: it was a dashing and effective performance. The scenery (painted by Mr Shalders) was beautiful; and all the appointments were exceedingly rich. Our satisfaction with the result of the performance would, however, have been greater, had the piece been a native production, or illustrated with a poetic spirit. As a spectacle, we must pronounce it completely successful.

WIDENING OF CHANCERY-LANE. –DINNER TO MR. J. R. TAYLOR.

ON Tuesday a dinner was given, at the George and Blue Boar, Holborn, to Mr J R Taylor, on the occasion of presenting that gentleman with a testimonial for his services in attempting to procure the widening of the north end of Chancery Lane; Sir James Duke Bart., M P., in the chair. The guests numbered between 80 and 90 gentlemen; and amongst them were many influential inhabitants of the parish of St. Andrew, Holborn. The testimonial prepared for the occasion consisted of a silver salver and *epergne*, each bearing an appropriate inscription.

The chairman, in presenting these objects to Mr. Taylor, observed that it did not require any eulogy from him (Sir James Duke) to recommend to their notice a gentleman who had lived amongst them for a quarter of a century, and who, during that time, had cultivated the good opinion of the great body of his neighbours. In alluding to the conduct of Mr. Taylor on a recent occasion, in his spirited endeavour to effect an important public improvement by the widening of Chancery-lane, he (Sir J. Duke) would only express his regret that the great metropolis should not have found means to assist a public-spirited private citizen in such an undertaking. (Hear, hear.) It was one of those

TESTIMONIAL PRESENTED TO MR. J. R. TAYLOR, ON TUESDAY.

improvements which were not only greatly required, but which might have been effected at a comparatively trifling expense. It was, therefore, much to be regretted that an application was not made to Government to assist Mr. Taylor in his endeavour to accomplish so important an object. It appeared that the same improvement might still be effected, but at a much greater expense than was originally suggested, and he trusted that the public would insist upon its being carried out. (Hear, hear.) Mr. Taylor had received the present token of esteem from them not only through his conduct in this particular instance, but from the desire they all felt to announce to him their general esteem for his private worth as well as his public usefulness. The exertions he had made during a period of twenty-five years to promote the welfare and happiness of his fellow-citizens were abundantly sufficient to entitle him to public

RECEPTION OF A MONSTER RAILWAY BAR, AT PORT TALBOT, GLAMORGANSHIRE.—(SEE NEXT PAGE.)

esteem. (Hear, hear.) He had been a large subscriber to the Farringdon Dispensary, and many other local charities. Besides these acts of charity, Mr. Taylor had been greatly instrumental in promoting the establishment of baths and wash-houses for the poor, and in impressing upon the public mind the great advantages of those institutions. He had, in many other ways, proved himself a most valuable servant to the public, and he (the Chairman) trusted that he might long be spared to continue his career of usefulness. (Cheers.) He concluded by proposing the health of Mr. Taylor, and presenting to him the testimonial which stood on the table

The toast having been responded to with great enthusiasm,

Mr. Taylor returned thanks; and in doing so assured the company that he could not find words to express the gratitude he felt for the great honour which had been conferred upon him. He did not think, however, that the testimonial now presented to him had been solicited by any merit in him, but it had its origin in the fact that his excellent friends on the occasion were anxious to testify to an important principle, viz. that although he had been unsuccessful in the attempt to effect a desirable public improvement, his efforts were still deserving of acknowledgment on account of the good they were intended to promote. (Hear.) He believed the meeting to be the commencement of a different order of things as regarded metropolitan improvements. He had suggested that a Commission should be appointed to take such matters in hand; that there should be a board to whom they might resort for assistance, and that the Secretary of State should have the power to advise upon all subjects submitted to him by such Commission. (Hear, hear.) If Parliament had been sitting at the time the contemplated improvement was suggested, he felt that they should have succeeded in accomplishing their object. But he still hoped that something would be done in the matter; and whatever propositions might hereafter be brought forward, he trusted that utility would always be the aim of all their endeavours. (Hear, hear.) As regarded the acts of charity he had performed, he must observe that he had only done his duty, and he was proud to think, that, having formerly served an apprenticeship in the City of London, he was blessed with the means of doing good to his fellow-men. For the testimonial with which they had honoured him, he lacked them all sincerely. It was not only a source of profound satisfaction to him, but it was also highly gratifying to his children, who would point to it as a great honour conferred upon their father. (Cheers.)

The Chairman then proposed the health of the Rev. Mr Toogood (Rector of St. Andrew's), the Rev. Mr. Davis (the Ordinary of Newgate), and the Rev. Mr. Pizey (another district clergyman); and the Rev. Mr Toogood returned thank-

The Rev. Mr. Davis then proposed the health of the Chairman, and expatiated upon the good offices which had been performed by Sir James in his various capacities of alderman and member for the City of London, and also in the positions he had latterly occupied of Sheriff and Lord Mayor

The toast having been warmly responded to,

Sir James Duke returned thanks.

"The Corporation of London" was next given, and was responded to by Mr. Deputy Bedford; and in the course of the speeches which were made upon the subject, various allusions were made to certain improvements which it was considered ought to be effected in the immediate neighbourhood of Holborn.

Other toasts followed, and the company separated at an early hour

The Testimonial, of novel and elegant design, manufactured in silver, by Messrs. Angell, Strand, bears the following inscription :—" This Epergne, with a Salver, were presented to John Robert Taylor, Esquire, by a large circle of his friends and neighbours, in testimony of their esteem for his long-tried services in promoting the welfare of his fellow-creatures, more particularly in his recent efforts to effect a great public improvement by widening the north end of Chancery-lane. February 15th, 1851."

MONSTER RAILWAY BAR.

A few days since this splendid specimen of railway iron was received at Port Talbot, Glamorganshire, for shipment, per *Ashley*, for London. This stupendous Bar was manufactured at the Cwm Avon Iron and Tin Works, and is 62 feet 5 inches in length; it weighs 56 tb. to a foot. It was rolled at one heat, without a flaw or crack in the [illegible]. It is accompanied by a miniature specimen of the same form, 40 feet long, and weighing only 4 lb. per yard. On the top are engraved the names of the manager of the works, John Biddulph, Esq., and the mill manager, Mr. Nathaniel Evans.

COUNTRY NEWS.

SOUTH NOTTINGHAMSHIRE ELECTION.—The following was the result as no meal at the close of the poll, on Monday, at Newmarket. For Viscount Newark, 1482; for William Hodgson Barnard, 1493. Majority for Mr. Barrow, 11.

BEDFORD ELECTION.—The nomination took place on Monday last, when Col. Gilpin (Protectionist) and Mr. Houghton (Free-Trader) were duly proposed and seconded. The show of hands being in favour of Colonel Gilpin, a poll was demanded on the part of his opponent. The poll was opened on [illegible]

LIVERPOOL DISTRICT PROVIDENT SOCIETY.—On Tuesday a meeting of the friends and subscribers of this institution was held at the Savings bank, Liverpool; the Mayor, John Bent, Esq., in the chair. From the report it appeared that the amount of subscriptions during the past year had been £826 19s. 6d.; that of donations, £804 6s. 7d. The number of successful applicants for relief were 8180, who had been relieved at a cost of £206 5s. 7d. The deposits, £8592 3s. 4d. The committee, in concluding their report, alluded to those imposters who actually robbed the poor, the begging-letter writers, a number of which they (the committee) had succeeded in detecting. The report having been adopted, and the officers for the year appointed, Mr. J. A. Tinne observed, that, if we gave money to people in the streets, of whom we knew nothing, it was not charity, but an indirect robbery of the poor. (Hear, hear.) What he called real charity, was always to investigate a case, and to know to whom you were giving, which might be easily done by means of the District Provident Society. (Applause.)—The Ven. Archdeacon Brooks, in moving "That the meeting record with grateful feelings the active and zealous services of the visitors during the past year, and that no pains should render a greater benefit on the institution than by visiting the poor. (Hear, hear) He was sorry to perceive a decrease in the number of visitors. They had now only 174, whereas, some few years ago, there were 400; therefore he felt sure that the meeting would not hesitate to accord thanks for their services to the few faithful friends who remained. The motion was carried by acclamation.

EDUCATION.—A meeting took place on Wednesday, at the Town Hall, Manchester, the Dean in the chair, upon the subject of education on the plan first drawn by the Rev G. Richson, to carry out which the following were given as his commencement subscriptions:—Sir J. Ray Shuttleworth, £500; Messrs. W. Entwisle, £500; S. Taylor, £500; J. C. Hester, £500; R. Gardner, £500; [illegible], £300; R. J. Jones, £500; W. Neild, £500; [illegible], £500; Dean and Chapter, £500; [illegible], £500; [illegible], £500; [illegible] Wood, £250; and J. A. Turner, £100.

EMPLOYMENT OF CONVICTS AT PORTSMOUTH.—The deputation appointed by the Portsmouth Town Council to wait on the Home Secretary, in reference to the projected convict prison adjoining the dockyard, presented their report of the results of their interview to the council on Monday last. The report stated, that "the Home Secretary entered fully into the subject, stating that, after long and mature consideration, the Government had come to the determination to abolish the present system of confining convicts in hulks, on the grounds, firstly, of the saving to the country which would be effected by their being confined in prisons on shore; and, secondly, for the enforcement of a better system of discipline than could possibly be maintained in prison ships. With reference to the apprehensions entertained by the inhabitants of Portsmouth, of a large addition being contemplated in the convict establishment, Sir George Grey added, that, while the present hulks would take 1500 convicts, the intended prison would contain only 1000. A less objectionable site than that resolved on was suggested to Sir George; but he added that whilst he was not wedded to any particular spot, it was the convenience of the Admiralty that must be considered. In addition to what was elicited in conversation from Sir George Grey, the Mayor of Portsmouth had received a letter from the Home Office, recapitulating the views of Sir George Grey, which he read. The explanations were by no means satisfactory to the council, and strong complaints were made of the measures intended, and also of the want of assistance from the borough members, Sir Francis Baring and Sir George Staunton, in opposing them, or at all events in getting them modified. The council unanimously resolved on an address to her Majesty, praying her Majesty to interfere with her authority to prevent the accomplishment of what was conceived to be an injury and disgrace to the neighbourhood. It was determined to forward the address to the Duke of Wellington for presentation to her Majesty

THE SAILORS' STRIKE.—On Saturday last, Captain Chidley, R.N., who went down to Hull for the purpose of explaining to the seamen the provisions of the Mercantile Marine Act, met an assemblage of about 600 mariners, at the Victoria Rooms, Queen-street, in that town. He was introduced to the meeting by the Mayor, who presided over it. The gallant Captain referred the men to the reply sent by the Board of Trade to the Sunderland memorial as a sufficient answer to an exactly similar memorial about to be sent from this port. With reference to the shipping-offices, he reminded the meeting that the crews of vessels were not compelled to have their agreements drawn out at these offices under the new system; it was only necessary that they should be recorded before the shipping-master, who would overlook the articles, to see that the men were not entrapped into a disadvantageous bargain, or into one the particulars of which were unknown to them, as was too frequently the case. He alluded to the degradation in the value of the advance notes which took place under the old system, owing to the numerous forgeries, and to the non-authorization of the ship-owner. These chances were now obviated by the existence of shipping-offices, and by the new act, under which the notes were made of watered paper, like Bank of England notes, so as to prevent forgery. the authority for their issue being given in the agreement. Commenting on the allowance which would result to the men from the power vested in the shipping-master to settle all disputes between the master and crew, Captain Beckley observed that this did not deprive the seaman of the privilege of mustering in force; by submitting his claim to a justice of the peace. He repeated that the shipping-offices were instituted solely to protect the seamen from impositions of various kinds, and he expressed the hope that he had succeeded in removing the objections of those present. This observation, however, was met by cries of "No, no !" and Captain Beckley's further reply to various objections urged by members of the committee failed to produce any sensible impression. The secretary (Christie) said, in answer to a peace-making remark from the Mayor, that he would rather go over to Liverpool, and work his way to the United States there to remain, than cease from the present agitation. He denied that it was a strike, either in regard to the obnoxious legislation regarding seamen, or to the question of wages. The meeting loudly applauded this sentiment, and there was evidently, at the termination of the proceedings, but little advance made towards a settlement of the existing differences. The committee at Hull have adopted an effective plan to prevent defection from their ranks. They have collected the register tickets from all the men who have struck, and who have attended their various meetings, and as, with one these, of course, no sailor can sign articles, the owners are deprived of almost any chance of obtaining crews. Under this system the shipping-office has become next to a dead letter. In Shields and Sunderland the seamen are taking very decided, but not very wise, measures against the Mercantile Marine Bill. Several persons were on Monday last taken into the movement have been roughly handled by the seamen on strike and their female friends, who tarred and feathered the unfortunate delinquents most temerariously. On Saturday a very large meeting was held, under the presidency of the Mayor of Shields; but no amicable conciliation was attempted, nothing in that direction succeeded with the sailors The attitude assumed is so determined, that it is feared much inconvenience may attend the present crisis.

THE KENT BURGLARIES.—On Friday (last week), the six prisoners, Clarke, Thomas, Weston, Wilson and his wife, and Hannah Summers, who were brought up on the previous Wednesday on several charges of burglary in the neighbourhood of Rochester and Maidstone, were fully committed for trial.

BURGLARIES.—On Tuesday information was circulated, that, on the previous Wednesday morning, the house of the Rev. John Hall, Roman Catholic priest, in the Canterbury-road, Kennington, was broken into, and robbed of a set of communion plate, consisting of a silver chalice, ten inches high, and gilt inside, a silver plate about five inches in diameter, gilt in the upper part, and about the same dimensions as the chalice. The chalice is described as embossed in the silver cup of open network, with the figures of angels and grapes engraved upon it, and on the foot of the chalice appears the name, "Daniel Fitter, Paris, 1777 or 77. A reward of £30 has been offered for discovery.—At Knowsley, near Prescot, the house of Mr Thomas Richardson, a farmer, was entered by five men, armed with pistols, and were happily disturbed by the arrival of the inmates in a very brutal manner, and stole £52 in gold and silver, an old silver watch, and a gun. A reward of £50 has been offered for the discovery of the offenders, and nine of a number held out to any one of those who will give such information as may be the means of bringing the others to justi

DISLOCATION BY FIRE OF LORD DOWNES' SEAT IN THE ISLE OF WIGHT.—A fire took place on Monday, at Binstead, near Ryde, Isle of Wight, the seat of Major-General Lord Downes, which was totally consumed. Very little of the furniture was saved. It was reported that the property lost £30,000 worth of jewels. His Lordship and family were crossing from Portsmouth, and saw the conflagration from the deck of the steamer; they were coming to Binstead to pass the Christmas holidays, and were expected the same evening. The cause of the fire was the careless way in which a stove had been set in the study. The wall between this room and the drawingroom was but half a yard thick; this had been knocked away, and the stove thrust against the battening, which was canvassed

FIRE IN THE ISLE OF WIGHT.—On Monday afternoon, the whole of the west side of Binstead, near Ryde, the seat of Lord Downes, was consumed by fire. The fire is attributed to some linen having caught fire in being aired, the family were expected the same evening.

WRECKS.—Since the late gales large portions of wreck have been continually washed on shore in various parts of North Wales. At Pwllheli, in Carnarvonshire, many pieces of wreck have drifted to land; at Port Neigwl Lleyn, the bottom of a vessel, apparently of foreign build, and from 200 to 300 tons burthen, has come to shore, and at Abererch the keel, of another vessel., with the stempost attached, has been cast on shore. Other pieces have been secured on the Anglesea coast.

WORKHOUSE RIOTING.—On Monday a rather serious disturbance occurred in the workhouse at Yarmouth, Norfolk, in consequence of the riotous behaviour of several of the able-bodied young men, who, having combined together to commit a breach of the peace, with that object, as it has since come out, of ultimately getting possession of the stores and provisions, but this design was frustrated by the timely interference of a detachment of police. The riot was smashed a great number of windows, benches, frames, &c., being £6 or £7 in damage. Six of the ringleaders, consisting of idle and dissolute young men, all from sixteen years of age to twenty, have been committed for two months each to the treadmill.

FATAL AND DESTRUCTIVE RAILWAY ACCIDENT.—On Tuesday evening, on the London and North-Western Railway, near Aldertey, an accident occurred, which was most destructive of railway property, and productive of considerable interruption of the traffic. The Government train, which left London at seven o'clock in the morning, drew up at the Aldertey station in front of nine or ten carriages. The train proceeded in safety until it reached a point about half a mile on the other side of Aldertey (fourteen miles from Manchester), when it was moving at a very rapid pace, although it was not travelling at the usual speed on leaving Crewe. At this point about one-half of the tire of one of the leading wheels flew off; the engine, after losing the wheel, appears to have got off the line, and to have proceeded for a short distance; it must then have fallen over on the off side, and been immediately brought to a stand by being firmly fixed in the ground. Chadwick, the driver, was thrown off on the up side of the line; but the stoker fortunately remained on the engine. The carriages were smashed and heaped together in the most extraordinary manner; and the shrieks of the passengers were fearful. The mischief was discovered from the neighbourhood of the Aldertey station immediately after its occurrence, and the station-master there proceeded to the spot with all the aid he could collect. He also despatched an engine to Manchester in order to give information of the accident there. As soon as men could be got to work, the passengers were extricated, and, fortunately, all alive. Chadwick, the driver, was almost immediately found, in the gutter or watercourse on the up side of the line, under the lower part of the tender. He lay across the gutter with his feet towards the line; and, although no part of the tender rested upon his body, a screw-jack lay upon his chest, and rendered fruitless all attempts to remove him. By dint of great exertions for about half-an-hour, the tender was lifted, the screw-jack removed, and then the unfortunate man was taken out quite dead. His body was removed to the Queen's Hotel, at Aldertey. All the injured persons were taken on to Manchester, with the exception of a married lady, named Hulse, who lay at the Queen's Hotel, suffering from a spinal concussion. She was from Liverpool, her husband having come for some friends in Salford. Mr. Allison, a medica. gentleman residing at Bridlington, Yorkshire, went on to Manchester by the first train. He had snatched a fracture of the skull, and received bruises all over the person which rendered his case critical. The following persons were among the injured passengers: Mrs Barber, Pendleton; Mrs. Brown, 7, Back Garden-street, Shudehill; Bernard Hughes, Ancoats-lane, Manchester; Mr. Hamilton, 85, New Bridge-street, Blackfriars; Mrs. Cope, 8, Fleet-street, Salford; Mr. Banks, North Bridge, Edinburgh; Mr. Rose, Northampton-street, Leicester. The guard of the train was severely bruised, and had his shoulder dislocated. The stoker was also much bruised in several parts of his body

DARING LEAP.—On Sunday evening last, a corporal and private of the 9th Foot were escorting a deserter from Dublin to Dublin by the Mid-and Great Western Railway. When within about seven miles of the Dublin, and near Clonsilla station, the prisoner managed to relieve himself of the handcuffs, and suddenly opened the carriage-door, he jumped out. The corporal in charge, on missing the prisoner, at once made a spring out after him, although at the imminent risk of his life, the train going at the rate of fully forty miles an hour at the time. He was not hurt by the fall, but the matter was reports to the superintendent, who returned on an engine to where the accident occurred, under the impression that both parties must have been killed. On arriving at the spot they found the corporal in safe custody, on reaching the place he found both the corporal and prisoner quite safe, and proceeding on their march to Dublin.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The English Market has been dull during the week, with a declining tendency. An intention on the part of the Directors of the Bank of England to increase the rate of discount was generally reported, which, added to the unsatisfactory arrangements of the Budget, caused considerable depression in the [illegible] apparent depression. The Chancellor's intention to devote one million to the reduction of the National Debt, would, under ordinary circumstances, have supported the Market, but the anticipation of a new description of stock, and the strong feeling exists that the whole scheme requires remodelling, and that, if it be not acceded to, the existence of the Ministry will be dangerously jeopardised. Under these circumstances, business has been limited. The highest price of Consols was on Tuesday, 95¾ to ½ being then the quotation. A decline to 95¾ to ½ followed, and a slight further depression was afterwards marked. Exchequer Bills continue to sit ely ready, having declined ten shillings since the beginning of the year. India Bonds have also fallen about twelve shillings. At the close of the week the Market continued heavy, at the following prices:—Bank Stock, 215 to 217. Reduced, 97¼; Consols, 95¾ to ½. New 3½ per Cent. Annuities, 98¾; Long Annuities, to expire Jan., 1860, 7 11 16ths; Ditto, 30 years, Oct. 10, 1859, 7 7-16ths; Ditto, 30 years, Jan. 5, 1860, 7 7-16ths, India Stock, 266¼; India Bonds, £1000, 28 pm; Consols for Account, 96¼; Exchequer Bills, £1000, June, 47 pm, Ditto, £500, June, 47 pm; Ditto, Small, June, 47 pm.

Alterations in the values of the various Foreign securities did not exceed fractional amounts, and were principally in Portuguese, Mexican, Spanish, and Peruvian. The three last enumerated stocks have all been dealt in at a slight decline. Business at the close of the week was very inactive, as the following official list of registered bargains will demonstrate. Brazilian Bonds, 92½; Danish Bonds, 5 per Cent, 103, Mexican, 5 per Cent, 1845, Ex Jan. Coupons, 33, Peruvian Bonds, 44 per Cent, 75½; Do., Account, 75¾; Portuguese, 4 per Cent., Do., Account, 35; Russian Bonds, 4½ per Cent, 97¼; Do., Small, 97¾; Spanish 5 per Cent., 1840, 19¾; Do., Account, 19½; Dutch 2½ per Cent., 59¾; Do., 4 per Cent., Account, 91¾.

Shares are less buoyant than they have been for some time past, the Market, with few exceptions, looking we.ker. The South-Western Railway Incrense of the year has fallen off to 4 per cent., the capital account being virtually closed. For some time past, the large business that has been doing in the foreign lines has attracted the attention of the monied interest, from the effect generally produced on the exchange by the payment of the accounts. A cessation to some extent in purchases of Foreign Railway Stocks has, however, taken place in this past week; but the influence exercised will, doubtless, not be lost sight of by the directors of the Foreign Railways. At the end of the week the tone of the Market was flat, at the following prices.—Aberdeen, 13¾; Birmingham and Oxford Junction, calls daily paid, or with a guarantee, 2½; Buckinghamshire, 14¼; Caledonian, 11¾; Do., £10 Preference, 8¾; Chester and Holyhead, 20¾; Eastern Counties, 7¾; Do., New, Preference, 6 per Cent., 11¾; Eastern Union, B and C Shares, 4¾; East Lancashire, 14¾; East Lincolnshire, Guaranteed 5 per Cent., 102; Edinburgh, Perth and Dundee, 78½; Great North. ern, 18; Do., Halves, A Deferred, 6¾; Do., Halves, B, 6 per Cent., 11¾; Do., 5 per Cent., Preference, 13¾; Great Western, 91¾ ex. div., New, £17, 10s.; Lancaster & Carlisle, 76¾; Lancashire & Yorksh. 16¾; Do., 10ths 43¾; Leeds & Thirsk, 15¾ x d.; London & Blackwall, 7¾; London, Brighton, and South Coast, 97¾; London and Greenwich, 11¾; London and North-Western, 95¾; Do. do., New Quarters, 93¾; Do., 10ths, 18¾; Do., £10 Shares, M. and B. (c), 4¾; London and South-Western, 80¾; Manchester, Buxton, and Mat. lock, 1¾; Manchester, Sheffield, and Lincolnshire, 15¾; Northern of France, 15¾; Paris and Rouen, 26¾ x d.; Paris and Strasbourg, 10¾; Rouen and Havre, 10¾; Sambre and Meuse, 3½; Tours and Nantes, 0¾.

THE MARKETS.

CORN EXCHANGE. The [illegible] Market [illegible] Wheat and [illegible] Barley [illegible] Oats [illegible] Beans and [illegible] Peas [illegible] Flour [illegible] Linseed [illegible] Cloverseed [illegible] Rapeseed [illegible] Foreign [illegible] Linseed [illegible] Rapeseed [illegible] Flour [illegible] Wheat [illegible] Barley [illegible] Oats [illegible] Beans

ADVERTISEMENTS.

HER MAJESTY'S THEATRE, 1851.—The following outline of the arrangements for the season is respectfully announced to the Nobility, Subscribers, and patrons of the Theatre, as promised with the confident hope that the successful exertions of the Management during the past season, and of the legal reputation and character of Her Majesty's Theatre.

ENGAGEMENTS FOR THE OPERA.

Signor Lablache, who will appear for the first time in England as Don Magnifico in Rossini's Opera of the Italian Opera, Paris (Salle Ventadour) and of the Pergola, Florence, as Principal Theatre of Italy, and Madame Balfe, the Star of the Grand Theatre of Turin, the Principal Theatre, Florence, and the principal theatres of Italy; Mdlle. Fodor, Mdlle. Angiolini (Recovering Artistes have been re-engaged—Madame Sontag, Mlle. Parodi, Madame Giuliani, Mdlle. Ida Bertrand, and Madame Formilles, who appeared at the close of last season.

An engagement has also been made, for a limited number of nights, with Mr. [illegible]

Signor Gardoni, [illegible] with his first appearances), Mr. Sims Reeves, Signor Giuliani, Signor Soldini, Signor Ferranti (the Italian Opera, Paris, his first appearance), Signor Bonjolli (of the Italian Opera, Paris, his next appearance), Signor F. Lablache, Signor Leymore, Signor Casanova (of the Italian Op ra, Paris, his first appearance), and Signor Lablache.

Other arrangements of great interest are in progress.

The Music and Conductor, M. Balfe.

Leader of the Orchestra, Mr. Watson.

Leader of the Ballet, M. Musin.

Master of the Ballet, Mr. Lee.

Great care has been taken in the selection of the Dancers.

The chief of the Chorus will be increased by the addition of several Chorists to the Company.

The following novelties are now entered, that M. MEYERBEER will supply the first of the productions of a NEW GRAND OPERA, in which the great Composer is engaged to write the Music, and which will complete the series of the most attractive Novelties at the "Camp de Mars."

An entirely NEW GRAND OPERA, composed by M. BALFE expressly for the Theatre by Mr. Bunn, will shortly be produced; and a NEW OPERA, by M. AUBER, now completing expressly for Mr. Lumley.

A posthumous work of Donizetti, that has likewise been secured.

In addition to the most admired works of the following Composers, on a scale of completeness adapted to the Theatre, and to the [illegible]

Madame Flotzinski will appear, at the opening of the Theatre, in the Opera of [illegible]

Signor Neri Baraldi will appear the first week in April in the new Opera of [illegible]

Mr. Sloman will also appear [illegible] Easter

ENGAGEMENTS FOR THE BALLET.

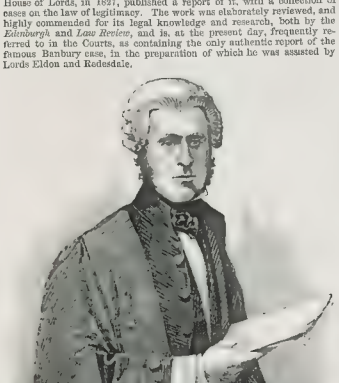
Mdlle. Carlotta Grisi, Mdlle. Amalia Ferraris, Mdlle. Marie Taglioni, Mdlle. Fanny Cerrito, Mdlle. Emma Livry, Mdlle. Adeline Plunkett, Mdlle. Angiolina, Mdlle. Rosa, Mdlle. Rosati, Mdlle. Cecchetti, Mdlle. Rosina, Mdlle. Augusta, Mdlle. Ferraris, Mdlle. Fanny Bias, Mdlle. Ellen Bias, Mdlle. Carlotta Bias, Mdlle. Bertha, Mdlle. Pauline

PARLIAMENTARY PORTRAITS.

SIR DENIS LE MARCHANT, BART., CHIEF CLERK OF THE HOUSE OF COMMONS.

SIR DENIS LE MARCHANT is the second son of General Le Marchant, who, on the 23d of July, 1812, led the charge of the heavy brigade on the battle of Salamanca, and fell on that fiercely-contested field. His elder brother, a captain in the Guards, fought by his father's side on that occasion, and was killed at the battle of Nieve—one of the last of the Peninsular War.

Sir Denis Le Marchant was born in the July of 1795, at Newcastle-upon-Tyne; educated at Eton and Trinity College, Cambridge; entered Lincoln's-inn as a student of law, and was called to the Bar in 1822. He practised for several years in the Court of Chancery, and, having been one of the counsel in the celebrated Gardiner Peerage case, before the House of Lords, in 1827, published a report of it, with a collection of cases on the law of legitimacy. The work was elaborately reviewed, and highly commended for its legal knowledge and research, both by the *Edinburgh* and *Law Review*, and is, at the present day, frequently referred to in the Courts, as containing the only authentic report of the famous Banbury case, in the preparation of which he was assisted by Lords Eldon and Redesdale.



SIR DENIS LE MARCHANT, BART., CHIEF CLERK OF THE HOUSE OF COMMONS.—FROM A PHOTOGRAPH BY KILBURN.

On the accession of the Whigs to office, under the Grey Administration, in 1831, Mr. Le Marchant became principal secretary to Lord Chancellor Brougham, and retired from the Bar.

In the September of 1833 he published, at Ridgway's, a tract, entitled "The Reform Ministry and the Reformed Parliament," reviewing the debates and measures of the first session of the Reformed Parliament, in answer to the question put, in the course of the debates on the Reform Bill, by the Duke of Wellington to Earl Grey, "I should wish to ask the noble Lord, how any Ministry would hereafter be able to conduct the King's Government, with a Parliament such as will be returned by this bill?" The matters which mainly engaged the session were—Ireland, slavery, finance, the Bank charter, the East India charter, trade, law, corporations, poor-laws, and foreign policy. On all these it was shown that the House had been in no way unfitted for legislation by Reform, no session, in the history of Parliament, had ever been more observant of the rules of the House, or had got through so large an amount of business. It sat on an average nine hours each day during a session of 142 days, making 1270 hours; whilst in the long session of the previous Parliament, under all the excitement of the Reform Bill, the total sittings did not exceed 918 hours; and both in committees, and in debate on home and foreign policy, the new Parliament had fully maintained the honour and constitutional dignity of the popular branch of the Legislature. It was well known at the time that the leading members of the Cabinet were considerable contributors to this publication, which was in reality an appeal to facts in vindication of reform. In a few months the pamphlet passed through nine editions, selling upwards of 20,000 copies, was translated into French and German, and in both countries had an extensive and rapid circulation, 6000 copies being sold at the Leipsic September fair, in answer to all the idle prophecies against it.

On the change of Ministry in 1834, Lord Brougham left the Woolsack. In 1835 the Whigs returned to office, and in the following year Mr. Le Marchant was appointed one of the secretaries of the Board of Trade, an office which he held until 1841, when he was appointed one of the secretaries to the Treasury. In the August of the same year he was made a Baronet, and at the general election contested Harwich, along with Mr. Bagshaw, against Major Beresford and Mr. Attwood. On this occasion, Harwich surpassed all former corruption, and became famous in the annals of electioneering, from the fact, that a portion of the Liberal committee, bought over at a good round sum, actually led the voters against their own candidates. Both the Liberals were thus defeated the numbers being: Attwood, 94; Beresford, 94; Bagshaw, 83; Le Marchant, 74. The return was petitioned against. Mr Attwood agreed to resign his seat in favour of Sir Denis Le Marchant, but the compromise was, with others of the same order, prevented from taking effect, by the appointment and report of Mr. Roebuck's committee, which, although it allowed the bought seats to be retained, gave a death-blow to all such negotiations for the future, which were, in fact, an ingenious mode of returning members without regard to the will of the constituency, escaping the legal consequences of corruption. Thus beaten at Harwich, Sir Denis Le Marchant did not, during the Peel Administration, again offer himself as a candidate to any constituency. He was not, however, an idler in the field of politics, but, in 1845, published in four vols. 8vo, at Bentley's, "Memoirs of the Reign of George III.," by Horace Walpole, with copious illustrative notes, chiefly biographical, the notes themselves being alone sufficient to form a volume, and valuable, as containing much original information of the leading public characters of the Walpole era, derived principally from original manuscript sources. The extracts from the autograph letters of George III. to Lord North, and also from the autobiographical manuscript of the Duke of Grafton, given in the Appendix, being exceedingly interesting and curious.

About the same time Sir Denis Le Marchant wrote and printed (without publishing it) a memoir of his father, which furnishes the substance of a detailed note in Alison's "History of Europe," where it is described as a rare and "very interesting work."

On the re-accession of the Whigs to power in 1846, Sir Thomas Wylde was appointed Attorney-General. Whilst canvassing Worcester for his election, on acceptance of the office, Chief Justice Tindal died suddenly. Wylde was at once appointed his successor. Sir Denis Le Marchant brought the news to Worcester the night before the nomination, and was nominated in his stead, and returned without opposition. During the sessions of 1846 and 1847 he sat for this constituency, but took no very active part in Parliamentary proceedings, further than being a diligent voter, and serving on committees. On the general election in 1847, he was appointed Under-Secretary of State for the Home Department, and, during the Chartist excitement of 1848, sympathetic with the French revolution, held the office, and had his name frequently brought before the public in no very good temper by the disturbers of the public peace. In 1848 he returned to his former position at the Board of Trade, and there remained until, at the death of Mr. Ley, he was appointed to his present office of Chief Clerk of the House of Commons.

In the February of 1835 he married Sarah Eliza, fourth daughter of the late Charles Smith, Esq., of Sutton, Essex, and sister of the late Sir Charles J. Smith, Bart., by whom he has a son, Henry Denis, born in 1849, and other children.

The family of the Le Marchants has been settled for many generations at Guernsey, and has always held considerable property and the highest offices in the island, Sir Denis' lineal ancestor having been Chief Magistrate and Lieutenant-Governor of the island in the reign of Edward III., in 1294.

Our Portrait is from a photograph by Kilburn.

CHURCH, UNIVERSITIES, &c.

OXFORD.

The following is the subject of the Great Exhibition Prize Essay (100 guineas): "In what respect is the union of all nations at the Great Exhibition calculated to further the moral and religious welfare of mankind, and thus conduce to the glory of God; and in what respect may we as a nation and as individuals most effectually promote this object?" Adjudicators—The Rev. R. Michell, B.D., Public Orator of the University of Oxford; the Rev. R. Walker, M.A., F.R.S., Reader in Experimental Philosophy, Oxford. The compositions are to be sent in (postage free) to the umpire, the Rev. Dr. Emerton, Hanwell College, Middlesex, on or before the 31st of March.

CAMBRIDGE.

PORTRAIT OF THE VICE-CHANCELLOR.—For the last twelve months a subscription has been going on among the members of St. Catharine's Hall (*a statu pupillari*, who have experienced the benefits derived from the instructions of Professor Corfe, now master of Jesus College, and Vice-Chancellor of the University, and formerly tutor of St. Catharine's Hall, to mark their sense of the value of such aid. The subscription having reached the required sum, a life-like portrait of the Vice-Chancellor, in his robes as Bachelor of Divinity, has been executed by Samuel Laurence, Esq., of London, and has been suspended in the hall of the College, so long the scene of the Vice-Chancellor's valuable labours: it now forms a graceful memento of the connexion of the Vice-Chancellor with that society, and a valuable addition to the College pictures. The picture has been engraved, and a copy furnished to each subscriber.

INCORPORATED SOCIETY FOR PROMOTING THE ENLARGEMENT, BUILDING, AND REPAIRING OF CHURCHES AND CHAPELS.—At a meeting of this society, held on Monday last, under the presidency of his Grace the Archbishop of Canterbury, the Archbishop of York, the Bishop of London, the Rev. Sir Charles Farnaby, Bart.; Sir R. H. Inglis, Bart., M.P.; the Right Hon. Sidney Herbert, &c., grants of money were made in aid of the erection of new churches at Cullingworth, in the parish of Bingley, Yorkshire; and Pendeen, in the parish of St. Just, near Penzance, Cornwall, both of which are districts constituted by the Ecclesiastical Commissioners; also at Hendon, in the parish of Bishopswarmouth; Bury-lane, a district to be formed from portions of the parish of Newton Kenyon, and the chapelry of Bedford, near Bury, Lancashire; and Oakenshaws, a district to be formed from portions of the parishes of Wombridge and Priors Lee, near Wellington, Salop. Grants were also made towards rebuilding the chapel at Preston Patrick, in the parish of Burton-in-Kendal, Westmoreland, and for enlarging and otherwise increasing the accommodation in the churches at Colton, near Rugeley; Launceston, Cornwall.: Llanfairy-neubwll, near Holyhead; and Llantrhydd, near Ruthin.

THE CHURCH IN WALES.—Some short time ago the Lord Chancellor presented the Rev. David Jeffrey, curate of Neath, in South Wales, to the rectory of Tir Newydd, in Anglesey, vacant by the death of the Rev. Rhys Hughes. Mr. Jeffrey is a Welshman, and well acquainted with his mother tongue; and in reference to this subject, it is asserted that the Lord Chancellor has expressed his intention of not bestowing any of his Welsh patronage on ministers who are not thoroughly proficient in and masters of the Welsh language.

EAST FARLEIGH.—A very gratifying testimonial of the respect of the parishioners has lately been received by the Rev. E. Coffin, late curate of this parish, under the Rev H. W. Wilberforce, consisting of a handsome communion service, for visiting the sick. This mark of respect is the more pleasing as being the united offering of all the leading parishioners.—*Maidstone Journal.*

TESTIMONIALS.—The following clergymen have lately received testimonials of esteem and affection:—The Rev. John Thompson, late assistant minister of Roland Episcopal Chapel, North Leith, from the congregation; the Rev. William Holme Milner, vicar of Penrith, from the parishioners; the Rev. William Edward Evans, from the members of his congregation at Monkland, Herefordshire; the Rev. John Gatlin Butler, from the congregation of St Jude's, Liverpool; the Rev. William Bateson, late of St. John's, Dukinfield, Cheshire, from the congregation; the Rev. John Henry Kirwan, late of Old Cleeve, Somerset, from the parishioners; the Rev. G. H. Connor, of St. Mary's, Wareham, Dorset, from his Bible-class; the Rev. William Duncan Long, late of St. Bartholomew, Birmingham; the Rev. Henry Dampier Phillips, late of Beoley, Redditch, Herefordshire, from parishioners; the Rev. Edward Philiott, late of Weston-in-Gordano, Somerset, from the parishioners; the Rev. T. Bowen, curate of Lesanaig or Church, from the congregation; the Rev. W. Jones, in the Cathedral of Llandaff *Beauty Incarnate!* The Rev. T. B. Corey, in the deanery of Hawkesbury, Gloucestershire. *Rectories:* The Rev. E. Evans, to Halkin, Flintshire; the Rev. W. M. Williams, to Llandudnan, Montgomeryshire; the Rev. H. Hughes, to Rogerston, Pembrokeshire; the Rev. R. B. Wright, to Milstead and Frinstead. *Vicarage:* The Rev. W. Pigott, to Whaddon.

VACANCIES.—Hanslope Rectory and Vicarage, with Castlethorpe Curacy, Buckingham, diocese of Oxford; value £90 with residence; patron, G. Hyde, Esq; Rev. J. Mayne, deceased. Pilton Rectory, Northamptonshire, diocese of Peterborough; value, £240 with residence; patron, Lord Lieutenant; Rev. J. Drummond, deceased. Melling Vicarage, Lancaster, diocese Manchester, value, £135 and residence; patron, Lord Chancellor; Rev. J. Fatham, deceased. Chaplaincy to the Duke of Hamilton and Brandon; Rev. J. Tatham, deceased.

THE HONOURABLE JOHN CHARLES FREMONT.

To review the life of the subject of this Sketch—to recapitulate the hardships and privations with which he has triumphantly battled—to recount his additions to geological science, and to poetry his manly and noble virtues adequately, were a task requiring much study and time, and space greater than the columns of a journal devoted to the history of daily events could conveniently bestow. But the enterprise, determination, and courage which add themselves to an extraordinary mental discipline, constructing one illustrious example worthy the imitation of the most unprophliously circumstanced, are matters with which the whole world ought to be acquainted, and from which it may profitably draw a moral of high importance. The man who can place a judgment may be formed of the excellence of one who has made himself great, and good, and of enviable reputation. What Lester has written* for the perusal of his own countrymen, may not inappropriately be submitted to the judgment and criticism of Europeans interested in the promotion of unambitious officer, tireless adventurer, and faithful senator. In either character, the public expectations of Fremont's services are more than realised. Not unfrequently "bending to the calamities of life, he has always resumed his erect attitude upon their passing away."

"The feet of three men have pressed the slopes of the Rocky Mountains, whose names are associated for ever with those vast ranges—Humboldt, the Nestor of scientific travellers; Audubon, the interpreter of birds; and Fremont, the pathfinder of empire. Each has done much to illustrate the natural history of North America, and to develop its illimitable resources. The youngest of all is likely to become as illustrious as either. For Fremont has linked his name with a scene in the history of the Republic as startling to the world as the first announcement of its existence, to his hands was committed the task of opening the golden gates of our Pacific Empire.

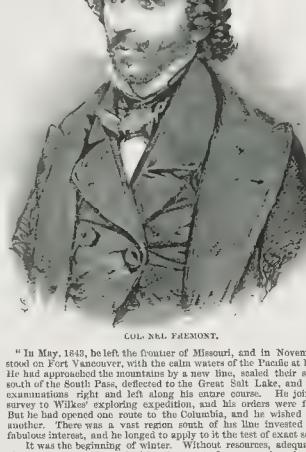
"His father was an emigrant gentleman from France, and his mother a lady of Virginia. Although his death left his son an orphan in his fourth year, he was thoroughly educated; and when, at the age of seventeen, he graduated at Charleston College, he contributed to the support of his mother and her younger children.

"From teaching mathematics he turned his attention to civil engineering, which he displayed so much talent, that he was recommended by Mr. Poinsett, Secretary of War, to Nicollet, as his assistant in the survey of the basin of the Upper Mississippi. Two years he was with that learned man in his field labours, winning his applause and friendship.

"On his return to Washington, he continued his services to the geographer for two years longer, in drawing up from his field-book the great map which unfolded to science the vast tract they had explored.

"Thirsting for adventure, he now planned the first of those distant and perilous expeditions which have given lustre to his name. Having received a Lieutenant's commission in the corps of Topographical Engineers, he proposed to the Secretary of War the penetration of the Rocky Mountains. His plan was approved; and, in 1842, with a handful of men gathered on the Missouri frontier, he reached, and explored the South Pass, achieving more than his instructions required. He not only fixed the locality and character of that great pass, through which myriads are now pressing to California, but defined the astronomy, geography, botany, geology, meteorology of the country, and designated the route since followed, and the points from which the flag of the Union is now flying from a chain of wilderness fortresses. His report was printed by the Senate, translated into foreign languages, and the scientific world looked on Fremont as one of its benefactors.

"Impatient, however, for broader and more hazardous fields, he planned a new expedition to the distant territory of Oregon. His first had carried him to the Rocky Mountains; Wilkes had surveyed the tide-water regions of the Columbia river; between the two explorers lay a tract of a thousand miles, which was a blank in geography.



COL. J. C. FREMONT.

"In May, 1843, he left the frontier of Missouri, and in November he stood on Fort Vancouver, with the calm waters of the Pacific at his feet. He had approached the mountains by a new line, scaled their summits south of the South Pass, deflected to the Great Salt Lake, and pushed examinations right and left along this entire course. He joined his survey to Wilkes' exploring expedition, and his orders were fulfilled. But he had opened one route to the Columbia, and he wished to find another. There was a vast region south of his line invested with a fabulous interest, and he longed to apply to it the test of exact science.

It was the beginning of winter. Without resources, adequate supplies, or even a guide, and with only twenty-five companions, he turned his face once more towards the Rocky Mountains. Then began that wonderful expedition, filled with romance, achievement, daring, and suffering, in which he was lost from the world nine months, traversing 3500 miles in sight of eternal snows; in which he explored and revealed the grand features of Alta-California, its great basin, the Sierra Nevada, the valleys of San Joaquin and Sacramento, explored the fabulous Buenaventura, revealed the real El Dorado, and established the geography of the western part of this continent.

"In August, 1844, he was again in Washington, after an absence of sixteen months. His report put the seal to the fame of the young explorer. He was planning a third expedition while writing a history of the second, and, before its publication, in 1845, he was again on his way to the Pacific, collecting his companions, as examples in detail the Asiatic slope of the North American continent, which resulted in giving a volume of new science to the world, and California to the United States.

"His achievements during the war with Mexico cannot be traced, nor will future times inquire how many nor how great battles he fought. After the conquest of California, Fremont was made the victim of a quarrel between two American commanders. Like Columbus, he was brought home a prisoner over the vast territory he had explored, stripped by a court-martial of his commission as Lieutenant-Colonel of Mounted Riflemen, and reinstated by President Polk. Fremont needed justice, not mercy, and he returned his commission. His defence was worthy of a man of honour, genius, and learning. During the ninety days of his trial, his nights were given to science. Thus ended his services to the Government of the United States, but not to mankind.

"He was now a private citizen and a poor man. Thornton offered him a lucrative office, which he refused. He had been brought a criminal from California, where he had been explorer, conqueror, peace-maker, governor. He determined to retrieve his honour on the field where he had been robbed of it. One line more would complete his surveys—the route for a great road from Mississippi to San Francisco. Again he appeared on the far west: his old mountaineers flocked around him: and, with 33 men and 120 mules, perfectly equipped, he started for the Pacific.

"On the Sierra San Juan all his mules and a third of his men perished in a more than Russian cold; and Fremont arrived on foot at Santa Fé, stripped of everything but his courage. In a moment of the last pang of despair which breaks the heart, or the moral heroism which conquers Fate itself.

"The men of the wilderness knew Fremont; they refitted his expedition; he started again; pierced the country of the fierce and remorseless Apaches—met, awed, or defeated savage tribes; and in a hundred days from Santa Fé he stood on the glittering banks of the Sacramento. The men of California reversed the judgment of the court-martial, and Fremont was made the first Senator of the Golden State. It was a noble tribute to science and heroism. His name is identified for ever with some of the proudest and most graceful passages in American history.

"His 20,000 miles of wilderness explorations, in the midst of the inclemencies of nature, and the ferocities of jealous and merciless tribes; his powers of endurance in a slender form; his intrepid coolness in the most appalling dangers; his magnetic influence over enlightened and savage men; his rare contributions to science; his controlling energy in the extension of our empire, his lofty and unsullied ambition; his magnanimity, humanity, genius, sufferings, and heroism, make all lovers of progress, learning, and virtue rejoice that Fremont's services have been rewarded by high civic honours, exhaustless wealth, and the admiration and gratitude of mankind.

"Born in January of the year 1813, he has lived many ordinary lives in the space of a dozen of his own, and still has an opportunity of making great additions to the stock of human actions in the field of learning which he is cultivating. The son-in-law of Colonel Benton, who is styled the father of the United States Senate, he has always at command a store of knowledge, which has never been slovenly treasured or meanly diffused."

* In the "Gallery of Illustrious Americans," Brady's Gallery, New York; and Delf, Bow-lane, Cheapside. The Portraits are engraved by D'Avignon, from Daguerreotypes by Brady.

THE ILLUSTRATED LONDON NEWS.

SUPPLEMENT.

VOL. XVIII.] SATURDAY, FEBRUARY 22, 1851. [GRATIS.

THE SUPPLEMENTS AND DOUBLE NUMBERS
OF THE "ILLUSTRATED LONDON NEWS."

OUR readers will have observed, that, in consequence of our desire to present them with a full account of all the news of the week, and with those pictorial illustrations of all current events of interest and importance which we continue to receive from every part of the civilized world, we have been compelled of late to issue a considerable number of Supplements and Double Numbers of this Journal. That course we shall continue to pursue whenever necessity arises; but, in order that our numerous and, we are grateful to say, our daily increasing subscribers may understand at what a pecuniary cost to ourselves we issue our gratuitous Supplements, and what an expenditure of capital is caused by the production of a Double Number, we present them with a few particulars of the manner in which we are not unwilling to tax ourselves, to render our Journal worthy of its popularity. They will see from the items what a cormorant the Government is, and what a tax it levies upon the diffusion of such information, amusement, and instruction as are conveyed through our columns. Upon our ordinary impression, of a Single Number, with an average circulation now amounting, in round numbers, to 100,000 copies, and sometimes, on occasions of great public interest, to considerably more even than that immense number, we pay for the excise duty upon paper alone, at 1½d. per lb. on the quantity consumed, no less sum than 120*l.* per week, or 480*l.* per annum. The penny stamp on this large impression is upwards of 400*l.* per week, or 20,800*l.* per annum; while the advertisement duty on a sheet (in which the advertisements, for absolute want of space to receive them, are limited to a page) amounts to 20*l.* a week, or more than 1000*l.* per annum. In other words, an ordinary single paper pays to the Government 540*l.* a week, or nearly 29,000*l.* per annum—a sum more than sufficient to pay the salaries of all the principal Secretaries of State! When, in consequence of the pressure of Parliamentary and other news upon the space at our disposal, we present our readers with a Supplement, we expend, without receiving any other return than their good opinion and the continuance of their patronage—both of which we shall endeavour to merit a long continuance of—the following sums; namely, for paper duty on the extra half-sheet issued, 60*l.*; for the halfpenny stamp upon 100,000 copies, £200. This is the Government share of this extra expenditure; but when to this we add the cost of paper and print, and the sums paid to artists and engravers—to say nothing of editorial and other expenditure—it will be seen, that a gratuitous Supplement of this Journal does not cost us far short of £1000 sterling! Our contributions to the National Exchequer for every Double Number which we publish may be easily calculated from the foregoing statements. Our object in entering into these particulars is not to make any boast of the extent of our sale, or of the extreme weight of the burden of taxation which is made to fall upon our shoulders. The sooner such a burden is removed, the better for us individually, and the better for the public of all classes, who are as directly interested in cheap political knowledge, as they are in cheap literature generally; but we have judged it fitting to exhibit these details to the popular apprehension, that our Subscribers may do us the justice to understand, that, although we may present them whenever necessity calls with gratuitous Supplements, we are compelled to be just to ourselves and to make a charge for our Double Numbers, whenever, under any unusual pressure, we are induced to publish them. It may be a curious fact to those interested in newspaper history—and to us it is a gratifying proof that our exertions are appreciated by the public—to state that a Double Number of our Journal always causes an extra sale, and that all the mechanical means at our command are scarcely adequate to supply papers with sufficient rapidity. In this latter respect we have, however, taken the necessary measures to prevent all further inconvenience and delay, and to provide our Subscribers, even in remote parts of the United Kingdom, with copies early on the Saturday morning. Success has its embarrassments as well as failure; and not the least of those attending the unprecedented success of this Journal has been the difficulty of making supply keep pace with demand. We trust, however, that we have finally conquered this difficulty, and that for the future our readers will have no occasion to complain in this respect.

BUDGETS OF THE HALF-CENTURY.

THE explanation of the financial condition of the country given by the Chancellor of the Exchequer on Monday, supplies an appropriate occasion for laying before our readers a brief notice of some peculiarities in our taxation for the last fifty years. Every year such an explanation is given by the same officer, or by the first Lord of the Treasury; it is called the Budget, and may be traced back to the very earliest period of our history, when the Kings asked the barons, prelates, knights, and burgesses, in Parliament assembled, for subsidies to carry on a war or marry their children. Being a mere explanation made in the House of Commons, limited by the views of the expounder, it is liable, when it comes to the public knowledge, to all the mistakes and imperfections of speeches reported in the newspapers, and it rarely or ever embraces the whole subject. The Budget wants, as an exposition of the national finances, both authority and completeness. In the present article, therefore, we have had recourse to official documents and books of repute, in addition to the budgets, to fill up our outline.

At the beginning of the century the nation was plunged in war, and, on the 1st of January, 1800, was burdened with a National Debt of 464,191,207*l.*, the interest of which was 17,881,861*l.* At that period money was borrow d year after year to meet the national expenditure; and, far from ever having a surplus of revenue, there was a deficit between 1793 (when the interest of the debt was 9,437,862*l.*) and 1816 (when it reached its *maximum* of 29,685,451) that the annual revenue had not increased. In 1738, the increase (greater than in any other year) was no less than 3,514,902*l.*, representing, at five per cent., a capital of 70,298,040*l.* Three-fold and one-half was the annual charge for the debt increased by the improvident statesman who carried on the war against France.

In 1792, Mr Pitt, though he had recently resigned office, brought forward the Budget; and though in 1805 he performed the same office, adopting Mr Addington's plans, the former was the last of the numerous financial expositions of his own measures in his long ministerial career. The Customs and Excise were estimated at 19,230,867*l.*, stamps at 3,049,944*l.*, assessed taxes and property-tax at 5,567,134*l.*, Post-office at 843,976*l.*, and miscellaneous at 1,031,325*l.*, making a total of 34,113,146*l.* of taxes levied on the people. The loans in the year amounted to 17,30.,146*l.*, making a total of money raised for the public service of 51,418,417*l.*

The Customs duties were chiefly levied on sugar, tobacco, tea, foreign and plantation spirits, wine, timber, &c.; a very large number of articles was subject to duties yielding comparatively small sums. The Excise duties were on home-made spirits, malt, beer, paper, starch, glass, soap, candles, vinegar, printed cottons, &c. There were a great number of assessed taxes, on horses, dogs, hair powder, carriages, &c., including a property-tax. To raise the additional sum required to pay the interest on the money borrowed on the year—then the chief object kept in view—the taxes on tea, paper, printed cottons, timber, pepper, raisins, and lead, with the stamp duties on bills, notes, ex-policies, and deeds, were augmented, and a new duty was levied on horses. The whole amount of the new taxes levied was 1,720,000*l.* The financiers had then a difficulty in deciding what taxes should be increased or imposed, as they have now a difficulty in deciding which shall be reduced or abolished.

Exclusive of the cost of collecting the revenue in 1801, the expenditure was—Navy, 17,261,747*l.*; Army, 17,752,947*l.*; Ordnance, 2,197,186*l.*; Civil List, 1,126,000*l.*; Miscellaneous services, 1,745,427*l.*; Loans and subsidies to foreign powers, 630,114*l.*; Miscellaneous expenses, 551,000*l.*; total cost of services, 41,464,421*l.*; Interest on National Debt, funded and unfunded, 19,953,284*l.*, making a total expenditure in 1801 of 61,229,175*l.*

On the 1st of October in that year the preliminaries of peace were signed, and the definitive treaty of Amiens was subsequently concluded. In 1802, consequently, the public expenditure was reduced to 49,549,207*l.*, and in 1803, to 39,209,604*l.* A remission of taxation ensued. A notice was given, in the latter end of 1801, of a motion by an independent member to repeal the income-tax; and in 1802 the Minister, without waiting for the attack, repealed it. The additional *ten pounds per cent* imposed on *property* was found so injurious to the book trade, that it was given up. But, in lieu of the taxes repealed, higher duties were levied on malt and beer, on exports and imports, and the assessed taxes were augmented, the increase being estimated at 4,000,000*l.* The taxes given up yielded 5,800,000*l.*, viz. income-tax 5,600,000*l.*; and paper duties, calculated at 132,000*l.*; but the produce of the remaining taxes was so much augmented, that the amount levied on the people was 36,884,194*l.*, or 2,000*l.* more than in 1801. Though taxes were remitted, a million more than 14,884,194*l.* was borrowed, making the amount raised for the public service 51,068,403*l.*; while the interest of the debt, by the operation of the Sinking Fund and other causes, was reduced 90,000*l.* Mr Addington was then Chancellor of the Exchequer. His Budget was the first for ten years that did not involve a large increase of expense, and impose on the people some new taxation. Well would it have been for his reputation and happier for the people, could he have continued to reduce the public burdens.

Unfortunately the peace was very brief, and he had next year to imitate his predecessor, Mr Pitt and come forward with a Budget of increased expense and increased taxation. At the end of April 1803, war again ensued between France and England. Mr Addington renewed the property-tax in his second Budget, making it 1*s.* in the pound on rent, 9*d.* in the pound in England, and 6*d.* in Scotland on the tenants; per cent. on the incomes of traders and professions, and on the dividends of the public funds he also imposed an increase of 20 per cent. in the duty on sugar, and an increase of 12½ per cent. in the duties on all other imports except cotton, wool, tea, and wine; on exports he imposed a duty of 1 per cent. and 5 per cent. *ad valorem*, as the articles were exported to Europe or other parts of the world; and, further, he imposed additional duties on tonnage, on tea of 1*l.* and 45 per cent. *ad valorem*, as the teas were coarse or fine; on wine 10*l.* per pipe, on spirits 50 per cent of the existing duties, and on malt 2*s.* per bushel. The new taxes were calculated to yield in a whole year 12,000,000*l.*, but as they only came into operation in part of 1803, their produce for that year was estimated at 5,000,000*l.*; and to meet the expense of the necessary armaments, a loan of 12,000,000*l.* in addition was negotiated. Further, to pay the interest, the Chancellor increased still more Customs duties, granted something by the consolidation of the assessed taxes, altered and increased the stamp duties on receipts, and so obtained 690,000. By the end of the year he had provided for an additional annual revenue in future of upwards of 14,000,000*l.*, making the whole sum raised for the service of the year 66,000,000*l.* Thus the Government went on from year to year, never making a hearty attempt to raise a sufficient revenue to pay the expense of the year, though Mr Addington's Budgets were not so faulty in this respect as those of Mr Pitt.

In 1806 Lord Henry Petty, the present Marquis of Lansdowne, the descendant of a family renowned in our financial history, was Chancellor of the Exchequer. He was then a very young man, and was chosen before on a celebrated satirical poem of the time called "All the talents," "The Dancing Chancellor." He professed to imitate Mr Addington, and to raise the chief part of the necessary expense of the year by the taxes of the year. By his celebrated Budget he raised the income-tax and property-tax to 10 per cent. on the incomes of traders and professions, the duty on sugar 3*s.* per cwt.; laid a duty on pig iron of 40*s.* per ton, and levied a tax on apprentices. But even this large increase of taxation was insufficient to meet the enormous expense; and the Budget of 1806, like preceding budgets, announced a loan of 12,000,000*l.*

In this career the Government continued till the year 1816. Every year the Budget announced that more and more money was to be raised by taxes to meet current expenses, that more and more was borrowed, and more and more taxes were fixed on posterity to pay the interest of the loans. The largest sum raised from the people by taxes in any one year was 72,492,512*l.* in 1815; but in 1813, in addition to the sum obtained by taxes, Government borrowed 32,849,282*l.*, making a sum of 105,341,794*l.*, than 108,397,045*l.*, the largest sum ever raised in any one year. The greatest actual expenditure, however, was in 1814—106,488,707*l.* The interest of the debt, funded and unfunded, reached its highest point in 1815, and was then 32,958,754*l.* Through most of these financial operations, the Budgets were brought forward by Mr Vansittart, then Chancellor of the Exchequer. It is an anomaly in the economical history of England, that those successive Budgets were continually augmented without breaking down the nation; but such was the elasticity then imparted to our resources by the steam-engine and the cotton manufacture, that it surmounted the enormous pressure of a ruinous financial system.

With 1816, on the establishment of peace, a new era began in taxation and reductions began. War taxes to the amount of 14,500,000*l.* had expired in 1814 and 1815; but 1816 was the first year from the end of twenty-two years, when only a small sum, 514,059*l.* was added to the debt to provide for peace establishments. In the following fifteen years nothing was added to the debt, though loans were continually contracted to enable the Commissioners of the Sinking Fund to reduce it. We cannot, among many other things, and continually lost by the transaction. In fact, from what I could gather, I regard reach an ignorant impression of taxation that is what we feel no surprise when we learn that, in the case of London alone, 11,000 surcharges had been made in the property-tax, 3000 of which were instantly followed, the Ministers were compelled, by an adverse vote of the House of Commons, to resign that tax and they voluntarily gave up the war malt tax, and other trifling war taxes, making a remission of taxation in that year of 17,547,359*l.* At the same time they added 3,127,000*l.* to other taxes.

The process of reduction has continued to our day with occasional interruptions. The impatience of taxation has never surely ceased. Rarely has a session passed, but economy was preached out, and reduction of taxation have been urged on Ministers by the indefatigable Mr Hume, who for nearly forty years has laboured most assiduously in the service of the people; but the Ministers have never ceased to spend as much as they could, and were allowed to levy from the people. Sometimes our philanthropy or the urgent necessity of Ireland has led the public to approve of increasing the debt. Unfortunately, no settled, well-regulated system of finance has been introduced and steadily carried out by our financiers. In all their schemes they have been defeated by the shortsightedness of individual interest; and, at the end of thirty-four years, though the rate of interest has been two or three times reduced, the charge for the National Debt has undergone no important diminution. In 1793 the capital was 261,785,089*l.*; interest or annual charge, 9,437,862*l.* At its highest point it was 885,186,223*l.*; interest, 32,388,751*l.* The annual charge was at its minimum in 1825—28,060,287*l.* In the present year it is nearly the same—28,051,586*l.* The capital of the debt last year (the account for the present year is not yet published) was 773,168,316*l.* Subsequent to 1825 the charge increased, and was, in 1844, 30,495,459*l.*, principally caused by purchasing the freedom of the slaves, and by sundry defalcations of the revenue. Without an equally strong reason, we have continued the vice of our predecessors. The ruinous system of borrowing is not yet half enough detested nor half enough condemned.

Without going into details of our Budgets, which would more emphatically show the inconsistencies of our financial system, and the poor expediences of our hand-to-mouth Chancellors (a tax repealed one year being re-imposed a year or two after, and a tax imposed one year being repealed in a similar period), because it was found unprofitable, or actually could not be levied), we must now give a brief outline of the principal Budgets, and of the changes in taxation, since 1816. In 1818, Mr. Vansittart being Chancellor of the Exchequer, new taxes on foreign wool, on malt (reduced in 1816), &c., were imposed, to the extent of 3,000,000*l.* and upwards. Sundry trifling alterations increased the taxes too in 1824 and 1826; and in 1831 a tax was placed on steam-boat passengers, with other taxes, amounting to 600,000*l.* In 1840 a percentage addition was imposed, when Sir Francis Baring being Chancellor of the Exchequer, fished for a Budget, according to Sir R. Peel, on customs, excise, and assessed taxes, calculated to yield upwards of 2,000,000*l.*, which were not found to answer the end proposed. In 1842, therefore, to meet continued deficiencies, and allow of improvement in our commercial regulations, Sir Robert Peel, in his famous Budget of 1842, re-imposed a property and income-tax. These are the principal taxes imposed or increased, all being renewals of taxes previously abolished, except that on passengers. Altogether, the increase of taxation between 1816 and the present time was calculated at something more than 15,000,000*l.*

In 1819, changes in the duties and taxes reduced them 990,000*l.*; and, in 1821, 470,000*l.* In 1822, a reduction of the malt-tax—imposed in 1819—and other changes diminished taxation 2,130,000*l.* In 1823, Mr. (so called) Prosperity Robinson (now Earl of Ripon) was Chancellor of the Exchequer, and announced with a prodigious flourish to Parliament in his famous Budget an extremely large revenue, the consequence of a great increase of trade and of one or two abundant harvests. The surplus was 7,147,214*l.*: 5,000,000*l.* was applied to reduce the debt; and taxes were removed to the amount of 4,186,785*l.*; amongst others, the salt-tax was lowered from 18*s.* to 2*s.* per bushel; and, in 1825, the tax was wholly abolished. In 1824, Customs and stamp duties were abolished 1,801,333*l.* In the following year, the duties on hemp, coffee, wine, spirits, iron, &c. were reduced, which, together with taxes that expired in the year, made the calculated reduction of taxation 3,676,239*l.* In 1826, Mr. Goulburn being the author of the Budget, the beer-tax and the leather-tax, previously much reduced, were abolished, and relief altogether afforded to the calculated extent of 4,976,743*l.*

In 1827, when the Whigs, with Lord Althorp for the Chancellor of the Exchequer, began their reforms, reductions of duty on tobacco, newspapers, coals, cotton, glass, &c., amounting to 1,868,052*l.*, took place. In 1832 the duty on candles was abolished. In 1833 the duty on soap was reduced, and on tiles abolished, and other reductions made, amounting to 1,300,000*l.* In 1834 the house-tax was got rid of, and 2,064,816*l.*, altogether struck off. In 1839 the great change was made in the rate for letters, which, with other changes, made a reduction in taxation of 1,052,268*l.* In 1842, to counterbalance the property tax, Sir Robert Peel remitted customs and other duties to the amount of 1,596,366*l.*; and finally, in 1845, there was a great abolition of small customs duties, the reader duties on glass were abolished and other changes, extending relief to 4,586,561*l.*

The subsequent alterations, so far as taxation is concerned, are not important. The duties on bricks have been abolished, and other minor changes have been made; but the principle so extensively acted on by Sir Robert Peel, in 1842 and in 1845, of relieving trade from restrictions, has been carried further; and as he abolished the Corn-Laws, his successors in office have abolished the greater portion of the Navigation Laws.

In all, according to Mr. Porter's tables, since 1816, not including that year, the reduction of taxation has amounted to 36,000,000*l.*, subtracting from which the 13,000,000*l.* added, it appears that the taxpayers have been relieved since 1816 to the extent of 23,000,000. Including that and the preceding two years, the reduction of taxation since the termination of the war amounts to about 40,000,000*l.* The conclusion which glares on us from this statement is a gloomy one. Side by side to the budgets of successive Chancellors, and to our financial management. In thirty-four years of peace the charge for the debt has been reduced only by 4,847,165*l.*, or at the rate of 142,563*l.* per annum; a sum only one-half more than the annual charge for the management of the debt, 94,926*l.* In the same period taxation has been reduced something less than 1,300,000*l.* per annum. At the same time, such is the natural increase of population and of wealth, that the taxes which remain now produce as much (52,819,000*l.*) as was produced by the numerous taxes of 1805; and within 20,000,000*l.* of the very largest sum that was raised by our extensive taxation which hardly spared any article of subsistence or luxury in any period of the war. The abolition of a tax is the removal of a restriction on industry; and the revenue has become productive in proportion as restrictions have been removed by the abolition of taxation.

The period under review was conspicuous for wonderful improvements in all the productive arts. Wealth increased faster than population; but such was the effect of the enormous taxation, that the wages of labour, far from rising conjointly to the rise in the price of the necessaries of life in the course of the war, could only command two-thirds of the quantity of food in 1800 which they commanded in 1790. Never since, till now, have wages risen, except in momentary spurts, to their level in 1790. For the bulk of the people, the effect of exorbitant taxation is more afflicting than pestilence and storms. Notwithstanding, however, the vast increase of taxation between 1793 and 1816, and notwithstanding all the reductions since, the community has not been more satisfied, and scarcely more prosperous since 1816, than during the war. The fatal enactment of the Corn-Law in 1815, the gift of a Tory Budget, confining our population to the estates of a few landowners for food, was probably more disastrous, even than the war debt, than the extravagance of our financiers, and more ruinous than the devastation of war. Its temporary evils are soon obliterated by the hand of peaceful industry; but when that is chained, the spring of all prosperity ceases to work. Only since the Corn-Law was abolished, have the people begun to feel and to appreciate the advantages of a diminished taxation. Let us add, in conclusion, that the 50,000,000*l.* now on the average annually raised for the service of the State, notwithstanding the increase of our population and the vast extent of our colonial empire, is a greater sum, in proportion to the duties the Government now has to perform, than was the greatest sum ever raised during the war, in proportion to the duties the Government then had to perform.

We may roughly estimate the amount of taxation per head, when the taxes were at the highest, at 3*l.* 7*s.*; now, it does not amount to more than 1*l.* 6*s.* per head: but, from the less important nature of the duties of the Government, it is felt more than when the nation was engaged in war.

The task of defending the empire against a powerful and vindictive

foe was great and grand; the task of merely talking about it is both possible and uninteresting. It is nearly as costly, but even more popularly useful.

Our readers will [illegible] low an account of the last Budget proposed that by Sir Charles [illegible] on Monday evening. We have nothing to say about it here, but [illegible]ces out, however imperfectly, and with whatever [illegible]ect principle of reduction that the nation has [illegible]ted on since 1816.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

Their Lordships sat for about half an hour.

Several petitions were presented against Papal aggression, and in favour of the [illegible]

EXTENSION OF COUNTY COURTS.

Lord BROUGHAM gave notice, that on Friday he would move the first reading of the bill for extending the jurisdiction of the county courts to bankruptcy cases.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

Several petitions were presented praying for the remission of various taxes pressing upon industry.

THE BUDGET.

The House resolved itself into a Committee of Ways and Means.

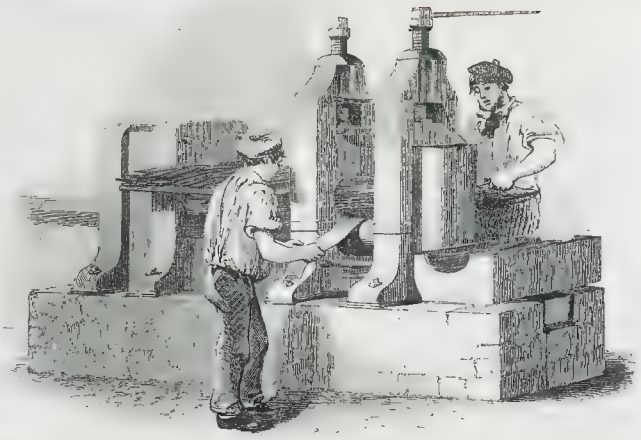
The CHANCELLOR OF THE EXCHEQUER addressed the committee as follows:—Sir, often as I have on former occasions experienced the indulgence of the committee, I can assure you that I never stood more in need of it to-night. I feel acutely the importance that I do on this occasion; for the hon. friend, the member for Montrose has, in addition to the ordinary duties of a Chancellor of the Exchequer in making the financial statement of the year, called on me for some additional information on the general subject of the incidents of taxation. But, independently of that request, I cannot describe how deeply I feel the importance of the proposal I am about to submit to the committee, and the more than usual difficulties connected with the present occasion. Sir, when the income-tax was first renewed in 1845, the country was, in every branch of its industry, in such a state of prosperity as little to feel the burthen arising from the continuance of the tax. On the other hand, such were the circumstances of the country in 1848, that there really was very little ability in the House to relieve the subject. I cannot but feel that now our circumstances are different (Hear, hear); and although I believe, and am deeply convinced that the course I am about to propose is as wise and necessary as it was on either of those two former occasions, I cannot but feel that many gentlemen may be of a different opinion, and that opposition may be made with a [illegible] made on former occasions by any one, to the further continuance, for a limited time, of the income-tax, and to those stamp duties imposed upon Ireland [illegible] same time as concomitants to that tax. Before, however, I come to this proposal, of course it is my duty to state to the committee the present financial condition of the country. Hon gentlemen having had in their hands the [illegible] for some time past, will be aware that [illegible]ion as to what the position of the country will be on the 5th of April next. I must, as on former occasions, ask [illegible] indulgence of the statements made by me in the [illegible] of the [illegible] I have [illegible] more necessary by reason of the [illegible] which I [illegible] to the committee, and upon which it is desirable [illegible] it at the earliest possible period. Besides it must be obvious, as a general rule, the financial statement must be made until the [illegible]. I am now making my estimates about two months in advance of [illegible] such a mode of proceeding matters little when the country is in a state of prosperity, because it is easy to form any approximate little whether or not the estimate should be strictly accurate, but still, no doubt, a statement framed at such a period must lead to considerable inconvenience from the fact that the data cannot be sufficiently matured. I need scarcely remind [illegible] stated in the course of last year, that the import duty upon corn had been falling off for a considerable time, and that, therefore, I did not feel justified in taking a large probable amount upon that head subsequently, however, to the 5th April, the importation had very much increased; and, although not as much as the importation in the corresponding period of the previous year, and very nearly reached that amount; whereas, on the same period of the year in the 5th of April last, the importation was only half what it had been in the corresponding six months of the previous year. Making, therefore, every allowance for the increase which first of all gave a probable estimate of the income and expenditure up to the 5th April next, and, subsequently, a probable estimate of our income and expenditure for the year ending 5th April, 1852. Sir, I am happy to say that the whole year as that which would probably be received was £2,385,000£, and the actual amount of [illegible]ury has been £ 2,410,000£. I do not believe, from the [illegible]ng that the [illegible]income for the year ending 5th April will be so good as [illegible] last year, the reduction in the stamp duties having of course not taken place in the early part of the year, and therefore I do not [illegible]ng that the income for the year ending 5th April [illegible]000£. It is, however, a most gratifying circumstance to observe, that there is an increase in those items which are usually taken as the best tests of the general state of the people. (Cheers.) In April last I estimated the Excise at 14,045,000£, but subsequently the brick duty ceased to be collected, and its amount being deducted, left the probable income from Excise 13,590,000£. Taking a not unreasonable estimate up to the 5th April next, I think it will be increased by no less a sum than £68,000£. The estimated expenditure in last year's budget was 50,764,000£. [illegible]250,000£ for the purchase of annuities of the Russian and [illegible]211,000£ for naval [illegible]50,987,735£. Now the naval excess over [illegible]ch of 1851 does not [illegible] in the estimated expenditure of the [illegible]ent the latter—50,776,950£. The actual expenditure up to the 5th of January has been 50,295,879£, and excluding the unclaimed [illegible]cannot be part of the ordinary expenditure. I believe that the expenditure up to the 5th April will be less than 50,134,900£, showing that we have so administered the public funds entrusted to our care, as to have effected a reduction of £40,000£ below the estimate. The probable surplus on the 5th of April next will be 2,621,000£. I now come to the estimated income for the ensuing year. Honourable gentlemen will see that the receipt of Customs up to the 5th of January is rather upwards of 20,400,000£. In the course of the ensuing year, the last reduction of duty on colonial sugar, and a further reduction in the duty on foreign sugar, in pursuance of the act of 1846, will take place [illegible]. Nevertheless, although the probable reduction from this [illegible] in a former estimate at 350,000£, I feel fully justified in [illegible] Customs for the ensuing year at about the same amount, namely, in round numbers, about 20,400,000£. In the Excise I am inclined to think that I cannot calculate on so large an amount as last year. The whole question of Excise depends on duties derivable from malt and spirits. Now in 1849 there was a remarkably favourable [illegible]equently there was a large amount of malt made, and spirits also. The barley of 1849, I, am afraid, of an inferior quality, and therefore I do not think it will be possible to derive the same amount of revenue from it. My hon. friend the Chairman of the Excise is usually a most sagacious prophet. He was with great difficulty induced to estimate the probable amount at 14,000,000£. On the stamps there will be, as gentlemen who have attended to the subject are aware, a further decrease in the course of the ensuing year, because the act passed last session did not come into operation until the 10th of October. The probable amount of loss from the reduction was estimated at about 900,00 0£, and experience has fully justified that estimate. Of course, in the quarter ending the 5th April, people delayed renewing their stamps, in expectation of the reduction on the 10th, but in the quarter ending the 5th of January the amount of stamp duty was 245,000£ less than the corresponding period of [illegible]. So far as I can judge of the present quarter, I do decrease [illegible] and, in point of fact, rather exceed it, and, therefore, I believe [illegible] than 250,000£, or 300,000£ in the year, and that I take stamps at 6,910 000£, the assessed, & [illegible] takes at the amounts which I believe they will produce, [illegible] the property-tax, 5,380,000£ Post-office about 10 [illegible] namely, 830,000£. I take the Crown lands at the same [illegible] because, whether any alteration be made in the management or not, the results will be precisely the same; and therefore I take them the same as last year, namely, 160,000£, and miscellaneous receipts at 262,000£. The old stores are rather higher than last year, namely, 400,000£, which gives me an income altogether of 52,140,000£ from which to charge [illegible] and I think the House will probably hear with some satisfaction of a decrease in a portion of the charge on the debt, arising from a very large purchase of [illegible] That surplus for the extinction of a certain portion of the debt, and therefore, although [illegible]sent charge is imposed on the country, yet we invest [illegible]mately derive [illegible]enefit from the falling in of these annuities. There will also be some reduction in the charge of the Consolidated Fund. The charge on [illegible]funded debt, including annuities, will be 27,988,000£; and the unfunded debt [illegible]. The Exchequer bills, 464,000£, making together 28,202,000£. The charges on the Consolidated Fund will be 2,600,000£, making the gross charge [illegible] the funded debt and Consolidated Fund, taken together, 30,802 000£. I have [illegible] for the army, [illegible] the commission, [illegible] that sum [illegible] or the [illegible] 387 650£: and for the ordnance, at 2,424,174£. I [illegible] on some reduction of expenditure; but, looking at these three estimates—the army, navy, and ordnance—there would have been more, but for [illegible] taxes, to which I shall allude hereafter, and changes, some permanent, [illegible] benefit of soldiers and sailors, and some of a temporary nature, but the [illegible] reduction of force [illegible] from the Conservative benches.) The Government [illegible] that, in the present unsettled state of matters on the continent of Europe, [illegible] it be inconsistent with the interests of the country that the naval and military force of the country should be neglected. (Cheers.) I am aware that the whole world bears at present a very tranquil aspect; but it must, nevertheless, be remembered that only a few months have elapsed since we saw millions of armed men arrayed against each other in the very centre of Europe. We must recollect, also, that great changes [illegible] take place in the amount of assailing power that can be directed against this country. I am not at all alarmed on this subject, or at the large sums which are passing from and to, but there is a wide difference between unnecessary alarm and an absurd confidence (Hear, hear.) Those who are best acquainted with these matters are quite aware that our ports and arsenals are not in that state of defence [illegible] which I conceive it is necessary for the safety and benefit of the country they should be, and that it is most necessary to provide efficient safeguards for the depositaries of our national wealth in the event of any disturbance of that peace which I hope will long be preserved. The proposal for these purposes contains no large sum certainly, except those for continuing the defensive works in Pembroke dockyard, and for commencing the defences of Portsmouth on the land side. I must say, that leaving these matters unprovided for would be a responsibility which her Majesty's present advisers [illegible] to incur; and my firm conviction is, that by increasing and [illegible]o many to the general feeling in favour of economy in this House, the majority of a British House of Commons will not consent to leave their country in a defenceless and unprotected state. (Cheers.) Both the [illegible] reduction of the army and navy estimates. They were, last year, for both services, 20,012,000£, and this year they will be 19,850,000 for Army, Navy, and Ordnance, making the reduction about 457,000£. From this, however, must be deducted the vote of last year for naval [illegible]; so that the absolute reduction of expenditure under the three heads will be nearly a quarter of a million. This reduction would have been greater but for two or three changes which have been made in both services, some temporary and some permanent in their nature. Hon members may recollect that my right hon friend the First Lord of the Admiralty announced last year that it was thought advisable, for the improvement of the condition of the soldier, that his allowance of grog should be diminished, and a compensation given in money. They found, on the experience of the last year, that the navy estimates will remember that the question was raised as to the rations allowed to the soldier serving abroad, and, on the recommendation of that committee, it was determined to diminish [illegible] which had hitherto been charged at 8d. per day. I propose to maintain the principle of stoppages, but to diminish the amount. The additional charge arising under this head will be about 60,000£, and for that, supposing the same force to be kept up, 140,000£. There is a small additional charge, but only of a temporary nature, arising from the fact of this being leap-year, in which the soldiers and sailors have one day's more pay, and from some annuities, and also from certain annuities chargeable on the ordnance lands in Ireland. We are purchasing up those annuities on very favourable terms. The miscellaneous estimates were 4,059,000£ last year; and, of course, it is quite impossible to say what will be the charge this year, when I propose to take in a charge of a temporary nature, but which must be appreciated in the estimates of former years, or been borne by the public revenue. The expense of taking the census was formerly borne by the local rates, but I think it is one of those objects of expenditure which it is essential should be paid out of revenue at once, and therefore I have set down 140,000£. for that purpose. Including that estimate, and taking [illegible] addition that may be made this year, I propose to take 4,[illegible] I propose to renew the income-tax for the year will, therefore, be 50,247 17[illegible] and deducting the possible expenditure from the possible income, there will remain an estimated surplus of 1,892,000£. Now, sir, the first question which I have to ask the attention of the committee is, how these estimates bear on the [illegible] I propose to submit to it, namely, the renewal of the income-tax, and a concomitant stamp duty. The tax raised last year was 5,400,000£., and the stamp duty produced in round about 120,000£.; but some reductions made last session will bring it down to 100,000£. If, therefore, the income-tax be renewed, which I am about to propose in the hands of the chairman, there will be a fall in the revenue to the amount of 5,500 000£. Deducting from that the probable amount of surplus, namely, 1,892,000£, there would still be a deficiency for the present year it would be to amount to quite as much, because one-half of the present income-tax will be receivable in the course of the ensuing year. During that year there will be no receipt from the renewed tax, and the present income-tax, and, therefore, the deficiency would be only 3,000,000£; but, in every subsequent year, supposing taxes should be no improvement in the revenue, the amount would be, as I have stated, in round numbers, 5,000,000£. Now, these gentlemen who were members of the late House of Commons will remember that the time when Sir R. Peel proposed for the first time the imposition of the income-tax, the deficiency in January, 1842, was 4,000,000£, and the proposal that was considered by non gentlemen, most of whom now sit opposite, a sufficient ground for the imposition of the income-tax during that year. (Hear, hear.) I can scarcely suppose that any hon. gentleman will refuse a vote the renewal of which would create a deficiency exceeding that which existed in 1842, to the amount of 1,000,000£. (Hear, hear.) Is it quite certain that there was even deficiencies to that amount, but they were provided for by loans which covered them; and although I quite admit that the existence of such deficiencies rendered it imperative on me at a great crisis to be unfair to myself to be made to equalise income and expenditure, yet my hon. friends will surely admit that it is necessary now, if we wish to retain the reductions which were made in 1843. Now I say to those gentlemen who, in 1842, felt it to be their duty to oppose the imposition of the income-tax ("Hear, hear," from the Opposition.) But I opposed it because I thought then, as I think still, that the grounds alleged for imposing it were not sufficient. I hear, therefore, that I should still do me the justice to remember, that, in opposing the income-tax, I stated that it was to be imposed for the purpose of covering a great deficiency in the [illegible] circumstances, I should be prepared to support it. (Hear, hear.) Now, sir, I am not prepared to say that such a case is always fit for the use which [illegible]ate Sir R. Peel made of the revenue obtained from the income-tax, fully justified him in the course he took. [illegible] but I am prepared to say that the circumstances of the country thus obtained. I supported the renewal of the tax when it was again proposed by Sir R. Peel, in 1845; and, upon the same principle, I myself proposed the renewal of the income-tax, and I announced the same opinion now that I did then—concurring in the self-same policy, and on the same grounds—I am prepared again to propose to the House the renewal of that tax, in order to satisfy the pressure of an immediate [illegible] the timber duties have been reduced (Hear, hear) the corn duties have been reduced—or rather abolished—and the sugar duties have also been reduced. Now, by the income-tax, I propose to get rid of a deficiency, not to a small or even [illegible] but, by the measure of 1848, all tending to the great benefit of the consumer, these severe measures have been carried into effect, which, in my opinion, in 1845, as they do now, justify the imposition of an income-tax. (Hear, hear.) Now, sir, if the House is not prepared to adopt my proposal for the renewal of the tax for a further period to be limited, I may be permitted to repeat the alternative which was fairly open to a deficient revenue to the amount I have stated, or a reduction of expenditure to that extent. (Cheers from the benches below the gangway.) But I do not believe that any person who has looked seriously at the subject can for a moment entertain the opinion that it is possible, from an aggregate expenditure of about 50,000,000£., to make a reduction of 3,500,000£. ("Hear, hear" from Mr. Hume.) and if not, it is clear that the only way of meeting that deficiency would be to impose new taxes equal to the amount. (Hear, hear.) And I ask whether, in the present state of the country, the Opposition or any party in this country could hope to succeed in any proposition for putting on new taxes to that amount? Sir, with the common concurrence of the House of Commons of some eight years back—with the general concurrence of the House of Parliament—most certainly to a great advantage (Hear, hear)—we have been reducing or repealing taxes which pressed upon the industry or the consuming powers of the people, and which were justly open to a deficient revenue to the amount of 3,500,000£. So far from it, I believe that, with regard to many of those taxes of the same description which still remain on the statute-book, it would be most desirable to reduce, or to repeal, them with a view to their ultimate repeal to the full amount or mode of levying, are far more objectionable, more oppressive, and more unjust than the income-tax. (Cheers.) These duties being so reduced or repealed, when will [illegible] have repealed the income-tax? and if [illegible] duties which press upon the industry of the country when we shall have taken off or reduced many of those duties which interfere with the process of manufacture, and the operations of commerce, and the transport of raw materials, in our system of taxation, are remedied when the customs and excise shall be so changed that they will not hardly be felt as a burthen, when we shall have dealt with those arising whether it is [illegible] still further to relieve the consumer, or take off a proportion of the property-tax? (Hear, hear.) But when that is done [illegible] we have removed those inconsistencies which I have pointed out, and carried out the commercial policy we have been pursuing for some years past, and the happy results of which, financially, politically, and socially, I have stated at large on previous occasions; and that I have done, I hope and trust that neither this nor any other House of Commons will refuse to continue that tax under the cover of which, as the honourable gentleman (Mr Disraeli) said the other night, these financial changes have been accomplished and these advantages conferred. (Cheers.) I trust that on the present occasion, therefore, all those hon gentlemen who are opposed to any disorder in our financial system will not be induced to vote on that ground, if I am not disposable—and all those who would join with me in carrying out more completely that gradual improvement of our commercial and financial system which is the envy of the world—will not be induced to vote against the committee of 1830 for removing the burden of taxation as far as possible from the consumer and imposing it upon the property of the country. (Hear, hear,) and a laugh.) One suggests that there should be a reduction in the percentage levied under schedule A; another, the total abolition of the charge under schedule B, and a third party urges the abolition of schedule D. ("Hear, hear," from Co. nel Sibthorp.) For myself, I am quite ready to admit that exceeding good arguments may be advanced in favour of exemption and allowances from every schedule in the Income-Tax Act, except, perhaps, schedule C ("Hear," and a laugh.) But whatever may be the opinion of the House in this respect, whether changes should be made in the one schedule or the other, the committee must not fail to remember that the funds under both the pledged [illegible] as security (Hear.) I assure the committee, however, that I have devoted the whole subject most anxiously and carefully. I have with very [illegible] several deliberations which have taken place on the [illegible] from the period of its first introduction in by Mr. Pitt down to the present time [illegible] numerous publications that have appeared upon the question, and having given the fullest consideration to all the arguments on the one side and the other. I have come to the conclusion that it would not be practical, and, under all the circumstances, the fairest and justest mode of levying the tax is that which has hitherto been maintained—viz. on the principle of a certain and uniform rate for all descriptions of income, from whatever source derived. ("Hear, hear," and "Oh, oh.") I am aware that a question may be raised as to the mode of levying the income under Schedule B; and when the proper time arrives, viz. when the bill is before us, I shall be ready to discuss that question calmly and fairly, as a question of that importance ought to be discussed; and I think I shall be able to show to the satisfaction of those who desire an alteration in that schedule, that the change they propose would not be so much to the advantage of the tenant farmers as they suppose. (Hear, hear.) But, as I have said, on all these questions full opportunity will occur for discussion when we shall have to consider the various schedules, and I shall reserve for any explanation that may be required until then. That was the course taken in former years, and I propose to follow it on the present occasion, believing that it will be found to be most conducive to the convenience of the House. With regard to this question of the income-tax, there is only, therefore, one other observation which I feel it necessary to make; that is, that I propose, for a limited period, to continue [illegible] enjoyed. (Cries of "Oh!") I believe, after the whole which property of almost all descriptions has experienced, the reduction in the value, and the complete revolution which has taken place in the condition of all classes of proprietors in that country, and from which they are but just beginning to recover (Hear, hear) it would, I think, not be proper, at the present moment, to propose to the first time, to impose upon Ireland the burden of the income-tax. (Cheers.) I propose, therefore, in the present bill, to continue, for a limited period, that exemption which Ireland [illegible] enjoyed. ("Hear, hear," and cheers.) But I propose to re-enact (and for the same time) the same duties which Ireland is now subject to. (Hear, hear.) [illegible] same laws have hitherto accompanied the re-[illegible] I propose to enact them as before. I propose to re-enact both the income-tax and the Irish stamp duties for the further period of three years, and upon that proposition it will be my duty to ask the House to vote a sum of money. I will ask the House to agree to a resolution upon this important subject as early as it may be convenient to do so, because it must be obvious that the financial scheme of the year will depend upon the renewal or non-renewal of the income-tax. (Hear, hear.) If the tax is renewed, then I may be able to proceed with the other measures I have to submit; while if, on the other hand, it should be resolved to let the income-tax expire, any that these gentlemen who may fill the office I have now the honour to hold should have as much time as possible to prepare their financial scheme for the year. (Cheers and laughter.) Now, sir, my hon. friend the member for Montrose asked me the other day to make a return, or rather, perhaps, referred to some memorandum I had given on a former occasion to make a return, as I understood him, of the various rates of taxation which I thought it right to expect that I would lay on the table some return of the incidences of the different items of taxation. (Hear, hear.) But my hon. friend hardly seemed aware that he had imposed upon me one of the hardest tasks that I have undertaken since the Exchequer ("Hear," and laughter) because, as regards the incidences of many of those items, at least, the most learned authorities differ (Hear, hear.) Of the various rates of taxation which I have to submit to the House this night. The hon. member for Bucks (Mr Disraeli), who had evidently spared no research in collecting and preparing his materials, and in consulting authorities of eminence on matters of political economy, expressed it as his opinion that the malt-tax was paid by a producer of barley, while the right hon. baronet [illegible] for Bryan (Sir R. Grahame), on the contrary, was of opinion, and I entirely concur with him, that that tax was paid by the consumer. (Hear, hear.) Take another item, the import duty on tobacco. The hon. member for Bucks seemed to think, though he did not state it as a proposition, that the customs duty on the import of tobacco was a charge on the landowners of this country (Hear, hear.) But, considering the views usually entertained on the sale of his house, as to the incidence of the three per cents, ("Hear, hear," and a laugh) I should have thought it would have been of opinion that the incidence of the tax on tobacco was on the foreign producer; for it has generally been supposed by hon. gentlemen on both sides when you impose a duty on the import of any article, the revenue thereby obtained is so much money taken from the pocket of the foreigner who produces the article. (Cheers.) Then, with regard to the sugar duties, the right hon. baronet [illegible] opinion that I thought it had always been admitted that the [illegible] rent-charge was a part of the rent; the hon. member for Bucks, however, [illegible] entertains a different opinion (Hear, hear.) Therefore, sir, I say that I have no right now to state what are the incidences of taxation, he can expect no more than that I should state what are my own opinions, with regard to preparing returns I must decidedly object to being called upon to state my opinions, and to enter into mere matters of opinion. (Hear.) I am quite ready to state my opinion on any subject connected with my department, in reference to which the House may think fit to call upon me; but I must positively be asked, but, after all, such opinion will be worth no more than that of an individual. (Hear.) Upon this subject of the incidence of taxation I have prepared, to a certain extent, a set of tables, to which I shall refer to-night. I hear, however, that which I am ready to lay before the House (Hear, hear)—having hon gentlemen to form their own opinion as to how far I am justified in the classification I have adopted, and to enable me to be enabled to come to a conclusion upon the proposals I am about to submit. (Hear, hear.) I will explain how this amount has been made up. I have called the finance account for the year ending the 5th January—that is the year ending the 5th January, including that subsequently repaid as drawback. Omitting the incidental receipts, I have taken the gross receipts from the Customs, from the Excise, omitting the item brooks, the duty on which has been abolished. I have taken, first, the produce to the revenue on articles of food, whether sold or not, and the duties on articles of food, under the head Customs there are some forty-five different items of this description the principal being butter, cheese, coffee, corn, lemons, oranges, currants, raisins, pepper, spirits, sugar, molasses, wine, tea, tobacco, and miscellaneous articles of food. The total amount in the Excise I take three items in the same class—malt, hops, and spirits which produce nearly 11,000,000£; making the whole amount of duty levied on what we eat, drink, and smoke, 21,820,747£ In the Stamp Office I have taken [illegible] items of manufactured articles, the principal of which are in the Customs—a few of the Excise, and some miscellaneous articles, as books and opium. (A laugh.) These, with other manufactured articles, as paper and soap, and certain others which pay a stamp duty, as medicine, cards, &c., the whole produce of this class of articles is 2,422,686£. Then I take the duties on certain raw materials; the only materials of this class, subject to duty, as agricultural seed, tallow, and timber, these amount to 764,000£. All of which clearly falls upon the consumers, the persons who use the manufactured article. Those who consume the food, or pay the duty upon the articles in the composition of which the raw materials enter, pay then, as it appears to me, the whole of these, amounting together to 35,037,000£. There are then certain duties falling on trades and professions, as licenses to trade, bills of exchange, bankers' bills and notes, marine insurances, to which I add the income-tax, duties on trades and professions, and I must put in the same class the salaries of persons in public service, for I cannot see any just distinction between them and others who derive their incomes from their own labour; therefore I include the duty paid on incomes in schedule D with those to schedules A, B, and E. The amount of those charges to-[illegible] is 4,494,960£. Then there are the duties paid on pe[illegible] and rates [illegible] which are paid by the [illegible] those various kinds of conveyance; these amount to 1,500,000£. There are also the stamps on newspapers and advertisements, amounting to 511,000£—the assessed taxes, which, exclusive of the window duty, amount to 1,48 .000£. The amount of all these items is 7,504,000£. I have, however, omitted the window duty, which, though it may be difficult to pronounce any opinion upon, it is obvious does not fall as a tax upon property—the total amount is 42,183,575£. I now come to the other class of taxes not directly levied upon property, but which, though in one way or another—these are the stamp duties on mortgages and transfers, the probate duty, the legacy duty, and the duties charged on fire insurances, all of which I think I are taxes that properly fall upon property to the amount of 2,838,000£. The produce of the land tax is [illegible],000£. I am aware that the hon. gentleman opposite has stated it as 2,000,000£, but I think he must make allowance for commutation. It is, however, quite fair to take as a charge upon land the whole amount paid. Add to these the taxes charged on property under Schedule A, 2,656,700£, and under Schedule C, 730,000£; making, altogether the general taxes levied upon property 42,481,700£. To this we have to add the amount of the local rates—viz. for the three counties 13,000,000£. When the hon. member for Bucks made his estimate of the amount of these local [illegible] for 1849, he included in the item "local taxes" certain tolls, dues, and fees which, though local taxes, are not property taxes (Hear, hear, and cheers.) The total amount of rates, properly so called, borne by property is 13,000,000£, making the total amount of the taxes payable by property 55,481,776£. The right hon. baronet [illegible] to the amount of the taxes paid by the country is borne by the consumer; and I am bound, at the same time, to add that I believe, upon the whole, it is pretty correctly [illegible] though I do not find, that, comparing different years one with another, when a reduction has taken place in taxation, or a period of distress diminishes the consuming power of the country, every article sells cheaper than under other circumstances, that it was previous to that reduction or that pressure. Thus we find that the reductions in 1842 were more than covered by the results of the year 1845. And though the reductions of 1845 diminished the revenue in 1846, they diminished it in 1847. The year 1848 also was a period of diminished trade, and, of course, of diminished income, but, in 1849, the revenue rose again to its previous amount; and last year, in spite of the great reduction in the stamp duties and Excise, the ordinary income derived from the several heads of Customs, Excise, stamps, and taxes, showed, upon the whole, but a small reduction. (Hear, hear.) And we may take it, that about forty-six millions of taxes derived from these sources is what the country, under ordinary circumstances, can [illegible] about any severe pressure. (Hear.) Now, sir, having as I hope I have, met the view of my hon. friend [illegible] and, in stating generally the heads under which the revenue may be divided, I would say a word or two on a proposal which has been brought forward elsewhere and which may be alluded to in this House, namely that the Government should

THE MANUFACTURE OF STEEL PENS IN BIRMINGHAM.

BIRMINGHAM, the "toy-shop of the world," is famous for the production of a great variety of useful and ornamental articles in iron, brass, steel, silver, and gold, but few of them in these days are of more interest than the novel but highly important manufacture of Steel Pens, and the brief account of a visit to the largest manufactory of steel pens in that town, or in the world (for Birmingham supplies Europe, Asia, and America with these new implements of writing), will enable the reader to understand the magnitude of the operations, and the various processes through which a piece of steel passes before it becomes that flexible instrument which has superseded the quill as the recorder of our wants, our best loves, and our affections.

The manufactory from which our Illustrations are taken is that of Messrs. Hinks, Wells, and Co. A few years ago it consisted of a comparatively small house on one side of the street. Now the establishment has outgrown its original limits, and has become an immense manufactory, giving employment to 674 hands, consuming 25 tons of steel per week, turning out 4500 gross of pens weekly, or 1,500,000 gross in a year, and, consequently, contributing in no inconsiderable degree to promote the interchange of ideas, whether literary, commercial, or social, throughout the civilised world.

If our readers will accompany us in a visit to this manufactory, we shall trace the progress of the pen from the raw material to the finished article, and so give them an idea of the very interesting operations. Entering a shed at the extremity of the larger pile of buildings, we are introduced to the metal in its crude state. This consists of the best quality of cast steel, made from Swedish iron, its granular structure dense and compact. It is now in sheets 4½ feet long by 18 inches wide, which sheets are clipped across into lengths from 14 to 4½ inches wide. These strips are packed into cast metal boxes, and placed on what is technically called a "muffle," or large stone oven, heated to a white heat: there the process of annealing takes place. After twelve hours of this roasting, the strips are placed in revolving barrels, where, by the friction of metallic particles, the scales caused by the annealing and the rough edges are removed. They are now ready for the rolling mill. The rollers consist of metal cylinders revolving upon each other. A man and boy attend at each. The first introduces the strip of steel between the opposing surfaces, and the boy pulls it out considerably attenuated. From the first pair of rollers it passes through several others, until it finally assumes the requisite tenuity. Such is the pressure employed, that the steel, in passing through, becomes hotter than it is sometimes convenient for unpractised hands to touch. The strip of steel is now precisely the thickness of a pen, is quite flexible, and has increased in length from 18 inches to 4½ feet.



ROLLING THE STEEL FOR PENS.

THE PEN GRINDING ROOM.

BRONZING STEEL PENS.

It is now ready for the "cutting-out room," where the pen first begins to assume a form. Along this room a number of women are seated at benches, cutting out, by the aid of hand presses, the future pen from the ribbon of steel. This is done with great rapidity, the average product of a good hand being 200 gross, or 28,800, per day of ten hours. Two pens are cut out of the width of the steel—the broad part to form the tube, and the points so cutting into each other as to leave the least possible amount of waste.

From this room the "blanks" are taken to be pierced. The flat "blanks" are placed separately on a steel die, and, by a half circular action of a lever turning an upright screw, a fine tool is pressed upon the steel, and forms the delicate centre perforation, and the side slits which give flexibility to the pen.

All this time the metal is soft, bending in the fingers like a piece of lead. It becomes necessary, however, that it should be rendered still softer. The pens are consequently placed in the heated oven, and a second time annealed. Proceeding with these softened pens to the "marking-room," the ear of the visitor is assailed by a continuous volley of sharp heavy sounds. An animated scene presents itself. Upon each side and down the middle of the room are arranged a multitude of young women at work, each of whom raises a weight by the action of the foot, and suddenly allows it to fall on the pen. The rapidity of this process is equal to that of cutting out the blanks, each girl marking many thousands of pens in the day. When at length the hand of this operator, the back of the pen is stamped either with the name of a retail dealer at home or abroad, a monogram, emblem, a piece of ornamental heraldry, or the representation of some notability, foreign or domestic, according to the fashion of the day. The distinctive marks in this manufactory number about 5000.

The next process is the "raising." Until now the pen is flat; and by being placed in a groove, and a convex tool dropped upon it, forcing it into the groove, it is bent into a tube of the required shape.

Upon the perfection of the slit of course depends the value of the pen. Those who recollect the difficulty experienced in getting a perfect slit in a quill pen, can understand how much less easy it is to prevent the gaping of a metallic substance. The first preparatory process after the pens leave the raising-press is to return the tube form to the metal, into which they are placed in small iron boxes with lids, and heated to a white heat. They are then drawn out and suddenly thrown into a large tank of oil, which by the chemical action of the heat on the steel the pens obtain, in addition to that tube form, a hardness that makes them crunch between the teeth when pressed between the fingers. After being cleaned from the oil they are tempered, or brought back to the condition of softness and elasticity which they are henceforth to retain. This is done by placing them in a cylindrical vessel, open at one end and turned over a fire, somewhat after the fashion in which coffee is roasted. The action of the heat gradually changes the colour of the pens, first from a dull grey to a pale straw colour, next to a brown or bronze, and then to blue.

Still the pens are rough, and covered with small metallic particles. To remove this roughness, they are placed in large tin cans, with a small

THE SLITTING ROOM FOR PENS.

quantity of sawdust, &c. These cans lie horizontally on a wooden frame, and are made to revolve by steam power, the pens rubbing against each other, and so cleansing themselves. From this process of "scouring," they are taken to the "grinding-room." This is also an animated and interesting scene, from the great number of young women employed, the apparent complexity of the machinery, and the busy regularity with which the work is performed. Each individual pen of the 262,080,000 which are annually turned out of this establishment undergoes the process of grinding, which employs one-fourth of the entire number of hands engaged in the manufactory. If the reader will examine his steel pen before he uses it, he will perceive that the back, above the point, is ground in two different directions: first from its tube to the point, and then across: the quality of the pen very much depending upon the grinding. We have previously referred to the difficulty of getting a close slit in a quill pen. The grinding serves the same purpose as the scraping the back of the quill did, as, by weakening a certain part of the metal, the point where the slit is made has a tendency to cohere, and so to form a good pen. The pen is simply caught up by a pair of nippers, and held on a revolving "bob," and so ground.

The pens are now taken to the "slitting-room," which is filled, like the other rooms we have visited, by girls and women, all busy and silent. The only sound is the click of the tool with which the slit is made. The work is very light, for the pen is simply placed on a press, and the handle being pulled, a sharp steel tool descends, and the pens are perfect. To secure uniformity of quality, the pens are now looked over, by the points being pressed against a small piece of bone placed on the thumb, and they are then thrown into heaps according to their quality of good, bad, or indifferent. They are next varnished with a solution of gum, and are ready for sifting to cards, or boxing, the latter mode of packing being almost universally adopted. In this final stage, twenty sets of little nimble fingers weigh the pens into grosses, shake them into handsome little paper boxes, and finally seal them up with the smart label which records their quality, and the real or assumed "whereabouts" of their manufacture.

Thus far the process of pen-making in this manufactory does not differ from that employed in other manufactories. There is, however, one peculiarity in the process which deserves to be mentioned, namely, the invention of a machine, or tool, by which three perforations are made in a pen at one action of the press. By this process, also, the fanciful designs into which the side slits are thrown are produced by the same action of the press which makes the centre slit. It is not difficult to perceive, that, with such mechanical appliances, production will soon be enormously increased; and if it is, it will no more than keep pace with the extraordinary demand which is a necessary consequence of excellence combined with cheapness.

Although the price of steel pens has fallen from eight shillings a gross in 1830 to sixpence a gross in 1851, the wages have improved, nominally and really, above twenty-five per cent., in consequence of the mechanical facilities of production. Some of the more skilful workmen get high wages. The tool-makers especially are remarkably well paid. The younger girls earn from 5s. to 7s. a week. Between 125 and 144 Even at work they are generally well dressed; and to purchase their finery, they club together their spare pence, and draw a chance weekly. The men have also their clubs, and a circle in which they visit each others houses at stated intervals, the rules providing for the strictest temperance and good behaviour. To enable them to obtain medical relief when necessary, a fund amounting to £30 per annum is subscribed to the hospitals, by which they obtain out and in-patient tickets. For this purpose the men subscribe 6d. a month, and the girls 1d. In all these prudential arrangements they are zealously seconded by their employers.

To these provisions for health and comfort is added another fund, expended annually on a "gipsy party" to some of the beautiful rural spots in the neighbourhood of Birmingham. The girls and women pay one penny a week for twelve months towards it, and the men twopence a week. On the last occasion, the party mustered no less than 350 people. They started from Birmingham at seven o'clock on a fine summer morning to Hagley and the Clent Hills, to pass the day. Two hired horse-vans, which were gaily ornamented with banners and devices, and were accompanied by a band of music. The whole of the party breakfasted in the open air, in tents, at the Hagley Arms; then walked in procession up to the Clent Hills; and, having enjoyed the beautiful scenery—commanding a view into Wales—got up quadrilles and other country dances, which, with other amusements, were continued until dinner-time. The party dined in tents in the open air, the band playing popular airs during the whole time. They returned early in the evening, without an accident occurring to mar the general enjoyment. These gipsy parties have lately become exceedingly popular among the working-classes in Birmingham, and there is scarcely a trade in the town which does not have its annual festival of this kind.

It may be stated, in conclusion, that the total number of hands employed in the steel pen manufacture in Birmingham is estimated at upwards of 2000; of whom more than one-half are employed by the firm whose operations we have just described, and by the equally celebrated house of Joseph Gillott and Co. The manufacture owes much of its present prosperity to the enterprise and perseverance of the last-named gentleman.

A STORY OF THE PRESENT DAY.

BY AUGUSTUS MAYHEW,

ONE OF THE AUTHORS OF "THE GREATEST PLAGUE OF LIFE," "HOW TO GET MARRIED," ETC., ETC.

(*Continued from page 137.*)

CHAPTER IV.

A JOURNEY IN SEARCH OF WORK

According to all accounts this twisting twirling world of ours is a very strange sort of place after all—as if the face of the earth was a double one, weeping and laughing at the same time, like a spoiled child. It seems to be of the shot silk genus; for look at it one way it appears dark and gloomy, and yet only view it in a proper light, and all is bright and sparkling again. In fact it is full of whims and fancies; now frowning and sulking, then smiling and petting, and no more to be trusted than a pretty drawing-room miss, who can scarcely lock her desk for love-tokens, and has no more pity for her victims than a butcher has for a pet lamb.

In the morning, as you walk along the streets, you are shuffling your feet, your hands are buried deep in your pockets, your forehead is wrinkled like a top-boot, and you look as bitter as a friend's advice. Every man you meet is a scoundrel, every saying has a double meaning, every look is suspicious. The sun is too hot, the wind is too cold. You hate the rose for its thorns, and the bee for its sting. The world looks as dull as a hoarse horse. Presently, whilst you are yet grumbling, some one takes you by the button and whispers in your ear a few magical words. In an instant life is changed; the feet move like a dancer's; the fingers are snapped like castanets, the forehead is smooth as a billiard ball, and you are smiling and happy as a school-boy at a pantomime. You shake hands till your glove bursts, and your head is on the nod like a plaster mandarin's. You buy a rose for your button-hole, and in the evening do nothing but laugh and sing, and go to bed happy, proud, and contented, as a Lord Mayor on the day of his election.

We are almost as foolish in our day as old Democritus was in his. He put out his eyes, that he might study nature better. It is true we keep ours, but we might as well be without, we make such little use of them.

Kitty, who but an hour or two since had looked as wretched as a schoolgirl in love, was now walking along the streets as contented and happy as a page in new livery. As she tripped along, her eyes were bright as dewdrops in the sunshine; and a laugh was ready to burst from her lips the first chance that offered. She had determined, on her way to Tim Bradley's, to visit the flower-man, and offer her services as one of the "five hundred." She would make him an offer. It was but fair that she should work for him for nothing until she had learnt the business; and then—ah! they would be happy. It wasn't like stay-making, she was sure—something told her it wasn't. My word! she would work hard—she would! One thing she was determined on with the very first money she earned, that room of theirs should be made tidy and clean. Poor old man, he never stirred out, and ought at least to be comfortable. After that, she would buy him a good warm suit of clothes, his chest was so bad in the winter. The only doubt she had was, whether it should be a blue coat and gold buttons, or a brown wrapper all over pockets. However, there was plenty of time to think over it. Then on the Sundays, too! how they would enjoy themselves! They would pack up their dinner in a nice white basket she intended buying, and be off to the fields to eat it on the grass, just as in the olden time; and, whilst the old man was chatting with Tim Bradley under the cool shade of the trees, she'd be off with the little ones, blackberry-hunting, or looking for wild flowers to take home with them. Ah! there'd be no complaining then, she'd warrant.

At last the "Temple of Fashion" was in sight! A small admiring crowd was still in front of it, but it was not half as large as on the day before. But, no sooner did the poor girl see the people, than, in her hurry, they were all flower-workers, bound on the same errand as herself, she set to running, and never stopped till she had reached the stall.

But, now she was there, her courage failed her. She didn't dare to ask the gentleman whilst he was so busy; he might get angry, and refuse her the work. So she stood looking on like the rest, watching a proper time to speak.

It seemed as if the people would never go away. She had been there at least half an hour, and yet the crowd was no less. The ladies took so long to strike their bargains, that, even if two or three did drop off, their places were soon filled up again by the passers-by.

There was one old lady, with a wicker basket big enough to hold Falstaff, that Kitty lost all patience with. She was the only one left out of all the purchasers, and the little girl was biting her fingers with anxiety. Yet that old lady wouldn't stir, but kept taking up the china lambs and Wedgewood cats just as if she did it on purpose.

"What do you want for this thing?" she asked, taking up an ink-stand round which a gilt parrot had built its nest. The price was marked on it, but still she asked "What's the price of this thing?" to make the proprietor fancy she didn't want it much.

"Well, as times is hard, miss," answered the man, "I'll take thrupence. If I warn't selling off quick to meet a bill o' mine, I couldn't do it."

"Threepence!" cried the lady, looking at the "thing" with disgust; "I'll give you tuppence halfpenny: and she put it down as if she didn't care whether she bought or not."

"Wouldn't pay for the gold on it, ma'am," answered the man. "Sold one to the Emperor of Japan a year ago, for double the money."

"Oh, dear! oh, dear!" thought Kitty; "I wish she would make haste."

The old lady tried to look as if she was going away in a hurry. The man knew better, though; and, true enough, she put her head round the side of the stall, and cried "Twopence three-farthings."

"If it only wanted five minutes to the end o' the world I couldn't do it, miss," answered the man coolly.

"Give it here, then," she said snappishly, "and don't keep me."

Kitty's heart beat like a watch as she entered the tent. The proprietor was a very imposing man, and wore a beautiful red striped satin waistcoat, with his shirt-collar *à la poete*, and his silk neck-tie passed through a gold ring. He was immensely stout, and, as the day was warm, his face looked shiny, as if it had been varnished, and every minute or two he would rub his bald head with his handkerchief, till it shone like cream-laid note-paper. As he spoke his chins would work like the leather of a blacksmith's bellows. He stood looking at Kitty, as if waiting to know her business.

"If you please, sir," she said timidly, and pointing to the placard in front, "I've come to know if you will give me some work to do?"

"What?" said the gentleman frowning, till the fat creases in his forehead all puckered together.

"Some work at artificial flower-making," continued Kitty, growing pale.

"Ho! ho! ho!" shouted the proprietor, slapping his thigh. "Here, 'Lizer, here's a girl as wants you to give her some flowers to make." And he roared again, stamping like a Scotch washerwoman. "Oh! oh! ha! ha! ain't she beautiful green? Aint it refreshing to see; 'Lizer? Hang me if she don't knock Highgate clean out of the field, she's so jolly verdant."

The poor child didn't know what to make of the gentleman's manner.

"I thought that, as you wanted five hundred hands directly, you wouldn't."

"Stop her! stop her mouth!" roared the man; "for Heaven's sake, stop her mouth! She'll kill me, she will! Ha! ha! Ho! ho! He! he!"

And, indeed, the gentleman's face was getting so red, and his eyes had disappeared behind his cheeks so mysteriously, that Kitty, fearing he might go off rather suddenly, became silent of her own accord.

After a moment or two, he was all right again, and toned down to his natural colour. To tell the truth, the placard was, after all, nothing more than what is called in the language of spirited tradesmen "a blind, to draw people." The proprietor wished to be thought in a very large way of business, and imagined that nothing would convey that notion so well as the idea of his being in want of "five hundred hands directly." He had first tried it at York, and it had answered so well, that he had since used it at every town he stopped at. Little Kitty was the first one that had ever believed it to be true; for, as the gentleman never stayed longer than two or three days in a town at one time, it had been very well argued that the wages would be too small to pay for travelling expenses.

At last, the woman, having told "Hercule to be quiet" (as they were from Paris, he used a French name), turned to Kitty, "You're too late, my dear; we've engaged all we want."

The girl's hand dropped in despair, as she heard the words.

"If you had any work—needlework, ma'am, I should be very glad to do it."

Hercule roared out again: "Oh! she's too verdant to look at. She hurts the eyes, she do. You might lay her down in grass plots, you might."

Kitty could not understand it at all. Why should the man laugh at her? It was very cruel of him, and she was nearly crying.

"No, my dear, I've got nothing for you;" and, as the child yet stood still, she added, "There, you can go, my dear."

"Do you know of any one—that would I've a good character, ma'am—that wants any work done?" stammered out Kitty, as a last resource.

Turning to her husband, the woman said, "There's no harm trying, Mrs. Lucas: she may want a girl, and it aint far for——"

"Oh! I don't mind the distance, ma'am," cried Kitty joyfully, and brightening up with the prospect of success.

So the conference ended. The address was given; and the weaver's daughter run off as fast as she could, afraid that her father might miss

her. She was not quite so full of hope as she had been, but still she did not despair.

Mrs. Lucas lived in Whitechapel. She worked for a cheap tailor's in the neighbourhood, and had so much to do for them, that she employed no less than eight girls under her. This was her plan of doing business:

Perhaps she would have half a dozen dress waistcoats given to her at the shop, the pay being one shilling and sixpence each. She would take them home and set her "gals," as she called them, to work—their pay being a penny-piece each. Very often, in the summer season, shirts were in brisk demand. Perhaps Mrs. Lucas would have a gross given to her to get made, her pay being 2d. each shirt. She would again take them home, and away her "gals" would go stitching and stitching, their pay being 3d. each shirt. Brown holland blouses, shooting-jackets fancy trousers—Mrs. Lucas didn't care what she had to do—her "gals" were always ready at it. In the morning, and, with a cup of tea, could manage to work till twelve at night. So Mrs Lucas, with her "gals" at home and "out" could make her two to three pounds a week, without doing a stitch of work herself: and the "gals" themselves about four, or—if they worked hard—five shillings each. Some of the poor things used to board and lodge with Mrs. Lucas. She only charged them four shillings a week: so that, at the end of the week, perhaps they would have a 6d. left to clothe with. The boards were of the coarsest, as a bed, and used to grumble at having bread and coffee only twice a day, with, perhaps, potatoes or a little cheese for dinner: but as Mrs Lucas said, there was no satisfying such creatures; adding, that when she was young, "things was very different." From all accounts, it appears she spoke the truth. And, yet, it was extraordinary these poor wretched girls stayed with her. If they were so miserably treated, why didn't they go? Ah! poor souls, they could not. There was a chain a cruel, gripping chain that kept them to their servitude: they were bound by the safe fetters of want. To leave her, was starvation for a week at least, whilst they sought after fresh work, and they had too little flesh on their bones to endure it.

Mrs Lucas was a Jewess. She attended the synagogue, was a devout woman, and had a reputation for great zeal among her sect. There are many Christians who gain an honest livelihood by the same fearful trade, who haven't missed morning and evening service ever since they were in the business.

Is it not heart-sickening to find a woman living on the very flesh and blood of her own sex? she to whom [illegible] an often impulses so quick, so fine, so tender and easily moved, that to see such fine metal be so wrist to relieve it. How long must the eye have gazed on wretchedness, the ear misery should lose its only defence—its appeal to pity? How [illegible] blessings have been thrown away before the heart can see unto [illegible] face grow paler, the form more wasted, and the voice more placed, as day succeeds day? Had the same cruel perseverance that, rebelling against [illegible] was at last strangled all virtuous impulses in the breast [illegible] ster and nature the nobler promptings of the soul, it would have raised to itself a monument of glory in the remembrance of the good deeds it had worked.

Kitty soon found Mrs Lucas's abode. She scrambled up a dark pair of [illegible] ing so often and making such a noise that at last [illegible] the house was opened, and a voice shouted out [illegible] ight that the opening afforded the girl ran up [illegible] "Who's there?" shouted the voice again; "can't [illegible] the owner of the voice saw the young girl, she pretty [illegible] ed her errand.

It a small room were four women working with the needle. One of them was quite a young thing, with light flaxen hair that hung down, as she worked, in rich full curls: she was seated on a low reading-made-looking waistcoat, whilst the others were stanching at the open window breathing the air. The floor was covered with cuttings of all colours, and the whole place reeked with the stench of foul and coarse food. At the silence of the room you could hear the clicking of the needles as they seemed to keep time together at their work. The flaxen-haired girl was the only one that looked up, and her face was so pale and careworn, that Kitty once felt a friendship for her. Mrs. Lucas was a broad, portly-looking woman, with a plaid shawl over her shoulders, and tied behind, as if to show off her figure. She wore no cap, and, although, by the look of her face, she was fifty at least, still, her wavy hair was jet black, and [illegible] ver with grease. At her ears hung two tufts of curls, and over her old silk gown, which was [illegible] the shuttle-shaped opening [illegible] was flounced, like pocket mouse. There was a fine sneaking expression in her face; her eyebrows were so thick and black, and her yellow skin looked damp and cold, like oil-silk.

"Sit down here, ma'am," she said, pointing with a finger that had four rings on it, to a chair. "So you want work, do you? Ah! times ish [illegible] very bad times ish; shirts ish very bad. They'll soon wear [illegible] ed coats with plaid stocks and no shirts, like policemen, I know [illegible] and she shook her head affectedly. Then, as Kitty said no [illegible] he drew near to the fire, and, putting out a pair of unlaced lavender boots, that were gaping in two or [illegible] as "Can te vork very nicely, ma tear? Veil, vell, ish'll give you a shoomp-cent to make a shumpe. I shan't pay you for it, you know; put if the vork ish good, you shall have some more, ma tear."

Kitty readily assented. [illegible] moment, she saw the flaxen haired girl was standing by her quietly.

"And what do you give for making a shooting-coat, ma'am?" asked Kitty, timidly, for she was afraid of offending her patroness.

"Vy, ma tear, ve gives a great deal of moush," said Mrs Lucas, shaking her head, "a great deal. Some of ma tear gals vill earn—vill earn—ah! a great deal of moush, vont you, Sarey?"

Sarah was standing at the window, and answered snappishly, "I shan't tell no lies, so it's no use trying."

"Isn't she pretty, Kitty, and she looked wonderingly at Mrs. Lucas.

"He! he!" laughed the woman. "Vat a vit that Sarey ish. Eh! vat a vit! Ah, that's nothing to some of her shakes. Vill you come and vork with me, ma tear, or vill you vork at home?"

"At home, if you please, ma'am."

"Den I must have security, ma tear. I never lets my vork go out vithout security. Have yer got two pounds?"

"No ma'am, indeed not."

"Den [illegible] urity. Have you no friends, ma tear?"

Kitty assured her there was no possibility of her getting so large an amount, she was so poor. Mrs Lucas seemed to be deeply moved on hearing this, and, promising speedy wealth if she worked well, consented, at any rate, to trust her with one shooting jacket, so as to see a specimen of her work.

The parcel was packed up, and Kitty took her departure. The lady seemed to have taken quite a fancy for her, she wished her good bye so often, and the child felt quite happy with her success.

She [illegible] beauty in her [illegible] she had in [illegible] one behind her say in a whisper, "Stop, stop; I want to speak to you."

"What is it, have I forgotten anything?" asked Kitty.

It was the flaxen-haired girl that had followed her from the room

"She will want you to come here and live. Don't! Say you won't!" Kitty didn't understand her.

"Ah! don't trust her! don't trust her" continued the poor thing excitedly. "She's fair enough [illegible] but don't believe it. If she offers to [illegible]

Kitty was only more and more perplexed; "What did it all mean?"

"Promise me," whispered the poor girl, taking the child's hand, "promise me you won't come live here. You will repent it if you do. What motive could I have in saying this? Promise me you won't come here!"

"I live with my father, and couldn't," answered Kitty, her voice faltering with fear.

"Thank God! thank God! I was trembling for you all the time you were in the room. Ah! you are too young yet." Then, turning round, as if to hurry back, she added, "If she asks you if I spoke to you, say no." And the next moment she was hastening up-stairs again.

Bewildered she scarcely remembered where she was, Kitty made [illegible] way to Tim Bradley's home.

[illegible] I"ymouth having become [illegible] retirement of Mr [illegible] promotions will take place [illegible] sequence. Mr. John Stewart, collector at Dundee, to be collector at Plymouth. Mr James Trevenen, collector at Shoreham, to be collector at Dundee, Mr [illegible] ay, comptroller at Whitehaven, to be collector at Shoreham.

The Commissioners of Customs have selected Mr. Ogilvie, searcher [illegible] ss in the port of London, for the appointment of landing surveyor, [illegible] e retirement of Mr Beales.

The command of the *Banshee*, late Holyhead steam packet, but now [illegible] service between Malta and Marseilles, has been conferred on Lieutenant James Hosken (1828), late commander of the *Great Western* steamer. [illegible] of the unfortunate screw-ship *Great Britain*, and subsequently harbour-master at Labuan.

HOUSE OF COMMONS.—MONDAY.

(*Continued from page* 147.)

made, and it comes upon them from no act of their own. I think it desirable not to encourage keeping in the asylum these inmates who may be safely removed, because the chance of cure depends upon the patient being sent early to the case. In my own county we had a difficulty in the clearing out an asylum of lunatics, and I confirmed the liquidation debts, in order to make room for the admission of those who might, if admitted, be probably cured. I have not yet made precise inquiry as to the exact amount of such a charge; but I propose to [illegible] a sum of 150,000*l* a year under the head of poor rate. I propose, therefore, to take on the public revenue a portion of the charge for all pauper lunatics confined in public asylums, or in private asylums under proper superintendence. I should think that the amount to be asked for will be 150,000*l*. out of all events that is the proposal which, in due time, I shall submit to the House. The reduction of duties and relief to the country in the course of the ensuing year will be these:—Under the reduction of the sugar duty, estimated upon the returns of former years, about 330,000*l* will be remitted. Upon the window-tax I propose to sacrifice 700,000*l*. Upon the reduction upon coffee the amount will be 172,000*l*.; the reduction of duties on timber will be to the extent of [illegible],000*l*., and on agricultural seed 30,000*l*., making a total reduction in taxation of 1,532,000*l*. (Hear.) I set estimate the loss of the revenue at a little less than that. I have already stated the losses actually occurring to the revenue from the reductions. I conceive the loss upon [illegible] income-tax will be 400,000*l*., agricultural seeds 30,000*l*., and altogether the total sacrifices of the revenue amount to 1,130,000*l*., or, adding the 150,000*l*. for the pauper lunatic asylums, make 1,280,000*l*. Deducting that sum from the surplus I have stated, I have a future years a surplus of 612,000*l*. But the House is aware that the half-year's window duty due in April is in course of receipt, and, therefore, next year the loss will be only one half, or 380,000*l*. A surplus, therefore, of 992,000*l*. may be looked for next year, while the permanent surplus upon future years will, according to my proposals, be 612,000*l*. These are the proposals I shall make to this House and Country. If, however, a larger surplus was anticipated, I cannot but say that some parties will be disappointed that the amount of reduction is less than they hoped for, knowing accurately as the views and opinions of honourable gentlemen who sit opposite concerning the transfer of local rates to revenue—a course which I do not think it would be just to the community at large to adopt. (Hear, hear.) My belief is that these rates are not any charge at all upon the occupiers of the land. I do not feel myself open to the reproach of having been in these matters regardless of the claims of [illegible] upon the land. It will be remembered that last year I proposed the reduction of the duty on timber as it bears upon agriculture, and I propose the same of malt that did [illegible] believing that the reduction of no other tax would relieve [illegible] much. I reserve from gentlemen who sit opposite, that so far as I [illegible] able to do so with justice to others, I shall be prepared to [illegible] and to [illegible] to the House any power. (Hear, hear.) My gentlemen whose anxious desire it is that loans given for drainage last year should be extended to farming. I can only say that, taking my own control, and as far as the public Exchequer went, I had no objection to extend it in that way; and I put words in the bill so to extend it, in order that the question might be fairly discussed. It was discussed by the gentlemen representing counties who were present, one being the hon member for Somersetshire, and I gave the fullest opportunity for discussion But the result of the division was, that thirty-one country members of England and Scotland voted against the proposition, and twelve for it. (Hear.) So far as the Exchequer, therefore, was concerned, there was no objection to such a course; but thirty-one country members voted against it. However, they had changed their minds, and wished now for such an extension. I have left an ample margin for them to avail themselves of the opportunity, the amount of the loan not being taken up in England or in Ireland. It is, therefore, still open to those hon. gentlemen to have the extension if they wish it; at all events, there is no objection on the part of the Exchequer. Other proposals might be made for the mitigation or removal of objections to any [illegible] affecting the agricultural interest, and I assure hon gentlemen that I shall be perfectly prepared at all times to discuss these questions at the utmost per-onal interest, and at the utmost inclination to meet their wishes so far as I can do so with justice to others, and their wishes are in with the interests of the community at large, for I believe their interests are identical with those of that community, and that a relief operating upon the whole of the community is less objectionable than one which would benefit certain interests are indissolubly bound up with the rest. I do not know of any other point upon which it is necessary for me to trouble the House further at present. The proposals I shall make to you affecting the agricultural interest, and those of the stamp duties, and the letter course will be to reserve debate upon the items for future stages of the bill. I do not propose to take a vote to-night (Hear) and I only ask for assent to those matters which I have stated, and which are to be altered or modified I shall propose to renew the income tax for the same period as before, namely, three years; but I am sure that hon. gentlemen will see that no longer delay than is absolutely [illegible] with the business of the country is desirable for all parties on either side of the House. (Cheers.)

The CHAIRMAN then put the resolution as to the [illegible] to [illegible] the supply granted to Her Majesty, the respective duties on grant Britain on profits arising from property, professions, trades, and offices, and the stamp duties in Ireland, granted by various acts now assessed in the said duties, and which have been [illegible] continued and amended by several subsequent acts, shall be further continued for a time to be limited."

Mr. HUMES said he had listened with great attention to the speech of the right hon. gentleman, and must say, that, before they came at all to the remission of the duties proposed, they must first consider the all important question of [illegible] revenue of the country. He would be glad to know whether he will [illegible] or call up upon the House for an opinion. He would suggest [illegible] ons be asked for before Friday next.

[illegible] ANT said he thought that was a very reasonable one.

Mr. [illegible] thought that many other taxes might have been selected, the reduction of which would have been preferable to those which the Chancellor of the Exchequer proposed to deal with. He could see no information at all as to the reductions, of any, in the naval and military forces, or in the force on the coast of Africa. In fact, he believed that the country would be as disappointed as he was with the Budget. He [illegible] to the reduction of the duty on paper, the window-tax, but in laying on a house-tax he was mulcting the benefit almost altogether.

Lord JOHN RUSSELL was glad to find that the right hon gentleman had made up his mind to repeal the window-tax, but he feared the imposition of the house-tax would create much [illegible] throughout the country.

After a few words from Sir J. TYRRELL, Mr. W. WILLIAMS, Mr. Alderman SIDNEY, and some other members,

The CHANCELLOR of the EXCHEQUER, in reply to some questions asked in the course of the debate, said that it was intended that the house-tax should only apply to dwelling houses, and not extend to warehouses Existing farm houses under £20 per annum would be exempted from the tax altogether.

After some further discussion, the Chairman reported progress and obtained leave to sit again.

PASSENGERS ACT (AMENDMENT) BILL.

Mr. HAWES moved the second reading of this bill, and briefly stated the nature of the provisions which it contained. One object of the bill was to [illegible] it should be allowed for steam vessels on those voyages; and [illegible] enable certain [illegible] the charge to be proceeded with [illegible] require vessels which [illegible] put to sea, and been driven back to port, to [illegible] advertisements certified before they could again set sail. These were the chief [illegible] which the [illegible] proposed.

The bill was read a second time and ordered to be committed.

The Mills and Factories (Ireland) Bill was read a second time,

MONETARY CRISIS IN FRANCE.

Mr. ANSTEY moved for leave to bring in a bill for the establishment of municipal councils in counties.

Sir J. [illegible] would not oppose the motion, but would reserve for himself the right of objecting to the bill or its provisions on a future occasion.

Motion agreed to.

VALUATION IN IRELAND.

Sir W SOMERVILLE, pursuant to notice, moved for leave to bring in a bill to amend the laws relating to the valuation of rateable property in Ireland.

On the motion of Mr. [illegible] a bill was brought in to amend the acts for the recovery of fee farm rents under tenant-at, to all other fee farm rents and to [illegible] rents in Ireland, charged upon grants of land in which the grantors have no reversion. Adjourned.

[The report of the Parliamentary proceedings is continued on page 154 of the Number with which this Supplement is published.]

A FOREIGN RIVAL TO THE SHEFFIELD FILE.—The *Sheffield Times* mentions a novel file, of Danish manufacture, made for the Great Exhibition, and which is described as "a rubber equal," that is, a large file with four flat sides of equal breadth. It weighs ten pounds, and is ornamented externally with the royal arms of Denmark and views of public edifices of the city of Copenhagen. The manufacturer has chisel upon the [illegible] of the great Sheffield file just completed by Hiram Younge, of that town. But what enhances the curiosity of this Danish file is the fact of its being hollow, and containing a nest of smaller files within its seven sides. In the first place you draw out a large round file, which in its turn discovers several others, [illegible] them hollow, and acting as depositories of other files still smaller. There are about a dozen in all, [illegible] within the seven sides. In the first place of the tubular files being an inch and a quarter long The ingenious fabricator is Mr. J. W. Naylor, a file manufacturer at Copenhagen, the place of his nativity. His father, who died last November, was a chisel-cutter there, and who adopted that city as his place of residence many years ago. The file is got up expressly for the Great Exhibition in London.

On Saturday morning last, the extensive business premises belonging to Messrs. Mitchell and Co., engravers and printers, situate No. 3, Lovell's-court, Paternoster-row, were burned and the contents destroyed. Three other contiguous buildings were also much damaged.

The decoration of the new western galleries of the British Museum (by Mr. Collman, under Mr. Smirke) is now nearly completed, ready for the reception of the Layard Assyrian antiquities, which are at present just as much buried as if Layard had never lived.

BRITISH AGRICULTURE.

BY THOMAS ROWLANDSON, ESQ.S.

PART IX.—BERKSHIRE.

Area .. 473,920 acres	Population .. 161,147

BERKSHIRE, like Oxfordshire, has a most irregular [illegible] Its figure published a map of Berkshire in 1762), in which he divided the soil of Berkshire as follows:—

Inclosed lands, [illegible] and woods	.. ..	170,000 acres
Common fields and downs	.. ..	220,000 "
Forests, wastes, and commons	.. ..	40,000 "
Roads	.. ..	8917 "

From the above it will be seen that nearly one half the county 90 years ago was in the state of down or common field. The latter term is now almost unknown amongst the great bulk of the agricultural community; yet at the commencement of the present century the land occupied as common field formed a very considerable portion of the arable land of the county.

Common fields, or, as they are sometimes termed, town fields, had their origin in [illegible] made state of husbandry, resembling, in a great measure, the [illegible] and out tacks of Scotland. The rich lands of the vales were the only inclosed fields, and, consequently, the only soil subjected to tillage, the fallows and [illegible] grazing over the surrounding country in a great measure in common. These outer and inferior lands, though capable of maintaining great quantities of stock during summer, were incapable of doing so in the winter season. Numbers were, therefore, draughted off or slaughtered. It was, however, indispensably requisite that the store or breeding stock should be maintained, so that their progeny might stock the outlands in the ensuing summer. Farmers had, at the period alluded to, much greater difficulty in supporting stock during winter than at the present time, root crops being unknown. As the rearing of cattle only were then [illegible] the vales were the only ones then calculated to afford food and shelter to the stock, and for which purpose, from immemorial custom, at a certain day in autumn, which varied in different localities, all the arable lands were thrown open to be grazed by the cattle belonging to the inhabitants of the district in certain well-known and recognised proportions. Turnip or root husbandry, as a resource for winter feeding stock, became impossible under such a [illegible]; for, if one man grew a larger amount of the Swedes, [illegible] neighbours' cattle were entitled to eat them [illegible] common. Very extensive tracts of such kind of land, together with ordinary commons, have been inclosed and divided during the present century, to the manifest improvement of the husbandry, as may be seen along the course of the Great Western Railway, where large fields of waving grain are now to be met with, which formerly only yielded a scanty herbage when in common.

The climate of Berkshire is generally of a genial character: but, on the elevated and exposed situations in the midland parts, along the course of the White Horse, the air is frequently piercing, snow often lying there when none is seen in the vales. In the vicinity of Reading, Maidenhead, Oakingham, and Windsor, lying on a gravelly substratum, occasions the crops to be somewhat earlier than in other parts of the county. Wheat [illegible] [illegible] but out of place to meet the origin of the name of mangelford; it having been traditionally related that whenever certain springs in the vicinity of this town were very copious during the summer and autumn the succeeding year was one of dearth, with famine in consequence, instead, this lands were to be given to it. the simple fact being that the springs were owing to the same cause that occasioned a bad harvest—namely, a wet summer and harvest time

Springs from the high lands of Berkshire have occasioned many conflagrations of peat, and in the vale of the Kennet, and even on some of the high lands along the course of the Thames thin strata of peat occur. In the vicinity of Newbury the burning of peat for the ashes has become so extensive as to attain the dignified name of a manufacture. The first [illegible] burnt for the purpose by Mr. Thomas Rudd, of Newbury, in the year 1745, who spread the ashes on the clover, and for which Newbury ashes have ever since been famous. An acre of peat land at that period sold for £20, it has since been sold, according to quality, as high as £70 and £80, and in one instance [illegible] £100 per acre.

The native manuring principle of these celebrated ashes, which are frequently conveyed to a great [illegible] ce, consists of gypsum, carbonate of lime, and small quantities of potash and soda, which, in their present state of chemical science, can be obtained artificially, at a much cheaper rate, by mixing the various ingredients, than by the operose mode of burning peat.

The soils of Berkshire are exceedingly various, both as regards their agricultural character and geological position; the eastern part of the county near Bagshot consisting of a considerable expanse of wild heathy soil, the superficial portion of which is principally composed of a mixture of sand and peat, and of which [illegible] land is to be found in its uncultivated or natural state, extending from Windsor to Wokingham on the north, and from Finchampstead to Blackwater on the south. The middle portion of the county forms a part of the tertiary basin which the Board of Health propose to apply London with pure (?) water. The Blackwater river derives its title from the circumstance of its being not unfrequently the colour of dilute coffee. Stiff London clay is found in Windsor forest, succeeded by chalky subsoil, and this marly, which, in the Vale of the White Horse, becomes mixed with the upper and lower greensand; the north-western part being situate on the Oxford clay, coral rag, and oolites. Such a diversity of soil has caused the adoption of various implements for its tillage, as—especially the coarse but so long possessed such a number of machines for the culture of the soil. The skim, a peculiar instrument, is used for paring the soil previous to burning. The Berkshire wheel-plough is singularly constructed, being adapted for heavy lands. Pressers for light lands are also in use. The crops and rotations are similar to those which obtain in our best cultivated counties.

Windsor Park, as well as Windsor Forest, is situate in this county. At the latter part of the last century about 800 acres of light land was inclosed, and converted into a farm, called the Norfolk Farm, which was cultivated according to the Norfolk four-course system. At the same time, about 400 acres of heavy land, contiguous to the Norfolk Farm, was most inappropriately called the Flemish Farm. Flemish husbandry is more peculiarly adapted to poor, light land than any other class of soils, its principal features being the economising and application of liquid manure, the culture of the latter occasionally in combination with carrots, thus obtaining two crops a year. The courses adopted on these farms have never been made known to the public; all that is generally known being the gratifying fact that his late Royal Highness Prince Albert not unfrequently carried off some of the premiums for cattle and pigs. For the latter animals Berkshire has long been famed, though the pigs which obtained a premium for his royal highness at the late exhibition show were called "improved Berkshires." It is a manifest error between his Royal Highness with his improved Yorkshire, Lord Radnor with his Coleshill, and Mr. Fisher Hobbs with his improved Essex. May the most deserving bear the palm is our wish, as we feel convinced it is that of his Royal Highness. It is an error to suppose that the Berkshire hog, now known as such, is an indigenous animal The improvement was [illegible] by a cross with the Chinese [illegible] Loviden, Esq., of Basset Park, was one of the first gentlemen in Berkshire who turned his attention to the improvement of pigs: it is worth remarking, that Mr. Loviden preferred feeding these animals on baked rather than on steamed or boiled potatoes

The following [illegible] ular custom [illegible] connected with tithes is worth recording. The parishioners of Cumner, who paid tithes, had a claim of being entertained at the vicarage, on the afternoon of Christmas-day, with four bushels of malt brewed into ale and beer, two bushels of wheat made into bread, and [illegible] half-an-[illegible] of cheese.

SUNDAY TRADING PREVENTION BILL.—The bill brought forward by Mr. William Williams, to prevent unnecessary trading on Sunday within the metropolitan police district and City of London, has been printed. It contains twenty clauses, and is to come into force on the 1st of November. Sunday trading is prohibited after 1 o'clock in the morning, under a penalty of 5*s.* for the first offence. Medicine, milk, cooked meat, and newspapers, before ten o'clock, are exempted, as also tobacconists in the operation of the act. Barbers are not to open shop or exercise their calling after ten o'clock on Sunday morning, beers [illegible] saved for [illegible] Constables may seize goods exposed for sale. If penalties are not recovered the offender may be committed to the House of Correction for fourteen days. All proceedings under the act must be commenced within seven days.

At Kidwelly, in Somersetshire, on Friday week, a Wesleyan minister, named Davies, committed suicide by strangling himself with a piece of [illegible] The infelicitous character of his third and last marriage is stated by the *British Journal* to have been the cause

In consequence of a sufficient rent not having been offered for the Spey fishing, and also with a view to test the resources of the river fishing, by a plan not adopted for many years, his Grace the Duke of Richmond has resolved to take the river and coast fishing into his own hands for a season or two.

MUSICAL REVIEW.

TRIO for the PIANOFORTE, VIOLIN, and VIOLONCELLO. By E. SILAS. Cramer, Beale, and Co.

Next to the symphony, which is the highest form of composition, classical chamber works rank in importance. In this category are comprehended the sonata for a single instrument (with or without accompaniment), the trio, quartet, quintet, sextuor, and septuor, for the pianoforte, with the accompaniment of wind or stringed instruments; and the trio, quartet, quintet, sextuor, septuor, octetto, and nonetto for stringed or wind instruments, or a combination of both wind and stringed ones. To produce a fine chamber composition is the greatest effort in musical art: more science cannot ensure lasting fame for a trio or quartet, than an addition to the already possess ve of musical knowledge and theory, but a composer must have an inspiration and genius, where in st be ideas, and those of a soul-stirring nature, to affect the imagination and touch the heart, to render endurable, for half an hour or more, a conversation between a few instruments—for the composer cannot take refuge in noise, as in a full orchestra, to conceal poverty of invention. Classical chamber compositions are the cabinet-pictures in painting—the Claude Lorraines of art. In London there has been a growing taste for classical music. The quartet meetings of Mori, Ella, Bagrove, Dando, &c., some years since, were the pioneers: and the formation of the Musical Union, the Beethoven Quartet Society, the Lucas' Musical Evenings, the Pianoforte *soirées* of Sterndale Bennett, Madame Dulcken, &c., have contributed to the promotion of musical knowledge in this country. The standard composers are Beethoven, Mozart, Haydn, Hummel, Fesca, Mayseder, Onslow, Mendelssohn, &c.: but there are innumerable writers who have entered the lists, although their names are not yet known as "household words." M. Silas is a new aspirant for classical honours. He has before appeared in pianoforte productions, but in the trio before us he takes higher ground, and makes a bolder venture for fame. In structure, the trio follows the accepted models. There are four movements, an Allegro in common-time, a Scherzo in two-four measure, an Andante in nine-eight, and an Allegro finale. The Scherzo may be mentioned as having one novel point, being broken in by a beautiful cantabile. There are many very charming and original thoughts in this trio; although, on the whole, it will be found thoroughly Mendelssohnian in form and treatment. When we recollect how strongly Mozartian were Beethoven's stirring bolder works in the early works of the last-mentioned composer, and how youthful writers are imbued generally with some peculiar model, until their genius be matured, there can be no reason to mistrust the direct evidence of M. Silas's fertility of intellect. The trio is not beset with outrageous difficulties for amateurs; it is, perhaps, too long and diffuse in some portions, but there are so many fresh and graceful ideas, terse and fascinating episodes, that the highest expectations may be confidently felt as to the future of the young and gifted composer. He is a profound master of harmony: he has taste and imagination, and has evidently taken his resolve to soar to the highest regions of art. The trio has been very carefully and beautifully printed; and is published in score, with the separate violin and violoncello (which is an important feature in the trio) parts.

RECOLLECTIONS OF A STUDENT. By E. F. FITZWILLIAM. W. Allcroft.

Mr. Fitzwilliam, son of the popular comic singer, and of Mrs. Fitzwilliam of the Haymarket Theatre, composed, some years since, a Stabat Mater, which excited some attention in musical circles. The present volume, with its modest title, contains—besides the poetry (which has been re-edited from the works of Lord Byron, Sir E. Bulwer Lytton, Coleridge, Leigh Hunt, Shelley, Sidney Godolphin, Mrs. Hemans, &c. This choice of words from the most famed poets indicates a high purpose on the part of the composer. The collection is published in a handsome volume. There are lively as well as sentimental ditties: Mr. E. Fitzwilliam, however, inclining more to the ideal than to the real: and the compositions are calculated to raise anticipations that the career of the "student" will be conducive to his fame as a master.

SERENATA, "THE SLEEPER AWAKENED." Written by JOHN OXENFORD; composed, by G. A. MACFARREN. Cramer, Beale, and Co.

At the time when the above-mentioned serenata was produced at the National Concerts given at Her Majesty's Theatre, the ILLUSTRATED LONDON NEWS, in its notice, expressed its regret that the work had not the advantage of the *mise en scène*, as its popularity on the stage would be certain. On looking over the serenata in its complete form, as now published, we feel a stronger persuasion as to its dramatic capabilities. Without again entering into the vexed question as to the lack of individuality in the composer's style, it is impossible not to feel admiration for his great musician-like attainments. The prayer, "Mighty Allah!" with the march, the dance music, and the overture, prove that Mr. Macfarren has musical ideas and understands operatic effects, if his melodic imagery does not display the spontaneity and impulse of creative genius. The canzone, "Good night," and the terzetto, "When heart to kindred heart," are beautiful specimens of part-writing. Of the songs, the rondo, "Come, he's gone," rendered so popular by the charming singing of Angri, at Her Majesty's Theatre, the ballad, "Forget it not," the two tenor airs, "The caliph sits in a hall of gold," and "She is not here," are likely to be especial favourites in the drawing-room as well as on the stage, from their graceful and unrestrained flow of melody. Mr. Oxenford's poetry, in many passages, is of a higher order than is generally met with in modern operas, and he has treated the story evidently with a view for the theatre, and not for the concert room, in the impracticable serenata form. That there is not a national opera-house to produce "The Sleeper Awakened," is a national disgrace.

A NEW VOCAL METHOD. By JAMES BENNETT. Addison and Co.

Mr. Bennett was formerly a tenor singer at Covent Garden Theatre, in English opera days. He is now one of the gentlemen of her Majesty's Chapel Royal, and is a professor of singing at the Royal Academy of Music. He is also known as the author of "Elementary Exercises for the Voice," "Introduction to Part and Sight Singing," &c. His present "Vocal Method" is a clever manual of instruction, with a judicious course of exercises for entire novices. Mr. Bennett has so constructed his book, that it is adapted for home teaching, as well as for schools and classes. He is of opinion that young ladies may safely commence practice at a much earlier period than is usually the case; and he quotes the instances of Clara Novello, now Prima Donna at the Italian Opera in Lisbon, and of the late Malibran, that no injury is sustained by the voice by such early drilling. We can add, as additional examples, Jenny Lind, Viardot, and Grisi. Mr. Bennett suggests that the study of the vocalist should proceed hand in hand with that of the pianoforte: this is good advice for the acquirement of the theory; but there is no practice for the voice of more utility than that of solfeggi with the violin, in order to acquire perfect intonation. Mr. Bennett's work has been carefully prepared, and the progressive lessons are essentially practical.

THE THEORY AND PRACTICE OF MUSICAL COMPOSITION. By G. W. RÖHNER. Longman and Co.

On the appearance of the first part of this excellent treatise, we took occasion to express a strong opinion in its favour, as an able condensation of the standard works of the great foreign masters on the theory of music. The second part has now been published, and treats of counterpoint; the third and concluding portion of the work being reserved for fugue and canon.

THE BUDGET.

(From the "Times.")

We may as well satisfy at once the curiosity of our readers as to the contents of the Chancellor of the Exchequer's budget for the year ending April 5, 1852. Sir Charles, finding that he may expect a surplus of about £1,692,000 for that year, proposes the following measures:—The repeal of the window-tax, and the substitution of a moderate house-tax on the better class of houses; a reduction of the duty on foreign fruits; a repeal of that on foreign agricultural seed; a reduction and equalisation of the duties on foreign and colonial coffee, as well as on chicory; a removal of the cost of pauper lunatics, as well as of the approaching census, from the local rates to the Consolidated Fund; another lease of the Income-tax for three years, without any modification; and the application of about £1,000,000 of next year's surplus towards the reduction of the National Debt.

"As there still remain seven weeks of the financial year, it is only possible as yet to give an approximate statement of its income and expenditure. The former ground to be considerably greater, the latter considerably less, than Sir Charles ventured to anticipate in his financial speech of the 15th of March last. Hence the surplus, which he then estimated at a million and a half, and which he partly disposed of, will, nevertheless, probably be found next April 5 to be about £2,591,000. His estimate of the income for the year ending April 5, 1852, is necessarily founded on the latest returns of the revenue, taking into account the recent reductions, and various other modifying circumstances. It is as follows:—

Customs	£20,400,000
Excise	14,000,000
Stamps	6,310,000
Taxes	4,348,000
Property-tax	5,380,000
Post-office	830,000
Crown Lands	160,000
Miscellaneous	262,000
Old Stores, &c.	450,000
	£52,140,000

The estimated Expenditure for the same year is as follows:—

Charge for the Funded Debt including annuities	£27,688,000
Interest of Exchequer Bills	404,000
Civil List and other charges	2,000,000
Army, including Commissariat	6,893,945
Navy	6,347,055
Ordnance	2,424,171
Miscellaneous, including Census	4,000 000
	£50,247,171
Estimated surplus	1,892,829

"This surplus, in round numbers £1,890,000, Sir Charles Wood wishes to make the most of. He is also very excusably desirous to dispose of it in his own way, and without a too servile compliance with the demands of his numerous persecutors. His ideas of good financial husbandry have not permitted him to spend it in remitting a third of the Income-tax, which is almost as far as it would have gone in that direction. After considering the Income-tax in every possible light, and turning over all sorts of propositions for its more equitable adjustment, the only conclusion he has come to is that it is so harmoniously unjust, and so symmetrically wrong, that any attempt to make it fairer would only render it more flagrantly unjust. For our own part, it seems the simplest thing in the world to levy a different rate on the different schedules. As it is necessary to divide income into classes for the purposes of taxation, and as these classes represent the greatest actual differences differences which everybody feels—we do not see why the Chancellor of the Exchequer should not recognise a classification made to his hand. The public feels the difference, and Sir Charles Wood may depend on it that the receipts of the tax are very largely affected by that feeling, perhaps almost as much as if the difference were recognised. Professional men and tradesmen, and all who live by spinning the contents of their brains, are satisfied that there is a deep injustice in taxing those brains, which to-morrow may be dust or desolation, as if they were broad acres that have drunk in the sunshine and the rain ever since the creation, and will to the "crack o' doom." The result of this general feeling is that people will capitalize their incomes after rules of their own, or get off the tax altogether. If Sir Charles Wood, who is open to discussion on the mode of assessment under Schedule B, would also take it into consideration whether 4d. or 5d. in the pound would not harmonize better with the actual value of the incomes under Schedule D, we think he might, not impossibly, allay a deep sense of injustice, without much sacrifice of revenue. We really believe that many men would readily pay a tax adjusted to their case, who now feel no hesitation in avoiding a tax which they think wholly above it. That the Income-tax, however, is full of injustice, is confessed by the present ridiculous—not to say cowardly—practice of voting it triennally, notwithstanding the increasing determination of our Free-trade financiers to keep on the blister as long as the patient will bear it. A discussion would necessarily bring out the anomalies and hardships of the tax, so a discussion is to be avoided by a continual adjournment to this day three years; though, if we are to wait till we have a surplus large enough to dispense with the tax altogether, that day, it is clear, will never come.

To a mind so keenly susceptible of arithmetical beauty, it must have been a very sore trial not to set the surplus against the window-tax, and save all further trouble about the subject. We will venture to say, that had Sir Charles done so, it would have been thought as grand an idea as the Crystal Palace, or any other wonder of the age. The estimated surplus is about £1,890,000, and the produce of the window-tax is stated to be £1,856,000. What an opportunity of doing the thing neatly! Sir Charles, however, is proof against the temptation. He proposes, indeed, the entire repeal of the window-tax, so that no tax shall hereafter attach to any house in relation to its windows. As it is his view, however, that the objection lies rather against the mode of assessment than against the principle of a tax upon residences, and as he wants to do a little execution in some other departments of the revenue, he proposes to lay on a house-tax, but of a very different amount to that which existed prior to 1833. The house-tax then was after the rate of 1s. 6d. in the pound on a rental of £10 and under £20, 2s. 3d. on £20 and under £40, and 2s 10d. on £40 per annum and upwards; and produced, in the last year of its existence, £1,461,472. From that impost house property was altogether relieved, and it has since been further exempted from the glass-duty, brick duty, and partially from that on timber. It is now proposed that houses shall be charged as follows:—All now paying window-tax, but not the annual value of £20, to be entirely exempt. All not now paying window-tax, but of the annual value of £20 or upwards, to pay two-thirds of the lowest window-tax, viz. 12s. All of the annual value of £20 and upwards, now paying window-tax, to pay two-thirds of the amount now paid for window-tax. New houses to pay at the rate of 9d. in the pound on their annual value, but if they be occupied as shops, warehouses, or farm-houses, 6d. in the pound only. Notwithstanding the elaborate symmetry of this plan, it is far from meeting all the difficulties of the case, and still further from satisfying the ardent gentlemen who have lately devoted themselves to the emancipation of light. But, as the discussion threatens to be rather minute, we gladly leave it to its own proper time.

As it is calculated that 120,000 houses will on the above scheme pay neither window-tax nor house-tax, it will now be necessary to charge pay only two-thirds of the present impost, Sir Charles expects to lose only £700,000 by the scheme, and to raise £1,155,000 by his future house-tax. This will, therefore, leave £1,197,000 for the next year's surplus, and hearty for other reductions. It is sufficient in this place to state very briefly the reductions which have found favour in Sir Charles's discriminating eye. With a splendid equality of justice, he proposes to reduce the duty on foreign and colonial coffee, as also on chicory (which Sir Charles *does* not grow), and on every other root used or mixed with coffee, to a uniform level of fourpence a pound. The reduction of coffee is £178,000. It is then proposed to reduce the duty on foreign timber to half its present amount, viz. that upon sawn timber from 50s. to 25s., and that upon hewn timber from 15s. to 7s. 6d. This will cost £296,000. Next comes a duty on clover, grass, and other agricultural seeds, which has been already reduced, with very great benefit to farmers, but which still remains to an amount very disproportionate with the principle of letting raw materials in free. It is to be reduced to a nominal amount at the trifling cost of £30,000. A portion of the expenses of pauper lunatics throughout the United Kingdom will be charged on the Consolidated Fund to the amount of £150,000. The reductions thus to come into effect during the next year will be—

On sugar	£330,000
On windows	700,000
On coffee	176,000
On timber	286,000
On seeds	30,000
Gain to the public	£1,992,000

But, as Sir Charles anticipates that the loss by the first of these items will be compensated by the general improvement of the revenue, and as the reduction in coffee and timber will to some extent be made up, it is hoped that the revenue will not really lose more than £1,130,000 by these reductions, which, after the charge for pauper lunatics has been further added, will leave a surplus for future years of £612,000. As half a year's window-tax will come into next year's account, this surplus in April 5, 1852, will be £969,000.

Next, we ask, what is to be done with this? As honest men, in the midst of all these reductions, we are bound to remember that we are in debt; and Sir Charles, we are glad to say, does remember it. After having increased our debt £27,000,000 since the year 1835, we cannot with decency eat up the whole of our surplus ourselves, and give no thought for posterity. We must be just before we are generous, and still more before we are selfish. There are those, we know, who think it best to labour to attempt any impression on the mountain of our National Debt; but at least let us escape the stigma of often adding, and never subtracting from it."

THE ILLUSTRATED LONDON NEWS

No. 472.—Vol. XVIII.] FOR THE WEEK ENDING SATURDAY, MARCH 1, 1851. [Sixpence.

THE DOWNFALL OF HE RUSSELL ADMINISTRATION

We scarcely anticipated, when we last addressed our readers, that the fall of the Ministry, which we foresaw to be approaching, was so near at hand. Since that time the Russell Administration has become a thing of history. It is quite defunct; and has died, not from sudden accident, and not of one malady—but of a complication of diseases defying remedy.

Lord John Russell made a statement to the House of Commons on Monday evening, in which he set forth, in his own fashion, the causes which immediately produced the catastrophe. First in importance was the debate on Mr. Disraeli's motion, calling upon the Government to take prompt measures for the relief of the distresses afflicting the owners and occupiers of land. "With a question of that kind," said his Lordship, "brought forward in hostility to the Government, at the very commencement of the session, and when the Chancellor of the Exchequer had given notice of his intention to make his annual statement of the financial position of the country, a majority amounting to fourteen only, could not but tend to weaken any Government." But the Government, though it might have expected a more adequate support on such a question, had itself to blame in a great degree for the weak and puny result. It was an error of judgment—a political folly—to have made mention in the Royal Speech of the distresses of the agricultural interest, if nothing was intended for their relief. And if the Ministry was as fully convinced as it ought to have been, and is, that the clamours of the Protectionists—wretched when all around them were happy and prosperous—were not to be silenced by anything that the Legislature could do for them, to mention their distress in such a place as the Queen's Speech was wilfully to excite false hopes, and to lead to an impression that the system of Protection was not so utterly exploded but that it might be revived if its friends would exert themselves.

The next Ministerial rebuff was the success of the motion of Mr. Locke King for an extension of the suffrage—a motion deprecated and opposed by Lord John Russell. The promises of Parliamentary reform, made from time to time by his Lordship, have failed to satisfy the party for whose tranquillisation they were given; and the last promise which was made, immediately prior to the division on Mr. Locke King's motion, that Lord John Russell—if he had nothing more urgent on hand—and if he were quite in the humour—and if the Reformers behaved themselves properly in the interim—would, perhaps, condescend to show himself a Parliamentary reformer, to a small extent, in the Session of 1852, but not before—were received with a degree of merriment which could not be flattering to his self-esteem. The defeat upon that motion, coming so speedily upon the discouraging majority of fourteen upon the question of Agricultural Distress, was too much for the Government to endure. "I was inclined to believe," said his Lordship, "that upon other measures, and on other incidental questions, we might meet with similar defeats; and I came to the conclusion that the Government was not in a condition to conduct satisfactorily the business of the country. I thought that it was a very dangerous course, and very disadvantageous to the country, that the Government should continue liable to defeats from time to time; having but a very small majority at any time, and therefore carrying on a kind of lingering existence for the greater part of the session to come." The results were, that his Lordship determined to resign; that his colleagues agreed in opinion with him on that point, if not in others; that her Majesty accepted their resignation; and that Lord Stanley was sent for.

But in alleging these two as the principal, if not as the only, causes of his sudden determination to throw up office, his Lordship—with a desire, no doubt to spare the feelings of his Chancellor of the Exchequer—omitted to state a circumstance that must have had considerable weight on his mind. The incredibly ridiculous Budget of Sir Charles Wood was sufficient of itself to damage the Ministry beyond remedy. With a large surplus—with a prosperous state of trade throughout the country—with every opportunity that a great financier, or even an average statesman could have desired, Sir Charles Wood deliberately made the very worst of it, and shipwrecked himself and his friends by a Budget that excited the disgust of all who were to be affected by it, and the deri-

[WOODCUT EDITION]

sion of everybody else. The Budget of 1850 was bad enough. In reference to that scheme, we remember having stated, last year, in this Journal, that Sir Charles Wood, "if he loved office, would have cause to regret that he did not know how to do a gracious, a popular, and a just thing when he had the opportunity. and that his colleagues would have cause to rue their determination to support him." All the faults of the Budget of 1850 were repeated and exceeded in that of 1851; and Sir Charles Wood, the most inefficient, as well as the most unpopular, Minister who ever held the important office of Chancellor of the Exchequer—at least, within living memory—gave the tottering Ministry the final blow, which destroyed its equilibrium, and shattered it to pieces. Lord John Russell said nothing on this point; but the facts are not the less notorious to the country.

The Papal Aggression Bill was, no doubt, another ill-flavoured ingredient in the cup of the Ministerial misery. It was a bill that pleased nobody. It went too far for the enemies of the Church of England—not far enough for its friends—and affronted all Ireland, without being effectual as a remedy against the mischievous priestly domination it was intended to restrain. In fact, upon the only great and paramount questions calling for discussion or for action, the Ministry were either without firm principles, or were too divided among themselves to give effect to them. Upon the Papal Aggression Bill they were not unanimous. Upon the question of Agricultural Distress they endeavoured to soothe an irritated party by a condolence, which had no other effect than to exasperate their opponents, or to excite mischievous expectations of impossible relief. Upon the question of Reform in Parliament, upon which a little honesty and decision of purpose would have gone a great way, they played fast and loose, till the casual and tardy asseverations of the Premier that he was still a Reformer, excited no other feeling than ridicule in the minds of those whom he was anxious to propitiate. In the financial affairs of the country, the same desire of avoiding a straightforward and decisive course, and the same inclination to "be all things to all men" was apparent in their conduct. They coquetted with all parties, and pleased none. They had the chance of relieving industry from its burdens, of advancing knowledge, promoting health, and causing employment for the people, by the abolition of the Excise duties on paper and soap; they refused to take it. They had also the chance of modifying the Income-tax, and thus reconciling all the classes and professions of the country, and all the struggling middle classes, to their continuance in office; and they wantonly threw it away. They had a similar opportunity of making friends of all the town, and a great portion of the rural population, by the unconditional abolition of the Window-tax; and they stupidly, and as if in the very madness of approaching dissolution, refused to avail themselves of it. In short, they were a Ministry of make-shifts from the beginning; and never were tolerated except from the fact that no other party was ready to take their place. There never was a Ministry that had a nobler field for enlightened exertion than that which has just fallen. There never was a Ministry around whom a little honest energy would have rallied such hosts of friends and supporters; and it must be said, at the same time, that there never was a Ministry that so ruined itself by the rash boldness of its chief, where cautious prudence would have been the best policy, and by his timidity and procrastination, where courage and promptitude would have been the truest wisdom. Nor were the subordinates—with the single exception of Lord Palmerston—men of an intellectual calibre to supply the deficiencies of their leader. Under all the circumstances, the wonder is, not that it fell in 1851, but that such a Ministry should have lasted since 1846.

THE ARMY AND NAVY CLUB-HOUSE.

THIS beautiful building, one of the most imposing additions to the series of modern Club-houses which now adorn Pall-Mall and its neighbourhood, was opened to the use of the members of the club on Tuesday; it having been for the greater portion of last week the admiration of immense numbers of visitors, who were admitted by tickets. In its exterior, as will be seen by our Engraving, the building is particularly rich in ornamental detail; the frieze, with its groups symbolic of the Army and Navy, being very effective. The idea of the building is avowedly borrowed from Sansovino's Palazzo Corner at Venice; but it may rather be considered as a combination of the two, and another by the same architect, viz. the Library of St. Mark, of which the new part of the Carlton Club-house is all but a fac-simile. The rusticated basement, comprising a ground-floor and mezzanine, is indeed, copied from the Carlton externally, perhaps, than faithfully; the taste displayed in it being not of the very best kind. The upper part of the structure bears very little resemblance to the original claimed for it; because, while the latter has orders, as we have said, Corinthian, of very sober character, the Club-house has only one—a Corinthian, with coupled columns in the south or Pall-Mall front, where there are six intercolumns, and with both coupled and single columns in the entrance front towards George-street, where there are nine intercolumns. This order is treated similarly to the upper one of St. Mark's Library, and its copy the Carlton, the entablature given to it being proportioned not to the columns, but to the entaet on generally, by means of a most exaggerated frieze and cornice, so that coupled columns become almost necessary to support such a mass, and, by being coupled, produce a corresponding degree of fulness below. Over the arched headings to the windows on the principal story are groups of naval and military symbols, weapons, and defensive armour, which add materially to the picturesque appearance of the whole. These windows assume the character of arcades, which, with their dressings, fill up the intercolumns. One unusual feature in club-house design is the recessed entrance-gateway in the centre of the east or George-street front, which is formed by three open arches (very similar in character to those in the Strand front of Somerset-house), carried up through the mezzanine. The building is crowned with a massive balustrade.

In our next week's Journal we purpose illustrating the interior of this Club-house; and, therefore, shall reserve our more detailed description till then, merely mentioning that the architects employed were Messrs. Smith and Parnell; and that, so far as the exterior was concerned, the builder was Mr. Trego.

DIPLOMATIC EXPENDITURE.—The following reductions have been made in the estimates of the diplomatic service, to take effect from the 5th of April next. There are to be in future but two British Ministers abroad with the rank of Ambassador, at Paris and Constantinople; the Paris Embassy to be fixed at £ 6,000 a-year, the Madrid Mission is reduced from £6000 a year and £250 for house-rent, to £5000 and £700 house-rent; the Vienna Mission is reduced from £9000 a year and £900 house-rent, to £5000 a year and £900 house-rent; the Secretary of Legation at Vienna to have £350 instead of £900, hitherto paid to the Secretary of the Embassy. These reductions, in addition to the abolition of the Consuls-General at Syria and Naples, and other reductions, which we have already announced in the consular department, will effect a considerable saving in the expenses of the Foreign Office.

THE BUSINESS OF THE COURT OF CHANCERY.—A Parliamentary paper, printed on Saturday, at the instance of Mr. John Evans, contains a return of all matters disposed of in the Courts of Chancery in each year, from the 2nd of November, 1841, to the 2nd of November, 1850. The total number of matters disposed of in 1842 was 7325, viz. appeals and special motions, 2717; petitions, 2340; causes in general paper and short causes, 1964; pleas, demurrers, and objections, 68; appeals and re-hearings, 36. The business appears to have increased considerably since 1843. In the latter year, the total number of causes disposed of was 6873; and in 1844, 7036; 1845, 7239; 1847, 8221; 1848, 8329; 1849, 8697; 1850, 8395. The Accountant-General's return for the year ending the 1st October, 1850, shows that the total amount disbursed out of the Suitor's Fee Fund in that year £127,585 8s. 9d., and that the stock accumulated was £3,895,228 13s. 7d.

The Glasgow Town Council have adopted a proposal for the improvement and more frequent supply of the mortality statistics of that city. The expense of obtaining the additional information will be no more than £40 per annum.

During the years 1849 and 1850, the number of houses demolished in the different districts of Paris for the sake of improvements amounts to 323, of which the approaches to the Hôtel de Ville comprise 88, those to the Louvre 38. The average price paid by the city to the owner was 415 francs for one metre; the total outlay amounted to 28,999,000 francs. The houses thus pulled down had formed about 4845 shodes or lodgings, occupied, at an average, by three persons each. This amounts, therefore, to an expulsion of 15,000 people from their dwellings.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The intelligence from our neighbours across the Channel is wholly devoid of interest this week, notwithstanding that it comprised within its seven days' span the anniversary of the Revolution of the 24th of February, which has passed over without any disturbance, either at Paris or in the provinces.

On Sunday last a great number of students assembled with wreaths of *immortelles*, at the place de la Madeleine, and, after forming themselves in order, proceeded to the Place de la Bastille, where they shouted, repeated, *Vive la République!* They then threw their wreaths over the railing, and quietly dispersed.

On the anniversary itself (Monday) the principal commemoration of the event in Paris took place in the public streets, where religious services were celebrated, which were attended by the relatives of the slain, the surviving combatants, and members of the Socialist and Republican parties. One or more thousands thronged the Boulevards and the Champs Elysées, enjoying the weather, which was most delightful and exhilarating.

M. Crémieux presided over 150 representatives of advanced Republican opinions, who assembled at the Barrière du Maine, to assist at a banquet, and listen to speeches in praise of the Republic. The party separated in quietness and good humour.

The committee appointed to inquire into, and report upon, the proposition for an amnesty to all the political prisoners condemned since February 24, 1848, have decided against taking it into consideration by 19 to 8. This result was produced by the statements of the Minister of the Interior, which were, that the country was only apparently tranquil, that secret societies were again in course of formation, and that combined efforts were once more making by the discontented and turbulent to spread disaffection through the country.

The expenses of keeping the French army at Rome are to be considerably reduced. The troops are to be limited to 10,000, and the horses to 1500; lower than the Minister of Foreign Affairs thinks it impossible to go, without detracting from the dignity of the Republic. When the troops are to return home the Minister is not able to foretell, as the means which led to their occupation of the Papal city are not yet entirely removed.

General Aupick, the Ambassador at Constantinople, is to be removed to the Court of St. James's to fill the Embassy.

GERMAN STATES.

The conferences carried on by the representatives of the German States at Dresden, for the re-construction of a central federal authority (both executive and legislative), "drag their slow length along" with all the characteristic national tardiness and uncertainty of practical purpose.

The following proposition are said to have been submitted by Austria to Prussia, to be enforced regardless of the voice of the minor states, viz.:—

1. That an Executive Board of nine votes be created, to be presided over by Austria.
2. That a Federal War-office be created under the Archduke Albrecht and the Prince of Prussia.
3. That a Legislative Board be instituted under the Presidency of Prussia.

With respect to the first proposition, Austria subsequently agreed to admit Prussia to the Presidency of the Executive Board, and that it should be exercised alternately, or in rotation, by both of these States. The assent of Prussia being thus obtained to the projects of Austria, Prussia (together with Bavaria) has also consented to the reception into the Germanic Confederation of all the Austrian provinces, and Austria engages to defend this measure against the suspicions and jealousies of the foreign Powers.

The latest accounts are dated the 23d of February. On that day a plenary sitting of the Conference was held, and various and voluminous opinions and protests on and against the reports of the first and second committee were delivered by the agents of almost all the states. The kingdoms of Wurtemberg, Bavaria, Saxony, and Hanover were in favour of the Austrian propositions, but the lesser states, from Baden downwards, combated these propositions. Bavaria, Wurtemberg, and Saxony have, moreover, entered a protest against the competency of the Congress eventually to return to the old Federal Diet. The strong remonstrances of Austria, Prussia (together with Bavaria) and its result was that a further term of fourteen days has been agreed upon, in which time the various states will provide further declarations or new propositions.

UNITED STATES.

We have intelligence this week from New York to the 13th ult. The bill to settle land claims in California has passed the Senate. A petition to Congress from the American Peace Society has been referred to the Committee on Foreign Relations, who report themselves unable to act upon it. The Message of the President of the United States to secure a provision in its treaties with other nations, for referring all future difficulties to the decision of umpires before the commencement of hostilities.

The *New York Tribune* says that Sir Henry Bulwer, it is probable, will shortly resign and return to England, on account of his infirm health.

The arrival in New Orleans of Gen. Quitman and the "Swedish Nightingale," the former of whom appeared to take his trip for the share he had taken in the Cuba invasion, is mentioned.

The arrival also from Mexico to the 16th of January. President Arista's inaugural address had been delivered, and his Cabinet appointed; Zuzeo being Minister of Foreign Relations; Robles, War and Marine; Payno, Treasury; Aguirre, Justice.

WEST INDIES.

By the usual Royal Mail Packet, we have accounts from Jamaica to the 27th of January last. But these have been already anticipated by the intelligence we published in our Postscript last week.

The Governor-General of Cuba, with the exception of the districts, which it was still under martial law, had dissolved, on the 8th September, a number of the Assembly, took place on the 17th of January. He was charged with the forgery of island cheques, and the jury being unable to agree, they were discharged. It is supposed means will be found to quash him from the Assembly. From the other islands there is no news of interest.

The cholera had again made its appearance in localities of Cuba, while in Cayenne (French Guiana) the yellow fever was raging and fatally prevalent. Amongst its victims were the Governor-General and the Primate Archbishop of the province.

NAVAL AND MILITARY INTELLIGENCE.

RELIEF TO THE WIND BOUND MERCHANTMEN.—The Admiralty have ordered the fifty-gun screw one-of battle ship *Hogue*, Captain Maude, sail, to proceed from Cork in the chops of the Channel for the relief, with water and provisions, of five homeward bound trading-vessels; and the Admiralty have further ordered that in future the *Hogue* is to cruise in the chops of the Channel at all times when the wind has been blowing from the eastward for twenty-four hours.

ORDNANCE ESTIMATES.—The Ordnance Estimates for the next financial year (1851-52) show a gross charge of £2,411,497, or £22,920 less than the charge for the present year ending on the 31st March next. The only item of increase in the votes is No 7, which is £30,953 for fortifications, barracks, and civil buildings, that exhausting vote which in the Ordnance as well as the Admiralty department, is denominated new works, improvements, &c.

PURE WATER FOR THE ROYAL NAVY.—Mr. Grant's distilling apparatus has been tried on board the *Birkenhead*, the vessel ordered to Sierra Leone, and it produced 210 gallons of pure water in five hours.

OFFICERS IN THE ROYAL NAVY.—It appears by a Parliamentary return issued this week, at the instance of Mr. Hume, that the total number of officers in the Royal Navy, on the 1st of January, 1850, was 3173, of whom 8 were in commission, 2468 receiving half-pay, and 346 in the coast guard. The total number of admirals in the service in 1829 was 31; vice-admirals, 68; and rear-admirals, 65. In 1850, the number of admirals was 30; vice-admirals, 45; and rear-admirals, 75.

EFFICIENT SUPPLY OF LIFE-BOATS ON THE COAST.—A conference took place on Wednesday in the metropolis, between the sub-committee of the Shipwrecked Fishermen and Mariners' Royal Benevolent Society and the Royal National Institution for the Preservation of Life from Shipwreck, with a view to consult about the most desirable object of an amalgamation between the two societies. One of the principal objects of the latter is a convenient purpose of efficiently supplying our dangerous coast with *life-boats*, and giving rewards for saving life.

DISTRIBUTION OF THE EFFECTIVE FORCES AT HOME AND ABROAD on the 1st of January last, as stated in the army estimates for 1851, page 44:—

	RANK AND FILE.		
In Great Britain.	Cavalry	3947	
	Infantry of the Line	24,065	
	Recruiting force for Regiments in India	1614	
			31,161
In Ireland.	Cavalry	2600	
	Infantry	18,545	
			21,241
In the Colonies.	Infantry	27,281	
	West India Regiments	2907	
	Local Colonial Corps	4831	
			35,019
In India.	Cavalry	3337	
	Infantry	23,693	
			27,030
	Total effective rank and file		114,451

The War-office distribution excludes altogether the officers, non-commissioned officers, trumpeters, and drummers; but a ratio of 1 to 7 in the above numbers will, as nearly as is necessary, give the proportion those ranks bear to the rank and file; thus:—

Rank and file in India		27,030
Add for the other ranks, in the ratio of 1 to 7, or one-seventh		3,861
Total of all ranks		30,891

Which approximates to the number of all ranks now serving in India.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

CRIMINAL LAW.

Lord CAMPBELL, after presenting some petitions from Scotland on the subject of burglary, laid on the table a bill for the improvement of the criminal law, which was read a first time.

COUNTY COURTS.

Lord BROUGHAM stated, that, in addition to the return from the Queen's Bench, which had been ordered, the Chief Justice had promised to move for a return from the Petty Bag office of cases removed by certiorari from the County Courts to the Courts in Equity, by which it appeared that in 1849 there had been thirty-eight writs of that character, and in 1850 twenty-one, two-thirds of which applied to the County Courts.

MINISTERIAL CRISIS.—CABINET EXPLANATIONS.

The Marquis of LANSDOWNE: My Lords, As there is no business before us, I may take this opportunity of moving that the House, at its rising, do adjourn to Friday next. In making that statement, I feel that, however imperfect and insufficient any communication which it is in my power to make may be found to be relating to the present position of affairs, any information given or communication made to the other House of Parliament, should, in substance, be made also to this House; but, in doing so, I confine myself to a statement of facts as I understand them to have occurred. My Lords, on Friday last, in consequence of divisions which had recently taken place in the other House of Parliament, her Majesty's servants communicated with each other. From domestic circumstances, I was not one of the number on that occasion; but they communicated with each other, and on that day her Majesty was led to believe that it was probable her servants would resign on the day following. Early on Saturday morning I came to town, and such resignation was respectfully and unanimously tendered to her Majesty's servants to be laid at her Majesty. In the course of the same day, the noble Lord whom I see opposite was, as I am informed, invited to attend at the Palace, and a proposal was made to him to construct a Government. I am informed, that the noble Lord stated that he was not then prepared to form one; and, upon that communication being made, recourse was had to other persons, and more particularly to my noble friend lately at the head of the Government, and he was requested to re-construct an administration. My Lords, this is the present state of affairs. All that it is in my power now to state to your Lordships is, that my noble friend lately at the head of the Government has, upon reflection, thought it to be his duty towards her Majesty and the public to attempt the re-construction of another Administration. Beyond this I have nothing to say I speak as the organ of a Government which, in fact, exists no more; but which is in office nominally only; and of which I am only the representative as long as it so continues in office, and for the purpose of making this communication. (Hear, hear.)

Lord STANLEY: My Lords, None of your Lordships will, I am sure, be disposed to offer any opposition to the motion of the noble Marquis that this House shall adjourn at any rate, with regard to any business of importance—to a later day. My Lords, I will not attempt to offer any comment on the statement which has been made by the noble Marquis; circumstanced as the country now is, it is impossible that a complete revelation of what has occurred can take place, and it would not be consistent with my duty to offer any explanation, which must necessarily be of an imperfect character. I will only say, my Lords, that on Saturday I had the honour of an audience of her Majesty, with her Majesty, when I laid before her fully and unreservedly the whole of my views on the state of the country and present position of parties. Nothing could exceed the gracious condescension, and, if I may use the word, kindness of her Majesty throughout the whole of that audience; but of what passed at that interview—either what advice I humbly tendered, or what was stated by her Majesty I think it the present moment I should ill require the confidence and favour which was reposed in me if I were to say a single word. (Cheers.) When the time shall come at which this position, crisis shall have passed, I shall be prepared to state fully and unreservedly to your Lordships and the country the whole substance of the advice I humbly tendered, and the course which, as a private man honoured by the confidence of her Majesty, and a privy councillor, I felt it my duty, on that occasion, to recommend. (Hear, hear.)

The Marquis of LANSDOWNE: After the forbearance which the noble Lord has exercised, unquestionably it would be improper to deprive him of an opportunity of stating fully, when the proper time has arrived, that which he may consider most conducive to his own honour and the interests of the public. I beg to say that I have stated nothing more than that of which I have been strictly informed. (Hear, hear.)

MARRIAGE AFFINITY BILL.

The Earl of ST GERMANS had a motion for next evening, which would not involve any party considerations, but would relate solely to the marriage bill, and, as he could be absent from the House to-morrow in the absence of the Lord Chief Justice, who would on Wednesday proceed on his circuit, he would beg the noble Marquis to postpone the adjournment until that day (Tues

Lord CAMPBELL and the Archbishop of CANTERBURY having concurred.

The Marquis of LANSDOWNE said he would accede to the wishes of the noble Lords.

COUNTY COURTS EXTENSION BILL.

Lord BROUGHAM postponed the introduction of this bill until Monday next.

THE NEW VICE CHANCELLOR.

On the motion of Lord LANGDALE, for the appointment of a new Vice-Chancellor was read a second time, and the standing orders having been dispensed with, the bill went through committee, and was ordered to be read a third time next day.

ADMINISTRATION OF CRIMINAL JUSTICE IMPROVEMENT BILL

This bill was, on the motion of Lord CAMPBELL, referred to select committee. Adjourned.

HOUSE OF COMMONS.—MONDAY.

NEW MEMBER

Mr. S. CHILDS took the oaths and his seat as member for North Staffordshire.

NEW WRIT.

On the motion of Mr. HAYTER, a new writ was ordered for a member to serve in Parliament for the borough of Perth, in the room of Sir J. C. Hobhouse, who has accepted the Chiltern Hundreds.

INCOME-TAX

Mr. COWAN gave notice, that, in Committee of Ways and Means, he should move that the income-tax be superseded, by a fixed rate on all trades and professions.

MINISTERIAL CRISIS.—CABINET EXPLANATIONS.

Lord J. RUSSELL rose at five o'clock, and, amid breathless silence, in a very full House, said: Sir, On Friday evening last I promised the House that I would, on this day, state the reasons that induced me to propose on that evening an adjournment of the Committee of Ways and Means to the present time. I now rise to acquit myself of that engagement. The House will remember, that, immediately after the commencement of the session a motion was made by the hon. member for Buckinghamshire, calling upon her Majesty's Ministers to take immediate measures for the relief of the distress prevailing among the owners and occupiers of land. Every member of this House, and every person in the country, must have considered that that motion was a motion to take out of the hands of her Majesty's present Government the conduct of the measures which it is the duty of a Government to propose. The hon. member for Bucks took a perfectly Parliamentary course on that subject. He stated that he had in vain appealed to the Government during the previous session, and that he now had no resource but to appeal to the House of Commons. I do not in the slightest degree complain of the course adopted by the honourable member; I only mention what must be the effect, in the view of every one, if that motion had been successful. Two hundred and sixty-nine members of this House voted for that motion, and two hundred and eighty-three against it, and, therefore, the majority of those present consisted of only fourteen members. Now, sir, upon a question of that kind, brought forward in hostility to the Government at the very commencement of the session, the Chancellor of the Exchequer having given notice of his intention to bring forward the financial statement of the year, a majority of only fourteen must tend to weaken any Government, it being impossible to carry on the business of the country with so small a majority in the House of Commons. But it appeared to me, that, although, the majority was small, yet that if there was a determination on the part of all the members forming the majority to maintain those principles of commercial policy which, in effect, were in question on that day, that that union might have made up for the smallness of the majority, and that the Government might have conducted successfully the affairs of the country. But on the 20th February a motion

was made with regard to a certain question of Parliamentary reform; and on that question—though in a thin House certainly, there being scarcely more than a hundred members present—the Government was beaten by a majority of two to one. Now, sir, if that had occurred in ordinary circumstances, I might have thought that it was owing to the thinness of the House, and to those who were in favour of the motion having brought down a considerable number in support of it, and that probably on the discussion of the bill, which must have been introduced founded upon that motion, there would be a full House, and we should meet with similar defeats—(Hear)—I came to the conclusion that the Government was not in a position to conduct satisfactorily the business of this House during the present session. (Hear, hear.) I thought that it was for the public interest, that, if that was the case, the House should not be called upon to go into discussions of our financial measures, and to form decisions on those questions, when it was probable that the Government would not be able to go successfully through the session. I thought, likewise, that it was a dangerous and very disadvantageous thing for the country, that a Government should continue liable to defeats from time to time—having but a very small majority at any time, and carrying on, therefore, but a lingering existence during the great part of the session yet to come. I therefore assembled the other members of the Cabinet, and stated to them that in my opinion the best course we could take, as a Ministry, was to tender our united resignations to her Majesty, and to leave her Majesty free to form another Administration. (Hear, hear.) Sir, my colleagues in the Cabinet concurred with me in that opinion. (Cheers from the ministerial side of the House.) One very important member of that Cabinet, the Marquis of Lansdowne, the Lord President of the Council, was at the time absent in the country, and I did not formally tender our resignations on that day (Friday) to her Majesty without having first consulted him. Therefore it was that I asked the House to consent to an adjournment till to-day. (Hear, hear.) Early on the following morning the Marquis of Lansdowne came to town. He met me at Buckingham Palace, and stated that he concurred with me entirely in the view we had taken. I thereupon proceeded at once to lay before Majesty the unanimous resignations of the members of her Administration, which resignations her Majesty was graciously pleased to accept. Her Majesty was also graciously pleased to intimate to me that it was her intention to send immediately to Lord Stanley, and to entrust him with the charge of forming a new Government. Later in the day—in the afternoon—I was requested to go again to Buckingham Palace, and, on arriving there, I was informed by her Majesty that Lord Stanley had stated that he was not "then" prepared to form a Government. Her Majesty then asked me to undertake the charge of re-constructing a Government that might be able to obtain the confidence of the House of Commons. Sir, I thought it my duty, in those circumstances, to attempt the task her Majesty was graciously pleased to impose upon me; and I assured her Majesty that I would undertake it, though I was perfectly aware of the many difficulties surrounding such an attempt. The House will, I think, agree that I should only add to those difficulties, and be at the same time acting most improperly, if I were to state anything further on this occasion. (Hear, hear.) I have only, therefore, to request the House, without passing on any discussion or to any judgment as to what has been taken place, to adjourn until Friday next, when I trust some definite result will have been come to; and that I shall be able to say either that I have succeeded or that I have abandoned the task that I have undertaken, in either case the House will then learn what is likely to be the result. (Hear, hear.) I beg, sir, now to move that the House do adjourn till Friday next. (Cheers.)

Mr. DISRAELI, who rose amidst cries of "Order," and other symptoms of impatience, said: I feel it my duty, after the statement of the noble Lord, to occupy the attention of the House for a moment. It is most true—and, indeed, a matter of public notoriety—that Lord Stanley has had an audience of her Majesty, and that he shall receive her Majesty's gracious permission to state what transpired at that audience, he will do so publicly and in a constitutional manner in his place in Parliament. But from my position which I felt from the part I have

THE JAMSETJEE BUND, POONAH.—(THE SLUICES OPEN.)

THE JAMSETJEE BUND.

THIS great public work, undertaken by the munificent liberality of Sir Jamsetjee Jeejeebhoy, the well-known prince-merchant of Bombay, has just been completed; and we are enabled, by an obliging correspondent, to present our readers with the accompanying Illustrations and details.

The Jamsetjee Bund consists of a vast rampart or weir, thrown across the Moola-Mouta river, for the purpose of forming a head or supply of water for the important cantonments and bazaar of the city of Poonah, which is situated on the right bank of the river.

This river, for about six months in the year, is subject to continual "freshes," which, in the rains, cause it to rise to 27 feet above the usual height, and to extend to about a thousand feet in width, rushing with the greatest rapidity; while during the remaining six months it presents a comparatively unimportant stream

The first suggestion of the Bund is due to Colonel Jervis, Chief of the Bombay Engineers, who, having brought his plan under the notice of Sir Jamsetjee Jeejeebhoy, that public-spirited individual proposed that if the Government would engage to keep up the machinery connected with it, he would himself be at all the expense of the undertaking.

This offer having been accepted, the carrying out of the project was entrusted to several first-rate engineers, both civil and military; but such was the difficult nature of the site, and the impetuosity of the occasional torrent, that from 1844, when the works first commenced, to 1848, they presented nothing but a continual succession of failures, at once disheartening and of vast expense. In the latter year, however, the works were placed under the superintendance and direction of Captain Thomas Studdert, of the Bombay Engineers, who, with a rare combination of science and perseverance, has completely succeeded in carrying out the project to a most successful termination; no damage having been sustained during some most tremendous freshes, and the work having in other respects answered most fully.

The previous failures, however, increased the cost considerably; and, as the Government did not think that Sir Jamsetjee was bound to advance more than he had undertaken, the work was completed at their expense—the total expenditure being £25,575, of which Sir Jamsetjee contributed no less than £17,131.

Captain Studdert, who has so distinguished himself as again to call for the special thanks of the Government, is the same officer who, as a Lieutenant, was instrumental in the fortifying, and afterwards blowing up, the works of Kelet-a-Ghilzee, and rendered other valuable services in the Affghan wars, for which he received three medals.

FOREIGN-OFFICE PASSPORTS.

Notice has been given by the Secretary of State for Foreign Affairs, that, on and after Saturday, the 22nd ult., passports will be issued from the Foreign-office department, according to the following regulations:—

1. Applications for Foreign-office passports must be made in writing, and addressed to her Majesty's Secretary of State for Foreign Affairs, with the word "Passport" written upon the cover.
2. The fee on the issue of a passport is 7s. 6d.
3. Foreign-office passports are granted only to British subjects, including in that description foreigners who have been naturalized by act of Parliament, or by certificates of naturalization granted before the 24th day of August, 1850; in this latter case the party is described in the passport as a "Naturalized British subject."
4. Passports are granted between the hours of twelve and four on the day following that on which the application for the passport has been received at the Foreign-office.
5. Passports are granted to persons who are either known to the Secretary of State or recommended to him by some person who is known to him; or upon the written application of a banking firm established in London.
6. Passports cannot be sent by the Foreign-office to persons already abroad. Such persons should apply to the nearest British Mission or Consulate.
7. Foreign-office passports must be countersigned at the mission, or at some Consulate in England, of the Government of the country which the bearer of the passport intends to visit
8. A Foreign-office passport granted for one journey may be used for any subsequent journey, if countersigned afresh by the Ministers or Consuls of the countries which the bearer intends to visit

THE SAILORS' STRIKE.—RIOT.

In all the ports of the north, with the exception of Hull, the strike is ended. In that port, however, it is still maintained, no intention of yielding having been as yet expressed. This obstinacy of the local committee has already been attended with great distress and privation to the men and their families, as well as with inconvenience to the trade of the port, the former, however, far outweighing the latter result.

In the metropolis, meetings continue to be held of seamen, protesting against the Mercantile Marine Act, which they have in vain memorialized the Government to get modified, and for the repeal of which they have resolved to petition Parliament.

At Yarmouth, on Saturday, a serious riot arose out of the following circumstances:—Mr. Barber, a shipowner, preferred an information before the Mayor and magistrates against a sailor who, after engaging to go a voyage, had refused to do so. The man was brought up in custody, and, on being questioned, said he would go if properly protected. His vessel was lying at Lowestoft; and under the direction of the magistrates a steam-tug was brought up the harbour to a point opposite the Town-hall for the purpose of taking the man to Lowestoft. The Mayor and magistrates, accompanied by the police, started from the hall with the man, for the purpose of escorting him to the vessel, but were immediately attacked by a crowd of seamen, and a regular fight took place. The police, though dreadfully beaten, behaved well, and the authorities managed to get the man on board the tug and send him away. Ten or twelve of the rioters were apprehended and placed in the station-house. The crowd of seamen retired for a short time to consider what was to be done, and they determined, if possible, to rescue their comrades. For this purpose they turned out in great force, and, amid a concourse of 2000 people, carried the mast of a ship to the station-house, and began to use it as a battering-ram, in order to break down the door and to rescue the prisoners. The station-house was defended by the police, about twenty in number, also by some men from the revenue cutters, several of the coast-guard, and eight or nine militia-men. The tumult increased, the authorities caused the Riot Act to be read, and 100 special constables were sworn in. Notwithstanding the efforts of this extra force, the riot continued, and the seamen seemed determined to force the station-house. At this time there were only twenty policemen, nine militia-men, and thirty revenue cutter's men, with the coast-guard and the special constables, to oppose about two thousand people.

The Mayor and magistrates, finding that the force at their disposal would be overcome, and that property and life would be endangered, sent a telegraphic message to the commanding officer of the 11th Hussars, stationed at Norwich Barracks, who immediately despatched two troops of dragoons by special engine, and these quickly dispersed the crowd at the

COLLIERS LEAVING THE HARBOUR, NORTH SHIELDS, AFTER THE BREAKING UP OF THE STRIKE.

Yarmouth station of the railway, where the rioters were about to tear up the rails. The troops then rode into the town, and quickly cleared the street; the people flew in all directions up the numerous narrow rows peculiar to the town, and in a few hours quiet was restored; but the troops continued to parade the streets during the night.

Next morning the town was perfectly tranquil.

On Monday seventeen of the rioters were brought before the magistrates, when three were discharged, and nine were fined in various sums, from 10s. to £5, including all costs; and, in default of payment, they were sentenced to terms of imprisonment varying from one month to two months. The remaining five, who had acted as ringleaders, were charged with riot, and, after a lengthened investigation, were fully committed for trial at the next quarter sessions.

The excitement in the town during the day was very great, and the prisoners were guarded to and from prison by the Hussars. The Mayor, at the same time, issued a bill, announcing "That no public processions or out-door meetings of seamen or others would be allowed to take place within the borough during the present excited state of the town." At night a guard of the military was set within the gaol, and patrols of the cutter's men were placed in the streets, &c. leading to the gaol. In consequence of the arrival of the war-steamers *Black Eagle* and *Lightning*, with a strong body of marines, the troops have returned to Norwich, and quiet has been since preserved.

The accompanying Engraving, from a sketch by Mr. J. W. Carmichael, represents a gratifying result of the close of the strike—a Fleet of Colliers leaving the Harbour of North Shields.

DRURY-LANE THEATRE.

We have this week engraved one of the most impressive scenes in the new operatic spectacle of "Azail," the plot of which was fully detailed in our Journal of last week. The incident is that where the repentant prodigal receives the forgiveness of his father, at whose feet also stoops the imploring betrothed of *Azail*. The situation is full of picturesque solemnity; and the scene is one of the most beautiful in the entire drama; the corn-field, the stream, and distant mountain country are admirably painted. The spectacle continues deservedly to increase in attraction with each representation. It is certainly the best piece of its class that has been produced for a considerable time in any theatre.

SCENE FROM "AZAIL THE PRODGIAL," AT DRURY-LANE THEATRE.

CALENDAR FOR THE WEEK.

SUNDAY, March 2.—Quinquagesima or Shrove Sunday. Wesley died, 1791.
MONDAY, 3.—Boileau died, 1711.
TUESDAY, 4.—Shrove Tuesday
WEDNESDAY, 5.—Ash Wednesday. Lent begins. Battle of Barossa, 1811.
THURSDAY, 6.—Michael Angelo born, 1475
FRIDAY, 7.—Bank of England virtually stopped payment, 1797.
SATURDAY, 8.—Raphael born, 1483. William III. died, 1702.

'FAMILY HAPPINESS.'—PAINTED BY E. METERHEIM.

The housewife on the landing sits
  Contented in the sun;
And in his nightcap sober Fritz,
  His early dinner done,
Leans on the door, a happy man,
And smokes as only Germans can.

The tabby cat has slain a mouse,
  And Hans, the eldest boy—
The pride and darling of the house,
  His father's hope and [illegible]
[illegible]
[illegible]

He drags its corpse along the ground,
  [illegible]
[illegible] kittens leaping round
  With young ferocity;
While ancient Tabby looks and purs,
And knows the fatal deed was her.

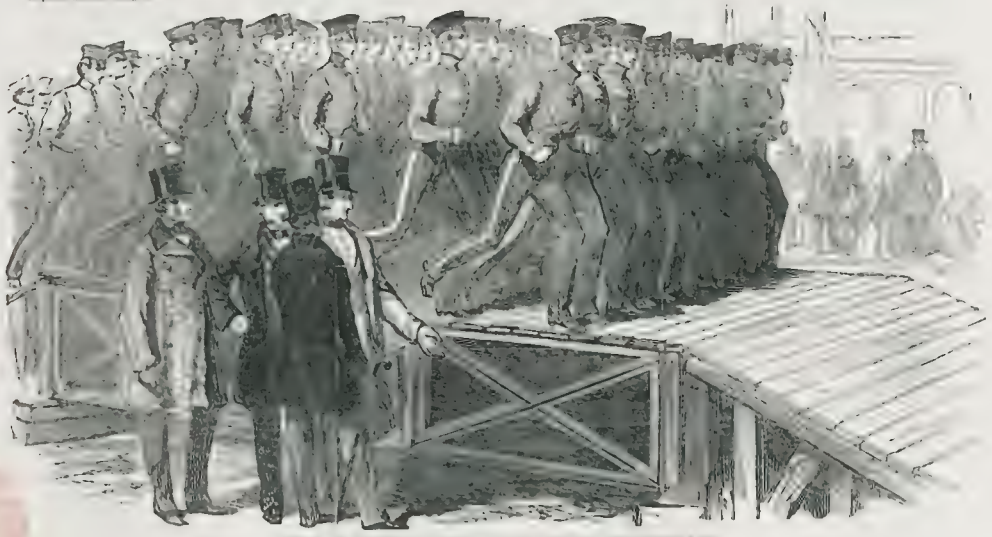
But is it right, O father Fritz,
  And Gretchen mother mild?
Is this the pastime that befits—
  Is't thus you teach a child?
Would not a ball of thread have done
Far better to amuse your son?

[illegible]
[illegible]
[illegible]
  That cruelty is crime?
And strive by precept, ev'n in play,
To light sweet Pity's heavenly ray?

Were it not better and more just,
  To teach, that God, who made
The meanest creatures of the dust,
  In sanctity array'd
Each life that He alone could give,
And that he fashion'd all that live?

Though luckless mice be lawful prey,
  And doom'd for cats to bleed,
Though hungry cats be prone to slay,
  Why smile upon the deed?
Let children reverence life and breath
Oh! never let them sport with death.

'Tis not in schools that we impart
  All knowledge pure and fair,
The education of the heart
  Demands continual care.
So, Fritz, my homily is read
Give little Hans a ball of thread.—C. F. H.



THE GALLERIES OF THE GREAT EXHIBITION BUILDING.—SEE [illegible]

MR. MACREADY AS "MACBETH," ON THE NIGHT OF HIS FAREWELL OF THE STAGE, FEBRUARY 26, 1851.

MR. MACREADY, HIS FAREWELL BENEFIT AND ADDRESS.

The last star of the old and now obsolete theatrical system has at length set. Mr. Macready's farewell has been spoken, and he has departed with honour into private life. The son of a provincial manager, he was "to the manner born" of the English stage, and heir of its traditions. His father was an actor at Covent Garden Theatre, at the moment of his birth—3rd of March, 1793, in Charles-street, Fitzroy-square; and young Macready's infant education took place at a private academy in London, previous to his reception at Rugby School. His first appearance on the boards was at the early age of seventeen, at the Birmingham Theatre, in the character of *Romeo*. We have seen a portrait of him in that part. He was very successful; and, in 1816, came to London to perform *Orestes* at Covent Garden Theatre, on the 16th of September.

For a while doomed to perform the stage-villains in Shiel's mad tragedies, Mr. Macready gradually worked up his way to dramatic importance. His earliest successes, indeed, were in melodrama, and so decided as almost to be fatal to him. His reputation in *Gamba* and *Rob Roy*, particularly the last, was enormous. It required his wonderful triumph in *Virginius* to deliver him from a dangerous *prestige*, by substituting a higher achievement. So perfect was his delineation of the character of the Roman father, that Kean is reported to have confessed at the time that Macready had made it all his own, and it was idle to think of another performing it after him. On the ground he doubted doing it himself; and Kean was wise in the recognition of his rival's merit—he rightly saw in Macready his legitimate successor, as he himself was of Kemble, however different their styles. New characters, in original and revived dramas, were eagerly sought after by the young and aspiring tragedian, such as "Damon and Pythias," "The Huguenot," "Julian," "Caius Gracchus," "The Fatal Dowry," and "William Tell."

In September, 1825, Mr. Macready sailed for America. On his return, in 1827, he performed at Drury-Lane as *Macbeth* to a crowded house. In the same character he made, in the ensuing year, a strong sensation in Paris, when he played there with Miss Smithson. It is recorded that our neighbours were thrown by his performance of the usurping Thane into strange ecstacies—fainting, weeping, and otherwise betraying irresistible excitement. Next came Mr. Macready's provincial tour, in which he spent the years 1826 and 1829. He had yet to bide his time.

On his return to the metropolis, in 1830, Mr. Macready much increased his reputation by the production of *Werner*. His success in this equalled his former triumph in *Virginius*—perhaps exceeded it. Of all Mr. Macready's impersonations, *Werner* is, probably, the most complete. Mr. Macready can be the ideal of wretchedness. Misery, in its most abject form, finds in him a most willing and accomplished representative. The heroic frequently proved beyond his aim or scope; but the human, in its utmost weakness, he could realise to perfection. This tendency—his greatest error in the representation of *Macbeth*—was his peculiar excellence in *Werner*. What was great in Byron, proved, as might have been expected, little in Shakspeare. The might of the one was the feebleness of the other. Shakspeare was no mandlin epicurean, seeing man's natural right to happiness: on the contrary, he knew that heroism was required from all humanity, and that trials were appointed to give occasion for its exhibition. This poetic view of things ever tempers in his works whatever were else too painful, and mitigates the pathos of the most terrible calamities.

We may pass over Mr. Macready's appearances in Knowles's "Alfred the Great" and in "Coriolanus," during the year 1831, the latter for the actor's own benefit, since neither made much impression at the time, and full trial was not given to the latter character, until his Covent-Garden management in 1839, when Mr. Vandenhoff was permitted to alternate the part with the manager,

... in the opinion of the judicious, bore away the bell. In fact, Mr. Macready's ... style was altogether unfitted for the Roman patrician; his petty irrita... had nothing in common with the aristocratic impatience and heroic daring ... e patriot and leader. He who could so well succeed in depicting the wretched, was not equally happy in the portraiture of the noble. Mr. Macready's *Coriolanus* also wanted that filial reverence for his great mother, which was one of the distinguishing attributes of John Kemble's impersonation.

To return. In 1832, Mr. Macready was admirably suited with a character, made after the very pattern of his style—we a lude to "If so afford," by Mr. Browning. It fitted these to the most minute particular, even to the cutting up of sentences into bits and pieces. Mr. Browning has scarcely two consecutive complete sentences in this extraordinary tragedy. His supposed fragments scarcely intell igible on perusal. It seemed, however, in acting, to be intelligible enough; and the peculiarity of the composition was for some time attributed to a similar ... The ... of ... was ... ...

GREAT INDUSTRIAL EXHIBITION OF 1851.

THE successive arrivals of Continental contributions within the last fortnight form an important stage in the history of the Great Exhibition. The vast edifice, a special wonderment and glory in itself, has, in fact, thrown open its doors for its expected treasures of industry and art; and again the gloomy forebodings of certain privileged croakers, respecting the paucity of foreign competition and exhibition, have been baulked by the wagon-loads of goods now deposited in their respective compartments of the Crystal Palace. The preparations, however, made for their reception have been duly expedited, and no confusion has arisen during the delivery of any of the goods now in the interior of the Building.

The morning, upto last Saturday, of the packages received and deposited in the boardings of the countries to which they belong, declared a total of 965 from Saxony, Switzerland, Prussia, Spain, Sweden, Mexico, Saxony, the United States, and from our other colonial territories, Canada, Nova Scotia, Guernsey, Natal, the Province of New South Australia. Since then 69 packages have been by the ship from Boston, United States. About 150 cases have arrived from Holland, and have also transmitted to Hyde Park: 12 cases of Russian and 62 cases of manufactures from a part of the French collection, together with 140 packages from Saxony, are also to be reckoned.

Not only the consignments from our own manufacturers come in but also those of the agricultural implement makers have been the first in the field. Many products, plastic substances, glass, hardware, miscellaneous manufactures, fine art contributions, machinery, and specimens of mechanism [illegible] manufacturing in silk and velvet, have been received from our home contributors. The whole amount of consignments from the United Kingdom are between 400 and 500 in number.

The second division is most advanced in the fittings up and carpenter's work in shelves, stalls, and tables: the painting progresses steadily, and we are conscientious in our opinion respecting the peaceful results of the blue and white decoration, and the adoption of a more bright hue in the tone of the yellow. The ceiling along the galleries is nearly all fixed—the mahogany hand-rail has been added in parts, and its decoration has also been commenced; the gas and water pipe fittings are being completed; the arrangements in the galleries are for the division of the spaces by the Sappers is also advanced; and intending exhibitors are now to be seen in various directions examining their allotted spaces, and the position and size of their projected counters.

An adequate number of Custom-house officers have been attached to the Building, to expedite the arrival of foreign contributions, and the staff of the Executive Committee has received extra assistance in the forty-second department from other of our own home display. We shall publish next week an accurate official list of those positively engaged in the labours of the arrangements, &c.

Besides the rails (already described) dividing the nave from the transepts, the galleries are to be tested by sill and moving weights of shot from the Royal Artillery. Fourteen waggons, each drawing a ton, have been dispatched for this purpose from Woolwich.

Most of the foreign commissioners engaged in the superintendence of the exposition, &c. of the goods of their respective countries, have commenced their duties. The commissioners for the Zollverein, for Austria, for France, Sardinia, Belgium, and Switzerland, are among those whom we may name as being early at their posts, and who, by themselves or their staff, are daily on the ground.

Prince Albert again inspected the progress of the works and disposition of the allotted spaces on the 20th ult. He remained upwards of two hours, minutely inquiring respecting the multifarious questions which in all directions. He was attended throughout his stay by the Executive Committee

To Mr. Owen Jones, as we have previously notified, has been intrusted the supervision of the stalls and counters to be appropriated to exhibitors. By this very fit regulation, the same mind which has in its decorative adaptations considered the laws of colour in relation to the structure, characteristics of the Building, has now harmoniously to control the shape and configuration of the fittings up with the architectural proportions of the Crystal Palace. In the various divisions, quadrangular courts will be preserved where possible; the tables will be geometrically set out, whilst central points of taste and effect will be aimed at in the arrangement of the contributions. The general proportion of the height of the stalls is believed, reach above half way up the columns, so that the ground area may not be too much blocked up, and the effect from the gallery may adequately embrace the arrangements in the courts below. Each of the 30 quadrangles some rare and remarkable specimen—pillars of polished granite—fountains colossal statues gigantic masses of coal—a contribution of spurmaceti, which will cost £2,000 in its preparation modes of the Bridgewater and Dancer Bridges—a monster locomotive—the model of some of the Naval Straits, whose lighting power exceeds 2620 tons—displays of feathers, furs, and Spitalfields silk manufactures, will evidence the energies and untiring industry of our native artizans. Let alone the variety and richness of her colonial productions, England will have no cause to be ashamed of her place at the great competitive festival, from the collection of her own island contributions.

The visits of the people indicate their continued approval of the outside of the Crystal Palace. On last Sunday, was the whole Park thronged with visitors, "actual computation" declares) that from ten till five o'clock 42,462 persons entered at the principal Grosse Apsley House, and 21,614 through Cumberland Gate. Of course, street visitors of all descriptions have been in attendance, from the days of the first erection of the Building being placed; and the variety and extent of the articles inside the Park demand had the numbers increased, and no great was the nuisance to all passers by, that, much to the general satisfaction of the Commissioners of Woods and Forests have enforced the legal provisions of Act 2 and 3 Vic. cap. 47, sec. 47, against exposing articles for sale in the public parks

To [illegible] is [illegible] having placed their contributions at the disposal of the Commissioners, as a central office, the sale of season tickets commenced on the 26th, as previously arranged. The demand was much greater than the supply. The first day's sale realized £3950, and, up to Saturday last, 1700 gentlemen's tickets, and two-thirds of that number of ladies' tickets, were disposed of. All applications by letter, we can inform our country friends, must be accompanied by a post office order, payable to George Grove, Esq., the secretary of the society, John-street, Adelphi.

The Westminster Local Committee, it is said, have been endeavouring to retard the period for admission at one shilling. They complain, we hear, will cool self-sufficiency, that a vast influx of the lower order of visitors would hurt "the respectable" and drive people of distinction out of town. These gentlemen must rest assured that their application will not succeed; it would be against the [illegible] of the Exhibition and public propriety to entertain such a "counsel's opinion" for a moment. It is hardly assumed that the largest amount of receipts will be received from the "shilling visitors;" and this point has, doubtless, will influenced the tariff of the Commissioners, which is generally acceptable.

Wines and tea preserve, by the West Ind a much that productions from Trinidad [illegible] sugar, Rice, sugar, woods, Sea Island cotton, naphtha prepared from the Pitch Lake of the island, and tobacco are to be exhibited

The [illegible] Sardinia and Piedmont now received consists of statuary, gold and metal work, velvets, silks, and miscellaneous articles of art, &c. The Governm ent steam-frigate which conveyed them brought several extra officers. She was only ten days between Genoa and Spithead.

Fifteen cases from Greece are reported to be on their route to the Exhibition. An Albanian dress worth 6000f is mentioned as having employed in its preparation 50 persons for three months.

The *Manchester Guardian* furnishes estimates of the proceeds of the Exhibition, if open for six months, which it affirms will range between £760,000 and £1,067,000.

Some of the representatives of foreign countries have attempted to interfere with the pre-determined arrangements of the Executive Committee, as the space allotted. It must be apparent to all, that a proper combination of interests of exhibitors should be effected where possible, and that no obstruction should be attempted by making individual wishes in the exercise of choice. Certain rules must be observed and implicitly followed, or the Exhibition would never be arranged at all. In most cases the foreign commissioners have manifested a full disposition of the Executive Committee, and have accommodated their arrangements to those previously decided upon by the proper authorities. In one case, we understand, however, a foreign commissioner refused to [illegible] Now London Docks, unless it was allowed to erect a [illegible] other countries adjacent to his allotment; and being refused, attempted to persist in his claim

*** At page 162, last week, it should have been stated that Messrs. B. Hick and Son, of Bolton, had commenced the foundation, &c. for driving the contemplating machinery of Messrs. Platt and Co., of Oldham.

VISITORS TO THE BRITISH MUSEUM.—The total number of persons who visited the British Museum in 1844 was 685,614; in 1845, 750,601; in 1846, 820,949; in 1847, 897,595; in 1848, 979,073; and in 1850, 1,098,963. The number of visits made to the reading-rooms, for the purpose of study or research, was about 1900 in 1840; 4360 in 1815; 8820 in 1850; 22,200 in 1842; 31,200 in 1830; 63,466 in 1839; 67,342 in 1840; 69,303 in 1841; 71,705 in 1842; 70,581 in 1843; 67,511 in 1844; 64,427 in 1845; 65,784 in 1846; 67,825 in 1847; 68,807 in 1848; 70,271 in 1849; and [illegible] in 1850. The number of visits made by artists and students [illegible] for the purpose of study, was about 1817, 6720 in 1841, 8120 in 1842, 7200 in 1843, 6720 in 1844, 4536 in 1845; 4124 in 1846; 3708 in 1847; 3654 in 1848; 6804 in 1849; and 6510 in 1850. The number of visits made to the print-room was about 4000 in 1825; 1065 in 1835; 6717 in 1840; 7744 in 1841; 8781 in 1842; 8162 in 1843; 8504 in 1844; 6940 in 1845; 4380 in 1846; 3972 in 1847; 3813 in 1848; 5070 in 1849; and 5745 in 1850

THE ROMAN CATHOLIC BAR ON THE "PAPAL AGGRESSION" BILL.—The Roman Catholic members of the Irish bar have agreed to a protest which has received from 90 to 100 signatures. In this document the barristers say:—

We view the proposed measure as retrogressive and penal in its character, as infringement upon religious liberty, as unwarrantable interference with the discipline of our Church, and a departure from the policy recently pursued by the Legislature, in facilitating the voluntary endowment of the Roman Catholic hierarchy and clergy of this country.

We object to the measure, because, by subjecting our religious to special legislation of a wexatious character, it will place the Roman Catholic people in a position of inferiority to their fellow-subjects

We object to the measure because it will create new difficulties in the administration of charitable bequests and religious trusts connected with the Roman Catholic Church, and, moreover, the free alienation of property, interfere with and endanger settlements made upon the faith of existing laws, and in its results be productive of great embarrassment and uncertainty.

Finally, we object to the measure, because it has been conceived, and framed in a spirit of hostility to the Roman Catholic religion, and because it is calculated to revive animosity which have been so baneful to our country, and which in latter years had been happily subsiding

J S.—Your subscription to the Chess Tournament may be remitted by Post-office order, addressed to Robert Longbottom, Esq., 3, [illegible] Royal, London, who will return you a receipt for the same.

P Q.—Let us carefully examine it to Problem No 367. It cannot possibly be solved in less than the prescribed number of moves

H J A.—It appears ingenious. Is it original? Mr. [illegible] shall appear among our Enigmas

Rev. J. Edwards by Zollverein, by Austria, by France, Sardinia, Belgium, and Switzerland, are among those whom we may name as being early at their posts, and who, by themselves or their staff, are daily on the ground.

Prince Albert again inspected the progress of the works and disposition of the allotted spaces on the 20th ult. He remained upwards of two hours, minutely inquiring respecting the multifarious questions which in all directions. He was attended throughout his stay by the Executive Committee

To Mr. Owen Jones, as we have previously notified, has been intrusted the supervision of the stalls and counters to be appropriated to exhibitors. By this very fit regulation, the same mind which has in its decorative adaptations considered the laws of colour in relation to the structure, characteristics of the Building, has now harmoniously to control the shape and configuration of the fittings up with the architectural proportions of the Crystal Palace. In the various divisions, quadrangular courts will be preserved where possible; the tables will be geometrically set out, whilst central points of taste and effect will be aimed at in the arrangement of the contributions. The general proportion of the height of the stalls is believed, reach above half way up the columns, so that the ground area may not be too much blocked up, and the effect from the gallery may adequately embrace the arrangements in the courts below. Each of the 30 quadrangles some rare and remarkable specimen—pillars of polished granite—fountains colossal statues gigantic masses of coal—a contribution of spurmaceti, which will cost £2,000 in its preparation modes of the Bridgewater and Dancer Bridges—a monster locomotive—the model of some of the Naval Straits, whose lighting power exceeds 2620 tons—displays of feathers, furs, and Spitalfields silk manufactures, will evidence the energies and untiring industry of our native artizans. Let alone the variety and richness of her colonial productions, England will have no cause to be ashamed of her place at the great competitive festival, from the collection of her own island contributions.

The visits of the people indicate their continued approval of the outside of the Crystal Palace. On last Sunday, was the whole Park thronged with visitors, "actual computation" declares) that from ten till five o'clock 42,462 persons entered at the principal Grosse Apsley House, and 21,614 through Cumberland Gate. Of course, street visitors of all descriptions have been in attendance, from the days of the first erection of the Building being placed; and the variety and extent of the articles inside the Park demand had the numbers increased, and no great was the nuisance to all passers by, that, much to the general satisfaction of the Commissioners of Woods and Forests have enforced the legal provisions of Act 2 and 3 Vic. cap. 47, sec. 47, against exposing articles for sale in the public parks

To [illegible] is [illegible] having placed their contributions at the disposal of the Commissioners, as a central office, the sale of season tickets commenced on the 26th, as previously arranged. The demand was much greater than the supply. The first day's sale realized £3950, and, up to Saturday last, 1700 gentlemen's tickets, and two-thirds of that number of ladies' tickets, were disposed of. All applications by letter, we can inform our country friends, must be accompanied by a post office order, payable to George Grove, Esq., the secretary of the society, John-street, Adelphi.

The Westminster Local Committee, it is said, have been endeavouring to retard the period for admission at one shilling. They complain, we hear, will cool self-sufficiency, that a vast influx of the lower order of visitors would hurt "the respectable" and drive people of distinction out of town. These gentlemen must rest assured that their application will not succeed; it would be against the [illegible] of the Exhibition and public propriety to entertain such a "counsel's opinion" for a moment. It is hardly assumed that the largest amount of receipts will be received from the "shilling visitors;" and this point has, doubtless, will influenced the tariff of the Commissioners, which is generally acceptable.

Wines and tea preserve, by the West Ind a much that productions from Trinidad [illegible] sugar, Rice, sugar, woods, Sea Island cotton, naphtha prepared from the Pitch Lake of the island, and tobacco are to be exhibited

The [illegible] Sardinia and Piedmont now received consists of statuary, gold and metal work, velvets, silks, and miscellaneous articles of art, &c. The Governm ent steam-frigate which conveyed them brought several extra officers. She was only ten days between Genoa and Spithead.

Fifteen cases from Greece are reported to be on their route to the Exhibition. An Albanian dress worth 6000f is mentioned as having employed in its preparation 50 persons for three months.

The *Manchester Guardian* furnishes estimates of the proceeds of the Exhibition, if open for six months, which it affirms will range between £760,000 and £1,067,000.

Some of the representatives of foreign countries have attempted to interfere with the pre-determined arrangements of the Executive Committee, as the space allotted. It must be apparent to all, that a proper combination of interests of exhibitors should be effected where possible, and that no obstruction should be attempted by making individual wishes in the exercise of choice. Certain rules must be observed and implicitly followed, or the Exhibition would never be arranged at all. In most cases the foreign commissioners have manifested a full disposition of the Executive Committee, and have accommodated their arrangements to those previously decided upon by the proper authorities. In one case, we understand, however, a foreign commissioner refused to [illegible] Now London Docks, unless it was allowed to erect a [illegible] other countries adjacent to his allotment; and being refused, attempted to persist in his claim

*** At page 162, last week, it should have been stated that Messrs. B. Hick and Son, of Bolton, had commenced the foundation, &c. for driving the contemplating machinery of Messrs. Platt and Co., of Oldham.

VISITORS TO THE BRITISH MUSEUM.—The total number of persons who visited the British Museum in 1844 was 685,614; in 1845, 750,601; in 1846, 820,949; in 1847, 897,595; in 1848, 979,073; and in 1850, 1,098,963. The number of visits made to the reading-rooms, for the purpose of study or research, was about 1900 in 1840; 4360 in 1815; 8820 in 1850; 22,200 in 1842; 31,200 in 1830; 63,466 in 1839; 67,342 in 1840; 69,303 in 1841; 71,705 in 1842; 70,581 in 1843; 67,511 in 1844; 64,427 in 1845; 65,784 in 1846; 67,825 in 1847; 68,807 in 1848; 70,271 in 1849; and [illegible] in 1850. The number of visits made by artists and students [illegible] for the purpose of study, was about 1817, 6720 in 1841, 8120 in 1842, 7200 in 1843, 6720 in 1844, 4536 in 1845; 4124 in 1846; 3708 in 1847; 3654 in 1848; 6804 in 1849; and 6510 in 1850. The number of visits made to the print-room was about 4000 in 1825; 1065 in 1835; 6717 in 1840; 7744 in 1841; 8781 in 1842; 8162 in 1843; 8504 in 1844; 6940 in 1845; 4380 in 1846; 3972 in 1847; 3813 in 1848; 5070 in 1849; and 5745 in 1850

THE ROMAN CATHOLIC BAR ON THE "PAPAL AGGRESSION" BILL.—The Roman Catholic members of the Irish bar have agreed to a protest which has received from 90 to 100 signatures. In this document the barristers say:—

We view the proposed measure as retrogressive and penal in its character, as infringement upon religious liberty, as unwarrantable interference with the discipline of our Church, and a departure from the policy recently pursued by the Legislature, in facilitating the voluntary endowment of the Roman Catholic hierarchy and clergy of this country.

We object to the measure, because, by subjecting our religious to special legislation of a vexatious character, it will place the Roman Catholic people in a position of inferiority to their fellow-subjects

We object to the measure because it will create new difficulties in the administration of charitable bequests and religious trusts connected with the Roman Catholic Church, and, moreover, the free alienation of property, interfere with and endanger settlements made upon the faith of existing laws, and in its results be productive of great embarrassment and uncertainty.

Finally, we object to the measure, because it has been conceived, and framed in a spirit of hostility to the Roman Catholic religion, and because it is calculated to revive animosity which have been so baneful to our country, and which in latter years had been happily subsiding

CHESS.

TO CORRESPONDENTS.

J C Cattle.—Your very handsome donation to the fund of the Chess Tournament has been safely received and duly paid in. A private note of acknowledgment shall be forwarded by the Original Mail. Many thanks for the games, many of which are full of interest

Rector.—A combination of one games to the family of the Chess Tournament will enable a proper and unique subscription to arise for the prizes, or to receive a copy of the work containing the same, as you may elect and the whole of the games

'THE EAGLE'S THRONE."—PAINTED BY J. WOLF.—EXHIBITION OF THE BRITISH INSTITUTION.

FINE ARTS.

"THE EAGLE'S THRONE."—PAINTED BY J. WOLF.

IN the notice of the British Institution Exhibition, in our Journal of the 16th ult., we characterised the above as one of the best and most striking pictures in the Gallery. Here sits "the monarch of the birds free, and on his throne, a jagged pinnacle of topmost rock, towering into the serene regions of the higher air. How calm, and proud, and king-like the grand bird sits upon his unscaleable eyrie, the *débris* and feathers of his slaughtered prey scattered around him. The keen yellow eyes unflinching, and the strong wing furled, the monarch of the air rests in all the proud consciousness of safety. The feeling of vast height and perfect isolation is finely conveyed."

JOANNA BAILLIE.

JOANNA BAILLIE, one of the most eminent female writers and poets that these countries have produced, was a native of Scotland. Her father was the Rev. James Baillie, a clergyman of the Kirk, and, at the time of Joanna's birth, minister of Bothwell parish, near Glasgow; his wife, Joanna's mother, was Dorothea Hunter, sister of the celebrated anatomists William and John Hunter. Joanna Baillie was born in Bothwell Manse, in 1762. Her brother was George the Third's favourite medical adviser, Matthew Baillie, a physician, whose name ranks high among those of the distinguished men that have adorned the British annals of medicine: he died in 1823, and his monument is in Westminster Abbey.

Miss Baillie commenced early in life that literary career which was to extend over more than half a century. The first production that stamped her fame was her "Plays on the Passions," one volume of which appeared in 1798; the second volume was published in 1802. Sir Walter Scott was among the ardent admirers of this work. Mentioning in a letter at the time his own "House of Aspen," he says, "the 'Plays of the Passions' have put me entirely out of conceit with my Germanized brat." His esteem of the talents of the author led, in Miss Baillie's case, as in that of Miss Edgeworth and others, to Scott's acquaintance and friendship with the woman. The cordial and agreeable intimacy between Miss Baillie and Scott, which ceased but with the life of the latter, dates from his introduction to her at Hampstead, in 1806, by the translator and poet, Sotheby. Joanna Baillie herself, many years afterwards, described the interview to a friend as one of the most remarkable events of her life. She, from that period of their first acquaintance, became a continual correspondent of the mighty minstrel, and some of the most entertaining letters he ever wrote are addressed to her. The author of the "Man of Feeling" was also her friend. The prologue to the play of "The Family Legend" was written by Scott, the epilogue by Mackenzie. Miss Baillie's works have been numerous, and all, more or less, even to her songs, such as "Woo'd and married an a'," and "Tam o' the Lin," bear marks of superior excellence. Her dramatic writings have great originality and invention, for the foundations of her plays are not in general historical, nor stories from real life, but combinations wrought out from her own conceptions. Her knowledge of the human heart, of its wide range of good and of evil, of its multifarious, changeful, and wayward nature, was great, and her power of portraying character has rarely been exceeded. Her language is simple and forcible, while the illustrations and imagery, often suggested, probably, by the picturesque localities where her youth was passed, are copious and effective. Her female portraits are especially beautiful, and possess an unusual degree of elevation and purity. Several of her dramas have been acted. John Kemble and his gifted sister sustained the chief characters of "De Montfort," upon several occasions, and the elder Kean selected the same tragedy for one of his benefit nights. The "Family Legend" obtained a considerable run in Edinburgh. The "Separation" and "Henriquez" have, in more modern times, been acted also.

Though Miss Baillie's fame tended greatly to draw her into society, her life was passed in retirement. It was pure and moral in the highest degree, and was characterised by the most consummate integrity, kindness, and active benevolence. She was an instance that poetical genius of a high order may be united to a mind well regulated, able and willing to execute the ordinary duties of life in an exemplary manner. Gentle and unassuming to all, with an unchangeable simplicity of manner and of character, she counted many of the most celebrated for talent and genius among her friends; nor were those who resorted to her modest home at Hampstead confined to the natives of this country, but many from various parts of Europe, and especially from America, sought introductions to one whose fame is commensurate with a knowledge of English literature.

To the inexpressible grief of all who knew her, this great poet and excellent woman departed this life on the 23rd ult., at Hampstead, being at the time close on her ninetieth year. In her death passed away, we believe, the last of those maiden authors whose brilliant list includes the names of Edgeworth, Porter, and Moore, and who rendered the literature of this country, a few years ago, illustrious by their original genius, exquisite fancy, and admirable morality.

The accompanying Portrait has been copied (by permission) from a plate prefixed to an edition of the collected works of Joanna Baillie, just published by Messrs. Longman and Co., in a large and handsomely printed volume extending to 850 pages, and ranging with the one volume editions of "The Doctor," the works of Sydney Smith, Sir James Mackintosh, &c. The engraving is from a painting by Sir William Newton. In this new edition are collected the dramatic and poetical works of Joanna Baillie, with many corrections and a few additions. They are arranged in three divisions: the first contains the "Plays on the Passions," from which the reputation of the author primarily and chiefly arose; in which is embodied the design she formed, at the commencement of her career, of writing a tragedy and comedy on each of the stronger passions of the mind. The second division embraces all her dramatic works not comprehended in that design. The third includes all her poetical compositions not dramatic, nor connected with the plays: in this division appears a poem entitled "Ahalya Baee," recently printed for private circulation, besides some short poems never before published. The following passage, from one of these later poems, possesses a truly pathetic interest:—

But in what order we shall leave this scene,
Where all our joys, affections, cares have been,
Ah! who can say? The young and strong may stand,
Close to the hidden confines of that land
From which no traveller returns again,
Whose sights and sounds in mystery remain:
But here full gladly d the aged wai
An hourly summons to the unknown state.

J. Baillie

THE LATE JOANNA BAILLIE.

PLATE PRESENTED TO CHARLES MACKAY, ESQ., LL.D.

IT may be remembered, that in this Journal of the 26th of October, 1850, we drew attention to the hardships inflicted upon the sailors frequenting the Port of Liverpool, by the prohibition to use lights and kindle fires on board of their vessels while in dock.

The Candlesticks—of which the annexed is a representation—are four in number, and were purchased by a subscription got up principally among the captains of the New York packet-ships trading to Liverpool, for presentation to Dr. Charles Mackay. The Candlesticks, with a pair of silver Snuffers and silver Tray, were manufactured by Mr. Joseph Mayer, of Lord-street, Liverpool. They display the most admirable workmanship, and are chased in frosted and polished silver; the pillar, which is of the tripod form, is ornamented with three antique goat masks. They each bear the following inscription:—

Presented to CHARLES MACKAY, Esq., LL.D., by a few of the Captains of the American ships trading to the port of Liverpool, in remembrance of his generous and able exertions in procuring the use of fires and lights on board ships in the Liverpool Docks, 1851.

The presentation of this testimonial arose out of the publication by Dr. Mackay in the *Morning Chronicle* of an elaborate letter on behalf of the seamen frequenting the port of Liverpool, and advocating the use of fires and lights on board of their vessels—a privilege denied them by the Liverpool Dock trustees and Town Council.

The question was mooted originally by the American captains and merchants, and by the British captains engaged in the coasting trade. These gentlemen alleged that in London and in every other port in the world ships were allowed this privilege, but that in Liverpool, where it was denied without any sufficient reason, the seamen were driven by necessity out of their cold, damp, unwholesome, and dark ships, to public-houses, and far more disreputable places on shore, to procure the essential comforts of warmth and light, to the injury of their health, of their pockets, of their character, of their efficiency, and of their whole moral, physical, and spiritual condition. The array of facts thus placed before the Dock committee proved their case completely, and showed that this absurd and peculiar regulation was mischievous in a hundred other ways. It was also shown that the vexatious prohibition was continually evaded; that lights were used clandestinely; and that, in consequence, more vessels were burnt in leaving the Mersey than in any other port, or any other three ports, in the world. It was at the same time argued that the prohibition was a tax upon commerce, inasmuch as it compelled the owners and captains of ships to board their men on shore, at a much higher rate than they could have fed them in their ships if they had been allowed to cook on board, and if, in the dark nights, the sailors might have had even so little as a covered lantern to light them to their berths. The Dock committee were so struck with the facts and reasoning brought before them, that they presented a report to their constituency, the Town Council, in which they recommended that the privilege should be conceded.

SNUFFERS AND TRAY.

This letter was considered to present the whole case so completely, that it was reprinted in the form of a pamphlet by the captains of the American packet-ships and other gentlemen interested, and largely circulated among the magistrates, the clergy, and the mercantile and trading community of the town. Its publication is considered to have greatly advanced the cause. The inhabitants of Liverpool were for the first time made aware of the full extent of the mischief and immorality caused by it among the sailors, and of the serious injury inflicted upon the character of the town and the commerce of the port; and so strong a public feeling was excited, that the friends of the

maritime population were encouraged to make new and stronger exertions to procure the repeal of the Act of Parliament by which the prohibition was instituted. The matter is still in abeyance, but it is understood that the authorities of Liverpool no longer oppose the privilege sought, and that, when the question comes before Parliament, for which the necessary preliminary notices have been given, the prohibition will be removed.

THE ADDERLEY CHAIR.

THIS handsome testimonial has just been presented to Mr. Adderley M.P., by the colonists of the eastern province of the Cape of Good Hope, in acknowledgement of his eminent public services. The presentation took place on Thursday week, the 20th ult., when a deputation, consisting of Messrs. Harrison Watson, H. Maynard, F. D. Deare, H. Quin, R. S. Blaine, and F. Joly, waited upon Mr. Adderley, at his residence, in Lowndes-street, Belgrave-square. Mr. Watson then addressed the hon. member, requesting his acceptance of the Chair in testimony of the high consideration in which the colonists hold his services volunteered in their behalf, and which successfully resulted in the entire abandonment of a plan framed by her Majesty's Government for converting the Cape colony into a penal settlement.

Mr. Adderley, in reply, expressed his great gratification in accepting a testimonial presented from so numerous and respectable a body of inhabitants as the residents in the eastern districts of the important colony of the Cape of Good Hope, and his willingness at all times to be made useful in endeavouring to promote their welfare.

The Chair has been designed and carved by J. Hart, of Graham's Town. The back consists of two panels, elaborately executed in wood of a lighter shade than the framework, each panel being enclosed in scroll-work of fanciful design. Between the upper and lower division, and in the centre of the back of the Chair, a cluster of native weapons and implements is grouped—the assagai and the shield of the Kaffir, the bow and quiver of the wandering Bushman, the war-axe and the plume of the Bechuana. On one side are placed the arms of the British settler—his rifle, hunting-knife, and pouch; on the other side, the long elephant gun, the powder-horn, and belt of the Dutch Boer.

The upper panel represents one of those scenes of wild nature, the truthfulness of which can only be identified by the adventurous traveller or huntsman:—

> Away, away! from the dwellings of men,
> By the wild deer's haunt, by the buffalo's glen;
> By valleys remote where the oribi plays,
> Where the gnu, the gazelle, and the harte-beest graze,
> And the kudu and eland unhunted recline
> By the skirts of grey forests o'erhung with wild vine;
> Where the elephant browses at peace in his wood,
> And the river-horse gambols unscared in the flood,
> And the mighty rhinoceros wallows at will
> In the fen, where the wild ass is drinking his fill.
> O'er the brown Karroo, where the bleating cry
> Of the springbok's fawn sounds plaintively;
> And the timorous quagga's shrill whistling neigh
> Is heard by the fountain at twilight grey;
> Where the zebra wantonly tosses his mane,
> With wild hoof scouring the desolate plain;
> And the fleet-footed ostrich o'er the waste
> Speeds like a horseman who travels in haste;
> Hieing away to the home of her rest,
> Where she and her mate have scooped out their nest,
> Far hid from the pitiless plunderer's view
> In the pathless depths of the parched Karroo.

The principal group in the immediate foreground consists of three of the lords of the forest, the elephant, the rhinoceros, and the buffalo; on the left a gnu comes galloping on, and in the distance are groups of giraffes and ostriches, whilst above soars the carrion vulture.

The lower panel represents a South African scene, the counterpart of which may be found in many a sequestered spot in this part of the colony. A wagon, with its sturdy driver, goes jolting on, and is about descending the bank of some steep rivulet. On a ridge overlooking the drift down which the leading oxen of the span are descending is a Kaffir hut, and by it stands a son of Amakosa,

> Eyeing the farmers' lowing herds afar.

In the middle distance is placed a frontier homestead, with its shady verandah and porch; and rising immediately behind it is a lofty and rugged kranz; and on all sides, stretching away in wild confusion, are mountains piled upon mountains

This cushion is worked in silk, on black velvet; it consists of a group of wild flowers surrounded by a rich wreath of vine leaves and blushing grapes. The lower part of the chair below the cushion is surrounded by an elegant frieze; the front is carved with a wheat-sheaf, and a festoon of cobs of Indian corn. The aloe, ever a characteristic of South African scenery, is grouped on one side of the sheaf of corn, with a stem of the Kaffir millet; and on the other with Indian corn. Upon a medallion is the following inscription:—

This Chair, made of South African wood, the work of a colonist, was presented to Charles Rawyer Adderley, Esq., M.P., by the inhabitants of Graham's Town, Albany, and adjoining districts of the eastern province of the colony of the Cape of Good Hope, in gratitude for his persevering efforts in opposing the Ministerial scheme for making this colony a penal settlement, and for his generous defence of their just rights and privileges as British subjects in the House of Commons, on the 27th day of March, 1849.

We understand that the above Chair will be placed in the forthcoming Great Exhibition, as a specimen of colonial ingenuity.

CHAIR PRESENTED TO C. B. ADDERLEY, ESQ., M.P., BY THE COLONISTS OF THE EASTERN PROVINCE OF THE CAPE OF GOOD HOPE.

PARIS FASHIONS FOR MARCH.

POLITICAL events but a short time since engrossed the attention of the Parisians; but balls, theatres, and gaiety have regained their sway.

Ball dresses are not worn plainer; on the contrary, they are richly ornamented with ribbons, flowers, lace, puffs, and in great profusion

Fancy dress is also very gorgeous; for heavy silk stuffs, figured antique watered silk, and sometimes figured silk, with gold silk or silver, no longer suffice for the sumptuous taste of fashion; and to these have been added plain antique watered silks embroidered by hand, and point of silk braidings; for example, a white antique watered silk dress is worked at the bottom with embroidery of a magnificent bouquet of shaded roses, the leaves of which join in other smaller wreaths coming from the top; and nothing can be handsomer and richer than these beautiful dresses thus embroidered.

BALL-DRESS.

The half-dress is, we think, more graceful than the full ball dress. Low dresses, open in front, and heart-shaped, are charming, with their wreaths of ribbon and lace. We should mention that dresses made low and square have given way to the preceding.

Velvet necklaces and bracelets are much in vogue; the shades preferred are coral red, garnet china rose, and, above all, black velvet, which sets off the whiteness of the skin. These bracelets and necklaces are fastened by a brooch or pin of brilliants or marcasite.

Young ladies have much adopted the Valois or Marie Stuart taste of dressing their hair, as follows:—The front hair is parted from the forehead, and is then raised and sustained by means of a comb made on purpose; the ends of this hair often fall in a curl or ringlet behind the ears on each side, or they can be concealed behind the twist of the hair The Marie Stuart *coiffure* is nearly the same, except that the hair is parted in the middle as for *bandeaux*, and then raised on each side on a small comb, which sustains the *rouleau* of hair. Puffed *bandeaux* are still more fashionable, this *coiffure* suiting a greater number of persons, and not requiring so young a face as the two preceding modes.

Dresses of heavy stuffs are rare in private drawingrooms, and much more frequently seen at subscription balls, at the Opera, or Jardin d'Hiver. Antique watered silk, figured pompadour, drugget, and lampas, attract by their wreaths of flowers; light net dresses, or mousseline, are rare.

Net dresses with two skirts are worn over a taffeta petticoat; the under and upper skirts decked with small flowers, each trimmed with a dark ribbon. Wide lace also is worn in profusion; and the front of the body is always covered with it as well as the sleeves. The skirts are often completely covered with two or three flounces of English lace (application), or Alencon point; and these two kinds of lace are generally used for heavy silk stuffs.

We have little to say about walking dresses. The choicest stuffs for morning dresses are damask satinated Pekin taffeta, drugget, all in dark shades.

THE ILLUSTRATIONS.

Ribbon Head-dress, disposed in knots, with long ends falling on the shoulders.

Sortie de Bal.—White cashmere worked in front and down the sleeves; shade upon shade.

Dress of White Antique Watered Silk, ornamented with two flounces

SORTIE DE BAL DRESS.

RIBBON HEAD-DRESS.

ANTIQUE WATERED SILK DRESS.

PARIS FASHIONS FOR MARCH.

of English lace (application), each having at the top a gather of ribbon, of two centimeters wide

Head-dress.—Puffing *tendences*, with two bunches of grapes and brown impressed velvet vine-leaves; body heart-shaped, with Maltese lace. Two rows forming a berthe; between which is a row of teeth cut with a punch. Three rows of similar lace are worn in the middle of the body, with a bouquet somewhat like that of the head-dress; and the sleeves are ornamented like the body.

Capote falling and very low-shaped, so as to make it necessary to lower the *rouleau* of hair.

Satin or Velvet Mantelets of poult de soie, trimmed with a single row of lace, and with a quilling round the whole of the mantelet. We are anxiously expecting some charming novelty to rid us of the everlasting mantelet, which for seven or eight years appears in all our pictures of fashion, with but trifling alterations.

CHURCH, UNIVERSITIES, &c.

OXFORD.

There will be an election at Lincoln College on Tuesday, March the 25th, to fill two Scholarships and two Exhibitions. The Scholarships are open without limitation. The Exhibitions are for natives of the diocese of Durham (including Al erstanes and Howdenshire, in the county of York), or of the counties of Leicester, Northampton, or Oxford. Candidates are to present their papers to the Rector on or before Friday, March 21st

There will be an election at University College on Thursday, March the 20th, to fill two Scholarships now vacant; one on Sir Simon Bennet's foundation, open to persons born within the province of Canterbury; the other is open without limitation as to place of birth. The examination will commence on Monday, the 17th, at ten o'clock, and candidates are required to announce to the Master, and to present certificates of their baptism and place of birth, with the usual testimonials of good conduct, on Saturday, the 15th.

THE UNIVERSITY FUNDS.—It has been resolved in Convocation to grant, out of the University chest, the sum of £100, in aid of the fund for providing public wash-houses for the poorer inhabitants of the city of Oxford, the same to be paid when the building shall have been completed, also to grant a sum not exceeding £5,60, to be expended in books printed at the University press, together with the cost of binding, towards the formation of a library for the University of Athens; likewise to grant the sum of £140 to be expended for the use of the Mineralogical Museum, in the purchase of a large collection of minerals, formed at a considerable expense by the late Rev. Mr. Banks, Dean of Bristol, which has been offered for sale to the University by the present possessor.

CAMBRIDGE.

BELL SCHOLARSHIPS.—The Vice-Chancellor gives notice, that an election of two scholars upon this foundation will take place on Friday, the 4th of April, 1851. That the members of Andrew's, Caius (except King's Old-court), and Trinity Hall), sons or orphans of clergymen, who were admitted between the commencement of 1849 and 1850, may be candidates. The candidates are required to signify their intention of offering themselves on or before Thursday, the 6th of March, in a Latin Epistle, to be presented to each of the electors, who are—The Vice-Chancellor; the Regius Professor of Divinity; the Regius Professor of Civil Laws; Mr. G. G Stokes, Lucasian Professor; Mr. Ramsay, Public Orator The examination will commence on Monday, the 10th of March, at nine o'clock in the forenoon, in the Senate-house.

MR. BENNETT A SCOTCH BISHOP.—It is rumoured, that, as soon as the Rev. W. J. E. Bennett has completed his arrangements for resigning the incumbency of St. Paul and St. Barnabas, Pimlico, he will be elected Bishop of the united dioceses of St. Andrew's, Dunkeld, and Dumblane, in the Episcopal Church of Scotland. The Right Rev. Dr. Torry, who had held the Bishopric of those dioceses for forty-three years, intends resigning act ve duty in the Church, during the remainder of the presbyters (which whom in Scotland the election of Bishop rests) are said to be in favour of Mr Bennett.

The parishioners of Little Hariord, near Tenbury, are about to place a stained glass window in their primitive little church, in memory of the late M. I. Bailey, M P., who had a seat in the parish, and was a large contributor to the local charities.

The parishioners of Chesterfield propose to found an exhibition in connexion with the Chesterfield Grammar school, as a token of their affection and gratitude for their late vicar, the Rev. Thomas Hill.

The Bishop of Durham has given an £50 (a second donation) towards the restoration of Rothbury Church

LINCLUDDEN ABBEY.—The picturesque ruins of Lincludden Abbey, near Dumfries, have sustained considerable injury in a point which must interest antiquarians. The "Turnpike Tower," a tall, isolated clump, fell to the ground last Sunday. Lincludden Abbey was founded in 1168, and, on account of the adapted meekness of its inmates, was converted into a college in 1389, and as such became the dowry of Margaret, daughter of the then King of Scotland, when she was married to the Lord of Nithsdale and Galloway. The last Lord of Nithsdale and Galloway who had his land fallen was erected when the building was turned into a collegiate Institution. It formed a very interesting part of the ruins The Royal Scottish arms were richly sculptured on its front.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have been recently made:—*Bishoprics*: The Rev. Robert Bunsen, formerly Fellow and Tutor of Worcester College, Oxford, is appointed to the bishop of Nova Scotia. *Deanery Barry*: The Rev. Plumpton Wilson, of Thorpe Arnold with Brentingby, Leicestershire. *Rectories*: Rev. Richard White, to Habberley, Salop. *Vicarages*: Rev. M. T. Dudgeon, to Lakenheath, Suffolk. Rev. T. Myall, to Great Yeldham, Essex. Rev. J. Dallas, to Laxfield, Suffolk. Ven. Archdeacon Hodgson, to St Mary's, Lleasfield. Rev Edward Harland, to Colwich, Staffordshire. Rev. E. Pughe, to Bangor Cathedral.

VACANCIES.—Illogan Rectory, Cornwall, diocese Exeter; value £487, with residence, patron, the Right Hon Lady Basset; Rev. G. Treweeke, deceased. St. Minver Rectory, Cornwall, diocese Exeter; value £630, with residence. Rev. G. Treweek, deceased. Widworthy Rectory, Devon, diocese Exeter; value £568, with residence; patron, Sir E. M. Elton, Bart.; Rev. W. Tucker, deceased.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection.—The Rev. D. Royce, vicar of Nether Swell, late curate of Cowley, Gloucestershire, from the pupils of the Cowley Diocesan and the congregation, on his departing the Rev Evan Pughe, on leaving Llanbrynmair, from the wealthier parishioners and also a second from the congregation of the parish, by penny subscriptions; the Rev H. Jones, from a few Protestant friends of the city of Chester; the Rev. T. Jones, from a few Protestant friends of Nesterne and Bollington, Lancashire, from the congregation

PAPAL AGGRESSION.

THE ARCHBISHOP OF CANTERBURY replied, on the 12th ult., to an address from 2746 persons at Bath, inclosing 29 clergymen, presented by Lord Ashley, that he concurs in their opinion, that no unwarrantable measure as the Papal aggression would not have been attempted except under a persuasion that the nation was more ready to receive the advance of Rome than the event has proved He laments that any ground for the expectation has been furnished, and that any doctrines should have been preached in our Church approximating to the doctrines of Rome. He believes that the limited power conferred by the law to repel the innovations in our Church, might be strengthened; and a short time will, he thinks, prove whether fresh enactments are necessary or public opinion sufficiently strong to correct the evil It will, he assures the petitioners, be his constant endeavour to uphold the supremacy of the Scriptures as the sole rule of faith, for on no other principle can the Church be saved from corruption.

THE CATHOLIC LAITY OF MANCHESTER and SALFORD met at Manchester, on Monday week, and passed strong resolutions against the Ecclesiastical Titles Bill, and petitioned the House of Commons against it. They agree with Dr. Wiseman and his followers, and disagree with the Duke of Norfolk and Lord Beaumont, who have condemned the Aggression.

THE CATHOLIC LAITY OF SALFORD and CLITHEROE have taken a similar course.

IRELAND is in a great commotion on the papal act, though the prelates there, we understand, would not strongly object to the bill so far as it merely abolishes the use of titles, but they are extremely hostile to that part of the measure which interferes with their property. Meetings of the laity have been held at Dublin, Limerick, and other places, and resolutions against the measure have been carried by acclamation. Many of the leading Protestants of Ireland, as Mr. Fallon, Lord Miltown, and others, co-operate cordially with their Catholic brethren.

THE ROMAN CATHOLIC BISHOPS OF IRELAND met at Dublin on Tuesday, and resolved unanimously to send an address the Queen, appeal to the people of Ireland, and present a petition to the House of Commons, with the object of preventing the passing of Lord John Russell's Ecclesiastical Titles Bill.

ARCHBISHOP MURRAY, of Dublin, the most temperate of the Catholic prelates, has published a pastoral letter, in which he tells his clergy that the Bill so far that it interferes with property, is about to be once more extended over us, and a new element of civil discord cast amongst us. Under the pretence of resolving what is unruly called a "Papal Aggression," a bill has been introduced into Parliament subversive of our religious discipline, hostile to the freedom of our religious worship, and fraught with mischief to the interests of our poor. In the bitterness of his heart, therefore, he calls on them to send up to the Lord of Mercy fervent supplications, that He, who by his wisdom hath appointed man that he no it have dominion over the creature that was made by Him, may vouchsafe to inspire our rulers with that wisdom that attributed by his throne, that they may execute justice with an upright heart, not for the benefit of a fraction, but for the peace, and happiness, and social welfare of the entire people over whom he has placed them.

MR. POOLE'S PAMPHLET.—This religious contest has brought forth a remarkable pamphlet by Mr A. Welby Pugin, the Roman Catholic and generally acclaimed architect *His earnest address* on the establishment of the Hierarchy startles us by the assertion, in the first page, "that Protestantism is a *sort of disease, or fungus*, that has developed itself in the Catholic body;" but, on proceeding further into the pamphlet, we find the existence of this *fungus* clearly traced to the disordered vital functions of the Roman Catholic hierarchy and clergy; showing that the so-called "fungus," or reform, was necessary, to get rid of the corruption, and that it is to be lamented it did not go far enough to abstract from the system all the peccant humours of priestly corruption. Mr. Pugin says, that Protestantism is "is a fearful and terrible example of a Catholic nation betrayed by a corrupted Catholic hierarchy;" that "the Catholic priesthood betrayed the liberties of Henry the Eighth's time they had sworn to defend;" that they "were the judges and executioners of the only Catholic Bishop (Fisher) who resisted Henry;" that they "plundered the religious houses, and brought ruin on the only religion before Protestant appeared on the scene." A great many facts of this kind are stated by Mr. Pugin, with dates and circumstances to show their truth; and we cordially recommend his pamphlet to all who wish to understand the character of the Romish priesthood. With such views, however, we cannot comprehend how Mr Pugin, or any other person, can wish for the revival of such a treacherous corrupt body. Is religion to be again betrayed? "No human legislation," Mr. Pugin tells us, "can interfere with the spiritual ties that must exist between the faithful and their clergy, while the latter remain true to their sacred duties and office." But what is the Papal Aggression other than an interference, by human legislation, of the Pope at Rome and his Cardinals, between the Catholics of England and their own Archbishops? If Mr. Pugin be true to himself and consistently logical, he must carry out his views, and teach his Catholic brethren to distrust and discard the class of men who have betrayed them, perhaps only once, but that once is continually

NATIONAL SPORTS.

As the Steeple-chase calendar improves in the number and importance of the events to come off, that devoted to the sport of the leash shows a marked in the off—the season, in short, is drawing to a close. The fixtures for the coming week stand thus:—STEEPLE-CHASES.—Monday, at Old son; Tuesday, at Cowbridge; and Morton in the Marsh; and Friday, at Coniston Cornbing Tuesday and Wednesday, near Edinburgh (the Mid-Lothian Club); and on Thursday and Friday, at Lythem (High) Club; at Saltwick (Morpeth).

TATTERSALL'S.

MONDAY.—It is betting this afternoon was dull, and with no material effect on the market, Vanhope and Hornby were having any change.

LIVERPOOL SPRING MEETING.—WEDNESDAY.

THE CRAMPTON FREE HANDICAP HURDLE RACE of 5 sovs each, with 50 added —Mr. Trehawn's Cogia (ARTHUR), 1. Mr. Galm's br c Seignor of Holderrouse (Grigg), 2.

SPRING CUP HANDICAP of 15 sovs each, with 100 added.—Mr. Hesseltine's Unity (Dodd), 1. Mr. Pa ner's Doubt (Marlow), 2.

GRAND NATIONAL STEEPLE-CHASE of 20 sovs each, with 100 added.—Mr. Osborne's Abd-el-Kader (Abbot), 1. Mr. C. Higgin's Maria Day (Frisby), 2.

OPTIONAL SELLING STAKES of 5 sovs each, with 30 added.—Mr Hesseline's Mistake (Longstaff), 1. Mr. Elder's Clara, 2.

A number of additional papers have just been issued relative to the census of the population to be taken by the 31st of next month. These papers include returns relating to public worship, to education, and to literary and scientific societies

About seven hundred persons, consisting chiefly of foreigners, on Monday evening, assembled at a "banquet," given at the Hanover Tavern, to celebrate the anniversary of the French revolution of 1848. In the course of the evening various reports were read describing the state of democracy in different parts of the Continent. Several speeches were also delivered; and amongst those who addressed the meeting was M Louis Blanc, who was received with great applause. The room was decorated with several flags bearing Republican inscriptions.

A return to the House of Commons, of the net income and expenditure of the United Kingdom for the last nine years, has been printed, which shows that in five years out of the nine the income was less than the expenditure. In 1842 the net income exceeded the expenditure by £2,139,984; and in 1843, £2,942,176. In 1844, the excess of income over expenditure was £2,980,427; per Sir Robert Peel's financial scheme. In 1845, £2,760,611. In 1846 the excess of income over expenditure was £1,249,811. In 1847 the excess of expenditure was £3,092,285; and in 1849, £269,377. The excess of income over expenditure in the year ended the 5th of April last amounted to £2,536,501.

The total quantity of foreign and colonial spirits warehoused under bond in Great Britain and Ireland in 1845 was 3,324,262 gallons, taken out for consumption 3,541,548; in 1846, 3,809,024 taken out in 1847, 6,018,116 bonded, 4,619,346 taken out; 1849, 7,834,658 bonded, and 4,253,61. taken out.

A member of a Christian church in Maine (United States) declared at the close of his brethren, Mr. Brown, "not fit to carry food to the hogs." He was arraigned before the church, and compelled to apologise. "My Christian friends," he said, "I do feel that I have deeply injured brother M——. I did not mean to say that he was fit to carry food to the hogs, and I now take it back, being firmly of opinion that he is fully qualified for that office." The apology was deemed satisfactory by all but brother M——, who declares to this day that he heard Brown say a low voice, that he was fit for nothing else.

THE NAVY ESTIMATES FOR THE YEAR 1851.—The total amount which will be reqn red to meet the expenses of the naval establishment in the year 185 -52, is £5,722,778. The total vote for 1850 51 was £5,908,352, and therefore the net decrease in the estimate for 1851 52 is £.71,321.

MELANCHOLY AFFAIR.—On Tuesday evening, as the railway steward *Anglia* was leaving the port of Holyhead, and when off the new harbour works, a blast was fired off, containing two tons of powder The announcement of such an event had brought together a large concourse of persons, and it had created no small degree of excitement in its effects. The superintendent of the harbour works (Captain Hutchinson, Royal Engineers) having completed his arrangements, retired also, and was at a short distance from the explosion. His wife, who was standing near him at the moment, almost miraculously escaped untouched. The sudden and melancholy death of this respected gentleman has created a most painful sensation in the town, where he was universally esteemed. He has left a wife and two children to deplore their sudden and afflicting bereavement. One of the labourers had his leg broken. A lady (Miss Conlon), who was passing at the time, had her dress torn to fragments from the effects of the explosion.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The directors of the Bank of England have lowered the rate of interest on loans upon the security of Stock and Exchequer Bills to 2½ per cent. during the shutting of the transfer-books, but the rates upon other securities remain unchanged. Money is plentiful and abundant. The brokers giving 2½ per cent for loans on call, and in some instances 2½, where a portion of withdrawal is agreed to Good mercantile paper is in demand at from 3 per cent. upwards, according to its presented security and the date it has to run

Business in the English Market has been limited, in consequence of the unsettled state of the Money, the fluctuation in Consols not having exceeded ¼ per cent. during the week. On Tuesday, the probability of a Free-Trade Cabinet afforded some buoyancy to prices, Consols opening at 99⅞ to ⅞. It afterwards transpiring that difficulties interposed, prices receded, and fell to 99⅝ to ¾ exclusive of the dividend.

The close of the week on Wednesday of Lord Stanley having authority to form a Ministry again depressed quotations, Consols reaching 99⅛ but towards the close of business, some purchases were made by those who expect a change, and the opening price of the week (99⅜ to ½) was again quoted. This was the current price on Thursday, and so marks at the close of the week. Any probability of a change in the Cabinet to cause the revival of Free-Trade agitation is generally discredited in the City, hence the depression in prices consequent upon the prospect of a Protectionist Government. Exchequer Bills have maintained their quotations, prices nearly the same. The March Bills are advertised for exchange or payment. India Bonds are at about previous rates. At the close of the week the Market was dull at the following quotations:—Bank Stock, 214½. Reduced, 97½. Consols, 99⅛; New 3½ per Cent. Anns., 99⅛; Long Anns, to expire Jan., 1860, 7⅞; India Stock, 264; India Bonds, £1000, 51 pm; Ditto, under £1000, 50 pm; Consols for Account, 99⅛; Exchequer Bills, £1000, June, 50 pm; £500, June, 50 pm; Small, June, 50 pm; Ditto, Advertised, 49 pm.

Considering the state of the Consol Market, there has been some extent of business done in the Foreign House during the week, and prices, upon the whole, have been well maintained. Mexican Stock has been done as high as 33¾, and Peruvian has been carried over to the next Account, at a quotation of 33 for the Active, and 37½ for the Deferred Bonds. Spanish Five per Cents opened at 20¾ on Monday, and closed at the same price. Russian Bonds, it will be seen, 10⅝ on Monday, and closed at the same price. Russian Bonds, it will be seen, continue to creep up; and Danish Five per Cents have been done at 103¾ 103. Prices, at the close of the week, were tolerably supported, the preparations for the settlement occupying attention. Quotations are as follows:—Brazilian Bonds, 92. Buenos Ayres Bonds, Six per Cent., 85; Mexican, Five per Cent., 18½, 18 Jan Coupons, 33½; Ditto, Account, 33½; Peruvian Bonds, Four-and-a-Half per Cent., 87½; Ditto, Account, 33½; Ditto, Deferred, 37½; Portuguese, Four per Cent., 33½; Russian Bonds, 114; Ditto, Four-and-a-Half per Cent., 97½; Ditto, Small, 99½; Spanish Five per Cents., 1840, 21½; Ditto, Passive, 4½; Ditto, Three per Cent., 36; Venezuela Bonds, Two-and-a-Quarter per Cent., Deferred, 12; Dutch, Two-and-a-Half per Cent., 58½; Ditto, Four per Cent., 99. The Railway Market, although not so buoyant as last week, has still maintained considerable firmness, and prices, it will be seen by the annexed list, have, in several instances, only receded by fractional amounts. Aberdeen, 13½; Bo., Preference, 8 dis.; Antwerp, Nottingham, Boston, and E. Junction, 3⅛; Bristol and Exeter, 89; Buckinghamshire, 17½; Caledonian, 11⅞; Do., £10 Shares, 10⅞; Chester and Holyhead, 21; Do., Preference, 16½; Eastern Counties, 6⅝; Do., New Preference, 6 per Cent., 10⅝; Eastern Union, Scrip, Guaranteed 6 per Cent., 18; East Lancashire, 14½; Edin. and Glasgow, 35; Great Northern, 18½; Ditto, Halves, B, 6 per Cent., 12; Ditto, 5 per Cent., Preferential, 12; Ditto, Two-and-a-Half per Cent., 58½; Ditto, Four per Cent., 99. Great Western, 91; Ditto, New, £47, 15½; Lancashire and Yorkshire, 58; London and Blackwall, 7⅞; London, Brighton, and South Coast, 97½; London and North-Western, 120; London and South-Western, 89; Manchester, Sheffield, and Lincolnshire, 39½; Ditto, New, £10, Pref., 12; Ditto, £6, Pref., 2⅝; Midland, 62¾; Do., £50 shares, 19½; North British, 6⅝; North Staffordshire, 11⅝; Oxford, Worcester, and Wolverhampton, 19; Reading, Guildford, and Reigate, 2⅝; Shrewsbury and Birmingham, Class A, 5½; Do., New, Guar., 10½ x d; South-Eastern, 6⅝; Vale of North, 8½; West Valley, Six per Cent. Guaranteed, 5½; Do., Extension, 1½; Ditto, Newcastle and Berwick, 1½; Ditto, Berwick and Edinburgh, 1½; Ditto, Newcastle Extension, 1½; Ditto, G.N.E., Purchase or Preference, 7½; York and North Midland, 24½; Ditto, Preference, 8½; Boulogne and Amiens, 3⅜; Central of France (Orleans and Vierzon), 16½; East Indian, 12; Luxemburg, 1½; Namur and Liege, 2½; Northern of France, 14½; Orleans and Bordeaux, 3½; Paris and Rouen, Paris and Strasbourg, 10; Rouen and Havre, 10½.

THE MARKETS.

CORN-EXCHANGE.—Since our last report, the arrivals of English wheat, coastwise and by land carriage, have been to a very moderate extent, and the trade for the large imports of French flour the demand has ruled heavy at a decline in the quotations of fully 1s per quarter and barrel, and the transactions have not in any case taken place to the extent of the best fine qu wheats; the low qualities have tended downwards. Barley has met a moderate inquiry, at previously quoted currencies. We have to notice a small, home, yeas, or Canadian oats has been held for rather more money Foreign and inferior English have been offered on somewhat easier terms.

English.—Wheat, Essex and Kent, red, 36s to 44s; ditto, white, 38s to 45s; Norfolk and Suffolk, red, 36s to 43s; ditto white, 38s to 45s; rye, 28s to 30s, grinding barley, 18s to 22s; distil. 20s to 24s; malting, 24s to 28s; malt, fine, 52s to 56s; Norfolk and Lincoln malt, 46s to 48s; distil. 50s to 52s; Chevalier, 54s to 56s; Yorkshire and brown ditto, 44s to 46s; Kingston and Ware, 56s to 58s; Chevalier, 58s to 60s; Yorkshire and Lincolnshire ditto, 52s to 54s; pale ditto, 48s to 50s; grinding oats, 24s to 26s; ditto white, 25s to 27s; distil. beans, new, 26s to 27s; old, 28s to 30

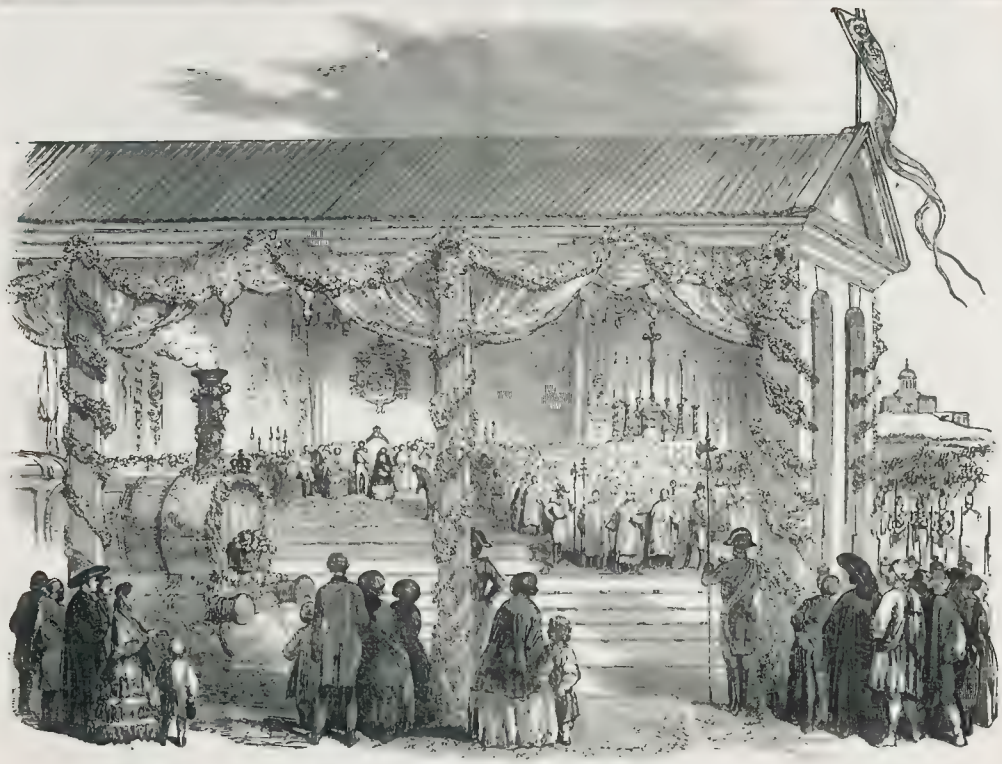
LONDON: PUBLISHED AT THE OFFICE, 198, STRAND, IN THE PARISH OF ST. CLEMENT DANES, IN THE COUNTY OF MIDDLESEX, BY WILLIAM LITTLER, OF NO. 3, CLARENCE-TERRACE, REGENT'S-PARK, IN THE PARISH OF ST. MARYLEBONE, IN THE SAID COUNTY.—SATURDAY, MARCH 1, 1851.



OPENING OF THE MADRID AND ARANJUEZ RAILWAY.

INAUGURATION OF THE MADRID AND ARANJUEZ RAILWAY.

THE grand ceremony of the inauguration of the new line of Railway from Madrid to Aranjuez took place on Sunday, the 9th ult. The line commenced at the end of the promenade Las Delicias, which is a continuation of the Prado, upon the right bank of the Manzanares, a river or torrent in the winter, and a ravine almost dry in the summer. The environs of Madrid are dreary and parched, so that in the fifteen leagues which divide Aranjuez from the capital there are only two villages and one hamlet. In approaching Aranjuez, the Railway crosses the river Jarama, which empties itself into the Tagus. Aranjuez is a town containing 12,000 inhabitants during the two months' residence here of the Spanish Court; during the remainder of the year it is comparatively a desert.

Early in the morning of inaugurating the Railway, the Madrid terminus was besieged by immense crowds of persons, who came from all parts of the city and its environs to assist at the spectacle. An altar was prepared for the benediction of the locomotive engines by the Cardical Archbishop of Toledo. Towards noon the trumpets and band of the garrison, and a salvo of artillery, announced the arrival of the Queen Isabel II., accompanied by the King Consort, the Queen Mother, and the rest of the Royal family. Her Majesty was received at the terminus by the director, Senor Salamanca, the sub-directors, the civil engineers, deputations from the Senate and Congress, several dignitaries of the Church, including the Archbishop of Toledo, the civil and military authorities of Madrid, several foreign ministers, and a brilliant gathering of the rank, fashion, and beauty of Madrid. After the ceremony of the benediction of the locomotives had been performed by the Archbishop, the Queen, followed by this splendid crowd, set out for Aranjuez in magnificent carriages. The principal ones are called the Isabel, Madrilena, Cristina, Francisco de Asiz, and Anonima. The Royal carriage is a marvel of luxury and elegant decoration, in which arabesque predominates. The journey to Aranjuez was accomplished in one hour and a quarter; and enthusiasm similar to that expressed on the departure of the train from Madrid welcomed its arrival at Aranjuez. In one of the carriages was the chorus of the Madrid Opera. A magnificent *déjeûner* was prepared at Aranjuez for the illustrious passengers; after partaking of which they returned to Madrid. At night the line was illuminated by several thousand torches, carried by the troops of the garrison, stationed ten paces from each other; and in the evening there was an illumination in Madrid.

Her Majesty has since conferred the title of Count upon M. Salamanca, the Director of the Railway.

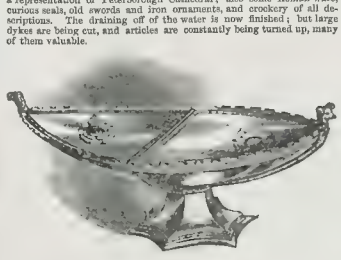
AN IMPROVED SYSTEM OF WORKING RAILWAYS.—The advantages of one gauge for all railways, and the inconvenience arising from having a broken gauge, are very great. Unfortunately, however, our different engineers and different companies thought only of their peculiar views on their own presumed advantages, and they have constructed a considerable number of lines, the traffic of which must pass from one to the other, of different gauges. The evil is done, and the proper subject now for consideration is how to make it as light as possible and remove it as soon as possible. To these points, Benjamin Smith, Esq., of Carnarvon, has turned his attention, and, assuming that the broad gauge is the best, comes to the conclusion, after much investigation, that the narrow gauge can be cheaply and easily converted into the broad gauge by laying down rails of the seven feet width on the outer sides of the present narrow gauge rails, removing the narrow gauge rails when the traffic would be permanently adapted to the broad gauge. To this gauge he proposes to adapt carriages of new form, of considerable length, but reduced in height and width, so that they might be used on the broad gauge of the present narrow gauge lines, without altering the breadth and height of the way. The plan seems feasible, but it is hardly within our province to pronounce a positive opinion of its practicability. To ensure the well working of plans which look remarkably well on paper so many minute circumstances must combine, that, unless we saw the present scheme carried out, we should scarcely venture to say that it is excellent. Mr. Smith's pamphlet we can, however, without hesitation, affirm, is worthy of being read and studied by all who take any interest in the question of how the broad and narrow gauges may be assimilated, and, for practical purposes, reduced to one.

GENERAL STEAM NAVIGATION COMPANY.—The fifty-second half-yearly meeting of this company was held on Tuesday, at their offices, 71, Lombard-street; John Wilkin, Esq., in the chair. The report of the directors, and a statement of the accounts for the year ending the 31st December last, were read to the meeting. The report, which was very satisfactory, was unanimously adopted by the proprietors. A dividend of ten per cent., and bonus of 2s. 6d. per share, were declared, and the cordial thanks of the shareholders voted to the chairman and directors for their able management of the company's affairs.

RELIC FOUND IN WHITTLESEA MERE.

A VARIETY of interesting relics have lately been found in Whittlesea Mere, in Cambridgeshire; and among them the remarkable object here engraved. It is of silver, of a boat-like shape, resting on an elegant hexagonal base. All the ornaments (which are of silver gilt) are most elaborately and delicately made out, and the whole is in beautiful preservation. It is furnished with one lid. It was found in the draining of the Mere, and is the property of William Wells, Esq., of Holme Woodhouse, the Lord of the Manor, at whose expense this great undertaking of the draining is chiefly being executed. This vessel has been conjectured to be a salt-cellar; but, with more probability, a case for containing incense. Its length is eleven inches.

Among other objects found in the Mere, are a silver censer, of beautiful workmanship, and well preserved; a silver chandelier, having on it a representation of Peterborough Cathedral; also some Roman ware, curious seals, old swords and iron ornaments, and crockery of all descriptions. The draining off of the water is now finished; but large dykes are being cut, and articles are constantly being turned up, many of them valuable.



SILVER RELIC FOUND IN WHITTLESEA MERE.

The Correspondent who has favoured us with this information suggests that the rams' heads at either end of the above vessel may have reference to Ramsey, to whose Abbey this article may have belonged?

THE RELIGIOUS AND EDUCATIONAL CENSUS.

THE CENSUS, to be taken on the 31st inst., promises to be a very complete account of our vast population. It will comprise all the usual information of the number, sex, and age of all the people on that day; of their occupations and pursuits; where born (if farmers, the number of acres they occupy, and the number of labourers they employ); it will record the cases of the blind, and of the deaf and dumb; moreover, it will furnish us, according to five additional forms just issued by the Registrar-General, with information of the number of places for public religious worship and education in Great Britain. Of all churches and chapels of the Establishment, it will inform us where they are situated, when and under what circumstances consecrated or licensed, how or by whom erected, and how the cost of erection was defrayed; how they are endowed; the number of sittings in the building, distinguishing free from other sittings, and available space; the estimated number of the congregation on Sunday the 30th instant; and the average number of the congregation, distinguishing Sunday scholars. Of other places of worship information will be given, of their name and title, where situated, the religious denomination they belong to, when erected, whether separate or entire buildings or otherwise, whether used exclusively as places of worship or not, the number of free and other sittings they contain, and space available for sitting and standing room; the estimated number of persons attending Divine worship on the 30th instant; and the average number of attendants, distinguishing Sunday scholars. All this information is requested to be supplied, duly attested by the ministers, churchwardens, deacons, or other authorised officers of the several churches, chapels, and places of worship.

Concerning education, the master or mistress, or other principal teacher of every school in which daily tuition is carried on, is required to state the name and place of the school, the date of its establishment, whether or not the school-house be held on trust for the purpose, whether the school be a private establishment or subjected to any or what governors, what religious denomination it is connected with, the size of the school-room, the number and age of the scholars, whether male or female; the average number of scholars during five years, whether they have attended other schools, and how many have left school in the period; an exact description of what they are taught, and how many acquire each different branch of knowledge, distinguishing the sex of the scholars; number and remuneration of the teachers, stating whether houses or apartments are provided for them; the number of monitors, whether paid or not; by whom the school and scholars are examined; the different classes of scholars are to be distinguished, whether boarders, weekly boarders, day boarders, or day scholars. The masters or mistresses are also requested to state the income of the school during the year ending December 31, 1850, distinguishing the different sources of permanent endowment, voluntary contributions, grants from Government, rates or assessments, payments by scholars, school fees, and any other sources; also the expense of the school during the same period. There is to be also a return of evening schools and of Sunday schools, detailing in like manner the particulars of them, such as how many scholars attend them, whether agricultural labourers, farm-servants, domestic servants or artizans, number of teachers, number of scholars on the books, amount of the expense, and how it is defrayed. Further, there is to be a return of all the literary and scientific societies, describing the governing bodies, the general character and principal rules of the societies, number of volumes in their libraries, nature of their museums or collections; how often public lectures are delivered, terms of admission, whether gratuitous or otherwise; and the number of members at the time of making the return, distinguishing proprietary, annual, quarterly, and other members. The master and mistress of the evening schools are required to make the returns. The returns from the Sunday-schools and the literary societies are not required from any particular persons; but the persons making them are to state in what capacity they give the information. There seem to be no penalties imposed for not making these returns, for the first two of the five forms of which we have copied the leading directions, say, "You *are requested* to insert or cause to be inserted in the manner directed by the instructions within contained, full and accurate information respecting each of the particulars in the said schedule mentioned or referred to, in compliance with the Act of 13 & 14 Vict., c 53, for taking account of the population of Great Britain;" and all of them state, that "the return is required to enable the Secretary of State to *complete the Census*, but it is not intended that *all the particulars contained in it should* be separately published."

Each form is signed "George Graham, Registrar-General," and "Approved G. Grey, the Secretary of State." If all these particulars be obtained, this will be the most complete description of our population ever formed. Similar descriptions, and, perhaps, even more complete in some points, have already been obtained, and will again be obtained in the present year for Ireland; and the past and present condition of that country entitles us to warn our readers that such statistical enumerations, however gratifying to the statesman or the political arithmetician, do not constitute, and perhaps contribute very little to social welfare

STATISTICS OF BANKRUPTCY.—In Lord Brougham's bill for the extension of county courts jurisdiction some interesting information is given as to the number of bankruptcies from the year 1843. In the year ending the 11th of November, 1843, there were 658 bankrupts in London and 719 in the country, making 1376; in 1844, 596 in London and 511 in the country, making 1107; in 1845, 611 in London and 539 in the country, making 1140; in 1846 there were 706 in London and 787 in the country, making 1493; in 1847 there were 824 in London and 892 in the country, making 1716, in 1848, 880 in London and 1060 in the country, making together 1930, and in 1849, 413 in London and 731 in the country, making 1344: making in the seven years 10,100 bankrupts, consisting of 4858 in London and 5242 in the country—being an average of 694 in a year in London and 749 in the country, or 1443 bankruptcies a year. In the year ending the 11th November last there were 412 in London and 436 in the country, making 837, or a falling off in the year, as compared with the average of seven years, of 262 in London and 334 in the country, or 606 a year.

THE ILLUSTRATED LONDON NEWS.

No. 473.—VOL. XVIII.] SATURDAY, MARCH 8, 1851. [SIXPENCE {WITH SUPPLEMENT GRATIS.

REINSTATEMENT OF THE RUSSELL MINISTRY.

EVERY attempt to form a new Administration having failed, Lord John Russell and his colleagues, at the request of her Majesty, and on the advice of the Duke of Wellington, specially summoned to give his counsel on the occasion, have resumed their places. Lord Stanley and the Protectionists were utterly unable to form a Ministry. It does not appear, from the statements made in the House of Lords on Friday, the 28th ult., that Lord Stanley could procure more than one colleague—a noble Lord not named. Lord Stanley candidly confessed, that his party, although comprising men of great attainments and abilities, "hardly reckoned among its members one individual of political experience and versed in official business." So little interest in the fortunes of Protection had the only men in whom he could place reliance, that, with the exception of the noble Lord alluded to, they all failed him in the hour of need. One refused, "because he had very extensive domestic concerns to attend to;" a second declined, "from a disinclination to take part in an Administration;" a third gave a refusal, "from an undue depreciation of his own abilities;" while no less than three or four others, on being applied to, sent replies "expressive of their inability to join his Lordship."

The party of which Sir James Graham is the head was equally unfortunate, but for different reasons. Not being sufficiently numerous to form an Administration out of their own body, and not being certain of adequate Parliamentary support, even if they could have disposed of all the offices of Government among themselves, this enlightened party, and their sagacious and experienced leader, could only lend their services in conjunction with the more efficient and popular members of the Russell Administration. But, as they only agreed with that Ministry on some points, and disagreed on others of vital importance, especially on the Papal Aggression Bill, and as the premiership of Lord John Russell would have been fatal to such a coalition, the attempt either to form a Ministry independently of the Whigs, or in conjunction with them, necessarily failed. There was but a third course to follow, which was the course recommended by the Duke of Wellington. The result is, that Lord John Russell is again the Prime Minister of the British Crown.

But while all parties—convinced by these occurrences, if not before, of their own powerlessness to carry on the Government of the country at the present time—will refrain from any factious opposition, and will make all due allowances for the difficulties of the Ministry, it remains to be seen whether Lord John Russell, in resuming office, will resume the faults which led to his resignation; or whether he will not endeavour to strengthen his Ministry by avoiding the errors which, more than the hostility of his opponents, drove him into his late unpleasant position. There are two great and pressing questions on which he must pronounce himself decisively and satisfactorily, or heap up unpopularity, mistrust, and odium upon the heads of himself and his colleagues; and there is a third great question, surrounded with difficulties, whether it be left alone, or whether it be pressed forward to a solution, from the embarrassments of which he must extricate himself, under the penalty of weakness to his Government, and disaffection and discontent throughout the country. The first two questions are those of the Budget and an Extension of the Suffrage, and the third is the question of the Papal Aggression. Each of these requires able management; and upon each of these, unless more wisdom is shown in its treatment than has hitherto signalised the efforts of Lord John Russell and his colleagues, the Cabinet, safe as it may now appear, may once more be shipwrecked.

First and foremost is the question of finance, involved in the production of a satisfactory Budget. It is not a little singular, that, amid all the explanations and statements which Lord John Russell has made from time to time, in the interval between his resignation and resumption of office, he has never said a word upon this point. He has never once admitted that the Budget of Sir Charles Wood was a stumbling-block in his way, or given the slightest hint that he was not satisfied with his financial colleague. Yet, if Sir Charles Wood do not prove himself more fitted to deal with the great fiscal questions of our time; or, failing him, if Lord John Russell do not appoint a capable Minister for this important department, it is easy to foresee that disgrace and defeat will await

PUBLIC DINNER TO MR. MACLEAN, IN THE HALL OF COMMERCE, ON SATURDAY LAST.—(SEE NEXT PAGE.)

[COUNTRY EDITION.]

the Ministry. It may answer as a temporary expedient to postpone the revision of our fiscal system for a twelvemonth, and pass the iniquitous income-tax for another limited period; but if Lord John Russell desires to regain his lost influence, and to entitle himself to the respect of men of business and to the gratitude of the people, he must sacrifice a little present ease, and grapple with our whole system of taxation at once. A fair property and income-tax might be endured—if it applied to all realised property and to all income—without reference to the arbitrary and unjust line of £150 per annum; if it did not affect the man with an £149 per annum, drawn from the comfortable and steady 3 per Cents, to escape free, while it mulcted the man with only one additional pound per annum, derived entirely from the labour of his head and his hands, of no less a sum than £4 7s. 6d., sufficient to pay for, perhaps, the only suit of clothes he could buy in a year, or the only little luxuries and elegances of life that he might be able to afford. It might be endured if made equitable in this respect, and if, besides this, the owners and occupiers of house property—the chief sufferers by the burden—were compensated by the uncontinental repeal of the Window Duty. But if Lord John Russell prefers immediate quietude to the performance of a duty that sooner or later must be done, he will sacrifice the future for the present, and sow the seeds of his own downfall a second time. The next time he falls, it will be "like Lucifer, never to rise again." Nor is this the only fiscal question that presses. The Tax on Paper, which is a standing disgrace to a Legislature that professes to care for the education of the people, and that votes £100,000 per annum for the erection of schools and the payment of teachers, must be repealed; and no beknighted commonplace, such as Sir Charles Wood is in the habit of using, about "the necessity of getting money somewhere," must be allowed to stand in the way. The present Ministry, notwithstanding all their past faults and shortcomings, have an opportunity of rendering a real service to every interest in the country, by a careful, enlightened, and bold financial policy. They could wipe off all past disgrace which has attached to them, by energy and wisdom on this vital question; and it is to be hoped they have received sufficient warning to induce them, individually and collectively, to devote themselves to it in the present session, and avoid the fatal procrastination which has hitherto rendered the name of their Administration a by-word of reproach.

The question of the Extension of the Suffrage—which, leading to their accidental defeat, expedited the recent catastrophe—is another that, after Lord John Russell's own declaration, and the firm adhesion of Sir James Graham to the cause of a further reform of Parliament, cannot be any longer trifled with. The subject has attained so much more importance from the occurrences of the last fortnight, that Lord John Russell must make up his mind either to move on" or to "move off." The Great Kalends are a term rather too remote, to satisfy the expectations that his Lordship has himself raised upon this question; and it should be borne in mind, that the party of which Sir James Graham is the head, might, by the aid of Mr. Cobden and his friends, and of the affronted Irish members, carry this question against the Ministry, if the Ministry refused to take it up.

The Papal Aggression storm, by the general consent of all parties, not to call for hasty legislation. Although it was upon this point that most of the difficulties of the late crisis turned as upon a pivot, it is not impossible to postpone it without disgrace and without mischief until committees of both Houses shall have reported upon the best course to be pursued. The Roman Propaganda will not be left to do its best or its worst in its attempt to re-establish Popery in this country. Give us but untaxed paper, untaxed knowledge, and free discussion, and ten thousand Popes and as many Cardinal Wisemans will assault in vain the faith and the intellect of the people of this country. The present feeling, if not against legislation to punish the assumption by Roman Catholic Bishops of territorial titles, is against the Bill itself. This feeling has been mainly caused by the discrepancy between Lord John Russell's description of his proposed bill and that given by the Attorney-General, and by the avowal made by his Lordship, that, in more than one important point, he was unaware of its tendency. No harm can be done by deliberation; and it is, therefore, likely that this great stumbling-block of the last fortnight will be removed for the future, and that the difficulty which was apparently the greatest, will be among the least of those in the way of the restored and reconstructed Ministry.

The country will await with anxiety a new declaration on the part of the Prime Minister, and will hope in the meantime that Lord Lansdowne's words of Monday last will be verified, and that the Administration will be made "effective."

BANQUET TO MR. MACREADY.

"To persuade a great character three hours in the twenty-four (says Henry Fielding), is a matter of more consequence than it is generally esteemed. The world itself is commonly called a stage; and, in the eye of the greatest philosophers, the actions on both appear to be equally real and of equal consequence. Where, then, is the mighty difference between personating a great man on the great theatre or on the less? In both cases we often assume that character when it doth not really belong to us; and a very indifferent player acts it sometimes better than his right honourable brother, and with ten thousand times the applause." How far the public of the present day sympathises with the spirit of this fine remark, written a century ago, may be learnt from the manifestations during the past week on the last night of the first tragedian of our time.

Immediately following the hearty tribute of regard offered by the wider circle of the admirers of Mr. Macready in his farewell appearance on the 26th ult. at Drury-Lane Theatre, came the more select, but not less sincere, salutation, by a public dinner at the Hall of Commerce, on the 1st instant.

Statesmen, philosophers, poets, wits, patriots, orators, novelists, and even lawyers, swelled the list of stewards for the entertainment, and again the public, "the genus generalissimum"—the great general universal public, as Southey calls it—responded with a thronged, concurrent, and enthusiastic attendance.

Potent indeed is that man's art which thus hath

The dullest and different skill,
Catching all hearts in his all of will

Debarred as the actor may be from the outward and visible honours which reward the labour, anxiety, and toil of more privileged classes, his proud distinction is to reign in the secret and innermost recesses of the hearts of his subjects He wins a seat in their affections; he is a "household word." He has moved all their passions; he has beguiled them of their smiles and tears; he has rekindled their hatreds and their loves. In a word, he has made the pulse of a crowded theatre like that of one man. So, at his retirement, when he is dethroned by death, or descends by abdication, his genius becomes enshrined in the recollections of his devotees. Bear witness, O shade of Elia, then exquisite remembrancer of stage illusion—bear witness with thy "Elistonians" and thy quaint memories on the acting of Munden and on some of the old actors. Among our retrospections of public life, those connected with the drama are certainly the most natural and most cherished; indeed, to the elderly playgoer, what Hazlitt said of the pleasures of the past, is especially applicable—"All that strikes the imagination or excites any interest in the mighty scene, is sided Age here."

What though the actor's fame, then, is fleeting as the day—what though his triumphs come like shadows, so depart—is there aught of such contemporary pervading enthusiasm among their followers for the heads, the *proceres*, of any other profession? For a premier, or a bishop, a judge, a general, or a president either in science or art? No, the chief judge has the host of his *dramatis personæ*. His efforts command a more immediate appreciation; and we can well conceive how sadly he relinquishes his "unseen empire," and can make respectful allowance for the affecting regrets repeatedly expressed by "Sir Joshua's Tragic Muse" on quitting the stage in the zenith of her fame. In her last days (says a modern writer), Mrs. Siddons frequently told the Dean of C——, an old and valued friend, that, "Had she not kept her religion, she would indeed have been miserable beyond expression.

John Kemble was the first great performer publicly entranced on his retirement from dramatic life. Neither Betterton, Cooke, nor Garrick had received this distinction; for, independently of dinner-giving being the more modern custom of crowning charity or good-will, Betterton remained almost to outlive his reputation; Cooke destroyed his fine powers, and their hold on the public, by drinking; and Garrick had, we fancy, a rival interest too strong for any such unanimous mark of popular esteem.

The entertainment to Mr. Macready was celebrated in the Hall of Commerce, Threadneedle-street, an edifice erected by Mr. Moxhay as a subsidiary accommodation to the Royal Exchange, for the merchants of the city. The alleged insufficiency of room at the London Tavern, for the numerous applicants for tickets, necessitated this arrangement. Application was unsuccessfully made for one of the larger theatres; and the fitting up of St. Martin's Hall, in Longacre, as suggested, would have proved tedious and too expensive. None but an English assembly, with its good temper and cheerfulness, could have endured the physical discomforts which the majority of those present in the Hall of Commerce submitted. On a cold day, to take part at a cold dinner, in an immense cold room, unwarmable, draughty, and so lofty that the speakers were but pygmies, and consequently heard at comparatively small advantage, and with closely packed seats, is a trial of no mean consideration, especially with March weather inside and out. Yet the assembly, which numbered 350, the Chairman, Sir E. Bulwer Lytton, Bart., took his seat. On his right were placed Mr. Macready, the guest of the company, and, proceeding in the extreme right of the line, were his Excellency the Chevalier Bunsen, the Prussian Minister; Sir C. L. Eastlake, P.R.A.; Earl Fitzhardinge; Charles Dickens, Esq.; Sir E. Landseer; Lord Dufferin; Captain Sir George Back; Charles Babbage, Esq.; W. M. Thackeray, Esq.; Lord W. Graham; Lord Ernest Bruce; James Heywood, Esq., M.P.; D. Maclise, Esq., R.A., Charles Baring, Esq., R.A.; A. Stafford, Esq., M.P.; Sir Alexander Cockburn; De Bammeville; S. Hart, Esq., R.A.; T. Macaulay, Esq., Q.C.; D. Roberts, Esq., R.A.; F. P. Delme Radcliffe, Esq.; Eliot Warburton, Esq.; W. F. Pollock, Esq.; and on the left of the Chairman were his Excellency M. Van de Weyer; the Marquis of Clanricarde; Sir H. Hardinge; Hon. R. Cooper, M.P.; Charles Kemble, Esq., Hon. John Forster, Esq.; Lieutenant-General Sir John Wilson; C. Stanfield, Esq., R.A.; W. J. Fox, Esq., M.P.; R. Monckton Milnes, Esq., M.P.; John Delane, Esq.; Leslie, Esq., R.A.; Sir Henry Bishop; Serjeant P. Alban Fonblanque, Esq.; Doctor Quin, Hon. S. Lyttleton; J. Cattermole, Esq.; Sir E. Ryan; Mr. Serjeant Adams; R. S. Rentoul, Esq.; D. W. Harvey, Esq. Among the general company, Esq. Samuel Carter Hall, Esq., Major Hall, P. Cunningham, Esq., J. H. Parry, Esq., Charles Knight, Esq., G. Bentinck, Esq., B. Webster, Esq., James Wallack, Esq., Captain Cooke, Joseph Paxton, Esq., Mark Lemon, Esq., H. Southey, B. W. Proctor, Esq., W. Jerdan, Esq., S. Phelps, Esq., Captain Torrens, F. Stone, G. Landseer, Leech, Esq., H. Colburn, Macready, jun., Esq., Dr. Mackay, &c. &c.

The grace from the "Lacrymatorium" was chanted by Misses L. Pyne, F. Hewitson, Messent, Thornton, Pyne, Land, Eyles, M. Williams, and Messrs. Francis, Gray, Lockey, Young, Bartley, Machin, Howe, F. Bodda, Whitworth, Lawler, Hutton, and H. Phillips, and "the direction of Mr. Land.

The various loyal and customary toasts of the Queen, followed by the National Anthem, the Prince Consort, and the Army and Navy, were proposed as usual by the Chairman, and responded to by Lieut.—n. S. J. Wilson and Sir G. Back. Mr. Lockey then sang, with chorus, Purcell's song from "King Arthur. Comell you days.

The Chairman, in introducing the toast of the evening, in the opening of his address, craved indulgence of the numerous and distinguished assembly, met to honour an eminent man returning long prized life, after services, which all must feel when they are about to be lost to the public. (Hear.) His could but seek to give some utterance to the sentiments of admiration of which he was there as the representative; and he would ask those present, how, in the name of humanity, if he was not right in the doctrine that the true measure of the genius of an artist is the degree of excellence to which he brings his art—"For Mr. Macready by this test (said the hon. Bart.) we know how great is the genius that will delight us no more! (Loud applause.) For it is because it has so achieved what I will call the symmetry of art, that its height and its breadth has been often forgotten. (Cheers.) It is the unerring proportion of those that strikes us, and the dimensions of genius, like those of a building, are lost in the justness of its proportions (Cheers); and therefore it is, that, in reading the surpassing excellence of our guest as an artistical conception, one's really at a loss to see where he excelled the most. The titanic grandeur of *Lear*, the human debasement of *Werner*, the fresh vision of Byron's fine imagery and tremendous figures of *Manfred* and *John*, or that last personation of *Macbeth*, in which it seemed to me that he conveyed a more exact notion of what Shakspeare designed than the most profound of the German critics? I take it, what Shakspeare meant to represent in *Macbeth* was a kind of character most liable to be influenced by the belief in supernatural agency—a man actually subservient to all the impressions which a morbid imagination, powerful, but not original, creates—who sees daggers in the air and ghosts in the bubbling caldron—who has moral weakness and physical courage, and who, as our guest represented him, alternates perpetually between terror and daring, a caterpillar often oppressed by conscience, and a warrior when defied by his foes. (Cheers.)"

Sir E. B. Lytton then proceeded to dilate upon the comprehensiveness rather than the versatility of his genius as an actor, which made all the creations within range of his art equal to one another. This (affirmed the hon Bart.) explains the originality which even his detractors have conceded to his genius.

"every great actor has his manner, as every great writer has his style But the originality of our great does not consist in his manner—none but in his singular depth of thought. He is not only comprehensive in his essential views of oratory, in look, in gesture, intonation, stage play, but he has applied his study far deeper—he has sought to penetrate into the intellectual motives of the poet, and made poetry itself the golden key to the human heart. (Great applause.) He is original, because he has not sought to be original, but true; because, in the noble ambition of worthily rendering the author, he has become, nolens, volens, one merit in our guest as an actor, on which I would be ungrateful if I were silent. Many a great performer may attain to high reputation if he restrain his feeling to the reading of Shakspeare and the great writers of the past, but it is clear that in so doing he does not advance an inch the literature of his time. It has been the merit of our guest to recognise the truth that the actor has it in his power to assist in creating the poet. He has identified himself with the living drama of the period, and by so doing he has half created it. Who does not recollect the rough and manly vigour of *Tell*, and the Roman heroism of *Virginius*, and the exquisite sweetness, and pathos, and dignity of *Ion*? (Great cheering.) Who does not feel that, but for him, those great plays would never have obtained a hold upon the stage, or have gained among the masterpieces which will go down to the next posterity? (Cheers.) Not as an actor alone as an author's own—he has given to the lesser works of an inferior writer, it is not for me to say. (Loud cheers.) This brings me at once to the merits of the actor to those of the manager; I recall that brief but glorious time, when the drama of England appeared suddenly to revive, and promise that the future would be worthy of the past—(Cheers)—when, by the union of all the kindred arts, and the exercise of taste at once gorgeous and severe, we saw the thoughts of Shakspeare properly embodied on the stage, because the ornament is never superior to the work. Remember that to the managerial position assumed by Mr. Macready as was made appear to the eye, or the magic isle of Prospero rose into its mysterious solitude, or new the knightly character of Henry of Agincourt, or the Roman dress to decorum as if he had taken her to the home of a friend (Cheers)—and for this reason, the late lamented Bishop of Norwich made it a point to form the personal acquaintance of Mr. Macready, that his influence might be exerted in the Church for the good he had done to society. (Hear.) And here I cannot remind myself, if, without a sharp pang of indignant regret, that, if that management had acted some ten years more, we should have seen a perfect school for actors, and a fresh and enduring field of dramatic poetry, and we might, while we educated the audience up to it, feel that the noblest dramatic performances had become as familiar to the public mind as the novels and the no more than we can now dispense with our newspapers—(Great cheering)

and all this has been checked and put back for an age, not be cause the public would not support the experiment—because he says that his houses were filled to overflowing, but because of the enormous exaction from the proprietors of the theatre, which, even in the case of eminent success, made the exact difference between profit and loss. (Hear, hear.) It is not the place now to speak of remedies—remedies there are for legislation to effect But these recollections belong to the past—the subject we are now here to con (Hear, hear.) Whom have we with us to-day? Something grander than actor or manager. To-day we have with us the man. (Tremendous cheering.) Gentlemen, so much of genius is connected with many and associations—but not to-day. (Hear.) Later and long will we cherish the mingled feelings that accompany this farewell—(Hear)—later, while the power of sight we miss from the playbills fix old familiar name, and feel that one, the source of elevated delight, is lost to us for ever. (Great applause.) To-day let us only rejoice that he whom we so appreciate is no worn-out veteran retiring to the rest he can no longer enjoy—that he is in the prime of his powers with many years to come in the course of nature of that dignified leisure for which every public man must have sighed in the midst of his triumphs (Loud cheering.) And, although I cannot say that the period of his life has fallen into 'the sere, the yellow leaf,' I can say that prematurely he has obtained that which should accompany old age—love, honour, and obedience troops of friends'; and, therefore, withdrawing for this night all selfish regrets—not thinking of the darkness that is to follow, but of the brightness of the sun that is to set, I call upon you, with full glasses and full hearts, to drink 'Health, happiness, and long life to William Macready'

After reiterated demonstrations of loud applause, Mr. Macready commenced his address under feelings of considerable emotion, and with a grave and saddened voice, he said: "I rise to thank you, I should say to attempt to thank you, for I feel the task is far beyond my powers. What can I say in reply to all that the kindly feelings of my friends have dictated? I have not the skill to arrange and dress in attractive language the thoughts that press upon me, and my existence may, perhaps, appear like a want of sensibility to your kindness, for we are taught to believe that 'out of the heart's fullness the mouth speaketh.' But my difficulty, let me assure you, is a contradiction to the assertion. I have to thank my friend, your distinguished chairman, for proposing my health to you, and for the cheerfulness, and may I not add, the brilliant fancy with which he has enriched and graced his subject. But that we might readily expect from man, who in the wide discursive range of his genius touches nothing that he does not adorn. (Applause.) I have to thank you for the cordiality, and if I may without presumption say so, the enthusiasm with which the compliment has been received, and for the distinguished expressions of my gratitude. Conferred on me by making me your guest to-day. (Loud cheers.) Never before have I been so oppressed with a sense of my deficiencies as at this moment, when looking on this assemblage of distinguished and crowded here to offer the spontaneous testimony of their regard. (Great cheering.) I observe among you many who, for years, have been the encouraging companions of my course; and there are present, too, those who have cheered my very latest efforts. (Hear, hear.) To all who have united in this crowning tribute, so far beyond my merits or expectations to my old friends—the friends of many years—I offer my heartfelt thanks. (Loud cheers.)—to welcome me with hopeful greeting in the morning of my professional life, and the younger ones, who now gather around to shed more brightness on my setting, I wish to pour forth the most important expressions of my grateful gratitude. You are not, I think, aware of the full extent of my obligations to you. Independently of the substantial benefit due to a liberal appreciation of my exertions, my very position in society was determined by the stamp which your approbation has set to my humble merits—(Hear, hear) let me unhesitatingly affirm, that, without undervaluing the accidents of birth or titular distinction, I would not exchange the grateful pride which your good opinion has given me the right to cherish, for any favour or advancement that the most privileged in station could receive. (Enthusiastic applause.) Gentlemen, I really seem to have said much more than I intended to attempt to detain you long; but with the reflection, and under the conviction that your drama, the noblest in the world, can never lose its place from the stage while the English language lasts, I would venture to express one parting hope that the rising actors may keep the loftiest look, may hold the most elevated views of the duties of their calling (Much cheering.) I would hope that they may strive to elevate their art, and with it raise themselves above the level of the player's easy life to public regard and distinction by a faithful ministry to the genius of our incomparable Shakspeare (Applause.) To effect this creditable purpose they must bring resolute energy and unfaltering labour to their work they must be content to spare delights and live laborious days." Remember, whatever is excellent in art must spring from labour and endurance. As Spenser has explained:

Deep the oak must sink in stubborn earth its roots observe,
That hopes to lift its branches to the sky.

This, gentlemen, I can assure you, was the doctrine of our Siddons and of the great Talma, and this is the faith of the few who ever taught one of their humblest disciples. (Cheers.) To my direction of the two patent theatres, on which my friend has so amply dilated, I wish to say but little. The preamble of their patents recites, as a condition of their grants, that the theatre should be for the promotion of virtue and instruction to the human race. I think these are the words. I can only say it was my determination to the best of my ability to obey that injunction, and, believing it to be the true prosperity, has its duties as well as its rights, I conceived that the proprietors should have co-operated with me. They thought otherwise, and I was reluctantly compelled to relinquish, on misunderstanding terms, my half-created and intellectual enterprise. They will take up the accomplished work; and if inquiry was set on foot for one best qualified to undertake the task, I should seek him in a theatre which by eight years' labour he has, from the most degraded condition, raised, that in public estimation, not only as regards the intelligence and respectability of his audience, but in the learned and tasteful spirit of its productions. (Cheers.) Gentlemen, I shall not detain you longer. All that I could desire, and far more than I ever could expect, you have, in the honour you have done me this day, conferred upon me. It will be a memory that must remain as an actual possession to my heart and mine, which nothing in life can take from us. The repetition of thanks adds little to their force, and therefore, deeply as I am already obliged to you, I must draw all further claim upon your indulgence to a close. I will only say, I could ask for your service; you will, I am sure, continue that faith in my gratitude for the value you have set upon it. With a heart more full than the glass I hold, I return you my grateful thanks, and have the honour of drinking al. your healths."

The same manifestations which attended the commencement, were audible throughout and at the conclusion of Mr. Macready's speech.

Mr. Charles Dickens, who was received with an enthusiastic welcome, after a prefatory recommendation of the task imposed upon him, said, "Gentlemen, as it seems to me, there is one point connected with this subject of perfect real sation of a scene so unusual and so splendid as that in which we are now assembled. The first, and I must say very difficult requisite, is a man possessing the strength in his own personality to command the attention of the room on the general regard and esteem, which is possessed by my dear and much valued friend, our guest. (Hear, hear.) The second requisite is the social requisites of a body of gentlemen—a great multitude of heats so cheerful and good-humoured (under, I am sorry to say, some personal inconveniences) (No, no)—so warmhearted and so ready to accept a hint, that the duty of contributing to it is amusing. (Hear, hear.) This third, and certainly not the least of these requisites, as a president who, less by his social position, which he may claim by long service, or by his own noble genius, which has been advertised to the world, and may be again accidentally lost, than by his comprehensive genius, shall fitly represent the best heart of him to whom honour is done, and the best heart of those who unite in the compliment. Such a president I think we have found in our chairman of to-night (Loud cheers), and I need scarcely add that our chairman's health is the toast I have to propose to you." (Hear.) Mr. Dickens then passed an eulogium on the chairman's literary career, his generosity, and his readiness "to assert the order of which he is so great an ornament; never condescending to shuffle it off, and leave it outside statecoach, or Mussulman mosque, where his dignity could not accompany him. (Loud cheers and laughter.) And I have," said the speaker, "the strongest reason just at present to bear my testimony to his great consideration; for, in conjunction with some other gentlemen, he has now present, I have just clinched a design with Sir Lytton Bulwer, to smooth the rugged way of young labourers, both in literature and the fine arts, and to redeem by no eleemosynary means the declining years of meritorious age. (Loud cheers.) [This allusion refers to Sir Bulwer Lytton's having written a comedy for Mr Charles Dickens and his professional friends to perform at the latter's proposed theatre to be applied to the raising of retreats for decayed literary men, on a site of ground to be presented by the honourable Baronet in Hertfordshire.] And if that project prosper, as well, and as I believe it will, it will be a boon to England where there is now a reproach (Hear) originating in his sympathies, being brought into operation by his activity, and endowed from its very cradle by the generosity represented by his numerous friends. His Excellency the Prussian minister has declined the assorted decay of British art, and cited among the glorious names of British painters, Wilkie, Mulready, Newton, Knowles, the "Ion" of Mr. Justice Talfourd, and the "King of the Commons" of the Rev. Mr. White, to be connected with the genius of their guest. He also named Richard Sheridan, Miss Mitford, Taylor, Jerrold, and Douglas Bell, whose dramas were all associated with the career of their great tragedian. Mr. Forster concluded his earnest remarks by reading the following poetry addressed to their distinguished guest by the Poet Laureate, Alfred Tennyson:

Farewell MACREADY, since to-night we part,
Full-hearted thunders echo from a chord
Thy power, well-used, has touched in the public breast.
We thank thee with one voice, and from the heart
Farewell! MACREADY, since this night we part
So, take thine honours home, rank with the best—
Patrick, and stately Randolph, and the
Who made a nation purer thro' their art.
Thine be it that our Drama did not die,
Nor flicker down to trashiness and tinsel.
And those girl-stars a-rise and children swarm to see.
Farewell, Macready! mark, grave, sad-wise,
Our shakspeare's brain, and universal eye.
Deep, pleased, they seize a hundred years, on thee.

The Chairman next gave, "The Prussian Minister, the Chevalier Bunsen, and the German exponents of Shakspeare."

His Excellency Chevalier Bunsen acknowledged with gratitude "that modern German literature had been nurtured by the English Muse, and that the immortal genius of Shakspeare had stood at its cradle." He paid a high compliment to Mr. Macready, by avowing, that, though the genius of Shakspeare was his study and admiration, he could not avoid recollecting that the finest portraits of his heroes—of *Macbeth*, of *Hamlet*, and of *Lear*—were drawn by the masterhand of Mr. Macready himself.

Mr. W. J. Fox, M.P., proposed "The Stage," connecting with it the name of Mr. C. Kemble, as one of the representatives of the past, and of Mr. Phelps, as one of the representatives of the future: the latter gentleman, he observed, having redeemed Sadler's Wells from clowns and waterworks (Hear, hear), and made it a not unworthy shrine of Shakspeare, and a pledge of what the drama would be before the impulse which had been given to it by Mr. Macready was exhausted.

Mr. Charles Kemble, who rose amidst a very roar of cheering, warmly thanked the audience for the honour conferred upon him, and which he had so unexpectedly received. He was not wanting in the desire, but only in the ability, to adequately acknowledge their kindness, and he sat down with reciprocating the good wishes of those who had drunk to his health.

Mr. Phelps having left the room,

Mr. Thackeray proposed "The health of Mrs. Macready and her family," which was briefly acknowledged by Mr. Macready.

The toast of "The Ladies" was proposed by Lord Dufferin, and the Chairman then quitted the chair; and the company separated shortly before twelve o'clock.

SKETCHES IN LOO CHOO.

THE late visit of her Majesty's steam-sloop *Reynard* to the Great Loo Choo, in the Chinese Seas, has afforded our countrymen an opportunity of adding to our stock of knowledge of this interesting island, of which little has been heard since Captain Basil Hall's visit in 1816. The object of the visit was to convey a communication to the authorities from the British Government, respecting the treatment of a medical missionary, J. B. Bettelheim, M.D., for four years a resident there; and, in making known his mission to the authorities, Captain Cracroft was ably seconded by the Bishop of Victoria, who was on board the *Reynard*, and contributed materially to bring about the good results which, it is hoped, will follow from the firm yet conciliatory tone adopted.

The *Reynard* anchored in Napa Roads on the 3rd of October, and remained a week, during which time three interviews took place with the native authorities, both on shore and on board. At the first interview, held on the 5th of October, the various complaints of Dr. Bettelheim were made known to them. Among these, the most serious seems to have been an assault on him, by spies or agents of the Government, while engaged in his missionary labours. Explanations, in reply to these charges, were demanded; and at the next interview, at which the Viceroy or chief authority of the island was present, assurances were given that Dr. Bettelheim should be very differently treated in future. At this last interview a display of force was thought politic, and Captain Cracroft and the Bishop were attended by a guard of 50 men, and accompanied by all the officers of the *Reynard* in full uniform.

On the 9th, the Viceroy and other mandarins partook of an entertainment on board the *Reynard*, and an interchange of presents was made. This being the first steam-vessel that had ever been seen here, her engines and propeller caused much astonishment: and her departure the next day was doubtless viewed with great satisfaction.

There was no attempt made to prevent the officers rambling where they pleased with their guns; but it was too early for woodcocks, which in the season are plentiful—so a few quails and golden plover were all that the sportsmen got for their toil. The appearance of the country about Napa is described as very beautiful. The fields are well cultivated, the sweet potato being the staple: there is an abundance of wood: and the road leading to Shuidi, the capital, four or five miles from Napa, is broad, and partly macadamised. The people appeared friendly and well disposed, and refused all offer of payment for their services. Their living so med to be chiefly sweet potato and rice; and, though outwardly free from the appearance of destitution, they are evidently sunk in the lowest dep ss of poverty. The Government, as proprietor of th soil, appropriates about one-half the produce for the support of the public officers and literati, who live a life of indolence, and form a large portion of the population. The dress of the lower orders is very simple, consisting of a loose robe of coarse grass cloth, fastened by a girdle round the waist. The literati and public officers wear a better description of garment; the first of blue, the latter of yellow cloth. The hair is worn in a tuft on the top of the head, fastened by two pins, which are of silver in the higher orders, and brass in the lower class.

Loo Choo is stated to have been raised to the dignity of a kingdom by one of the Chinese Emperors of the Ming dynasty, three or four hundred years ago, during a war between China and Japan, when the former sought to detach it from the interest of the latter.

In token of vassalage, a ship is annually despatched to Foo-chow-foo, a large city, one of the ports of trade open to us, and the capital of the province of Fokien. To this place the Loo-Chooan scholars resort for education, the Chinese being the polite language of the country; but the commonly-spoken language, the physiognomy, customs, and habits of the Loo-Chooans is decidedly Japanese, and the influence of the Japan Cabinet directs all the official appointments of the local Government.

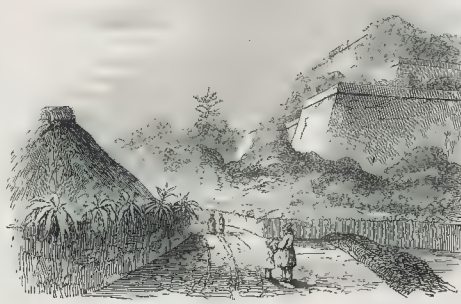
It is to be hoped this visit will have had the effect of ameliorating the condition of Dr. Bettelheim, who, although overflowing with missionary zeal, is somewhat peculiar in his views and conduct. Hitherto his missionary labours have been productive of little benefit towards the propagation of Christianity in this remote region; but this is not surprising, when the authorities prevent the friendly-disposed people from holding any intercourse with him. His time has not, however, been altogether thrown away; for, although he has not succeeded in making any converts, he has translated the Gospel of St. Luke and the Acts of the Apostles into Loo-Chooan, and is now busy with the rest of the New Testament.

The illustrations include Views of Dr. Bettelheim's house, which was formerly a temple or monastery, and is now in a very indifferent state of repair; a Chair, the only mode of conveyance in the island—for there are few horses, and those used only by the Mandarins; and a View of Shuidi, the capital and residence of the King, which is surrounded by a double wall. No European has ever been permitted to enter it; but one of the "mids" of the *Reynard* managed to climb to the top, and had a view of the interior; when the crowds of people who gathered to prevent his going further, effectually prevented any portion of the city being examined.

DR BETTELHEIM'S RESIDENCE, LOO CHOO.

DR. BETTELHEIM'S RESIDENCE, FROM NAPA ROADS.

MODE OF TRAVELLING IN LOO CHOO.



SHUIDI, THE CAPITAL OF LOO CHOO

INTERESTING EXCAVATIONS AT ROME.—The *Giornale di Roma* of the 15th ult. continues to give accounts of new discoveries made in the excavations now going on in the ancient Via Appia. The works have now progressed as far as the fifth mile outside the town. Beautiful fragments of Roman architecture have been again brought to light; among others, a frieze with festoons supported by children. Some heads of Medusa, belonging to the same decoration, and a *clypeus*, with a bas-relief representing a soldier of the Urban cohorts in full costume, with the inscription, *Dis manibus Q. Flavio Ortesio Consiga benemerenti et Q. Flavio Proculo multis coh. XII. vrb. bassi filio Pientissimo Ionia Procula fecit.* To these must be added four statues, one of which represents a woman, mutilated in the upper part, and another a person wearing a toga. A fragment of a motto, bearing the words, *Cæsius Lector Cæsaris*, and other inscriptions, denoting hitherto unknown offices, or sites of Rome not well ascertained before. Such are the following, in which the words *ab ara marmorea* and *coactor inter ærarios* have arrested the attention of antiquaries. The first is, *P Cæcrius, P. L. L. Philocles ab ara marmorea Cæcriæ P. L. Calliopa Mensque Cæcrii Euph.* The second is as follows:—*A. Arpedieri A. L. Antoc. A. . . . . Coactor inter Ærarios . . . . Octaviæ A. L. Eyschar. Sorror. . . . .* On a marble slab, in beautiful preservation, is the following inscription:—*T. Fulcinnius, T. L. Appella, ex testamento arbitratu fideicis et Pallargyri et Attice L.* Crowds of connoisseurs are constantly on the spot, to examine the relics daily brought to light.

TRAVELLING IN EGYPT.—Considerable numbers of English travellers (according to accounts from Alexandria of the 20th ult.) continue to arrive there on their way to Upper Egypt and Palestine. Private letters from the interior acquaint us of the death of Mr. Milly, a Liverpool commercial gentleman of some consideration, who, with his family, consisting of Mrs. Milly, a daughter, and two sons, had penetrated into Kordofan, as far as Kartoom. On their return to Gegea, a village some distance from Abou Hamed, on the confines of the Berber country, he took fever (supposed from exposure to the sun), and died, after a few days' illness, at the village named, where he was interred. His family performed the journey of the Korosko Desert on camels in ten days, and are now on their way to this city, from whence they propose starting for England by the first conveyance. The melancholy circumstances of this gentleman's fate are much deplored, and the public sympathise deeply with the family, whose privations since must have sadly augmented the severity of their afflicting trial.

The lists of candidates for the metropolitan police service are full, and the number required for the temporary augmentation of the police during the Exhibition of the Industry of all Nations has been obtained.

FOREIGN AND COLONIAL NEWS.

INDIA.

Intelligence anticipatory of the Overland Mail reached town during the week. The dates are, Bombay, February 3; Calcutta, January 25. There are no late advices from China. The cholera at Bombay had been very fatal. The mortality of the month for the island of Bombay is close on 3000.

The city of Rangoon, in Burmah, has been almost wholly destroyed by a fire which occurred on the 28th of December. A man engaged in boiling some oil went out to see a Burmese ship of war just then arrived in harbour, he forgot his charge, the oil boiled over, and the house was in a moment in flames. The fire spread instantly through the streets, the bulk of the houses being of wood. The Roman Catholic church, when in the midst of the flames, was saved from destruction by a sudden shift of the breeze. The building-yard and vessels in the harbour were preserved by the wise precaution of pulling down all the sheds and other combustible structures around. Several ships were burnt to the water's edge. The property destroyed is valued at £300,000.

The Hindoos of Calcutta have prepared a memorial for presentation to Parliament, praying for relief from a grievance under which they have for some dozen of years suffered in silence. When a Hindoo saw fit to doubt the soundness of the creed of his ancestors, who had it down that the earth was a plane, supported by an elephant, which stood upon a tortoise, he lost caste, and was deprived of the rights of inheritance, and the honest expression of conscientious views was visited with the severest penalties, unless these views accorded with the Shastras. Some dozen of years since, this law, as far as regarded Bengal, was repealed; and of late the Hindoos of Madras have, like those of Bengal, been relieved of the penalties. Of this, in reality, the majority of them complain, deeming restraint from tyranising over their brethren an intolerable grievance. Such is the amount of enlightenment prevalent amongst the natives—such the benefits of our schools and colleges.

The trial of the Americans charged with murdering the man Knox at the Calcutta ice-house, has terminated in the acquittal of two of the prisoners; the last Verry, who confessed, has been convicted, but the jury recommended him to mercy, on the ground of his having been the tool of others—the others having just before been pronounced innocent! Trial by jury in India is indeed a farce. The men acquitted have since been held to trial on a charge connected with the murder. Verry is to be hanged.

The fort of Dharoor, in the Nizam's dominions, lately captured by the Rohillahs, was on the 23rd January invested by 20,000 of the contingent, with a heavy siege train under Brigadier Beatson. The force was so overwhelming that the Rohillahs were expected to surrender without resistance.

There have been floods in the rivers, and tremendous rains in the north-west provinces, with heavy falls of snow at Simla.

The Governor-General was expected to reach Peshawur on the 20th of January. Gholaib Singh had returned to Jamoo, from the recent interview with his Excellency.

The Commander-in-Chief, Sir W. Gomm, has issued an order on the subject of debt, in which the views of Sir C. Napier are complimented and adopted.

Sir C. Napier's arrival, on the 25th ult., at Malta, on his way home, is mentioned.

EGYPT.

Accounts to the 20th ult. from Alexandria state that the Viceroy continues to reside at Cairo, where a meeting of the consuls-general of the four European powers privy to the settlement of the treaty of 1840 between the Porte and Mehemet Ali, for defining the territorial limits of Egypt, and adjusting its political relations with Turkey, is now being held. The ostensible object of this conference is to consider how far the newly-proposed measures of Reschid Pacha for reforming the administration of justice in this country, and organising a new system of police and property arrangements, are compatible with the conditions of that treaty and the independence vouchsafed by it to the reigning Pacha of the country. Under the name of "Tanzamat," a scheme of vast scope has been submitted. It provides for the present council (composed of the heads of all departments), a body chosen under the sanction of the Sultan from the boys and higher classes of the country, who are to possess legislative functions, and whose deliberations are also to be subject to

the approval or veto of Constantinople. It provides for the introduction of mixed courts of commercial, criminal, and civil jurisdiction. It provides for, in certain cases, a departure from the established system of property distribution, for the range and functions of district police surveillance, the abolition of corporal punishment, and a variety of other internal reforms, adapted doubtless to the advanced stages of civilisation, but of very questionable application to the condition of a half savage race such as that which now inhabits Egypt.

FRANCE.

A violent speech delivered by a member of the Mountain in the Legislative Assembly, and which exposed in all its naked deformity the ferocious spirit that animates the men who draw their political inspirations from reminiscences of the sanguinary epoch of the Great Revolution, has done more to shame the Legitimists and other "men of order" into abandoning their pernicious coalition with the Red men, than any truly politic or wise view of their position could have done, so blinded have they been by jealousies and factious animosities.

The occasion referred to was on the debate in the Assembly, on Saturday last, when M. Creton brought forward his motion for the repeal of the laws which exclude the Bourbon family of both branches from France. Amongst the speakers who opposed the proposition was M. Dufraisse, the representative of the department of the Montagnards, who in a furious speech illustrated his arguments by reference to the atrocities of the revolutionary tribunals of 1792–93, which he defended, as well as the execution of Louis XVI.; denounced all of Royal birth; and intimated that he should witness without regret the extermination of the whole race on the public scaffold. The speech created a sensation of horror in the Assembly, which extended to the public when the matter became known out of doors; and the Legitimist Allies of the Mountain have since felt it incumbent on them to draw off from the party that could applaud such sentiments.

On Dufraisse quitting the tribune, M. Berryer, in the name of humanity, of virtue, and of his country, denounced in eloquent and indignant language the abominable sentiments which had just thrown the Assembly into such confusion. M. Creton's proposition was ultimately postponed for six months.

The presidents and secretaries of the monthly *bureaux* were chosen on Monday, and the successful candidates all proved Conservatives. Not one of the Mountain party was selected—the first fruit of the speech of M. Dufraisse.

On Sunday and Tuesday the *Banyl Gras* (or Shrove-tide ox) made his procession through Paris, for the first time since the Revolution of February, in a canal, a vast crowd accompanied the *cortège*. First came a picket of the mounted Garde Republicaine. The *Banyl Gras*, with gilded horns, dressed out with garlands, stalked stately between four mounted masked as Indians, and armed with clubs. The whole berry of the Hippodrome followed, and in the midst a car adorned with wreaths, in which stood upright a handsome stout young woman attired as Ceres, wearing a wreath of gilded ears of corn, and bearing in her hand a gilded sickle, with a white mantle falling from her shoulders.

The revolutionists are active in promulgating their repulsive doctrines, which fact has caused considerable anxiety and apprehension in the minds of the friends of order.

A revolutionary riot took place at Bessac, in the Herault, on the 2nd instant, when the local authorities were violently assaulted.

SWITZERLAND

The Federal Council of Switzerland has, in consequence of the repeated remonstrances of the German powers, just abolished the absolute obligation imposed in July, 1849, on the various cantons to receive political refugees: it has, moreover, maintained the decrees relative to the expulsion or transmission of refugees into the interior. These resolutions are communicated to the cantons by a proclamation, dated Berne, the 26th ult. This document explains that, after the events of 1848 and 1849, Switzerland was obliged, from its position, and from the duties of humanity, to receive a vast number of refugees of different nations, and to take measures for distributing them among the cantons; but the time has now arrived at which the cantons can be relieved from this burden, and allowed their old privilege of dealing as they please with refugees

The Swiss journals state that a sanguinary conflict has just taken place at Matten, in the district of Interlacken, between the troops and a band of insurgents, in the course of which two of the former and four of the latter were seriously wounded. Several of the insurgents have been arrested.

The projects of the great powers against Switzerland, which have been so often talked of, now began to acquire consistency. Within the last week it is positively known that the Prussian Government has transmitted a note to the Federal Council, in which it demands the re-establishment of legal order in the Canton of Neufchatel, threatening to use coercive measures in the event of non-compliance. No answer has yet been given.

ITALIAN STATES.

The people of Turin and other leading towns in Piedmont have been lately startled with an account, which appeared to come from a well-informed quarter, of a conspiracy against the constitutional liberty of their country, which, it was said, was being concocted at the present moment by the Prince de Carignan, the Queen Mother, and others of the Court party, with a view to the overthrow of establishing an Absolutist Government. The statement appeared to be countenanced by the fact of a large number of Austrian troops (20,000) being at the present moment concentrated around Ticino, near the Sardinian frontier, under General Count Strassoldo, the nephew of Marshal Radetzky. The Milan garrison, too, was looked upon as a reserve of this corps d'armée in case any warlike demonstration, there would be no hesitation as to leaving the capital bare, and drawing all the garrisons into the field, as was the case in 1849.

However probable these reports may have been shown by the resignation of the Minister of Commerce to the Chamber of Deputies, to be a tissue of inventions. On the 27th ult., that Minister, in answer to interpellations from M. de Boncompagni, declared that the Government had never failed to respect the sanctuaries against the liberties of Piedmont, and that the announcement in the *Gazette* was intended to contradict such rumours.

GERMAN STATES

Difficulties of the most embarrassing nature are still interposed in the way of a satisfactory adjustment of the Central Federal authority, by the mutual jealousies of the two great rival States, Austria and Prussia. The Prussian Government have resolved again to communicate with the Austrian Cabinet, and to insist on the unconditional equality of Prussia and Austria in all the Councils and Boards of the Confederation. If Austria should refuse to comply with that request, Prussia proposes to return to the constitution of the old Federal Diet. A declaration to this effect has been forwarded to Dresden and Vienna, where this opposition of the Prussian Cabinet to the Austrian demands has caused the greatest dismay in Ministerial circles. In Berlin, on the other hand, it is feared that Austria aims at the revival of the old German Empire, under her own suzerainty. Meanwhile the Vienna Cabinet is preparing to address a circular to the chief Powers of Europe, which will contain what they hope will be regarded as a satisfactory statement of their German policy.

SWEDEN AND NORWAY.

Intelligence of the 18th ult. from Stockholm announces that serious riots had taken peace in that capital

On the 14th, the students of Upsal University assembled to the number of 400 or 500, and paraded the streets of Stockholm, and were not dispersed till a collision took place between them and the police, a result which greatly exasperated the body of the people.

On the 16th, the same scenes were renewed on a larger scale; and on this occasion, the police having endeavoured to disperse a crowd of 1000 or 1500 people, were repulsed by showers of stones and other missiles. The troops were called out, and squadrons of cavalry cleared the streets. Thirty or forty persons were arrested. The regency instituted to act, in the absence of the King at the Norwegian Storthing, published a proclamation forbidding all assemblages of persons in the streets.

At the same time that these riots were taking place at Stockholm, disturbances of a serious character were also occurring in the peasantry of Dalesklin, in Norway. The Socialists and Democrats in the district of Stordal and the town of Levangar rose up against the authorities, who had imprisoned one of their leaders, and rose in full insurrectionary movement up to the latest date.

CAPE OF GOOD HOPE—RENEWAL OF THE KAFFIR WAR.

According to the advices which reached town during the week, from the Cape, and which are dated January 8, we learn the disagreeable tidings that the Kaffirs had thrown off their disguise, and had again openly rebelled against the Queen's authority. Hostilities between them and the colonial troops at once commenced, in which the latter suffered considerable loss. Sir H. Smith, the Governor-General, had a narrow escape at Fort Cox, the Kaffirs having hemmed him in, from which precarious situation he was only able to extricate himself by a cool and determined effort to force his passage, which he fortunately accomplished without sustaining the least personal injury, though showers of shot fell round him during his hazardous enterprise. During Sir H. Smith's unwilling detention at the fort named, a communication was cut off between him and the other parts of the colony, which induced Colonel Somerset to attempt his release. For this purpose he dispatched troops in different directions: but they had scarcely proceeded half a march when they found themselves opposed by a considerable number of Kaffirs, who were speedily reinforced; when the critical situation in which Col. Somerset was placed induced him to give orders for his troops to retire. In composing with these instructions, however, they were ferociously attacked by the enemy, and the struggle became exceedingly severe, each of the parties being equally determined. Colonel Mackinnon also had to encounter a strong fire from the rebels, while passing through a narrow gorge of the Keiskamma, in his search after the chief Sandili. The affair was bloody on both sides, though the Kaffirs were defeated with great loss, Colonel Mackinnon did not obtain his victory until several of his choicest officers and men were put *hors de combat*. Martial law was proclaimed in the eastern districts. The enemy set fire to the villages of Woburn, Johannisberg, and Auckland, when they massacred upwards of 70 persons, without reference to age or sex.

On Tuesday, at the usual half-yearly meeting of proprietors in the South-Eastern Railway Company, held at the Bridge-House hotel, a dividend of £3 5s. 8d. per cent. was declared.

THE ARA NORTHERN RAILWAY.—The half-yearly meeting of this company was held on Thursday, at the London Tavern; Mr. E. B. Denison, M.P., in the chair: when the report of the directors was unanimously adopted, and the various bills now in the present Parliament for improving the line, and raising an additional capital of £780,000, were approved.

Hatchard's, Piccadilly; Partridge and Oakey, Paternoster-row; and at the Hall.

COURT AND HAUT TON.

THE COURT AT BUCKINGHAM PALACE.

The excitement arising from the recent Ministerial crisis closed on Monday last, when the seals of office were again restored to Lord John Russell.

On Tuesday the Queen and Prince Albert went to the Building for the Exhibition of the industry of all Nations, in Hyde Park. Her Majesty and his Royal Highness were accompanied by their Royal Highnesses the Prince of Wales, the Princess Royal, and the Princess Alice.

On Wednesday her Majesty and the Prince Consort, after receiving a visit from the Duchess of Kent, presented the Baroness Victor d'Holenlohe Langenbourg, took a drive in an open carriage and four. On the same day her Majesty received the melancholy intelligence of the death of her Serene Highness the Princess Ellen of Hohenlohe Langenbourg.

On Thursday her Majesty held her second Levee this season.

On Friday her Majesty held a Privy Council at Buckingham Palace

The Queen's Concert of Ancient Music was held on this evening.

The Earl of Morley has relieved Lord Byron in his duty as the Lord-in-Waiting to the Queen; and Lieut.-Col Hon. A. Anson, Hood has relieved Sir Frederick Stovin in his duty as Groom-in-Waiting to her Majesty.

THE QUEEN'S LEVEE.

The Queen held a Levee (the second this season) on Thursday, at St. James's Palace. Previous to the Levee her Majesty gave audience to Lord John Russell. The Queen wore a black silk dress, trimmed with crape. Her Majesty had black ornaments for the head-dress. His Royal Highness the Duke of Cambridge was present at the Levee, which was very numerously attended. Among the presentations were Mr. A. Tred Tennyson, on appointment as Poet Laureate to her Majesty, by Lord Monteagle; and the Dean of Hereford, by Lord John Russell.

Lady John Russell had a *soirée* on Monday evening, at the private residence of the Premier, in Chesham-place. The *reunion* was attended by a distinguished circle of the aristocracy, including the leading members of all the great political parties. His Grace the Duke of Wellington honoured her Ladyship with his company. The Archbishop of Canterbury and Miss Sumner were also present. Lord and Lady Stanley and Sir James Graham were among the early arrivals.

TOWN TALK AND TABLE TALK.

THE Great Captain of the Age said, "As you were," and the "Crisis" is over. Not an unpleasant thing, however, in its way is this said "Crisis." I do not mean with reference to the gentlemen mainly concerned in it, the "Ins" who tremble on the verge of "Outism," and the "Outs" who exult on the verge of "Insism" with them the game is sometimes apt to be too hot to be pleasant. But, as to the mass of the newspaper-reading and politics-gossiping public, a good sound breathless Ministerial Crisis is literally as good as, if not better than, a play. The general progress of the political and legislative drama is, we know, apt to lag somewhat. Long speeches, as on other stages, interfere with the march of the action. Then the catastrophes are generally foreseen; the characters are conventional or threadbare; the stage business something which has been witnessed a hundred times again and again, in short, boxes, pit, and gallery get prosy and sleepy, and begin to stare listlessly about the House, and long for something funny or pungent or peppery, something to wake them up. This the Crisis manages admirably. The Crisis forms in fact a "point," an effect, a situation, a bit of new and original comic or serious business in the play. The long speeches are waived; the "heavy fathers," and the "walking gentlemen," and the "general utility men" become inspired with an interest and sprightliness not their own, and there is a general anxiety to see and hear what comes next.

How well has Mr. Disraeli described a Ministerial crisis, in political and official atmospheres. How the world of red-lapism quakes and quivers to its centre. How the great nobles of the hereditary governing families—the leaders of the ins and the outs—hurry with anxious faces from conference to conference; how the tribe of their followers and expectants—the men who are looking out for under-secretaryships, colonial governorships, and commissionerships, and other such like treasures, beset their haughty official reserve, speculate upon their movements, prove the probability of this, and the impossibility of that political solution or combination. Then it is that the Clubs are in their real glory. Then it is that the shiny hats in the Park and Rotten Row wag convulsively amid the general agitation. Then it is that each man connected, or supposed to be connected, with the great rival powers, brings in another and another piece of "latest intelligence" every quarter of an hour; each of these precious budgets of unfounded rumour needing, say a ten minutes' uninterrupted credence. Then is the time for third, fourth, and fifth newspaper editions. Then is the time for lists of the new Ministry, marked "private and confidential," to circle from house to house and club to club. Then is the time for exclusive intelligence, for secret information, the time of the especial glory of that farseeing class who always, when anything particular is in the wind, "happen to know." Then is the time when the "Court Circular" man takes for the nonce the rank of the historian. Then is the time when future combinations, and future theories, and future courses of policy are inferred from morning visits and evening calls. Then, and then only, is the time when people are never in want of a subject of conversation to succeed the inevitable weather. Then is the time when gentlemen of a waggish turn, meeting their friends in the street, are sure to inquire, in a tone of profound astonishment, how it is that the said friends can possibly reconcile it to their sense of loyal and patriotic duty to leave their homes at a period when they may expect, from moment to moment, an imperative summons to Buckingham Palace; and then, and then only, is the time when the ladies begin to take a faint dawning interest in politics, and occasionally say, "Oh, by the bye, dear me! who's to be in?"

We must look back to very old days to find a time at which the Government was so long a-begetting. A twelve days' crisis is a strange event in English history; but the old parties have been so thoroughly broken up, and the old staff of governing men—Whig and Tory—seem so scarce to allow young and fresh blood into the Cabinet Councils of the Queen of England, or wonder by the bye the crisis terminated. Meantime, red-tapism has had a splendid triumph. The art of living in Downing-street, and sitting on the Treasury Bench, appears to be one of strange and mystic difficulty. Even in this present day, then, in the opinion of Socrates, the man who could conduct dramatic entertainments well, could govern a nation. In accordance with this theory, Mr. Macready ought to have been sent for. Yet, on second thoughts, the theatrical Ministry might very likely not be deemed satisfactory in the Clubs. The true translation of the gentleman's philosophy, however, I understand, makes him refer to the "arrangers" and not the "conductors" of dramatic entertainments—a change which would transfer office from the managers to the authors, and possibly oblige Mr. Pitzball with an under-secretaryship, or at least a seat at the Board of Trade. Meantime, we are to jog on as before—the same actors, the same drama; but provided, it is announced, with new properties and new scenic effects. Let us only hope for a more free and flexible fashion of action, and spirit into the management, and then ring the bell, sound the gong, and up goes the curtain on act second of the Session of Fifty-one!

PARLIAMENTARY COMMITTEES.

ALLESBURY ELECTION AND ST ALBAN'S ELECTION. The Examiner of Recognizances has reported to the House that the recognizances of the parties to the petitions against the return of members at those elections are unobjectionable.

HEREFORD ELECTION.—The petition of the electors, complaining of this election, has been referred to the General Committee of Elections

MID KENT AND DOVER RAILWAY (LANDOWNERS' LINE).—The select committee of this railway bill, sitting under the standing orders, have decided that the standing orders ought not to be dispensed with in this case

CLASSIFICATION OF PRIVATE BILLS.—The Committee of Selection, under the powers given to them by the standing order of 8th July last, have formed into groups the following private bills, which, in their opinion, it is expedient to submit to the same committee, and have agreed to report the same to the House, as follows:—Group No. 1. Turnpike Road Bills: Appleby, Kendal, Kirkby Stephen, and Market Brough; Cheltenham and Gloucester District, Cheltenham and Painswick; Huddersfield and New Hey District, Ilchen Bridge and Roads; Manchester Parish Highways; Milford and Haverfordwest; Penrith Road and Lakenheath and Hockwold Roads; Multrop and Levens Turnpike Road; Pyecomb and Hickstead district; Richmond and Lancaster (western district); Sheffield and Glossop; Shrewsbury and Bridgnorth; Stilton and Stamford District; Tattenhall and Woodchurch; Uttoxeter to Stoke and Mulwich to Sandon; Wivelsombe Roads. Group No. 2: Liverpool Docks (alteration of management, &c.); Liverpool Docks (abatement of sale).

IRELAND.

Mr. John O'Connell has at last got wearied of the vain attempt to stand in his father's gigantic shoes. The general indifference of the community at large to his puny exertions seems to have at length shown him the futility of his striving to play the political leader; and he is accordingly adjourned the weekly meetings at Conciliation-Hall "until further notice."

LORD GOUGH AT TRINITY COLLEGE.—On Tuesday, at the Spring Commencements held in the University of Dublin, the honorary degree of LL.D. was presented to Lord Gough. The gallant veteran appeared in the examination-hall in the full uniform of general officer, and was loudly and most cordially cheered by the crowds assembled to see and hear him. Amongst those who took Doctors' degrees were the hon. members for the University, J. Napier, M.P., and G. A. Hamilton, M.P.

AFFAIR OF HONOUR.—A hostile meeting took place at Merrion, near Sligo, on the 27th ult., between the Mayor of Sligo, E. H. Verdon, Esq., and C. Aries A. Sadley, Esq., solicitor, cousin to Colonel Sedley, 2nd West India Regiment, in which the former was attended by a professional gentleman, and the latter by his brother. After an exchange of shots, the parties were, with much difficulty, taken off the ground. The duel originated in an article inserted in the *Channel* newspaper, of which Mr. Verdon is proprietor.

THE ROMAN CATHOLIC MOVEMENT.—As time advances, the agitation against the Papal Aggression Bill of Lord John Russell is gaining strength, and extending to the remotest parts of the country. The provincial petitions rank certain accounts of several large meetings held during the present week. On Tuesday last there was a meeting of the Roman Catholics of the county of Kerry, in the Court House of Tralee, "to draw up an address to the loyal nobility and gentry of Ireland, in reference to the late measure introduced by Lord John Russell against the free exercise of the Roman Catholic religion in England and Ireland." The late High Sheriff of Kerry, Mr. Maurice J. O'Connell, presided. Many of the principal Roman Catholic clergy were in attendance. A letter was read from Dr. Egan, the Roman Catholic Bishop, describing the bill, as one fostering the clergy and interfering with the discipline of their church. Amongst the resolutions adopted, was one declaring that "the imposition of the support of the clergy of a minority on the great majority of the Irish people has ever been the fertile source of much discontent and dissatisfaction in Ireland," and that, "as long as so unjust a burden is imposed on the people of Catholic this country can never believe they possess equal rights or privileges with other classes of religionists."

[The following appeared in our Late Edition of last week.]

THE MINISTERIAL CRISIS.

It will be seen from the report of the proceedings in both Houses of Parliament last night (Friday), which we give below, what has been the nature of the negotiations and arrangements entered upon during the week (hitherto without effect) for the purpose of forming an Administration, by the Statesmen who have been honoured with the confidence of her Majesty in the present unexampled Ministerial Crisis: also, what the causes are which prevent the formation of a Cabinet up to this time; and what is the present state of matters.

Lord John Russell, in the course of his explanations, stated, that no final arrangements would be made until the counsel of the Duke of Wellington (who was summoned to Buckingham Palace in the course of the day—Friday) had been obtained by her Majesty.

HOUSE OF LORDS.—FRIDAY, FEB. 28.

The House was very crowded, and in the galleries a large number of ladies were assembled.

NEW PEER.

Lord BROUGHTON (late Sir J. C. Hobhouse) took the oaths and his seat.

NEW VICE-CHANCELLORS BILL.

On the motion of Lord LANGDALE, this bill was read a third time and passed.

MINISTERIAL EXPLANATIONS.

The Marquis of LANSDOWNE, in a most impressive speech, detailed the progress of the Ministerial crisis since Monday last. The failure of Lord John Russell to re-construct his Cabinet, and the refusal of Lord Aberdeen and Sir James Graham to consent to form part of an Administration, had been followed by an attempt of Lord Stanley to organise a Ministry, first by a coalition between the Protectionists and the supporters of the late Sir Robert Peel, and then by the unassisted forces of the Protectionist party. All these attempts had led to no result; and the state of things at that moment was, that her Majesty had sent for the Duke of Wellington, in order to have the benefit of his advice before taking any further step. Under these circumstances, it was consolatory to him to be able to state that the difficulties and obstacles which had occurred in those negotiations had turned entirely on matters of differences of opinion, and not at all on any personal considerations. The noble Lord then sat down, after reminding the House that there was one sacrifice which could not be called upon to make, and that was the sacrifice of dignity which would attend the prolonged attempt to carry on the business of the country without that amount of support which was indispensable to the efficient discharge of the public service. Such an attempt, while it would be highly detrimental to the honour of the Crown, could only be profitable to a not very respectable class of politicians, who would in that case be invested with an importance which did not otherwise belong to them.

The Earl of ABERDEEN next rose to state the course which he had taken during the recent negotiations. On Saturday last he had been honoured with a communication from, followed by an interview with, her Majesty. In obedience to her Majesty's expressed wish, he had endeavoured, in conjunction with Sir James Graham, to assist in the reconstruction of Lord John Russell's Government. He was sorry to say, that his endeavours had failed, in consequence of his invincible repugnance to the penal measure against the Roman Catholics introduced by Lord John Russell into the Lower House. That repugnance had been shared, without any previous concert or understanding, by all his late colleagues with whom he had communicated. When her Majesty found that no decision could be effected between the supporters of Sir R. Peel and Lord John Russell, she had asked him (Lord Aberdeen) to undertake the task of forming an Administration, but when he looked at the majority by which the bill among the Roman Catholics had been carried in the House of Commons, and when he was convinced that a large number of their Lordships would concur in supporting that bill, he felt that it was useless to attempt to carry out her Majesty's commands, and therefore he decided the task. This was all he had to say; and, in conclusion, he hoped that the House would believe that nothing would have induced him to follow the course he adopted, had he not been convinced that he had acted according to the dictates of the soundest principles of wisdom and justice.

Lord STANLEY then rose, and proceeded to lay before the House the several steps of the negotiation, in which he had recently en- When her Majesty asked for his advice on the Ministerial crisis, he a- ged for a statement of the reasons which had induced Lord John Russell to resign, and when he found that that retirement was attributed solely to the small majority on the occasion of Mr. Disraeli's motion, and to the defeat which the Ministry had sustained on Mr. Locke King's motion for an extension of the franchise, he had ventured to express his doubts that the resignation of the late Ministry was to be ascribed solely, or even principally, to those causes. He had felt it to be his duty before her Majesty to state his opinion as to the state of parties in the House of Commons, and to recommend that before he himself undertook the task of forming an Administration, an attempt should be made to bring about an union between Lord John Russell and the supporters of the late Sir Robert Peel. Lord Aberdeen had declined the proposal, and Sir James Graham had declined to make the attempt, he had himself attempted an approximation between the Protectionist party and the followers of Sir Robert Peel, among whose ranks were to be found men of the highest character for station and ability, and who had always seemed to exercise those talents solely to render the formation of any Ministry an impossibility. This attempt, too, having failed, he was reduced to have recourse entirely to the Protectionist party; and though there were many men among them who would have formed able members of a Ministry, yet, when he considered that with one exception that party was deficient in men of official experience, that when his Ministry was formed it would have to contend with a majority most effective for opposition if unable to combine for anything else, and that the public service rendered a dissolution at the present time at least impossible, he had, after mature deliberation, begged her Majesty to excuse him from the responsibility of forming an Administration. The noble Lord then contradicted the reports that he had pressed her Majesty to consent to a dissolution, and that Lord John Russell had forced himself on her Majesty while the negotiations in which he (Lord Stanley) had been concerned were in progress, and concluded his able speech by giving a sketch of the course which he should have felt it his duty to pursue with regard to the Income-tax, to agriculture distress, and to Papal aggression, had he been successful in forming an Administration.

After a few words from the Marquis of Lansdowne in explanation, their Lordships adjourned.

HOUSE OF COMMONS.—FRIDAY, FEB. 28.

The House was thronged with members, anxious to hear the Ministerial explanations.

MINISTERIAL EXPLANATIONS.

Lord J. RUSSELL stated what had occurred since Monday with reference to the formation of a Cabinet. He noticed the contradiction—very peremptory in terms, and in manner very courteous—which had been received from Mr. Disraeli to the effect that he had announced that Lord Stanley, having been sent for by the Queen, had represented to her Majesty that he was not then prepared to form a Government; and in justification of his statement he read (with permission) a letter from Prince Albert, in account written by Lord Stanley, and by him delivered to the Queen, of his interview with her Majesty, and which Lord Stanley had authorised him to make use of. After this he appealed to the House whether these circumstances did not bear out the statement of Lord John. He proceeded to say that, having been desired by her Majesty to attempt to reconstruct an Administration, and Her Majesty having been pleased to consent to the retention of Lord Aberdeen and Sir James Graham, he had met them at the Palace, and communicated with them afterwards; that no personal considerations stood in the way of a union, and upon several points of public importance there was no material variety of views between them; but there was one subject upon which they differed, and neither could recede—namely, the Ecclesiastical Titles Assumption Act; that though he thought it necessary to preserve with that bill, he had consented to make considerable alterations in it; whereas Lord Aberdeen and Sir J. Graham were of opinion that any legislation upon the subject was unnecessary; which was so wide a difference as to render an agreement impossible. He (Lord John Russell) thereupon again repaired to the Palace and resigned the commission with which he had been entrusted, and Lord Stanley having been again sent for, he had since resigned his commission into the hands of her Majesty, who, in this difficulty, had been pleased to command the attendance of an old and faithful friend of the Crown, the Duke of Wellington, and intended to pause for a while before any further endeavours were made to form a Cabinet. The noble Lord then removed a misconception of what he had said on Monday, explained the motives of his resignation, and defended himself against certain charges, especially that of shrinking from the difficulties of his position. These difficulties had arisen out of three questions: first, that of the ecumenical policy which had been recommended in 1846, and which, having been found beneficial to the great mass of the people, the present Government had to lowed out; secondly, the Ecclesiastical Titles Bill, in respect to which he retained his opinion, that the assumption of these titles was an act of usurped power on the part of a foreign Prince which it was impossible for Parliament to pass over; but the main object to be attained, he observed, was the assertion of the supremacy of the Crown and people of England as against any foreign power. With regard to the bill itself, having been told by persons of competent authority that its provisions, though carefully framed, might interfere with ordination and with existing endowments, he said at once that that was not the intention of the bill, and he should be ready to examine its provisions, and make such alterations as would prevent any such interference, without departing from its original scope. The last question a very important one—was that of the extension of the suffrage, the subject of many deliberations held with his colleagues previous to the meeting of Parliament. He had prepared an outline of a measure which he thought might be proposed to the House; but there was a preliminary question, whether looking to the present state of the country, to the situation of the country, it was desirable to introduce such a bill during this session; and they had all concurred in thinking it should be delayed and matured until the next. He had been perfectly satisfied with the general working of the Reform Bill; but he thought, if the number of persons enjoying the franchise could be increased, without danger to our representative system, that system would be placed upon a wider and safer basis. With regard to the nature of the measure, however, the greatest caution should be used. He should dread any change which would deprive the House of Commons of those conservative elements that ought to belong to it; and he believed that a House of Commons representing merely numbers would jar with the other branches of the Legislature, and not conform to the spirit of the constitution.

Mr. DISRAELI explained what he had meant to say on Monday. He happened to meet Lord Stanley shortly before the House met, and he understood him to contradict any statement that he was not prepared to form a Government; but there was no intention on his part to be peremptory in words or discourteous in manner.

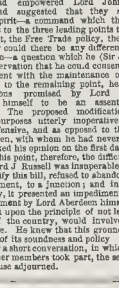
Sir JAMES GRAHAM, who was called by several members, said, that as the House seemed to expect some explanation from him, though he had no official character, he should not withhold one in the present critical position of affairs. On Saturday evening Lord Aberdeen and he received the commands of her Majesty to wait upon her at Buckingham Palace, when her Majesty informed them that Lord Stanley not being then prepared to form an Administration she had empowered Lord John Russell to endeavour to reconstruct one, and suggested that they should meet his Lordship in an amicable spirit—a command which they had most cheerfully obeyed. With reference to the three leading points to which Lord John Russell had referred, on the first, the Free Trade policy, there could be no difference between them; neither could there be any difference on principle as to the extension of the suffrage—a question which he (Sir James) was not unwilling to entertain, with the reservation that he could consent to no extension which he did not believe consistent with the maintenance of the existing form of Government. In respect to the remaining point, he was bound to say that, with all the modifications promised by Lord John Russell, he could not reconcile it to himself to be an assenting party to the measure before the House. The proposed modifications would leave the bill for all practical purposes utterly inoperative, while it would be regarded as penal and offensive, and as opposed to the policy of the last twenty years. Lord Aberdeen, with whom he had never communicated upon this subject until he had asked his opinion on the first day of the session, entirely concurred with him. Upon this point, therefore, the difficulty in the way of a junction between them and Lord J. Russell was insuperable. As that noble Lord, though he had offered to modify this bill, refused to abandon it, that was a cardinal difficulty and a fatal impediment, to a junction; and in the present excited state of feeling in the country, it presented an impediment equally insuperable to the formation of a Government by Lord Aberdeen himself. To endeavour to carry out a measure of reconstruction upon the principle of not legislating upon this subject, in the present state of the country, would involve Great Britain and Ireland in an angry struggle. He knew that this ground was an unpopular one, but he was convinced of its soundness and policy.

After a short conversation, in which Mr. Hume, Sir R. Inglis, Mr. B. Osborne, and other members took part, the second reading of the bill was postponed, and the House adjourned.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

CHARLES, FOURTH EARL OF HARRINGTON.

THE death of this nobleman occurred at Brighton, on the 3rd inst., after a short

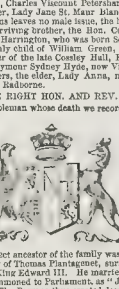


but severe illness. His Lordship was born 8th April, 1780, the eldest son of Charles, third Earl of Harrington, G.C.B., a distinguished military officer, by Jane his wife, daughter and co-heir of Sir John Fleming, Bart., of Brompton Park, Middlesex. Early in life he entered the army, and attained, eventually, the rank of Major-General. It may be remarked, that each successive Earl of Harrington rose to the highest grade in the army. The first peer, an eminent soldier and statesman, in the time of the first two Georges, became Lord-Lieutenant of Ireland; the second Earl was full General and Colonel of the 2nd troop of Horse Guards; and the third Earl, of similar military rank, commanded the 1st regiment of Life Guards, and was Constable of Windsor Castle.

The Peer just deceased was formerly well known in the world of fashion, and long enjoyed the personal regard of George IV. when Prince Regent. On his Majesty's accession to the throne, he became one of the Lords of the Bedchamber, and filled the same office under William IV. His Lordship married, April 7th, 1801, Maria, daughter of Samuel Foote, Esq., and had two sons, Charles Viscount Petersham, who died in his father's lifetime, and one daughter, Lady Jane St. Maur Blance Stanhope, born May 14, 1803. As the Earl thus leaves no male issue, the honours and entailed estates devolve on his next surviving brother, the Hon. and Rev. Leicester Stanhope, D.D., Rector of Bolton, Seymour Sydney Hyde, now Viscount Petersham, born in 1845, and two daughters, the elder, Lady Anna, married to Edward S. Chandos Pole, Esq., Radbourne.

THE RIGHT HON. AND REV. HENRY WILSON, LORD BERNERS.

The nobleman whose death we record, was second son of the late Henry William



Wilson, Esq., of Didlington and Astwell-house, Bucks, by Mary his wife, daughter of Sir John Miller, Bart., and succeeded to the estates and representation of the family at the death of his brother, Robert Lord Berners, in 1838, when the Barony became extinct by a writ of summons in favour of the late nobleman.

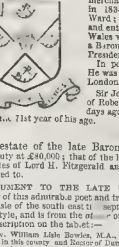
[illegible] was born [illegible] 1774, and married, [illegible] Mary Dorothea, daughter of Thomas Sumpter, Esq., of Hinton Hall, county Cambridge, by whom he leaves issue: he is succeeded by his eldest son, now Lord Berners.

The direct ancestor of the family was Sir John Bourchier, K.G., grandson internally of Thomas Plantagenet, surnamed of Woodstock, Duke of Gloucester, son of King Edward III. He married the heiress of Sir Richard Berners, and was summoned to Parliament, as "John Bourchier of Berners, Chevalier," in 1459. The Peerage thus created descended, through his descendants (the Knyvetts), to the Wilsons of Didlington, whose representative was the late Lord Berners.

LORD DE L'ISLE AND DUDLEY.

PHILIP CHARLES SIDNEY, Baron De L'Isle and Dudley, of Penshurst, in the county of Kent, and a Baronet, was born on the 13th June, 1800, he was the only son of the late Sir John Shelley Sidney, Bart., by his wife, Henrietta, daughter of the late Sir Henry Hunloke, Bart. He succeeded to his father's baronetcy at his decease in 1849; but previously to that he had been raised to the peerage by the title of Lord De L'Isle and Dudley, on the 13th January, 1835. His Lordship was Surveyor-General of the Duchy of Cornwall, a G.C.H. and D.C.L. In politics he was a staunch Conservative. He married, the 3rd August, 1835, the Lady Sophia Fitz-Clarence, sister of the late Earl of Munster, by whom he leaves three daughters and two sons, the elder of whom is now the second Lord De L'Isle and Dudley. The late Lord, to the great grief of all who knew him, and to whom he was endeared by his many public and private virtues, died on the 4th instant at the family seat, Penshurst, near Tonbridge.

SIR JOHN PIRIE, BART.



This gentleman, an Alderman of the City of London, was the son of John Pirie, Esq., of Dunse, Berwickshire. He was born on Sept. 18, 1781, at Berwick-upon-Tweed. He left his native town at an early age for London, where he rose into extensive business as a shipowner, ship-broker, and merchant. In 1831, he served the office of Sheriff; in 1834 he was elected Alderman for the ward; and in 1841 he was chosen Lord Mayor, and entered upon its duties the day the Prince of Wales was born. He was, in consequence, created a Baronet in the same year. In 1842 he was made President of St. Thomas's Hospital.

In politics Sir John Pirie was a Conservative. He was an unsuccessful candidate for the City of London in the election of 1841.

Sir John married, in April, 1807, Jean, daughter of Robert Nichol, Esq., of Kelso. He died a few days ago, at his residence, Champion Hill, Camberwell, in the 71st year of his age.

The estate of the late Baroness Rothschild has been valued for stamp duty at £80,000; that of the late Marquis of Northampton, at £12,000, and that of Lord H. Fitzgerald and Sir W. T. G. Thomas have also been admitted to.

MONUMENT TO THE LATE CANON BOWLES.—A tablet to the memory of this admirable poet and truly excellent man has recently been erected in the aisle of the south end transept of Salisbury Cathedral. It is in the florid Gothic style, and is from the design of Mr. Osmond, of this city. The following is the inscription on the tablet:—

The Rev. William Lisle Bowles, M.A., Canon of this Cathedral, many years Rector of Bremhill, in this county and Rector of Dumbleton, in the county of Gloucester a Poet, Critic, and Divine, died on the 7th of April, 1850, in the 80th year of his age. His wife, Magdalene, daughter of the Rev. Chas. Wake, D.D., Rector of Somerton Norfolk, in this county died on the 7th of May, 1844. The remains of both are interred near in a tablet erected by their kindred as a tribute of respect to departed worth, of which the writings of the first afford a more interesting and unimpeachable memorial.

CHURCH, UNIVERSITIES, &c.

We understand a vacancy is about to occur in the Wardenship of Dulwich College. By the statutes of the College, the candidates must be of the name of Alleyn or Allen, not less than twenty-one years of age, and unmarried.

CHURCH EXTENSION.—The Duke of Bedford has presented to the Church Extension Committee of St. Pancras, a site of ground for a new church, together with the sum of £500 towards the building fund. The church will be erected in the district of St. Matthew (one of those recently formed), which contains a population of 9000, the only present church accommodation in which is an unconsecrated building capable of containing 500 persons.

A subscription is being raised by the churchwardens of St. Paul's and St. Barnabas, Knightsbridge, assisted by a committee, to present a testimonial to the Rev. W. J. E. Bennett.

SALISBURY CATHEDRAL.—The old marble font in the Morning Chapel has just been replaced by a new one of free stone, the work of Mr. Osmond, sculptor, of this city. It is in the Early English style, and is composed of a circular basin, ornamented with arcades and floral devices, and supported by a cluster of eight columns. It is placed in the chapel, near the monument of Bishop Poore, and is in excellent character with the architecture of the building.

PREFERMENTS AND APPOINTMENTS.—Rev. R. M. Benson, to Cowley Perpetual Curacy, Oxfordshire; patrons, Christ Church, Oxford. Rev. F. S. Colmore, to Beckenham Rectory, Kent; value £900 with residence; patron, J. Cator, Esq.; Rev. G. R. Ferris, to Halifax Curacy, Yorkshire. Rev. W. Griffiths, to Glyn-Corwg Perpetual Curacy, with Bisen Gurach Perpetual Curacy, Glamorganshire; value, £90; patron, R. T. E. Vaughan, Esq. J. Kirkman, B.A., to Second Mastership of Bruton Grammar School, Somerset. Rev. Hugh Lyon, to Appleshaw Vicarage, Hants; value, £136; patron, R. Myall, Esq. Rev. W. L. Needham, to be Head Master of Queen Elizabeth's Grammar School, Worcester. Rev. H. Niven, to Bishampton Vicarage, Worcestershire; value £103 and residence; patron, Bishop of Worcester. Rev. O. Owen and Rev. J. Rowlatt, to be Bodleian Lecturers, Exeter, 1851-52. Rev. R. White, to Habberley Rectory, Salop; value, £168 and residence; patron, W. White, Esq. Rev. R. W. Burton, to Christ Church Perpetual Curacy, St. Pancras; value, £500; patron, Bishop of London. Rev. G. Crabbe, to Merton Rectory, Norfolk; value, £174; patron, Lord Walsingham. Rev. S. G. Wood, to Farnham, Lincolnshire; value, £200; patron, Earl of Yarborough. Rev. —— Salter, to East Teignmouth Curacy, Devon.

VACANCIES.—*Vicarages*: Duston, Northamptonshire, diocese of Peterborough; value, £140 and residence; patron, Viscount Maidstone. Rev. J. Greville, deceased. St. Minver, Cornwall, diocese of Exeter; value, £337, with residence; Rev. G. Treweeke, deceased. *Rectories*: Horndon West, with Ingrave Rectory, Essex, diocese of Rochester; value, £344, with residence; patron, the late rector, the Rev. R. A. Johnstone, deceased. Illogan, Cornwall, diocese of Exeter; value, £587, with residence; patron, Baroness Rassett; Rev. G. Treweeke, deceased. *Mastership*: Wymondham Grammar School, Leicestershire; Rev. G. A. Dimock, deceased

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection: The Rev. Edmund Coffin, late curate of East Farleigh, Kent, from the congregation; the Rev. Trevin Lloyd, of St. Peter's, Kingsland, from the parishioners; the Rev. Robert Harris, of Brierley Hill, Staffordshire, from his parishioners; the Rev Jacob Francis Matthew, of St. Paul, Bedminster, Somerset, from humble members of his congregation; the Rev. Charles Thomas Penrose, from the pupils under his care, during his Head Mastership of King's School, Sherborne, Dorset; the Rev. Braithwaite Harrison, from the inhabitants of Wolsingham, in the county of Durham; the Rev. H. Harvey, on his vacating the vicarage of Bradford, Wilts, from the congregation.

PAPAL AGGRESSION.

The ADDRESS of the IRISH PRELATES to their "beloved" flocks has been issued since our last publication, and says of the Ecclesiastical Titles Bill, that it "took away, disorganise, and cause to be doubtful the authority to annul its acts of jurisdiction; to fetter and impede, as much as possible, the exercise of that ministry by which the truths of revelation are proclaimed, and the mysteries and sacraments of religion imparted; and grievously to injure, if not to destroy, those noble charitable institutions which are the glory and the blessing of the land, and which are maintained, as they have been established, by the free offerings of the faithful. The blighting effects of this penal law, if adopted, will be felt by the orphan that is now sheltered in the bosom of Catholic benevolence, and by the destitute sufferer on the hospital bed, whom pangs are often soothed by the devoted daughter of charity, while they are consoled by the Christian ministry that has called those institutions into existence—by the power of that kindling and creative spirit which is the vivifying principle of religion." The prelates exhort their flocks to be strictly obedient to the laws, but to use all lawful and constitutional means to oppose the enactment—an injunction which the Irish, who love agitation for its own sake, are ready enough to follow. The address subsequently published the opinion of Mr Counsellor O'Hagan, who says, the bill will confiscate the bulk of the property bequeathed to the Roman Catholic Church in Ireland in the last twenty years, and the utter destruction of the Church.

Cardinal Wiseman caused a LENTEN INDULT for the archdiocese of Westminster, the dioceses of Southwark, to be read in the Catholic chapels of the two dioceses on Sunday last. It begins by the customary phrase, "Nicholas, by the Divine mercy, of the holy Roman Church by the title of St. Pudentiana cardinal priest, Archbishop of Westminster, and administrator apostolic of the diocese of Southwark," and is addressed "to our dearly beloved in Christ, the clergy secular and regular, and the faithful of the said archdiocese and diocese." After announcing his desire to make a good use of the sacred time, he says, with reference to his own mission:—"You know that popular excitement has given place to a more cunningly devised and deeply meditated measure of legislative aggression, the avowed object of which is to cramp or paralyse the spiritual ecclesiastical organization of our Church, while its secret aim is to despoil again our institutions of the poor crumbs of charity which, since their former plundering, have been slowly gathered up." Trusting only in God, he exhorts his flocks to the purification of their hearts, and the amendment of their lives, to induce God to forgive them past error and avert chastisement. After referring to what he calls "the shameful insults heaped on our religion and on its purest mysteries, blasphemous indignities having especially been uttered, and inscribed on the very walls, against the adorable pledge and sacrament of Jesus's love," he bids his flocks to go this year more frequently than ever to the place where He is especially adored; go daily, with souls full of sympathy and tender sorrow, with fresh fervour, love and strengthening from their daily meals to their lips, and entreat Him to forgive, and to ask His Father to forgive, what has been done in ignorant petulance, or blind fury, against his sacred presence; and, to encourage this beautiful penance, "making sure," he says, "of the facilities granted to us, we hereby grant a plenary indulgence to all of the faithful who shall visit the Exposition of the Blessed Sacrament in five different churches or chapels, making there an act of reparation for all sacrilegious, blasphemous, and irreverences committed against it, and praying for the intentions of his Holiness and the peace of the church, and receiving on the day of their last visit the holy Communion, after a contrite confession of their sins." Finally, he thus speaks of the Exhibition:—"This year our metropolis will become the scene of such a display of earthly magnificence, and the gathering place of such multitudes, as the world perhaps has never before witnessed. It will be, in fact, the world's jubilee: its pig arms will be the curious, the idle, the rich, and the gay, as much as the industrious and observant; the object of their interest will be the collected marvels of human productions, by wealth or skill, of their occupation, enjoyment through every sense. Whatever is fair to the eye and alluring to the appetite, will be temptingly hung on every bough of the newly-created paradise. Great as may be the display of material grandeur which will thus be presented to all nations, who does not fear the increase of sin and vice, if not of crime, which this immense concourse of people must inevitably produce? All our usual temptations to folly and to extravagance, to dissipation and worldliness, will be increased; every snare that awaits youth will be multiplied; every evil principle more widely and ingeniously fascinated: and there will be a concentration of corrupted and corrupting elements poured into the metropolis and the nation such as no other occurrence could make. And all this will endanger faith and morals, and perhaps sin, more charity."

The Cardinal adjures his flocks to be provided against this increase of wickedness, by laying before Heaven their penitence and prayers, by watching, for themselves, to avert or mitigate any evils that may result from this national display of greatness, whether directly or indirectly. "Let us bring down on it, as far as our poor efforts may avail, a sanctifying blessing, or a merciful regard; and let us arm ourselves, at least, against its distractions and allurements, by acquiring a more chastened, and well-regulated, and interior spirit."

The Cardinal concludes, by granting, in the name of religion, the following Dispensations for Lent, 1851:—

1. Flesh meat is allowed on all Sundays; and once on Tuesdays, Thursdays, and Saturdays, except Thursday and Saturday of Holy Week, and Easter Saturday.
2. Eggs are allowed at the single meal of those who are bound to fast, and at the Refection of those who are not so bound on all days except Ash-Wednesday and the four last days in Holy Week.
3. Cheese, under the same restrictions, is allowed on all days except Ash-Wednesday and Good Friday.
4. The use of dripping or lard is permitted at dinner and collation on all days except Ash-Wednesday, Good-Friday, and the three Ember-days.
5. On those days whereon flesh meat is allowed, fat is not permitted at the same meal.

A letter from Rome, in the *Times* of Wednesday, says, that our Government recommended the Pope indirectly to withdraw the offensive parts of the Bull constituting the Roman Catholic Hierarchy in England, particularly the titles of the bishops' sees; but the Pope turned a deaf ear to the recommendation.

CHARITABLE BEQUESTS.—The Hon. Duncombe Pleydell Bouverie, late M.P. for Hull, Wilts, Peel, Captain R. N., has bequeathed to the Salisbury Infirmary £100, and £100 to the Seaman's Hospital the *Dreadnought*, in the Thames, clear of duty.—The late Miss E. M. Beaumont, Holland-street, Kensington, has left to the London Charity for the Relief of Widows and Orphans of Clergymen, a legacy of £180.—To the Church Missionary Society, £5000; British and Foreign Bible Society, £5000; Trinitarian Bible Society, £2000; Episcopal Jews' Chapel Abrahamic Society, £2000; Operative Jewish Converts' Institution, £1000; Edinburgh Bible Society, £1000; Irish Society of London, £1000; Malta Protestant College, £10000; and the residue of her personal property not disposed of by will to be applied to the endowment of district churches or chapels in populous parishes—by the late Miss Jane Cook, of Cheltenham.

INTERIOR OF THE ARMY AND NAVY CLUB-HOUSE, PALL-MALL.

We this week, as promise to present to our readers views of the Interior of the Army and Navy Club-house, and, at the same time, take the opportunity of detailing the formation of the Club, and its progress up to the present date.

In the year 1837, Sir Edward Barnes and a few officers just returned from service in India, finding, from the number of candidates on the list of the Junior United Service Club, how little chance there was of a young officer being enabled to belong for some years to any military club, proposed to establish an "Army Club," eligible only to officers on full or half-pay of her Majesty's service. His Grace the Duke of Wellington, on being applied to, declined to become either patron or member, unless it was opened in a similar manner to the "Navy;" which suggestion being acted on, his Grace became a member and patron of the same, up to the present period. On the death of Sir Edward Barnes, the office of President, held by him, was offered to, and accepted by, Admiral Sir Philip Durham, who died in 1843.

The Club, at this period, had just completed the purchase of its present premises, with a frontage in Pall-Mall of 80 feet, 100 feet in St. James's-street, and 200 feet back with entrance from Regent-street by Cleveland Mews; at an expense which, together with excavations, concrete, &c., amounted in round numbers to £34,000.

On the committee's application, his Royal Highness the late Duke of Cambridge in the kindest manner enrolled himself as a member, and accepted the Presidency of the Club—an event of great importance at the time, giving great stability to the Club, then entering on expensive negotiations connected with the new building. Amongst the houses pulled down to clear the new site was that of Lord de Manley; and, with other objects of art and interest bought with the house, may be mentioned the looking-glass of Nell Gwynne, which now, in the new Club-House, occupies a conspicuous position in the visitors' dining-room. *En passant*, we may remark, that the admission of friends constitutes a leading feature in this Club, and to which it owes much of its rise and popularity, having been the first military club wherein such an indulgence was permitted.

THE ARMY AND NAVY CLUB-HOUSE.—THE STAIRCASE.

The first stone of the building was laid on the 13th of May, 1848, by Lieutenant-Colonel Daniell, Coldstream Guards (owing to the unavoidable absence of his Royal Highness the late Duke of Cambridge, from indisposition); and the first day of the Club being thrown open for the use of its members was the 26th of February, 1851.

During the week antecedent to this date it was thronged by upwards of seven thousand visitors. It was also, on the first two days of the week (set apart for the purpose), visited by his Royal Highness the Duke of Cambridge (who, on the death of the late Duke, graciously accepted the office of President), and also by his Grace the Duke of Wellington, who both expressed to Colonel Daniell and the committee accompanying them their great satisfaction at the building, and all the arrangements connected with the furnishing, and commended the absence of gilding in the decoration.

The Hall, which is much admired, and of which we give an elaborate Engraving, contains, besides a striking bust of the present Duke of Cambridge, by Jones, two remarkable pieces of art, which the Club are most fortunate in possessing. One, a piece of Gobelin Tapestry, of the rarest workmanship, valued at £1500, presented to the Club, in remembrance of his being an honorary member of the same, by Prince Louis Napoleon Bonaparte, President of the French Republic; the other, a beautiful portrait of her Majesty on horseback, reviewing the troops at Windsor. This masterpiece of Mr. F. Grant was originally painted (without the military figures in the background) for Christ's Hospital, and for which her Majesty was pleased to give him eight sittings; but the governors of Christ's Hospital preferring a portrait of her Majesty in robes, Mr. Grant was enabled to allow a large body of the members of the Army and Navy Club to purchase the equestrian portrait for 400 guineas, and present the same to the Club: a more pleasing or faithful resemblance of her Majesty it would, we venture to assert, be almost impossible to obtain. The staircase and hall form a most effective and picturesque portion of the building, the decorations being in most artistic style, the caryatides supporting the frieze at the top of the staircase being especially so.

Our other Engraving represents the Morning Room, a most superb apartment. The windows look into Pall-Mall, and also into George-street. The enrichments to the walls and ceilings are of extremely fine and varied character, and the room in its whole appearance is truly palatial. The same remarks apply to the coffee-room, which is superb in every respect; and in all the architectural and decorative enrichments, the

THE ARMY AND NAVY CLUB-HOUSE.—MORNING ROOM.

taste and skill of Mr. Jackson are pre-eminent. There is one point worthy of remark in the embellishments, that all possible effect is attained in the simplest manner possible, absence of gilding being remarkable.

The contracts for the exterior, internal fittings, and furniture of the Club, together with the decorations, were under £54,000, which, considering the magnitude of the building, its beautiful furniture and decorations, evinces what may be done in this metropolis by prudence, attention, and ready money—the whole expenditure of the building and site having been met by a sum raised at the commencement of the building solely amongst the members of the Club, in addition to some £20,000, the savings of the Club for many years. The present effective strength of the Club is limited to sixteen hundred members, to which number although the candidate list is near 800, it is not contemplated to make any addition. We understand, Thursday is the day selected, during the week, upon which the Club will in future be opened to parties of visitor accompanied by a member. Wishing it every success, and congratulating the committee and their zealous secretary, Mr. Walcot, on the satisfactory termination of their labours, we doubt not the Club will be an object of much admiration and curiosity to the numerous foreigners who will this year visit London for the Exhibition of 1851.

In justice to the architects, builders, and all parties employed by the committee, who, in their various departments, acquitted themselves most creditably, we subjoin a list of the same, which we copied from one of the cards presented, on admission, to the visitors:—

Architects, Messrs Parnell and Smith. Builder (exterior), Mr Trego. Builders (interior), Messrs. Smith and Appleford. Clerk of the Works, Mr Coulshan. Furniture, Messrs. Gillon and Co. Carpets, Mr Lenworth. Lamps (ormolu), Messrs. Hughes and Forrest. Lamps (glass), Mr Osler. Mirrors, Thames Plate-glass Company. Mantelpieces, Mr Brown. Gas-fitter, Mr. Cowan. Painters, Mr. Sang and Signor Romoli (Smoking room). Decorator in *carton pierre*, Mr Jackson.

We have to thank Amicus (Dr. Lloyd) for his obliging letter, calling our attention to the illustration of this superb specimen of Club-house architecture and decorative taste.

NAVAL AND MILITARY INTELLIGENCE.

MILITARY SCHOOLS.—The Board of Ordnance have given orders for the construction of chapel schools at Portobello Barracks, Dublin, Mullingar, Templemore, Birr, Fermoy, Buttevant, and Jacobs.

ABOLITION OF THE CANTEEN OF THE FOOT GUARDS AT WHITEHALL.—This house, which has for many years been used by the Foot-Guards, was closed last month, and the building is, we understood, to be converted, by direction of the authorities, into an office connected with the recruiting department.

GENERAL OFFICERS.—The number of general officers employed on service at home and abroad in 1811 was 207, and the number employed at home and abroad in 1851 is 239: decrease since 1811, 168.

THE GOLD COAST CORPS.—In page 14 of the Army Estimates for this year, a vote for the first time is required for this local corps. The arrangements for its formation are not yet completed, but it is to consist of 11 officers, 16 non-commissioned officers, and 312 rank and file, at an estimated cost of £6154 per annum.

CEYLON STAFF.—The appointments of staff officers at Galle and Trincomalee to be abolished. Captain M'Lean will return to his duties in the Royal Artillery. Lieutenant-Colonel Simmonds, Ceylon Rifles, is to be removed from Trincomalee to Kandy, and Captain Cole, from the roads department, is to rejoin the 15th Regiment.

COLONIAL WOOD FOR SHIP-BUILDING PURPOSES.—The Lords Commissioners of the Treasury have conveyed to the Commissioners of Customs their Lordships' authority for the admission, duty free, of all treenails from the British possessions, and expressed their desire that they will cause a clause to be inserted to that effect in the Great Customs Amendment Bill.

LADY FRANKLIN'S ARCTIC EXPEDITION.—The intense interest and anxiety still felt in the safety of Sir John Franklin, and the heroic crews of the *Erebus* and *Terror*—in particular the anxious solicitude of Lady Franklin—justifies the fact of the Government reward of £20,000 for the discovery of the missing voyagers being still obtainable, have led to the undertaking of another expedition to sail from Aberdeen. It will be recollected that the *Prince Albert* was purchased by grafs—arrived there in October last, after about three months' absence in the Polar Seas. During the period she was in these northern regions, much, in the circumstances, was accomplished, traces of the missing expedition (the only distinct and unmistakable ones that have as yet been found) having been discovered. Circumstances, however—and chiefly, perhaps, the state of the ice—prevented Commander Forsyth and his crew from fully accomplishing what had been intended in the way of a search for Sir John and his associates. An attempt under hopeful auspices is, however, to be made this season in effect, if possible, a search in the same quarter, and to the full extent as proposed last year. The *Prince Albert* will again be fitted out and manned, and will proceed to Prince Regent's Inlet, where the ship will be laid up in such safe and convenient a position as may be found. The party will then proceed in boats so far as can be reached by open water; they will cross the Isthmus of Boothia, and follow out their search so far to the westward as possible. Where boats cannot be used, "kyaks" will be used, which, with the assistance of the Esquimaux, will enable the party to proceed 100 or 200 miles farther than boats could carry them, as the "kyaks" can be rolled up and dragged over the ice. It is supposed that the expedition shall remain out one season, and, if the state of the weather and the ice be favourable, it is expected that a very extensive search will be effected. The *Prince Albert*, which has lain at Aberdeen all winter, will be got ready as soon as possible, and it is hoped she will be able to reach Lancaster Sound in the middle of June. The expedition will be under the command of Captain W. Kennedy, who has come here from America for that purpose. Mr. Kennedy has a most intimate acquaintance with the Arctic regions, having served for a considerable period in the employ of the Hudson's Bay Company. He wintered eight years in Labrador, and was the first European who explored the northernmost point of that ley coast. Captain Kennedy, who possesses inflexible determination, courage, and enthusiasm, is very hopeful of success. He speaks highly of the courtesy, and even affection everywhere shown him, and which has sympathy felt, both in America and this country, for the success of his noble undertaking. He proceeds to Orkney to engage lacksmen for the expedition, who have been in the service of the Hudson's Bay Company will accompany the expedition. A well ascended-seamen have also been engaged, and will complete the expedition. We heartily pray that they may succeed in their noble enterprise

INEFFICIENCY OF THE FIRE BRIGADE OF THE METROPOLIS.—This subject was again brought before the Marylebone Vestry on Saturday, when Mr Skeet waited upon the vestry, to lay before them a statement he had to make in support of his letter, forwarded to the vestry a few weeks back, on the subject of the extension of the fire brigade. He said, he found from returns that the Sun Fire-office, in 1839, paid to Government in assurance duty £140,000, and in 1849 it exceeded that amount by £175,000. It was quite evident that the increased property of the insurance offices resulted from the great and successful increase in building speculations The increase of buildings in St. John's Wood, Paddington, Belgrave-square, and on towards Kensington, had been immense within the last ten years; but, although the assurance offices had received a vast deal more for duty, showing how their profits had increased, they had taken no steps whatever to increase their own and as well as the public, to give greater protection. He had been told that the insurance offices held a fire now and then; and he believed it, because it alarmed people, and made them insure. But he thought the fire-offices must have felt that they had rather not many fires lately to be received. The insurances had paid last year £1,160,000 to the Government for duty, and he wanted to know if they did not do their duty they would have the sweets they so frequently enjoyed taken from them by the Government, as it was well known to be a most profitable affair. He could only say, that if they did not he would himself stand a memorial to Parliament. It was far better under the old system, because each fire-office had its engine, and it was said that the keeping up of such establishments brought them custom. Now, however, whilst there were twenty-six insurance offices there were but sixteen fire brigade stations, and St. John's-wood and the whole of the western districts of the metropolis were unprotected. Whilst he had expressed the vestry for was to induce them to use their influence by calling the attention of the directors of the assurance offices to the subject.—Mr. Skeet, in answer to questions, said he had received a great many applications from householders in the vicinity of Maida-hill, as it would then be in a central position for St John's wood and Paddington. He believed that the Paddington vestry, as well as that of St. George, Hanover-square, were going to take the matter up. Mr. Sodo moved the appointment of a committee to investigate the matter, and to communicate with the insurance offices on the subject Mr D'Eyncourt, jun., seconded the motion. His thought a great pity the fire brigade of Commons in the session of 1841, with the names and address of the agents respectively who have deposited the same." The list includes various improvement and health bills, and some, though fewer than might have been anticipated, having reference to railways.

While several labourers were engaged on Friday morning week in pulling down some houses, in order to clear the ground for making the approaches for the new bridge in course of construction in Rochester, one of the walls suddenly gave way, burying two of the men in the ruins No time was lost in extracting them, but when found one was dead, and the other so severely injured that his life was despaired of.

At the weekly meeting of the directors and guardians of the poor of St. Magdalen, on Friday week, one of the medical officers was dismissed from his office for neglect of a female patient under his care.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A great meeting of delegates of the Protection societies, from all parts of the country, assembled at the South Sea House on Monday, when a resolution expressing a determination to reverse the free-trade policy of the late Sir R. Peel was unanimously agreed to. Another resolution, expressing the confidence of the association in the policy of Lord George Bentinck, and a deputation was nominated to wait on the noble Lord to communicate the terms of the resolution

The Paris *Moniteur* publishes a decree from the President of the Republic, declaring that pig-lead and block tin, destined to be broken up into small pieces of one and two kilogrammes, for the purpose of being employed in manufactured goods, may be imported into France free of duty, on condition of being afterwards re-exported when made up into whatever articles

It has been calculated that there are at present 40,000 persons confined in their apartments, at Paris, by the prevailing influenza, exclusive of those in the hospitals.

Marshal Dode de la Brunerie, the contractor of the fortifications of Paris, died lately at Bagneux, aged 77 years. He was created by the late the number of surviving Marshals, viz Soult, Gerard, Sebastian, Reille, and Jerome Buonaparte. The late Marshal was made lieutenant of artillery in the Egyptian campaign, and was colonel after the siege of Saragossa, and attained the rank of Marshal after having directed the gigantic fortifications of Paris

The Bombay Government have engaged the services of Mr. Fallon for a twelvemonth, at £40 a month, for the purpose of obtaining drawings of the Cave Temples of Western India, in compliance with the wishes of the Court of Directors. They have allowed £540 for the drawings of the ruined city of Beejapore, but have not, so far as we know, as yet found an artist.

A magnificent set of drawings of the Caves of Ajunta, by Captain Gill, of the Madras army, got up under the Madras Government, has been recently exhibited in India

Diplomatic negotiations have just been concluded with the Court of Vienna, by which great privileges will be extended to Austrian merchantmen in the ports of Holland and the Dutch colonies, with the exception of the Netherlands possessions in the East Indies.

By a return to an order of the House of Commons, it appears that the number of vagrants taken into custody by the metropolitan police in the year 1850 was 3810; that of these 2400 were convicted, and 1404 discharged. In 1849, 5515 were taken into custody, 4097 convicted, and 2468 discharged. In no other of the last ten years was the number taken into custody or convicted so great as in 1849. During the three winter months, November, December, and January, 1848-49, there were 2372 taken into custody; in the same months of 1849-50, a less number, 1309; and 1850-51, a further decrease, 1016.

The *Gateshead Observer* says—"We are happy to announce, on the authority of a letter from a most respectable Dutch house, received yesterday, that the Government of the Hague is disposed to bring forward a proposition for altering, or even totally abolishing, the import duty on coal."

The first arrival of foreign ice this year in this country has just taken place by a vessel arrived in the river from one of the Norwegian ports, with an entire cargo, comprising several hundred tons weight of the article.

A committee of English gentlemen has just been formed at Calcutta under the title of the "Vernacular Translation Committee," whose object will be to promote the translation of standard works in general literature by English writers into the vernacular languages of India.

A clerk, in the service of the East Lancashire Railway Company, is in custody at Bury, on a charge of embezzlement

The Wotton estate, of about 7000 acres, in Bucks, till recently the property of the Duke of Buckingham, is forthwith to be drained and improved. The like for the draining are to be manufactured on the estate, and a number of workmen are engaged in furtherance of the object

During the past week several meetings have been held in the west of England in furtherance of the abolition of punishment by death. On each occasion resolutions, and a petition in favour of the abolition of death punishments, were passed unanimously. This is the commencement of a series of meetings from which the society are proposing to carry out during the present session.

The published accounts of the receipts and expenditure of the Great Northern Railway Company for the half-year ending the 31st of December last, show that the total revenue receipts for the six months have been £196,822 9s. 11d., and the working expenses (exclusive of rates, taxes, and duty, viz. £4384 9s. 10d.) £59,693 0s. 11d., or £63 less than 30 per cent of the receipts. The gross working expenses are, therefore, £66,077 4s. 9d., and the net balance £59,845 5s. 2d

A joint-stock association is now in course of formation in Belgium, to meet the expected demand for increased steam-boat accommodation between England and that country on the occasion of the approaching Exhibition. It is intended to purchase a line of steamers capable of carrying 250 passengers each, and run them so as to make three trips a week. The capital will be formed of 50-franc shares, each share-holder being entitled to make one double journey.

M. Jules Coutin has just left Paris for New York, charged by the Minister of Public Works with the mission of studying the system of working the railways in the United States.

At the Bristol police-court, on Monday, a man named M'Allister was charged with having stabbed a man named Christopher Connor. The prisoner and another man were quarrelling at a beer-house in Graville-street, when Connor endeavoured to separate them, upon which M'Allister struck him in the left side with a chisel. The wounded man was immediately conveyed to the Bristol Infirmary, where he now lies, and the prisoner has been remanded to await his fate

The Aldermanic gown of Cornhill Ward, vacant by the decease of Sir John Pirie, Bart., bids fair to be the subject of a very sharp contest, although the greater part of the gentlemen canvassed for the purpose declined to stand entirely between Mr. D. Nicoll, the late sheriff; Mr. John Carter; and Mr. Jacob Emmanuel Goodhart, who was sheriff two or three years since.

The Liverpool Chamber of Commerce, which meets at their usual monthly meeting, agreed to memorialise the Government, in order to procure a reduction of the Sound dues to a rate commensurate with the benefits received by the shipping of Liverpool; and to the Belgian, Bavarian, &c. off the coasts of Denmark, and to co-operate with other Chambers of Commerce for this end

The Liverpool Strangers' Friend Society on Monday held a meeting, at which some of the leading gentlemen of Liverpool were present, for the purpose of reconstituting the active operations of the society. Thomas Kaye, Esq., occupied the chair, and alluded to the benefits which, in former years, the society had been the means of conferring upon distressed strangers and others. After addresses in favour of the object of the meeting, a new working committee and officers were appointed.

In the monthly return of the London Hospital, of admissions of accidents, and other cases, from 1st to 28th February, 1851, the total number given is 1617.

A few minutes after three on Monday morning, a fire broke out in the private residence of Mr. R. Mallett, 7, Belvidere-crescent, Lambeth, which unfortunately resulted in the death of a fine young woman, named Sarah Clarke, who acted as housekeeper to the owner of the premises

It is said, that, in the event of a dissolution of Parliament, Mr. Simon Watson Taylor intends to offer himself as a candidate for the representation of Barnes, upon Protectionist principles.

At the Bristol police-court, this week, Thomas Huckman, one of the district messengers, was fully committed to take his trial for stealing from the letter-bag a letter containing a number of post-paid postage-stamps.

Early on Monday morning a fire happened at No. 3, Crown-street, Soho, belonging to Mr. T. Hayne, a pork-butcher. It commenced on the first floor, and, in spite of the exertions of the firemen, a great deal of mischief was done before the flames could be extinguished. A female, who lived in an adjoining house, and who had been confined only a few weeks previous, was so dreadfully excited when she saw the fire break out, that when a person went to assist her, she fell forward in his arms, and expired.

The Grand Jury, during the Assizes at Carlisle, just ended, agreed to a strong memorial to the Secretary of State against the county being compelled to build any asylum.

The Liverpool Dock Committee, with the view of increasing the shipping accommodation of the port, have given notice to take, under an act, property upon the shores of the Mersey to the extent of nearly £10,000.

At Holyhead (says the *Liverpool Albion*), the New York packet-ship *Yorkshire* has been placed under arrest by authority of a warrant issued by the High Court of Admiralty, at the instance of the City of Dublin Packet and the Chester and Holyhead Railway Companies, the former claiming £10,000 for services rendered by the *Prince of Wales* in towing the said vessel into the harbour, and the latter claiming £3000 for similar services rendered by the *Victoria*.

The deaths in Manchester, in the week ending 25th ult., were 221—exceeding those of the preceding week by 14; and the births were 383.

Tynemouth is one of the dryest parts of the country, the average annual fall of rain for seven years being only 21¼ inches, or about a third less than the average annual fall of the whole island, viz. 32 inches.

During the past year, 163 gold, 1295 silver, and 2057 copper coins, making a total of 3525, were added to the collection in the British Museum, partly by gift and partly by purchase.

In return to an order of the House of Commons, there has been printed an alphabetical list "of all the petitions for private bills deposited in the Private Bill-office of the House of Commons in the session of 1851, with the names and address of the agents respectively who have deposited the same." The list includes various improvement and health bills, and some, though fewer than might have been anticipated, having reference to railways.

MEETING OF LORD JOHN RUSSELL'S SUPPORTERS.

A meeting of members of the House of Commons took place at one o'clock on Tuesday, at the official residence of the First Lord of the Treasury, in Downing-street. The meeting having been summoned by Lord John Russell by circular, 170 members were present. Among the number were, the Right Hon. Edward Ellice, the Right Hon. R. Vernon Smith, the Marquis of Kildare, the Right Hon. Thomas D'Eyncourt, Mr. Brockman, Mr. Duff, Sir De Lacy Evans, Mr R. Fox, Mr. G. C. Glyn, Mr B. Hawes, Mr. L. Heyworth, Mr. J. Locke, Mr. W. Marshall, Viscount Malgrave, Lord A. Fred Paget, Mr. Somers, Sir Harry Verney, Hon. C. P. Villiers, Mr. Wakley, Hon. C. Howard, Mr. Tufnell, Sir R. Ferguson, Lord M. Hill, Mr. R. W. Grey, Sir Wm. Clay, Col. the Hon. R. Boyle, Mr. J. Abel Smith, Lord F. Cavendish, Hallyburton, Capt. Townshend, the O'Gorman Mahon, Mr. Sharman Crawford, Col. Watkins, Mr. Bernal Osborne, Sir William Molesworth, Mr. Pendarves, Sir James Duke, Mr. W. Williams, Mr. Ricardo, Col. Romilly, Mr. Hodges, Lord Seymour, Mr. Holland, Hon. W. Cowper, Lord G. Paget, Mr. Brotherton, Lord James Stuart, Hon. Mr. Fortescue, Mr. Hastings Russell, Right Hon. W. S. Lascelles, Mr. Grantley Berkeley, Mr. Mark Phillips, the Solicitor-General, Sir W. Craig, the Earl of Sandhurst, the Right Hon. Sir Wm. Somerville, Mr. James Wilson, Mr. Bellew, Hon. J. Elliot, Viscount Ebrington, Mr. Macgregor, Lord Robert Grosvenor, Mr. Fitzstephen French, Admiral Dunlop, Sir Charles Lemon, Mr. Parker, Lord Enfield, Mr. Rich, Mr. Cornewall Lewis, and the Right Hon. W. G. Hayter.

Lord John Russell was accompanied by Sir George Grey, Viscount Palmerston, Sir Charles Wood, Sir Francis Baring, the Right Honourable Henry Labouchere, and the Right Honourable Fox Maule. The Conference lasted about an hour

Lord John Russell opened the proceedings by adverting to the position in which the Government at present stood directing the attention of the meeting to the fact, that there existed a powerful and compact body, at whose head was a distinguished statesman, whose bond of political union was the reversal, in a great measure, of that commercial policy, the beneficial effects of which the country had so assuredly felt during the last few years. From the exertions of that body (if successful) either of two evils must result—either Protection would be restored, or the country would be thrown into a disastrous state of agitation to repel the efforts of the opponents of Free-Trade. Under these circumstances he had called them together, for the purpose of seeking a continuance of their support, and of asking them to forego all differences on other questions, in order to seal the success of the commercial policy which they advocated in common. The noble Lord then adverted to the Papal question, and said, that, while advocating any unnecessary legislation, he felt bound to go with the Ecclesiastical Titles Bill in a modified form. The plan proposed by Lord Stanley did not meet his assent, as, by referring the subject to a committee, much might last possibly for two years, the feelings of acrimony which prevailed would be prolonged. This he thought most undesirable, and, therefore, was induced to dispose of the question at once. With regard to financial arrangements, he said that the Cabinet had not met since their return to office; but he hoped, when he met the House on Friday, to be able to make a statement on that subject which would be satisfactory. His Lordship concluded by asking for a continuance of that generous support which had been given him for the last two years—not for the personal object of keeping himself and his colleagues in office, but for the sake of securing that which they all had at heart—the welfare and prosperity of the country. (The foregoing is necessary but as an imperfect sketch of the noble Lord's observations.)

Messrs. Labouchere and Ousely Higgins severally remonstrated strongly with the noble Lord on his determination to persevere with the Ecclesiastical Titles Bill, which they pledged themselves to oppose, even at the risk of the noble Lord's Government. Mr. Sharman Crawford, the O'Gorman Mahon, and Dr. Power (Cork) followed in a similar strain.

Mr. Bernal Osborne next addressed the noble Lord, and expressed his intention of supporting the Government, concurring, as he did, generally in his policy; but entreated him to except Ireland from the operation of the Ecclesiastical Titles Bill. Sir De Lacy Evans spoke in a similar spirit. Lord Ebrington, Colonel Rawdon, and several other hon. members spoke, and the spirit which pervaded the meeting (with the exception of the dissent of the Irish members present) was one of strong confidence in and attachment to the policy and principles of the noble Lord and the Government.

PRINCE ALBERT AND THE IPSWICH MUSEUM.—Amongst the patrons of the Ipswich Museum Prince Albert has recently condescended to rank himself. The following are the circumstances under which this honour has been conferred on this institution:—A few days since the name of the Museum portraits was presented to his Royal Highness, through his secretary, the Hon. Colonel Phipps, and the opportunity was taken to solicit the patronage of the Prince, and the honour of a visit to Ipswich on the morning of the British Association for the Advancement of Science. His Royal Highness expressed himself greatly pleased with the portraits, and eventually condescended to become one of the patrons—a decision which, we believe, the Corporation principle of the Museum—the benefit of the working-classes—has mainly contributed. On the other point, though no positive intimation was given, there is reason to hope that the Prince will visit the town at the meeting of the British Association in July next.

GRAND FREEMASONS' BALL, GIVEN BY THE WORCESTER LODGE 349.

ON the night of Tuesday week, a splendid *réunion* of the Freemasons of the province of Suffolk friends, took place in the Town-hall, and when we state that at least 300 gentlemen assembled and accepted, will show that a greater number was eagerly sought for, and that the Hall was of a strictly private character, we shall, perhaps, convey some idea of the extent to which the Worcester Lodge 349 has become carried their hospitality.

The arrangements were excellent. The company continued to arrive from nine to eleven o'clock. The space between High-street and the entrance to the Town-hall was enclosed by a decorated passage. From the door of the Town Hall this enclosed passage was continued through the supper-room, and up the staircase to the ball-room. The effect on first entering this celebrated room was very striking. The room was brilliantly illuminated with wax-lights. Of the jewels worn by the ladies, as well as those of the brethren who were present in their costumes, there was a superb display. Cox's fine band, from Cheltenham, was stationed in the orchestras; and the south ante-room, in addition to the ball-room, was devoted to quadrilles, polkas, waltzes, schottisches, &c. At about half-past twelve, the company descended to the Hall, where an elegant supper was served by Mr Mountfort, of High-street

The wines, which were of the finest quality, were supplied by "Brother Read," and comprised champagne, moselle, sherry, &.

We should mention that the walls of the Hall were hung most tastefully, under the superintendence of Mr. Freame, with drapery, in broad stripes of blue, pink, and white. At the south end a brilliant gas illumination represented the letters W. L. (Worcester Lodge), 349, with a splendid star between the two letters, on either side of which were hung union jacks. At the other end of the noble old apartment, another illumination of gas displayed the letters "I. S. R.," surmounted by a crown, underneath which was another magnificent star, likewise supported on either side by similar flags. The seat of the Worshipful Master, F. T. Elgie, Esq., was placed beneath a canopy. Opposite were suspended busts of several eminent Masons of the Craft.

The Worshipful Master presided, assisted by the Warden, Past Masters, and Officers of the Lodge. At the north end, the Senior Warden's chair was filled by H. G. Goldingham, Esq.; at the south end, the Junior Warden's, by E. G. Scales, Esq.

The guests having taken their places, the "Hiram" of the Worshipful Master arrested attention, and the Chaplain solemnly pronounced the following beautiful grace:—"Most Great Architect of the Universe give us grateful hearts for the many mercies we have to be mindful of the wants of others:" to which the immediate Past-Master responded, "So mote it be"

After the supper, the Worshipful Master rose, and proposed the following toasts:—"To all poor and distressed Masons, wherever dispersed over the face of land or water, wishing them a speedy deliverance from all their troubles, and a safe return to their native land if they desire and deserve it." Then followed "Her Majesty," which was received with a salutation of "and the Craft;" the "High Sheriff of the County," Sir T. E. Winnington, Bart.

The High Sheriff, in responding to the toast, offered a few well-turned compliments to the Lodge 349, dwelling, in eulogistic terms, on the magnificence of the entertainment they had so generously provided. Sir Thomas concluded his observations by proposing the health of "The Worshipful Master and Brethren of the Worcester Lodge 349."

The Worshipful Master having acknowledged the compliment, called upon Past-Master J. B. Hyde, who, in an excellent speech, proposed "The health and happiness of the Ladies who have honoured us with their presence this evening."

The toast, as might be assumed, was received with the utmost enthusiasm

The following toasts were afterwards given and acknowledged in suitable terms—" Sir E. Blount, Bart.;" "The High Sheriff of Gloucestershire" (W. Dent, Esq., of Sudeley Castle); "the Mayor;" and "J. Best, Esq., M.P."

The company, shortly after the last toast, returned to the ball-room, and dancing was continued with renewed spirit until between four and five o'clock in the morning.

We regret that we have not space for the list of the guests who had the high gratification of being present at this brilliant entertainment

F. MASONS' BALL AND SUPPER, AT WORCESTER.—(SEE PAGE 191.)

FINE ARTS.

"HISTORY."—PAINTED BY J. SANT.

This picture is one of Mr Sant's three contributions to the present Exhibition of the British Institution. Here we have "History" personified by a studious female, whose features evince the interest of the broad page outspread before her: the expression is thoughtful; she is evidently drinking in deep draughts of philosophy, teaching by example. She is reclining upon a star-spangled robe, and the position of the right arm betokens intense study. The picture is admirably painted the flesh is life-breathing, and the colours of the accessories well chosen. It is, altogether, a brilliant work.

Mr. Saville Lumley is appointed first *attaché* to the British Mission at St. Petersburgh, vice Wombwell, resigned; Mr. Richard Ker, late *attaché* at Paris, is appointed second *attaché* at St. Petersburgh, vice Lumley. Mr. S. Creeiman is appointed financial secretary for Nova Scotia, and Mr. William Barrow is appointed chief clerk in the office of the Colonial Treasurer at the Mauritius.

A letter from Frankfort announces the death of Mr. George Brentano, banker, of that place, aged 88. He was brother of two persons well known in the world of letters, M. Clemeut Brentano and the Countess Bettina d'Arnim.

The English schooner, the *Liberty*, of Yarmouth, was driven ashore on the 29th ult., near Waldam, and soon afterwards went to pieces. It is feared that the crew perished in endeavouring to save themselves. It is not known of what the cargo was composed.

Phillip's Gardens Ragged and Industrial Schools.—The annual meeting of the supporters of these schools took place on Wednesday evening, at the Music Hall, Store-street; Lord Ashley in the chair. From the report, it appeared that the mode by which the objects of this institution were carried out were by a day-school, an evening-school, and a working class, under the superintendence of ladies. The evening class was chiefly attended by the elder boys, who were taught reading, writing, and arithmetic, and the desire for instruction generally evinced was most encouraging. Attention was also given to instructing the boys in some trade, for which purpose a tailor had been engaged—not with the view of making them all tailors, but to accustom them to habits of industry; and further operations in this direction were contemplated. For the past year the receipts have been £100 14s. 8d., and the expenses £107 16s. 10d.; leaving a small balance to be liquidated by the supporters of the school. A library had been formed; and, owing to the aid given by gentlemen interested in their support, the school-room had been enlarged without drawing on their funds. The Rev. David Laing, the Hon. Arthur Kinnaird, the Rev. Richard Burgess, the Rev. E. Auriol, and the Rev. Henry Hughes severally urged the claims of the schools to the support of those who desired the well-being of this unfortunate class of the population, and adduced a variety of facts showing the good that had already resulted from their establishment.

"HISTORY."—PAINTED BY J. SANT.—EXHIBITION OF THE BRITISH INSTITUTION.

LAMBETH RAGGED SCHOOLS.

On Wednesday, a handsome building in Lambeth Walk (close upon the South-Western Railway), which has been erected by Mr. Beaufoy, of South Lambeth, for the education of the many poor and destitute children in that neighbourhood, was inaugurated at a public meeting of the friends of Ragged Schools in Lambeth; Lord Ashley in the chair.

The origin of the school was related to the meeting by Mr. F. Doulton, the honorary secretary to the committee, who stated:—In 1845, a few of the destitute and degraded children of Lambeth were accustomed to assemble for instruction, on Sabbath evenings, in a school-room in Palace-yard, near the Palace. In the following year, a few gentlemen in the neighbourhood, at the instance of Lord Ashley, formed themselves into a committee, and afforded the poor children instruction during the week. Soon after, the school was removed to one of the arches of the South-Western Railway Company, kindly granted for that purpose. About this time, the schools excited the sympathy, and attracted the support, of the late Mrs. Beaufoy; and, on her death, her husband intimated his intention of perpetuating her memory and fulfilling her benevolent wishes, by founding the Schools, which were subsequently erected. The building has cost the sum of £4000, apart £4000 for the [illegible] The expenses of tuition will be [illegible] are to meet for instruction during five week nights, exclusive of Sunday evenings, when religious instruction will be communicated. There is also accommodation for a daily infant school. The Schools are calculated to accommodate about 800 children. There are two large class-rooms—one for boys and one for girls, there are also two reception-rooms for the training of the children on their first admission, and there are four smaller class-rooms where young persons who show more than usual diligence are taught in the higher branches of education. In the larger class-rooms the committee have erected marble tablets, each bearing the following inscription:—

This Tablet is erected by the Committee of the Lambeth Ragged Schools, as a grateful record of the munificence of Henry Benjamin Hanbury Beaufoy, Esq., of Caron-place, South Lambeth, by whom these Schools have been built and endowed; and also in grateful remembrance of Eliza his wife, whose unspeakable private worth has here a fit memorial, and whose benevolence and special kindness to poor children will live in the gratitude of generations who shall enjoy the benefit of these Schools.

"She stretcheth out her hand to the poor; yea, she reacheth forth her hand to the needy."

"Children arise up, and call her blessed."—Prov. xxxi., ver. 20 and 28.

The meeting was opened with prayer by the Rev. Mr. Wix; when Lord Ashley rose and addressed the assembly, eloquently advocating the benefits already derived from the Ragged School system, through which many hundreds had been taken from a state of filth and misery, and raised to one of honourable independence. "There was no reason whatever why Lambeth should not rescue itself from the present disgraceful opprobrium which attached to it. If they exerted themselves in the way he had mentioned, he saw no reason why this district should not vie with any other district in the metropolis, or even with the most favoured parts of the earth." His Lordship concluded by observing that he had no objection to the introduction of any amount of secular knowledge, but it must always be subordinate to moral training. "Let the great basis of all Ragged School teaching be true sound evangelical Protestantism. (Great applause.) Let them ever keep before the minds of the children the saying of the great Chillingworth, 'The Bible, and the Bible alone, is the religion of Protestants.'" (Hear, hear.)

The meeting had now so greatly increased that Mr. Williams, M.P. for Lambeth, accompanied by other gentlemen, adjourned to the girls' class room.

The Rev. Mr Christmas moved the first resolution of thanks to Mr. Beaufoy, for his munificent donation.—The Rev. [illegible] Messenger, of the City of London School, seconded the resolution, and mentioned, as another instance of Mr. Beaufoy's liberality, that he had given as much as £10,000 to the institution over which he (Dr. Mortimer) presided and to found exhibitions at Cambridge.

The Rev. J. Baldwin Browne, the Rev. Mr. Aldis, the Rev. Mr. Soul, the Rev. Mr. Hill, the Rev. Mr. Hall, Mr. W. S. Hale, and Mr. Field (of the

firm of Maudslay and Field), successively addressed the meeting. Thanks were voted to the noble chairman; after which the meeting separated. A handsome subscription list was filled up at the meeting; and the children (about 600) in connexion with the schools took tea with the teachers in the afternoon.

FATHER GAVAZZI DELIVERING HIS ITALIAN DISCOURSES AT THE PRINCESS' CONCERT ROOM.

ALESSANDRO GAVAZZI was born at Bologna, in 1809, and at the early age of sixteen entered the order called *clerici regulares* of St. Barnabas, in which he rapidly rose to a distinguished position. Professor of rhetoric at Naples, he not only taught the theory, but exemplified the practice of eloquence in the pulpits of that capital, and subsequently in most of the principal cities of Italy. His views were broad and generous; and, though little to the taste of Pope Gregory, that pontiff prudently refrained from molesting the popular missionary.

The advent of Pius IX. gave unfettered scope to the liberal and enlightened views hitherto compressed and discountenanced among the Italian clergy; and foremost among the upholders of the new Papal policy were Ugo Bassi and Gavazzi, both Bolognese.

The first appearance of Gavazzi on the political scene—whose career we are now to trace through a file of Italian newspapers in our possession—was on the news of the Milanese insurrection, and the discomfiture of the Austrians throughout Lombardy being celebrated in Rome. when the students of the University seized on the eloquent priest, carried him on their shoulders into the pulpit of the Pantheon, and called on him to pronounce the funeral oration of the patriots killed at Milan. The orator rose at once to the height of that great argument, and became at once the trumpeter of freedom throughout Italy. The tricolor cross was now displayed on his cassock, and is the same decoration which he has worn during the whole campaign, and now wears unsullied on his manly breast. In the Colosseum he harangued for weeks crowds of citizens gathered within that gigantic structure, which became an arena of patriotic manifestations. The Pope encouraged his efforts to rouse the national energies, and conferred on him the office of Chaplain-General to the Forces, then organising by the levy of volunteers and the formation of national guards. In that capacity he marched from Rome with 16,000 men, and, after a short hesitating halt on the frontiers, positive orders came from the Vatican, and private instructions to Gavazzi himself, to move forward and act against the Austrians. The onward progress of the Roman army was a succession of triumphs to the walls of Vicenza. Gavazzi's eloquence supplied ammunition, clothing, provisions, horses, and all the *matériel de guerre*, from a willing population. He was the Hermit Peter of the whole crusade, the life and soul of the insurrection. At Venice, in the great area of St. Mark, he harangued, day after day, congregated thousands, and filled the Venetian treasury by the voluntary oblations elicited by his irresistible appeals. Women tore off their earrings and bracelets, and the wives of fishermen flung their large silver hair-pins into the military chest, and several thousand pounds' worth of plate and jewellery was the result of his exertions. When the Roman division was ordered to fall back, the father made Florence ring with his exhortations to uphold the cause. The Grand Duke, who had already begun his tergiversations, gave orders for the forcible expulsion of Gavazzi from Tuscany: he took refuge in Genoa; but the Bolognese having broken into open mutiny against the Pope on the 8th of August, and formed a Provisional Government, Gavazzi was recalled, as the only means of allaying the discontent of the legations; his return was in triumph, and order was restored by his presence.

Gen. Zucchi was now sent from Rome to take the command of the troops at Bologna, when, at the instigation of the Cardinal Legate, this Lieutenant of Rossi seized on Gavazzi, and sent him off secretly, under a strong escort, to be incarcerated in Corneto, a sort of ecclesiastical prison, where clerical robbers, assassins, and adulterers have been for ages confined by Popes; but, on his passage through Viterbo, the whole city rose to rescue their patriot, and Pius IX. found it expedient to order his liberation amid the plaudits of the town. On the flight of the Pope, the formation of a Republican Government, and the convoking of the Roman Assembly, Gavazzi was confirmed in his previous functions of Chaplain-General to the Forces, and began his preparations for the approaching siege of the French, by organising the military hospitals on a scale commensurate with the coming warfare. He formed a committee of the principal Roman ladies, to provide for the wounded (Princess Belgioioso, Countess Pallavicino, and Pisacane at their head), and superintended the surgical ambulances during the whole struggle. At the lull of the fight against Oudinot, when a sortie of 14,000 Romans was made to repel the King of Naples, who, with his 20,000 men, had advanced as far as Velletri, the father went forth at the head of the troops with the gallant Garibaldi, and, after the utter rout and precipitate flight of the invading army, assisted the dying and the disabled of both sides. Returning into the besieged capital he sustained the spirit of the inhabitants throughout, and was ever at the bastions and in the front of the battle. At the fall of Rome he received an honourable testimonial and *ampl conduct* from Oudinot; and while his companion Father Ugo Bassi was shot by the Austrians without trial and against the law of nations at Bologna, he was suffered to depart by the more civilised freebooters of France. In London he has since lived in retirement, giving for his daily bread a few lessons in the language of his beloved but downtrodden land: when a few of his fellow exiles, anxious to hear in the country of their forcible adoption once more the eloquent voice which cheered them in their hour of triumph, clubbed together the pittance of poverty to hire a room for the purpose, and the result has been the potent blast of indignant oratory and the trumpet note of withering denunciation with which he now assails the treachery, fraud, and accumulated impostures of the Roman Court, and all its malevolent and Macchiavellian machinery.

We hear that he will lecture on "clerical celibacy" next Wednesday, at Willis's Rooms, at half-past two o'clock.

FATHER GAVAZZI.

LAMBETH RAGGED SCHOOLS, OPENED ON WEDNESDAY.

MUSIC.

THE MELODISTS.

One of the most attractive musical entertainments to be found in the metropolis is at the monthly meeting of the Melodists. The Club was established in 1825, for the encouragement of melody and ballad composition. The last Thursday in each month, commencing in January and ending in June, the members dine at the Freemasons' Tavern. Many eminent composers and singers are amongst the honorary members and visitors; and it is the custom of the Club to invite to every banquet distinguished professors, native and foreign, as well as men of letters, artists, &c. Lord Saltoun is the President of the Club, having been elected on the accession of the late Duke of Cambridge. The Earl of Westmorland, our Minister at Berlin, and Gen. Sir Andrew Barnard, are the Vice-presidents. B. Bond Cabbell, Esq., M.P., is the Chairman of the Committee of Management; Mr. Addison is the Treasurer; Mr. D'Almaine, Auditor; and Mr. J. King, the hon. Secretary. The Club dates its origin from the festival that was given in 1824, to erect a monument in honour of Charles Dibdin, the "Ocean Bard," which testimonial is now to be seen in the Dibdin Pavilion at Greenwich Hospital. Various prizes have been awarded by the Melodists' Club since its formation: the donors have been the late Duchess of Cambridge and Sussex, the Earl of Westmorland, Lord Saltoun, Sir C. Barnard, Messrs Cabbell, Dixon, Hoare, Andrews, Pepy, Hopkinson, W. H. Smith, Savage, Simpson, White, Addison, D'Almaine, &c. The winners have been Messrs. Parry, Blewitt, Hobbs, E. Taylor, T. Cooke, Hawes, John Parry, Jun., C. Horn, &c. Mr. Parry, the father of the facetious John, was for many years the active honorary secretary of the Club; but indisposition has compelled his retirement, much to the regret of the members. Amongst the professional foreign visitors of note, invited by the Club, have been Ole Bull, Ernst, Eliason, Molique, Jaquemin, Sivori, Vieuxtemps, Thalberg, Spohr, Vieta, Godefroid, Herz, J. and G. Hellmesberger, Heinemeyer, Joachim, Liszt, Labarre, Lapinski, Moscheles, Benedict, Pazzi, David, Ciebra, Hummel, Kellerman, Leopold de Meyer, E. Meyer, Panofka, Offenbach, Schulz, L. Schulz, Liddell, Molique, Mazoni, Negri, Cavallini, Biase, Briccialdi, &c. At the second meeting for the season, on the 27th ult., E. Goldsmid, Esq., was in the chair. Molique, the composer and violinist, and Herr Solimon, were the invited professors. Amongst the other professional visitors and members were Professor Taylor, Messrs. J. King, Turle, H. Gear, Gray, Barnby, Young, Francis, Land, Bradbury, &c. Amongst the glees sung were Webbe's "Wanton gales," Weadon's "Nightingale," and Danby's "When Sappho tuned;" the last-mentioned glee was beautifully rendered by Messrs. Francis, Land, and Bradbury; nothing could surpass the exquisite vocalisation of Mr. Francis. Herr Schunen played plaudente solos. Molique's finished violin playing of his own elegant compositions was greatly admired and applauded. Messrs. Land and Handel Gear sang airs, and Mr. Young gave with taste a new ballad, by Mr. Blewitt, "Love will bloom when summers dies." In a new comic scena, "What do the gentlemen do before marriage," Mr. Blewitt enlivened the company with one of his novel descriptive songs, in which he so happily blends the melodious with the conversational, with a clever and characteristic undercurrent of accompaniment. At these meetings oratory plays but a secondary part; but the amusing addresses of the patriarch chairman, whose wish that the guests might be as lively as himself at the age of 88, was heartily responded to, and of Baron de Paravicini and Mr. Smith, were not the least provocatives of hilarity during the evening; whilst the encomiums to uphold the Club, of Messrs. Addison and King, were also duly acknowledged.

MUSICAL EVENTS

The third concert of the Musical Amateur Society was given last Monday, at the Hanover Rooms, under the direction of Signor Negri.

Mr. Kiallmark began his series of performances of Classical and Modern Pianoforte Music last Monday, at the Queen's Ante-street Rooms, with the aid of Herr Molique, M. Rousseau, Signor Regondi, Mr. F. Chatterton, Mr. Gratian Cooke, Miss Eliza Birch, Miss Pyne, Miss A. Polzer, and Herr Kroff.

The Finsbury Philharmonic Society gave performances of Handel's "Dettingen Te Deum," with a miscellaneous selection, last Tuesday, at Crosby Hall. Mr. Summer was the conductor, and Mr. T. Perkins leader. the chief vocalists were Mrs Harper, Misses Pyne and Poole; Messrs Sharpe, Bodda, Mitchell, Crouse, Harper, and Henshaw. The society has an executive of 200 performers. The oratorio of "Jerusalem," by William Glover, of Manchester, is announced for the next meeting.

On Wednesday night, at Exeter Hall, Mr. Allcroft gave his fourteenth annual grand concert; Mr. Thurlwall was the leader of the band, and Sig. Negri the conductor. Amongst the solo instruments were Haldeman's "Recollections of my boyhood," Mr. Richardson, flute; M. Arban, cornet-à-pistons, and Mr. F. Chatterton, harp; the vocalists were Miss Birch, Miss Louisa Pyne, Miss Lowe, Madame Brandt, Mrs. R. Pitswilliam, Miss Poole; Messrs. Sharpe, Mitchell, Dolby, and Mdlle. Angri; Messrs. Harrison, Brandt, Leffler, Allcroft, Drayton, Herr Stockhausen, and Signor S. Tamburini.

The Caledian Society performed Handel's "Samson," on Thursday, at the Hanover Rooms.

Mdlle. Zinggeler, the blind vocalist, gave an evening concert on Thursday at Willis's Rooms, assisted by Madame Geffroi (piano), Herr Geffroi (violin), Mr. J. Thomas (harp), Mesdames Rummel, Magner, Lavinia, Signor Marchesi, Herr Stockhausen, Messrs. Richards and Distyne.

Mr. Lucas had his second musical evening on Thursday, at his residence, in Berners-street, assisted by Sainton, Blagrove, Hill, and Mr. Lindsay Sloper. Sibella's new trio was included in the scheme.

Mr. R. Carte began his lectures on Instrumental Music at the Whittington Club, on Thursday, assisted by Miss Kate Loder, Messrs. T. Severn, Blagrove, Dando, W. Thomas, Waddell, Nicholay, Hoel Davies, and Lazarus, Goodchild, and Chipp.

Of the 113th anniversary festival of the Royal Society of Musicians, celebrated on Friday night, in Freemasons' Hall, we must report progress in our next week's impression.

Mr. Henry Blagrove commenced on the 7th instant, at St. Martin's Hall, a series of quartett concerts, assisted by Miss Kate Loder, Miss M. Williams, Messrs Lockey, T. Williams, R. Blagrove, Banister, Cleaver, Goodchild, Hancock, Larken, Mayrock, and C. Harper.

The Philharmonic Society will commence the season next Monday, at the Hanover Rooms; Mr. Costa will be the conductor of the eight concerts. M. Bilet's third and last pianoforte *soirée* will be on Tuesday, at St. Martin's Hall. The Sacred Harmonic Society, on Tuesday night, at Exeter Hall, will revive Handel's "Samson," to be conducted by Costa for the first time. Mr. May will give a concert on Tuesday, at Kennington. M. Rousselot's second *soirée* will be on Wednesday. On Friday, Mr. W. Spencer has secured Jullien's Concert Room.

In default of a National Opera, there are two companies wandering in the provinces: namely, Miss Louisa Pyne, Signor Borrani, Mr. H. Corri, and Mr Harrison; and the second comprising Mrs. A. Newton, Mrs. Weiss, Messrs. Travers, B. Frodsham, Latter, and Weiss. Mr. and Mrs. Sirus Reeves having completed their tour in Ireland, have gone to Paris; Mr. S. Reeves is to make his *début* at the Italian Opera House in that capital in "Figaro."

Mr. John Ella, the founder of the Musical Union, has just established a private amateur union, with a band and chorus.

Sir George and Lady Clerk have resumed their amateur parties, under the direction of Mr Ella. In the second programme, all the new music of Rossini's "Moise" was included. The right hon Baronet played the contra-basso most efficiently, and eight members of his family took part in the execution.

FOREIGN MUSICAL NEWS.

L'Italia Musical and *La Fama del* 1851, record in the most eulogistic terms the triumphant reception in Rome of Miss Catherine Hayes; her last character was the *Maria di Rohan*, of Donizetti, in the opera of that name, in which she is acting in the last act excited the greatest enthusiasm. Signor Ferlotli played the jealous husband, Ronconi's famous part; and Signor Liverani was the tenor. The singer of Signor Nardin, the tenor, was Miss Catherine Hayes, who, it is said, had also pleased the Roman amateurs at the Teatro Apollo.

We learn from Paris, that the rehearsals of Gounod's opera are in such an advanced state, that "Sappho" will be ready for the first week in January. Whilst expectation is thus strong in respect to M. Gounod, there is another composer, a M. Membrée, who is indicated by some of the Parisian critics as full of promise. His opera called Opera wants a decided success to be added to the *repertoire*. Cerito and St. Leon had left for Madrid, after their benefit, at which a Viennese *pianiste*, Mdlle. Lester, made a sensation in Schulhoff's "Carnaval de Venise," and Vieuxtemps filled the house by the finale from "Concertante," "Non più mesta." Scribe and Halevy's "Tempesta" was produced on the 30th ult. Owing to an accident to Rosati—who was the *Ariel* in the opera—the ballet was thrown over for the performance, and the repetition of the work was postponed for some days. Lablache's *Calibar*, styled by a journal "admirable du physionomie, étonnant de costume, effrayant et sublime à la fois," seems to have realised the ideal of the character so thoroughly versed in Shakspeare. Cohni was *Prospero*; Gardoni, *Fernando*; and Madame Soning, *Miranda*. Mdlle. Ida Bertrand, besides singing the invisible *Spowzar*, gave the drinking song, so delightful sung at Her Majesty's Theatre by Grisi. The third act is judiciously cut out in Paris, the opera terminating after Lablache's orgie, with *Miranda's* seizure of the bouquet, the release of *Ariel* from the oak, the restoration of *Prospero*, and Mr. Mitchell's farewell.

At the fourth concert of the Philharmonic Society in Paris, Berlioz's symphony, "Romeo and Juliet," was performed; between the adagio and the magnificent scherzo descriptive of Queen Mab, two young ladies, dressed in white, took the front seats, and placed before Berlioz, on a white satin cushion, a golden laurel crown, as the homage to genius on the part of the Society.

Glück's "Armida" has been revived at Berlin with great success. Madame Koester sustaining the heroine. Adam's "Giralda" has been brought out at Berlin, with Madame Herrenburger-Tuczek.

Rastrelli, a violinist of fame in Italy, is expected to visit Paris, he is given out as a Paganini.

Alboni has been very successful in Madrid, in "La Figlia del Reggimento." She is expected to visit Barcelona.

Mr. F. Gye, the lessee and Director of the Royal Italian Opera, Covent-Garden, arrived in town on Tuesday from St. Petersburg, via Paris. The season will commence the first week in April; and the prospectus will be ready in a few days.

Auber's "Gustave" and a new ballet are in preparation for the opening of Her Majesty's Theatre in about a fortnight. The subscription this year is the largest ever known under Mr. Lumley's management.

DIORAMA OF THE HOLY LAND.

This diorama, at the gallery of the New Society of Painters in Water-Colours, 53, Pall-Mall, was opened to a private view on Saturday. It is a series of pictures calculated to excite much enthusiasm, and reflects the highest credit on Messrs. Warren, Roworal, and Fahey, who have painted them from "recently executed original sketches." The different views are for the most part highly finished, and are skilfully arranged. The spectator is thus conducted along the route of the Israelites from Ramsees to Mount Sinai; and is shown, in succession, Suez, the Red Sea, Marah, Elim, Wady Feiran, the Written Mountain, and the Convent of St Catharine. He is next led across the Desert, and makes acquaintance with the caravan on the way to Mecca; thence he passes Akabah and Mount Hor, to Petra and the Dead Sea, to Jordan and to Jericho, and, finally, to the Promised Land itself—Hebron, Bethlehem, and Jerusalem, and through the streets of the Holy City. The shrine of the Nativity, at Bethlehem, is exhibited in a style of splendour, with rich hanging lamps, gold, and silver, and on a scale of size equal to the dimensions of the real place itself But the Diorama concludes not here. We next take ship for the Mediterranean, see its prospect—Jaffa, Acre, Mount Carmel, Tyre and Sidon, and land at Beyrout. Thence we proceed to Mount Lebanon, and visit Galilee, the Lake of Tiberias, the plain of Esdrelon, Mount Tabor, Cana of Galilee, Nazareth, and Samaria, and, ultimately, we find ourselves at the Mount of Olives, which occupies the site of Solomon's Temple. Objects like these, consecrated by the holiest associations, are of equal historical and religious interest. The accuracy with which they are portrayed cannot fail to be as interesting as it is attractive.

NEW COLONIAL PANORAMA.

Mr. Wilson has presented the public with a new Colonial Panorama, consisting of scenery at the Cape of Good Hope and Port Natal. The pictures have been painted from sketches by George French Angas, Esq., the Rev. Thornley Smith, T. W. Bowles, Esq., and Edwin Griffiths, Esq. (Government surveyor at Natal). These are sufficient pledges for the accuracy of the views, which include Table Bay, the Cape, with Cape Town from the beach, and the villages of Wynberg and Somerset West, the inlet of Santa Cruz, and Algoa Bay by moonlight. We were next conducted to Fort Elizabeth and Graham's Town, and then were treated to a sunset view of the mouth of the Umvoti, Natal, followed by an evening scene on the Umsmooi river. After passing the haunts of the hippopotamus, another moonlight scene was exhibited, illustrating the Inanda Kraal, Natal. The Falls of the Tsitzo, with a farm in New Germany, the cultivation of the cotton plant, D'Urban, Port Natal, &c., conclude the series, which are accompanied by illustrative music, under the direction of Miss Kirkham, and a descriptive lecture by Mr. J. D. Malcolm. The exhibition is exceedingly satisfactory.

HOGARTH'S TOMB AT CHISWICK.

(To the Editor.)

Torrington-place, London, March 3, 1851.

On seeing the notice of Hogarth's tomb at Chiswick, I immediately wrote to my friend Adamson, builder, of Turnham-green, and requested him to make a survey; his report entirely corroborates your correspondent's statement, and goes on to describe the present state of the tomb, which is extremely unsightly and able outlay. He says that "nothing short of taking it down and entirely recreating it, will save it from ruin."

The spot is the general resort of a grave on one side of it giving way, and other sinkings of the earth incidental to churchyards

In the year 1832, I paid Mr. Adamson £11 14s. for extensive repairs done to the tomb; but circumstances (keeping a shop) not acted as his confidential shopwoman, and whose portrait is in my possession, painted by Mr. Hogarth, and inscribed by him in the back ground and dimensions of the canvas), told me, speaking of the history of our family, that Mr. Hogarth's parents were in poor circumstances: his father, I think, was a printer, or in some way connected with the press; and himself was apprenticed to a herald and general engraver, in Cranbourn-alley.

Lady Thornhill was my grandmother's sister (she is buried in the Chiswick vault), and Mr. Jones married her daughter, Jane Thornhill, the only issue of their marriage (John Thornhill being a natural son), who survived Mr. Hogarth twenty-five years.

Mrs. Lewis died in January, 1808, and is buried in the vault; she was the daughter of the celebrated David Lewis, harper to George II. She had a brother, John Lewis, who married into the Childeroe family, of Brentford. His portrait (and an excellent likeness) is in my possession, very well executed by Mr. Hogarth into one of the paintings "Marriage à la Mode," in the National Gallery, playing on the flute, on which instrument he was an excellent performer.

Mary Lewis died a spinster; and I believe my sister (who is my housekeeper) and myself are the only living remains of anything connected with Hogarth. Mrs. Ann Thornhill, sister to William Hogarth, died a spinster, and is buried in the Chiswick vault

The remnant and relics of Mr. Hogarth's property came into the possession of Mr. Hart, my uncle by marriage (who had the honour of serving George IV. for forty-five years). When he died (in 1823), he was Chief Clerk in the Office of the Bushy of Cornwall, Clerk of His Majesty's Kitchen; and through him many family portraits and other matters came into my possession.

In the "Beauties of England and Wales," I find a connexion mentioned between Mr. Hogarth and Mr. Piggott, who was Clerk of Nigh Abbey, in Westmoreland, at the time of the Dissolution; but I never heard it alluded to in our family. I am, &c.,

JOHN PHILLIPS.

THE HUNTERIAN MUSEUM.—A copy of a resolution passed by the trustees of the Hunterian Museum, in February, 1845, relative to the means of enlarging the space for receiving and exhibiting the collections, has been laid before the House. The resolution moves that the Marquis of Northampton and the Bishop of London be requested to submit to the First Lord of the Treasury the claims of the Hunterian Museum to some provision whereby it might obtain an enlarged area for its contents, and be enabled to maintain itself worthily as the great national depository of the branches of knowledge which it has been instituted to promote.'

SUNDAY TRADING PREVENTION BILL.—A public meeting of shopkeepers and traders was held on Monday evening at the British Institution, Cowper-street, City, for considering the propriety of petitioning Parliament against the [illegible] bill. Mr. Williams, to "prevent unnecessary trading on Sunday within the metropolitan police districts, and to facilitate the liberties thereof." Mr. Williams, M.P. for Lambeth, and Mr. Wakley, M.P. attended and addressed the meeting. Most of the speakers and the meeting, in its resolutions, deprecated the bill as an interference by which only the privileged of the poor. Mr. Williams said the vote of the meeting would have great influence with him

STEAM COMMUNICATION WITH THE NORTH OF EUROPE.—A company has just been formed at Gothenberg, in Sweden, under the direction of M. Fahlmann, merchant and vice-consul of Denmark in that town, for the purpose of getting up steamers to ply between Gothenberg and the First Lord of the Treasury the claims of the Hunterian Museum to some provision whereby it might obtain an enlarged area for its contents, and be enabled to maintain itself worthily"

of spirit and body, it can be no matter of surprise that a horse falls, and, further, that, if he does, he falls like a lifeless mass.

Why, when Steeple-chasing was first in vogue in Ireland, the distance was usually so much shorter than we made it, and now make it, probably arose from the Irish horse not usually being in those days so highly bred as ours; and it was not the custom there, as it has now become with us, to run racehorses in steeple-chases; consequently, horses that were only half-bred ones (or nearly so) could not have gone four miles at Steeple-chase pace, however they might shine in the field as hunters: and highly to the credit of our Irish neighbours be it said, that though no

man will have his horse better trained, no man can ride or will have him ridden better, and no man is more likely to avail himself of his judgment to get the best of a race of any sort than an Irishman, still, sport is often carried on in his country for a love of sport, and it does not always follow there, that, on the coming off of every sporting event, a crowd of miscreants and harpies flock thither to perpetrate any piece of rascality to serve their own purpose. Thus, Steeple-chases were there run in such way as they considered showed most sport, and this they held short distances and heats to do.

We are not quite aware when it may be said the ball was opened, as regards Steeple-racing in England; for matches of this sort, and a private stake among friends, often occurred long before the public had ever witnessed an exhibition of the sort. Perhaps the memorable Steeple-chase in Leicestershire, when the "Squire" (Mr. Osbaldeston) hunted that country, first brought this sport under general notice with the public. In matches long before the race alluded to, the distance was often six, seven—even twelve miles from start to finish have been done; but then

each chose his own line of country as he conceived it best suited his horse—each made the best of his way at his own pace, which frequently was not even a hunting one. The chief qualification in the horse required then, was very perfect fencing at the natural fences of the country, and the endurance of the hunter in a long run: racing speed was not thought of.

When Steeple-racing became an organised sport, distances became fixed and known, and about four miles was the distance in nearly all the principal Steeple-chases in England. Hunters (that is, mere hunters) no longer contended in such contests; racehorses were purchased to make Steeple-chase horses of. These, when practised at jumping, from their spring, elasticity, and courage, became the finest leapers in the world for fencing, where great exertion and bound was called for, more than safety at intricate places.

This being found out (for before this it was most erroneously set down that thorough-bred horses would not leap), men are so fond of the marvellous, that they were not content with seeing these horses fly fences as no ordinary hunter could do, but not to make security more secure, but danger more dangerous—artificial obstructions, in addition to natural ones, were put up; as if we had suddenly become endued with Spanish taste, where, in a public exhibition, nothing exhilarates short of man or beast, or both, being so placed as to afford a fair chance of seeing them immolated before our eyes. At some places we could name in England, this practice was carried to a most reprehensible pitch.

No sooner were there a given number of regular Steeple-chase horses in constant training, their respective powers known, and entries made long before the time of running, but down came a certain class of harpies on this sport to do a little business while racing was out of season, and, of course, to *do* any and everybody they could get hold of. Something bordering on a book could now be made; and the entries being heavy, the take up was heavy also: so, as in racing, it became worth while to give a pretty good sum to make a horse safe; and if that could not be done, if a rider happened to be a rogue, he would not object to be made safe instead, for, in a Steeple-race, many ways may be resorted to to lose it, and yet nothing to be detected in the jock's riding or manner of riding the race that could be censured. If the provokingly obstinate horse will go, in spite of his jock's laudable endeavours to "pull" him, why falling off at a fence is not badly paid for by a hundred or so, independent of, perhaps, some little business the jock may have been doing in the odds on [illegible] own account: he has been heard to take them to a small amount, thus backing his horse; his friends who have the secret have not been heard laying them thick and strong the other way.

Our Illustration shows the jock falling from his horse, (?) slipping himself off. He has, unfortunately another (?) voluntarily—lost his stirrup. Just as his horse was preparing to take off, his horse swerved (?) was pulled aside—so did swerve at his leap. Could the poor fellow be blamed for losing his seat under such circumstances? From good luck (?) the fence where he fell was a wide soft bank, with some yielding brushwood on its crown, so, fortunately, he could not be much hurt. He contrives, like a good one, to keep hold of his rein, so his nag does not get away from him, he gets on his legs as soon as possible (?), mounts, and sets off after the leading horses—nothing daunted, brave fellow—spins his horse along, spares neither whip nor spur. Signs of this application look well for his strenuous wish to win and not to throw a chance away (mem.) that was thrown out when he was thrown off. But for this he must have won; no horse could have run honester, no man could have ridden him better. We allow all that, and, in sooth, a man has a good many things to allow if he keeps race or Steeple-chase horses.

We mean no slur by what we have said on professional riders; we know many of them to be as honest and honourable in their intentions and acts as any other class of men, but we have known such little occurrences as the one described to have happened, and may happen again.

Some one may say, "Well, I always thought both racing and Steeple chasing a precarious game, and certainly nothing can be a greater robbery than such a transaction as has been described." Here comes in again our (?). Why this is only a little dodge, that deprives an owner of a stake he thought he had a chance of winning; or, possibly, he had not much on the event; let him wait till there is a decided plant made on him, and he gets regularly cleaned out—that there are things worse than the little go we mentioned, he will be perfectly satisfied (?).

We do not take upon ourselves either to praise or condemn Steeple racing as a sport; let the nation and the sporting world decide this for themselves. There are, however, two or three points for and against it, and as many in the mode in which it is carried on, on which we, like others, feel we have a right to form an opinion. We cannot join in its eulogium on the mistaken ground of its encouraging the breeding good horses; no man now breeds for Steeple-racing; he breeds for racing purposes, and then the bad ones, or those that have become slow, are turned into Steeple-racers. Nor will it encourage the breed of any fine horses, if weeds are allowed to go with boys' weight on their backs. On the other hand, we do not condemn it, as we formerly did, on the score of cruelty, for horses are now got of such a class to go in Steeple-chases, and are brought out so fit to go, that, barring accidents, it is no worse than the old four-mile flat races.

There is one thing we should like to see altered. This is the distance. Let that be shortened, and the weight increased to a fox-hunting one. This would throw out the weedy lot: the spectators would lose nothing by it; for there can be no amusement in merely knowing horses are going when out of sight, but it would be an exhilarating sight to see horses taking their leaps into the winning field with the energy left in them our Artist has shown in the subject of our third Illustration.

CONSECRATION OF THE NEW DISTRICT CHURCH, BRACKNELL.

On Wednesday week, the Church of the Holy Trinity, which has just been erected at Bracknell by public subscription, was consecrated by the Lord Bishop of Oxford. The weather was brilliant, and the ceremony

NEW CHURCH AT BRACKNELL, CONSECRATED ON WEDNESDAY WEEK.

was attended by a large proportion of the leading families of the neighbourhood, as well as of residents of Bracknell, to whom most especially the Church will be a very great accommodation, situated as it is almost in the centre of the town.

The Church is an elegant structure, in the Early English pointed style of architecture, and consists of a nave and transept, and chancel, with a spire. Within, it is very plain: the roof is open and of carved oak beams: the sittings are also open, designed to accommodate 300 persons, most conveniently arranged; and the pulpit and lectern stand at the two angles formed by the junction of the chancel with the body of the Church.

The architects were Messrs. Coe and Godwin, of Frederick's-place, Old Jewry, London. The Church, as seen from the opposite hill on the western side of the town, is a very striking as well as pleasing object.

Amongst the clergy present were the following: Revs. A. A. Cameron, Austin Leigh, J. E. Sabin, sen., — Peel; the Hon. and Rev. C. Neville; the Revs. T. Morres, — Stewart, T. T. Carter, J. Gossett and family, V. Foebery and family, — Harman and friends, Richard Randall and family.

Amongst the congregation were the Lady Mary Berkeley, Lady Emily Seymour, the Ladies Murray, the Misses Codrington, the Misses Hayward, the Misses Duffield, Miss Le Marchant Thomas, Mrs. Col. Mitchell, the Misses Milner, Mrs. John Walter, Mrs. Gurney Barclay, Mrs. Adams, Mrs. Cave, R. Mangle, Esq., and lady; W. Makepiece, Esq., and lady W. Stevens, Esq., and lady; Dr. Pickering and ladies, R. Tidswell, Esq., and lady; James Winch Grave, Esq., C. Fiteher, Esq., and lady; T. Williams, Esq., and family; - Browne, Esq., and family; John R. Wheeler, Esq., J. Sorten, Esq., T. R. Harman, Esq., Mrs. Croft, Rev. James Ellis, Mrs Sidwell and Miss Shotton, Mrs. Sewell and family, Miss Atkins, &c.

Shortly after twelve o'clock the Bishop arrived, attended by the Rev. J. Randall, M.A., rector of Bunfield; his Lordship's chaplain, Dr. Phillimore; and Mr. Davenport. On the Bishop alighting, the petition of consecration was presented by the minister and read, after which the procession was formed, and proceeded round the churchyard, responding the accustomed services of consecration. The choir then sang a hymn; after

THE BERKSHIRE AND READING CHESS CLUB SOIREE, IN THE NEW HALL, READING.—(SEE NEXT PAGE

which the procession entered the church, and proceeded up the nave saying the 24th Psalm.

On arriving at the altar, the Bishop occupied a seat on the north side of the table, the minister and the Rev. Mr. Elliott were on the opposite side, and the Rev. Mr Goddard and the Rev. Walter Levett (the rural dean) officiating at the reading-desk. The instruments of dotation and conveyance were then presented; and after they had been read, the sentences of consecration were pronounced by the Lord Bishop. The appointed services for the occasion were then proceeded with, his Lordship taking part in them. The choral portions of them were very effectively given by a large party of amateurs and others, from Reading, Eaton, Waltham St. Lawrence, and Wokingham, as well as those residing in the town, under the able leadership of Mr. Rogers.

The final prayers of the service having been read with great solemnity by his Lordship, the hymn "Veni Creator Spiritus",was sung, after which the Lord Bishop ascended the pulpit, and delivered the sermon. His text was taken from the 21st chapter of the Revelations of St. John, and 22nd verse—"And I saw no temple therein." His Lordship's address was delivered with the marked solemnity and earnestness of purpose which are so peculiarly his characteristics, and was listened to with the deepest interest.

In the afternoon a second service took place, the Lord Bishop assisting.

Collections were made after both services in aid of the building fund; and they were responded to with great liberality, the total amount raised being £182.

Amongst the gifts for endowment, were £15 per annum from the Vicar of Winkfield, and 2½ acres of land by J. W. Grave, Esq., of Kidmore End House, Caversham, who handed his deed of gift to the Bishop, at the altar, in the morning.

The Rev. J. E. Sabin, jun., is appointed the incumbent of the new church.

BERKSHIRE AND READING CHESS CLUB.

On Wednesday evening week, a most agreeable *réunion* of this Club took place in the New Hall, Reading. The company was very numerous: chess-tables were disposed through the area of the room, and the orchestra was tastefully decorated with evergreens, Chinese lanterns, &c. Soon after six o'clock the company began to assemble, among whom were, the Revs J. C. Grainger, W. M. Madden, F. C. Blackstone, Capt. Allen, R.N.; Dr. Cowan, Dr. Chase, H. Stanton, Esq.; W. S. Joberns, Esq.; J. S. Little, Esq.; J. Piercy, Esq., a number of the highly respectable inhabitants of the town, and visitors from London, Bristol, Ramsbury, and other distant places, amounting to about 80.

The annual dinner had previously taken place at the George Inn: George Worgan, Esq., presided; the vice-chair being filled by the hon. secretary, Mr. W. Hodges, jun. After the removal of the cloth, the health of "Her Majesty the Queen" was given from the chair, and drunk with the usual honours.

Mr. Worgan, in an able speech, proposed the health of their distinguished visitor, "H. Staunton, Esq., and success to the great Chess Congress in 1851.

Mr. Staunton, in reply, expressed the gratification he felt in attending such meetings, and briefly explained the objects and motives of the intended Tournament, adding, some doubt had been expressed on the subject, that the meeting would undoubtedly take place; that already he had received from the Calcutta Club, 10,000 miles distant, £50, with a promise that £100 would follow the next mail; and this, I may be permitted to recollected, before they had received the names of the London Committee After a few more observations, Mr. Staunton resumed his seat amid general applause.

The health of the acting president and the hon secretary having been drunk, the party retired early from the dinner-table, and adjourned to the hall. Here the various chess-tables were soon occupied by amateurs, amongst whom were several ladies; and their skill in playing excited considerable attention. The great attraction was the games between Mr. Staunton, the Chess champion of England, and Mr. Hodges, the indefatigable secretary of the Club, Mr. Staunton giving Mr. Hodges the odds of a pawn and two moves in the first two games, and in the others the Q's knight: their progress was watched closely intently. The company did not disperse till nearly midnight; having spent a very agreeable evening, and being highly satisfied with the arrangements which had been made for their convenience.

CHESS.

TO CORRESPONDENTS.

ANXIOUS.—You will be sure of obtaining the genuine "Staunton Men" of *Mechi*, in Leadenhall-street. Those you speak of are very clumsy things.

R L M.—1 We know of no portrait of either Purcell or Jaumack 2. Anything but a flattering likeness

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The LORD CHANCELLOR took his seat on the Woolsack at five o'clock.

The House was more crowded than usual, and there were a large number of strangers on the steps of the Throne and below the bar.

MINISTERIAL CRISIS.—FURTHER EXPLANATIONS.

The Marquis of LANSDOWNE, in laying a report upon the table, said:—My Lords, I may as well, in laying this report upon the table, before I move the adjournment of the House, discharge my duty by communicating your Lordships, that, in the circumstances of the present moment, and after the failure of three successive schemes for the construction of a new Administration, her Majesty, after duly reflecting upon the situation in which she was placed by that failure, has been pleased to call upon those of her Ministers who have been recently in office to resume their duties, and to endeavour at least to carry on the government of the country. My Lords, that step upon the part of her Majesty was not taken without full and due deliberation; and I have the authority of her Majesty to state, that having, during the time she was so pausing, had recourse to the advice and opinion of a noble and illustrious Duke (the Duke of Wellington), the most distinguished member of your Lordships' House, who now sits at, your table, his advice and his opinion were in conformity with that step Under these circumstances, I have to acquaint your Lordships, that her Majesty's late Ministers have thought that they had no alternative but to undertake the task thus of necessity almost devolving upon them. My Lords, having made that statement, I may be permitted to add for myself, what I am sure your Lordships will readily believe, that no person laments more deeply than I do the existence of those differences of opinion which it is obvious to your Lordships and well known to the public have prevented the construction of a stronger and more effective Administration. ("Hear, hear," from Lord Brougham.) If there is, my Lords, one wish I could, as an individual, entertain more than another, one which would give me more satisfaction, either in or out of office, it would be, if it were possible, by any efforts of mine, to contribute to put an end to any of those differences which have proved obstacles to the construction of that Government which is so desirable for the interests of the country. The noble Marquis concluded by moving the adjournment of the House to next day.

THE PAPAL AGGRESSION.

The Duke of ARGYLL, in rising to present some petitions on the subject of the Papal Aggression, said he should not offer any remarks upon the events that had occurred within the last month, because he thought that no argument on the questions of public polity which had been the subject of consideration and discussion in the course of these difficulties; neither would he offer any strictures on the speech of the noble Marquis, although it was to one of the subjects to which that speech had reference that he was anxious to address a few words. He held in his hand petitions from the corporate body of the city of Glasgow, who, although the measure of the Government did not extend to that country, felt deeply, strongly, and intensely upon the subject of the recent Papal Aggression. Although there had not been so many public meetings held in that country as in England, yet the great cities had spoken out. He belonged to a Church that held it as the natural right of every Christian sect to meet for the management of its own spiritual affairs, and therefore neither he nor the petitioners sent the length of protesting against clerical meetings of the Roman Catholic body for such purposes. (Hear, hear.) But it was the duty of the Government to guard against any aggression on the part of the church which they had been told by a Roman Catholic Peer, the other night, with peculiar significance, was, in that as in all other respects, an unchangeable church. The petitioners also stated that the power with which we had to deal in the Roman Catholic Church was by no means a contemptible power, but was still capable of exercising the most baneful influence on the social and political condition of the people. So far as he should have been inclined to deplore, under ordinary circumstances, some of the events of the last ten days, still, after the opinions expressed by his noble friend near him (the Earl of Aberdeen), who had informed them that these opinions, as he believed, were shared in by almost all his former colleagues, he did not hesitate to declare his satisfaction on the failure which had taken place. He rejoiced that no Government had been formed upon the basis of passing over in total silence an act which had been proved to be an aggression against the public law of Europe—(Hear, hear)—an aggression against the spirit, if not against the letter, of the municipal law of England; above all, an aggression which, if passed over, would only serve as a justification for future aggressions, and, in the end, this country would again have to plunge into the same contest, with the previous disadvantages of having imperilled her cause by fatal admissions and saint hearted acquiescence. (Hear, hear.)

Lord BEAUCHAMP presented several petitions from Roman Catholics in the county of Norfolk against the Ecclesiastical Titles Assumption Bill, which the petitioners stigmatised with almost every expression of reprobation. They characterised it as insulting to their feelings and outrageous, and as opening the door to the plunder of their charitable funds. It was needless for him to observe, that he entirely differed from the view taken by the petitioners in this respect. Nothing, however, which had passed this night would in the least changed the opinion with which he had entered the House. On every account—on account of the statement of his noble friend with respect to the late difficulty in forming a strong Government—on account of the statements of his noble friend behind him respecting the feeling of one part of Ireland on the subject, and the feeling prevailing in another part, as shown by the position which he had just presented—and, lastly, on account of the declaration of his noble Duke, as to the feelings of the people of Scotland, he implored her Majesty's Government to pause before they rejected the advice given them not to proceed to legislate. At least for the present, he (the Earl) was satisfied with a resolution of both Houses of Parliament.

The Marquis of BREADALBANE presented petitions from Scotland in favour of the Ecclesiastical Titles Assumption Bill.

The Earl of ABERDEEN wished to offer a few words of explanation, in consequence of a mis-statement, in which their Lordships had been given to understand that he had recommended that this aggression should be allowed to pass off without any notice and in silence. This was not the case, for he had particularly mentioned in the few words which he had addressed to their Lordships the other night, that, in his opinion, it was a subject which might properly engage the attention of her Majesty's Government, and even the attention of Parliament (Hear); and he referred to the opinion which he had expressed to the noble Baron below him before the meeting of Parliament, that, in his opinion, the proper mode of dealing with the subject was precisely that recommended by the noble and learned lord who had just spoken, namely, by a resolution on the part of both Houses (Hear, hear); but that he did not think it a fit subject for legislation, and he was much mistaken if the experience of their Lordships—or, rather, of the other House—would not convince them very shortly of the difficulty of legislating in such a case. A ready bill the noble Lord who was again at the head of her Majesty's Government proposed to make material alterations in this bill, and he would find new difficulties arise to embarrass him as he advanced further. He had also been blamed for calling it a penal measure. Now, whether they imposed a penalty of £100, or imprisoned, in either case it was a penalty, a penal measure. How great its severity might be, was another question. And here he must beg leave to remind their Lordships, that persons viewed very different thing at different periods. There could be no doubt that people entertained very different notions of what persecution was, according to the state of society in which they lived. He doubted not that Archbishop Cranmer, when he had a poor wretch burned for denying the King's supremacy, was not looked upon as a persecutor. Neither was Calvin, when he burnt Servetus. He doubted if Philip II. and the Duke of Alva did not think all they had done redeemed by their tender regard for the salvation of souls. But those days were past. He recollected hearing in that House most able and eloquent speeches, especially from the Woolsack, proving that the Roman Catholics had no cause for complaint whatever, but that they were in the enjoyment of every privilege to which they could reasonably lay claim; and the greatest opposition was made from a quarter of eminence to the bill which gave them those privileges which he believed now all their Lordships, or at least a great majority, thought had been wisely and properly bestowed upon them. He must say, however, that the speech of the noble Duke near him, if good for anything, was certainly a very good reason for repealing the Catholic Relief Bill. This proposed measure, in the first place, would turn out ineffectual, unless something more was done than the bill. If it did, he admitted, that, although, strictly speaking, every penalty might be called persecution, still this could not be considered in the light of a measure of severity. But in maintaining it to be the lawful right of the Roman Catholic Church in this country to constitute, in a regular and orderly manner, their episcopal government; and he further maintained that any impediment offered to their efforts in that respect was persecution, because it denied the right which he conceived to be inherent in every acknowledged Church, because times were changed. If the Roman Catholic religion were not tolerated in this country, the whole case would be altered; but having admitted them to an equality of civil rights, having fully tolerated this Church, they had a right to constitute that Church in a legal and regular manner. Any opposition to that right, and though for reasons which might satisfy them they might have thought fit for a time to act under vicars apostolic, there was nothing whatever of justice or common sense, if they were to take away that toleration to that Church, that should prevent them from constituting their Church in a regular manner. He really dreaded the recurrence of these daily debates on the presentation of petitions. He desired most ardently—being, as their Lordships were aware, an intruder very rarely on their attention—to have an opportunity of expressing fully the views which he took upon this subject, and the conclusion which he had that line course proposed would be fatal to the peace of the kingdom

The bills on the table were forwarded a stage, and their Lordships adjourned.

HOUSE OF COMMONS.—MONDAY.

THE PAPAL AGGRESSION

The following petitions against the Papal Aggression Bill were presented:—(6) By Mr. Wilson Patten, from the Roman Catholics of Zealand; by Mr. Greene, from the inhabitants of the parishes of Killamory and Snilehaught, in Ireland, which prayed for the abolition of the Church establishment in Ireland; (3) by Mr. Keogh, from places in the county of Kerry; by Mr. Shafto, from the Catholics of St. Cuthbert's College, Durham; by Mr. S. Hoche, from the parishes of Clayne, Churchstone, and other places in Cork; by Mr Seymour, from the Roman Catholic inhabitants of Tralee; by Sir T. O'Brien, from Cashel; by the Earl of Arundel, from Sussex; by Mr. Browne, from Lancashire; by Mr. Kershaw, from Somerset; by Mr. M Gibson, from Manchester (this petition prayed the House not to pass so harsh a bill as that before them); by Mr. W. Fagan, from Cork, by Mr. Ousely Higgins, from Newport, in Mayo; by Mr. Heywood, from Lancashire; by Mr. Scully, from the Queen's County; by Lord Jocelyn, from Lynn Regis (the noble Lord observed that he dissented from the prayer of the petition); by Mr. Talbot Egerton, from Cheshire; (3) by Mr. Murrough Maloula, from places in Ireland; by Mr. Ferrand, from Tipperary; and by Mr. Wakley, from the Roman Catholic inhabitants of Islington. They complained that the provisions of the bill were unjust and vexatious, and directly opposed to the principles of civil and religious liberty.

PETITION OF THE ROMAN CATHOLIC BISHOPS OF IRELAND.—Mr. W. T M'CULLAGH, pursuant to notice, presented a petition, signed by the four Roman Catholic archbishops and 24 bishops of Ireland, praying the House to reject the bill. He moved that the petition be read by the clerk at the table. It was as follows:—

"The Petition of the Archbishops and Bishops of the Roman Catholic Church in Ireland humbly sheweth,—That we, the undersigned, archbishops and bishops of the Roman Catholic Church in Ireland, most respectfully approach your honourable House, to declare our sense of the injustice of the bill respecting ecclesiastical titles which has been submitted to the consideration of Parliament by her Majesty's Ministers; its measure as one which, under the pretence of respecting their assumption of titles, is fraught with hostility to the dearest interests of the Catholic religion. Petitioners beg leave humbly to state that these titles are purely of a spiritual nature, that no secular power can confer or take them away, that they do not interfere with our duty to the Throne, or infringe on the rights of any class of her Majesty's subjects, yet that the act prohibiting them interferes directly with the performance of our duties as Roman Catholic bishops, renders legally impracticable the observance of the essential discipline of the Catholic church, and thereby inflicts great injuries on us the Roman Catholics of the United Kingdom. Petitioners beg leave further most respectfully to state, that, in the opinion of the most eminent lawyers of Ireland, the proposed measure will control the free disposition of property, interfere with and endanger settlements made on the faith of existing laws, and its results be productive of great embarrassment. Petitioners, therefore, deem it an unjust interference with the rights of property, a direct violation of the principles of civil and religious liberty which our beloved Queen at the opening of the session graciously expressed her determination to preserve sacred and inviolate, and that it is eminently calculated to revive feelings and animosities fatal to the peace and prosperity of the country. Petitioners feel called on to to inform your honourable House, that, although the proposition of the Roman Catholic laity has been urged in justification of the measure, yet its bare introduction has already produced a manifestation of outraged feeling and indignation among the Roman Catholics of Ireland, which nothing short of its rejection will be sufficient to allay."

Sir R. INGLIS asked that the signatures be read.

The Clerk accordingly proceeded to read them, as follows:—Paul Cullen, D. Murray, M. Slattery, John M'Hale, E. M'Nicholas, M'Gettigan, Cornelius Egan, John Ryan, Edward French, James Browne, William O'Higgins, John Cantwell, G. S. Browne, Michael Blake, Cornelius Denvir, Nicolaus Foran, Francis Haly, Thomas Feeny, Charles M'Nally, Laurence O'Donnell, E. Walsh, William Delany, John Barry, J. Murphy, Francis Kelly, Malesius Murphy, William Keane, D. Vaughan (Vicar Capitular).

The hon. Bart.'s curiosity was as to whether the bishops had signed themselves according to their proper names or their diocesan titles

Other petitions were presented from the various localities in England, praying for measures of repression against the "Papal Aggression."

FINANCIAL REFORM.

Sir W. MOLESWORTH gave notice of his intention on the 13th of March to move, "That it is the opinion of the House, that steps should be taken to reduce the military expenditure as soon as possible from the present extravagant expenditure on account of those colonies which are neither military stations nor convict settlements. That it is expedient at the same time to give to the inhabitants of those colonies ample powers for their local self-government, and to free them from the imperial interference with their affairs, which is inseparable from their present military occupation."

THE NEW REFORM BILL

Mr. ANDERSON gave notice, that when the Reform Bill of his hon. friend the member for East Surrey, for extending the county franchise in England and Wales, should come to be considered in committee, he would move that its provisions be extended to Scotland

A message from the Lords brought up the Vice-Chancellor's Bill.

THE MINISTERIAL CRISIS.—FURTHER EXPLANATIONS.

On the motion for the second reading of the Assumption of Ecclesiastical Titles Bill,

Lord J. RUSSELL, who had just previously entered the House, rose and said: I have now to inform the House what has occurred since I last had the honour of addressing it (Hear, hear.) Since I last addressed the House, Lord Stanley has had power and the opportunity to form a Government, and request he thought it reasonable to make was denied him by his Sovereign. (Hear, hear.) Sir, I stated, when last I addressed the House, that her Majesty sent for the Duke of Wellington in order to have his advice in order to have the benefit of an address of her Majesty this morning at twelve o'clock. (Hear, hear.) Having received the opinion of the Duke of Wellington that the best course her Majesty could pursue with a request she had made to Lord Stanley to form a Government, we thought we could not perform our duty to her Majesty and the public otherwise than by accepting the offer which her Majesty was pleased to make to us. (Cheers.) So after entering so fully the other evening into those subject matters of public interest that have occasioned debates, and are likely still to occupy the attention of Parliament, I will only say, that the House will not allow us to enter into matters of public debate until Friday next (Hear, hear)—so that we may have an opportunity of considering the various plans and measures which we should have to propose with the view to the conduct and progress of public business generally. (Hear, hear.) I will propose on that day (Friday) to proceed with the Assumption of Ecclesiastical Titles Bill, and my friend the hon. friend the Secretary of State for the Home Department will, in moving the second reading of the bill, state what amendments we shall be prepared to make in committee upon that bill. (Cries of "Hear, hear.") I propose for that bill for the first thing on Friday, and therefore, if the House will permit me, I will name that bill for the first order of the day. (Hear, hear.) With respect to the other matters before the House, before proceeding with the Budget, I will on Friday, I will state my opinion as to stating the course which the Government mean to follow, so far as the public business of the country is concerned. ("Hear," and cheers.) A question was asked the other day, I was not then prepared to answer—namely, on what day did we propose to proceed with the Budget. (Hear, hear.) I could not answer that question when it was asked, but on Friday I shall be prepared to state on what day we propose to do with regard to the Budget, and the subsequent proceedings we shall take for carrying on the public business of the country. (Hear, hear.) I have only now to move the House to postpone the order of the day till Friday. (Hear, hear.)

Mr. B. OSBORNE wished to know whether the noble Lord intended to introduce the same Budget?

Lord J. RUSSELL replied that he was disposed to make every concession that was reasonable. He did not think the noble Lord could be aware to the course proposed—to make a statement on the second reading of the changes to be made. That they were anxious to do; and then when the bill went into committee, was not that proper period to make such explanations? Then, that under these circumstances the House would agree to the second reading on Friday

Mr. M. GIBSON wished the bill to be postponed; for, if persevered with, it would have the effect of taking out of the session the financial business of the country He appealed to the noble Lord whether it was right to permit a measure of this sort to over-ride the general business of the country? (Hear.)

After a short conversation between Lord J. Manners, Mr. Reynolds, Mr. Wakley, the Marquis of Granby, Mr. Moore, Mr. Newdegate, Sir G. Grey, and Mr. Sadlier took part,

The second reading of the bill was then fixed for Friday.

The Committee of Ways and Means was also fixed for Friday next.

Lord JOHN RUSSELL moved that the House at its rising do adjourn till Friday next

Mr. W. PATTEN said, if that motion were agreed to, it would be necessary to suspend the standing orders, to enable the committees on private bills to sit and proceed with their labours.

Lord J. RUSSELL was understood to say there would be no objection to that course

The motion for adjournment was then put and agreed to, and the standing orders, so far as they related to the sittings of committees on private bills, were ordered to be suspended.

A motion for account of public money expended on the Royal Palaces, was, on the motion of Mr. WILLIAMS, agreed to.

Mr. W. WILLIAMS moved for a return of all new places created and appointments since the 6th of April, 1846, whether under any act of Parliament, or by any other authority, and of the names of the persons appointed to them; stating, separately, the salaries of each, and the estimated annual expenses of the establishments in connexion with such appointments (in continuation of Parliamentary Paper No. 633 of session 1846).

The CHANCELLOR of the EXCHEQUER stated he had no objection to the motion.

Lord J. RUSSELL remarked that an account should also be given of the places abolished.

Motion agreed to.—The House then adjourned to Friday next.

HOUSE OF LORDS.—TUESDAY.

The Lord Chancellor took his seat at five o'clock.

PETITIONS PRESENTED.

PAPAL AGGRESSION.—By Lord LANSDOWNE, from several places against Papal Aggression.

TRANSPORTATION TO VAN DIEMEN'S LAND.—By Lord MONTEAGLE, from Van Diemen's Land, complaining of the continuance of transportation.

COUNTY RATES.—By Lord WORTHOUSE, from a union in Norfolk, and Lord VIVIAN, from a place not heard, praying for a revised system of county expenditure

THE SLAVE TRADE By the Duke of ARGYLL, from Edinburgh, against the withdrawal of the African squadron.

STANDING ORDERS.

On the motion of Lord REDESDALE, standing order No. 138, relating to the taxation of costs on appeals and writs of error, was taken into consideration and amended

PAROCHIAL ASSESSMENTS.

The Earl of MALMESBURY said that he should, but for the state of public business, have brought the subject of parochial assessments before the House. He hoped the report of the committee of last year on this subject would not be allowed to remain a dead letter.

TRANSPORTATION TO VAN DIEMEN'S LAND.

Lord MONTEAGLE, on presenting the petition, of which he had given notice, from Van Diemen's Land, relative to transportation to that colony, observed, that it was numerously signed, and the petitioners said, that, in consequence of the statement of the Government that they would alter the law of secondary punishment, they imported in 1840 and 1841 a large number of labourers from the neighbouring islands to the extent of 7000; but, notwithstanding that announcement, the colony was still the chief place of transportation for convicts, and the condition of the colonists was greatly deteriorated, from the number of lawless and criminal persons sent there. In the session of 1846 the Government of the colony announced that the Government at home had come to the final determination not to resume the system of transportation after the expiration of the two years for which it had been renewed, but this promise was not adhered to. It appeared that the enormous amount of the convict population was destroying the best hopes of the moral improvement of the colony, and the effect was to drive the free population and free emigrants out of the colony. The petitioners concluded by saying, they would place no reliance on the solemn engagements of the Government, as the pledges they had given to the colony had been repeatedly violated. The noble Lord complained of the uncertainty and variety of the systems which were adopted with regard to the convicts. At one time a system of assignment was recommended, and, at another time, it was advised by order of the home Government. Then the system of transportation was suspended for two years, and again, before the expiration of that time, the transportation of convicts to Van Diemen's Land was renewed. It appeared that 27,000 and upwards, or more than one-half of the population of the colony, were convicts. The noble Lord referred to the opposition raised to the transportation of convicts into the colony of the Cape of Good Hope, and feared the example of the colonists might be productive of the worst results. He believed all the Australian colonies were determined to resist the further transportation of convicts to that part of the world. It was a subject of great importance, and he hoped it would receive the early attention of the Government.

Earl GREY denied that any promises had been made by the Government of which he was a member to abstain from sending criminals to Van Diemen's Land; but they had undertaken and succeeded in improving the system of management and discipline. He thought the system as at present pursued was best for the convicts, and not injurious to the colony; and adduced many facts to show the improvement that had taken place, during the past few years, among the transports, and the diminished opposition to their reception among the inhabitants of the colony.

The subject then dropped, and their Lordships adjourned.

HOUSE OF LORDS.—THURSDAY.

Their Lordships sat for a short time.

THE RENEWAL OF THE KAFFIR WAR.

In reply to Lord Monteagle, Earl GREY stated that he had received a dispatch from the colony, which mentioned that an end had been made by the Kaffirs upon Sir Harry Smith, and he regretted to add that the enemy had resulted in the death of several men and two officers. The dispatch would be laid on their Lordships' table as soon as possible, and he gave an assurance that measures would be taken

THE GREAT INDUSTRIAL EXHIBITION.

DEPARTURE OF THE FRENCH GOODS BY THE GREAT NORTHERN RAILWAY OF FRANCE, FOR THE GREAT EXHIBITION

We have previously detailed the reception of the goods brought into the transept of the Crystal Palace. Here, in our Engraving, the wagon has arrived, attended by the Custom-house officers, &c.; and, under their inspection, the Sappers and attendants attached to the Executive Committee are wheeling the goods off on trucks, or otherwise carrying them to the compartments allotted to their respective countries.

The despatch of the French contributions, and the Great Northern of France Railway, for embarkation at Dunkirk, which we here present, was highly interesting. The allusion made by the *Journal des Débats* on this occasion is agreeably demonstrative of the good-will with which the Parisian exhibitors regard the Exhibition:—"The goods station at La Chapelle has beheld the cargo of a first steamer leave its storehouses for Dunkirk, whence our manufacturing produce is to be carried to the shores of our rivals, to sustain the peaceful competition between all nations. A touching symbol of union and peace! and how different from the time when implacable England was forcing Louis XIV. to fill up this same port of Dunkirk."

WESTMINSTER FREEHOLD LAND SOCIETY.—On Monday evening, a meeting took place at the King's Arms Hotel, Kensington, for the purpose of explaining the objects and principles of this society. Mr. George Wilson took the chair in the absence of Mr Hindley, M.P., who was prevented from being present, and pointed out the great benefits which the society was entitled to confer upon the working classes by enabling them to exercise the right of the elective franchise. Mr. Ivimey stated that the total number of members of the society was now over 1000, holding 1850 shares. The society, he observed, had purchased 34 acres of land at Mortlake, near Hampton Court, and the ground had been laid out in 214 allotments, varying in price from £20 to £40. The committee were, however, in treaty for other estates situated in the various counties where members of the society resided. After these explanations, a resolution in accordance with the objects of the society was passed, and several new subscribers were enrolled.

RECEPTION OF GOODS IN THE GREAT EXHIBITION BUILDING.

NEW BOOKS, &c.

Just ready, in crown 8vo, price 7s cloth,

METROPOLITAN NEWS.

DEPUTATION OF LONDON SEAMEN TO THE BOARD OF TRADE.—On Wednesday, a deputation of [illegible] waited upon the Right Hon. Henry Labouchere, the President of the Board of Trade, and the members of the marine department, Captain Beechy, Captain Walker and Mr. Farrar the secretary, for the purpose of presenting a memorial consisting of [illegible] from the seamen of the port of London, praying for the adoption of [illegible] with regard to seamen. Mr. Labouchere explained in regard that he had been requested to receive the memorial, and had no doubt that it had been drawn up with a view to the best interests of the seamen. He referred to [illegible] and pointed out that [illegible] Although he could not [illegible] he would [illegible] the memorial. He would [illegible] after listening with much attention to some remarks from the members of the deputation, [illegible] The deputation then withdrew.

DEPUTATION OF PUBLICANS.—A deputation from the Committee of the National Association for Protection of Property and Character, and of the deputation from the licensed victuallers, had a meeting at the Home Office on Wednesday, with Sir George Grey, to represent to him the [illegible] The deputation consisted of [illegible] Mr. Thomas Corey, late of Bristol. It was also reported that the ensuing anniversary had been fixed for the 26th of next month, [illegible] Mr. Hall, of Cambridge-road, Hackney. The following gratifying contributions were also reported: £7 [illegible] from the workmen of Messrs. Tebbutt and Co., of Limehouse, being a second donation within twelve months, and £5 from the son of a late accident patient in acknowledgment of the kindness and attention bestowed on his father while in the hospital.

ADULT DEAF AND DUMB INSTITUTION, RED LION-SQUARE, BLOOMSBURY.—On Ash Wednesday morning, a sermon in behalf of the funds of the society, for teaching trades and imparting religious instruction to adult deaf and dumb, was preached by the Rev. J. Wright, M.A., at Eaton Chapel, Eaton-square.

METROPOLITAN DISPENSARY AND CHARITABLE FUND.—On Tuesday evening the [illegible] took place at the London Tavern, Bishopsgate-street, Mr. [illegible] in the chair. About 100 gentlemen sat down to dinner, and amongst those who sat at the principal table were Mr. Alderman Challis, the Rev. Mr. Brock, and many [illegible] connected with this [illegible] charity. The chairman, in proposing the toast of the evening— Prosperity and perpetuity to the Metropolitan Dispensary," stated, that amongst the many valuable charitable societies in the City of London, there was none which yielded a greater amount of benefit in proportion to its means than the institution whose biennial festival they were now met to celebrate. The institution was not only valuable on account of the numerous cases it cured or relieved, but also for the advantages it bestowed upon the community by prevention. The report of the committee for the past year showed that the great extent to which medical aid afforded by this charity has been supplied, is proved by the fact that during the past year upwards of 7000 cases (including those whose letters were renewed) have been entered on the books, independently of those who have received pecuniary aid and maternity assistance. The ordinary income of the charity scarcely exceeds £400 per annum, which [illegible] the strictest economy [illegible] the present [illegible] committee should be liquidated. There are nearly [illegible] the books requiring medical or surgical attention [illegible] thousand of the poor of this [illegible] many [illegible] which [illegible] would [illegible] to many [illegible] and [illegible] dispensaries [illegible] the [illegible] pressed a hope that they would consider the vast amount of benefit which the institution was calculated to afford by enabling the poor to obtain medical and surgical relief at their own habitations. The toast was most warmly responded to, and a [illegible] was [illegible]

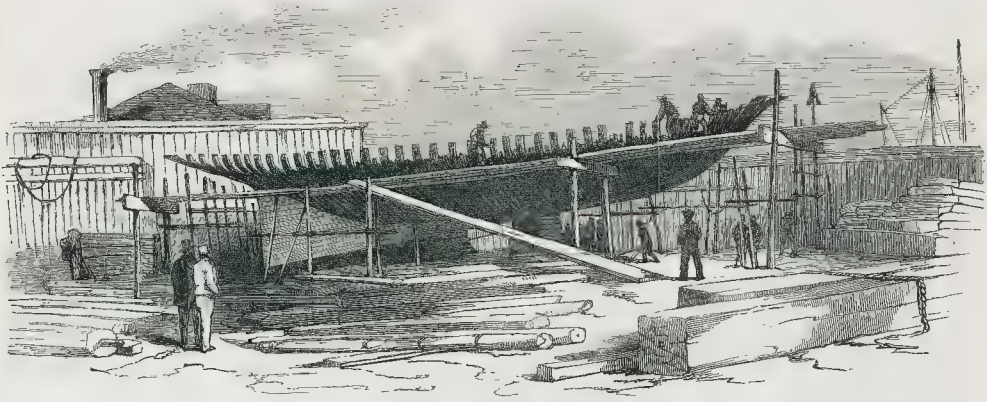
ROYAL GENERAL PENSION SOCIETY.—The annual meeting of this society took place on Tuesday at Sussex-place, Regent's-park, Lieut.-Colonel Bart. in the chair. The report was read by the secretary, Mr. [illegible] [illegible] an excellent [illegible] [illegible] only [illegible] 30 per week. The receipts [illegible] during the past year [illegible] persons to £121 [illegible] [illegible] of former [illegible] [illegible] [illegible]

THE ILLUSTRATED LONDON NEWS.

No. 474.—Vol. xviii.] FOR THE WEEK ENDING SATURDAY, MARCH 15, 1851. [Sixpence.

PROPOSED CHAMBER OF COMMERCE IN LONDON.

Once upon a time," to borrow the opening language of the fairy legends, London was a city whose opinions upon political and commercial questions no Government could afford to despise. When London spoke, the whole country replied. When London moved the extremities were not long quiescent. Things, in this respect, have altered of late years. London has become too large and unwieldy to stir. Like a plethoric alderman, she suffers the inertia of obesity. Around the original London a host of minor Londons have sprung up, as important, and even larger and more populous than herself. Westminster overshadows her; and her boroughs of Southwark, Lambeth, Marylebone Finsbury, the Tower Hamlets, and Greenwich, each large enough to make a capital city, form so many independent jurisdictions, having nothing in common but their police-constables, that the old, familiar London is well-nigh jostled out of all her dignity and glory. Of so little account is this great city, that, when London chooses to elect a Hebrew to represent her in Parliament, the House of Lords coolly denies her right to do so, and acts with as much unconcern as if London were of no more importance than John-o'-Groat's house. Yet the Hebrew so elected is one of the notabilities of the world, and London is not only the metropolis of Great Britain, but the richest, most celebrated, and most wonderful city on the face of the earth. The fact is, that the ancient organisation of London is no longer of any political or commercial worth whatsoever. It does not answer its original purpose. The energies of the metropolis are diluted by subdivision, and so frittered away as to be practically useless. The Lord Mayor, with his lumbering state-coach, his mediæval trappings, his mace-bearer, and all his trumpery of the 9th of November, is a spectacle for mischievous boys and idle sight-seers. The Lord Mayor is no more that power in the State which the Lord Mayors used to be in the days gone by, even at a time so recent as when Mr. Beckford braved the crowned Majesty of England, when a wrong was attempted against the City and the popular liberties. Manchester has a voice that must be listened to; but the voice of London has lost its terrors. It may thunder, but no one regards it. No one asks in our time what London thinks, or what London is going to do. She is politically a cypher; and Manchester, as an exponent of public opinion, has taken the high place



YACHT BUILDING AT NEW YORK TO COMPETE WITH THE ENGLISH YACHTS AT COWES.—(SEE NEXT PAGE.)

THE STEAM-SHIP "IBERIA," WITH "CUNNINGHAM'S PATENT TOPSAIL."—(SEE NEXT PAGE.)

COUNTRY EDITION.]

which the metropolis might have continued to hold, had she not grown into such an unconscionable size without any corresponding development in her government. In this respect England and France offer a remarkable contrast to each other. The will of Paris is the law of the State, and the provincial towns are the merest shadows of an almost nameless insignificance. The will of London, on the other hand, is of little or no influence; while the provincial towns, by their growth, their energy, and their organisation, dictate the law to the seat of Government. London is stagnant, while Manchester is vigorous with life, and takes up the great questions of the day, and forces the Legislature to follow in her wake.

This is not a wholesome or natural state of things; for, large as the metropolis is, and divided as the jurisdictions may be which cluster around her, there is no reason why she should cease to be the metropolis of opinion, or why a provincial town should be allowed to eject her from her moral throne, and take her place as the leader of the nation. The great questions of our day are social and commercial, and not merely political, as they used to be. They require for their development the expression of opinion by the metropolis. They require discussion in the seat of Government. We rejoice, therefore, to see that an attempt is about to be made to organise in the City, but not merely for the City, the nucleus of a public opinion on commercial matters, which, if duly fostered, may lead to important results.

The principal object of the promoters is to establish, in the first place, a "Chamber of Commerce." In England, there are Chambers of Commerce in Liverpool, Manchester, Bristol, Sunderland, Hull, and Plymouth; in Scotland, we find that Glasgow, Edinburgh, Dundee, and Leith have similar institutions; and even in Ireland, whose trade is comparatively so small, Dublin, Belfast, Limerick, and Cork have organised the interests of trade, and are enabled to speak their sentiments on all great commercial and social questions with a voice of authority. London has no such means at her command for making known her opinion; for her Court of Common Council is not qualified to represent the mighty interests of commerce, and has no delegation to speak on their behalf. "From this anomaly," as a recently-published circular truly states, "it has naturally followed, that, while, by the organised co-operation of the manufacturing, shipping, and mercantile classes of Lancashire and Yorkshire, they have generally succeeded in directing the prompt attention of the Government and the country to subjects connected with their interests, and in procuring speedy redress of their grievances, the merchants of the metropolis have, by want of union, failed to bring their influence to bear upon public opinion, or to command that consideration from the Ministerial departments, which their high position and proximity to the seat of Government were otherwise calculated to exert." The objects that fall naturally within the legitimate sphere of operation of a chamber of commerce are multifarious in any great trading town, but in such a place as London they are more than usually so. Among the most important must be named a tribunal of reference, to which traders may appeal in all questions with each other. The code of commerce is cumbersome and expensive to manage, and arbitration in all commercial cases would be greatly for the advantage of trade and traders. "Such a tribunal," as the circular remarks, "might possess powers of summary adjudication in cases which constantly arise betwixt the officers of the revenue and the individual merchant, and might control, by equitable arrangement, the discretionary and almost irresponsible power which fiscal boards too often arbitrarily exert in reference to the application of the revenue laws." The inconvenience and loss to which individual merchants have been subjected by the mistakes, illegalities, and procrastination of Government boards and the delays of Treasury decisions, have been made painfully notorious within the last few weeks, and might be prevented by appeal to a properly constituted commercial tribunal, such as that suggested.

The isolated attempts made by Societies for the Protection of Trade from Fraud, by the East and West Indian Associations, by societies for the Reform of the Laws relating to Bankruptcy and Insolvency, and many others, might be better directed by a Chamber of Commerce, and with far more certainty and effect. Influence and energy are alike frittered away by associations, which collectively might be powerful enough to overthrow any abuse or any number of abuses against which a voice might be raised from the great merchants of London. "The institution of a Metropolitan Chamber of Commerce," says the circular, "would establish a permanent or standing committee on all the subjects undertaken by these isolated associations. Sixty-five members of the House of Commons have their places of business in the City, and many others speedily branches or agents in the metropolis. The merchants greatest in eminence, in wealth, in number, in the variety and extent of their operations, in the intricacy and magnitude of their mercantile connexions in the world, are established in this vast capital. The object of the proposed Chamber is to combine their numbers, their experience, sagacity, enterprise, energy, and social influence, in one focus for their common objects. The important subject of—1. Mercantile law and usage, partnership and commandite; 2. Bankruptcy and insolvency; 3. Currency and banking; 4. Reform of the boards, laws, and practice of revenue; 5. Railway goods traffic, 6. Commercial frauds; 7. Navigation and shipping, embracing the Trinity-house and light dues, the Cinque Ports and pilotage, the Sound dues, stade dues, the church dues at St. Petersburgh, &c.; 8. Intercolonial trade and shipping laws and regulations; 9. The relations of British commerce and our trading subjects with foreign States; 10. International mercantile laws and customs; 11. The proper adjustment of the commercial tariff, and the revision of the Excise duties; and others, which will suggest themselves to the various interests connected with the trade of the country, would form the proper departments of sub-committees and the general council of such a body."

The merchants and traders of London have this question in their own hands. They require no aid from Government or the Legislature. They have only to determine to do the thing, and to set about it in earnest, to form a commercial association which, publicly and privately, will be of the highest value, and which will influence public opinion on matters of state policy, and many urgent questions of social well-being. It is not at all surprising that such an attempt has at last been made. The only wonder is, that the great commercial men of London should, as a body, have so long allowed themselves to be practically inert, while the rest of the world was moving, and to seem careless and indifferent, when public and private interests required them both to speak and to act.

NEW AMERICAN YACHT.

THE Yacht of which we have engraved a Sketch is now building at New York, to compete with the English yachts, next summer, at Cowes. The builder, Mr W. H Brown, is to receive about one-third more than her value (say £28 a ton) if she succeeds in outsailing any competitors of the same tonnage in England. Her construction is on a novel principle: drawing 10 feet aft, she tapers away forward to about half that draught, and is totally without any gripe. Aft, her keel is about 90 inches deep; diminishing in depth forward, and gradually ascending in a graceful curve into outwater and stem. Her tonnage, 175 tons, length, 94 ft.; extreme breadth, 23 ft 6 in.; depth of hold, 11. Her timbers are a foot apart, filled in on both sides with eighteen pigs of lead, which weigh 12 cwt. each, and have small projections, or shoulders, which let into the timbers, and prevent any contact with outside planking. In addition, eighteen square pigs, each 1¼ cwt., are placed on the main keel, fitting exactly between the timbers. She has, therefore, upwards of 21 tons of ballast, built and tightly wedged into her sides. As she only requires about as much more ballast, it is calculated that she will be able to stow it with great ease, and have room to spare. She is cross-braced inside with long iron bands, well secured to the timbers. The intelligent foreman, Mr. Stears, as well as the American gentlemen who are to own her if she succeeds, are very sanguine of success.

This is an original and spirited undertaking, and will, if successful, completely alter the present system of yacht architecture. We do not, however, think she can compete with the sharp and deep English yachts. Whatever the result may be, it cannot fail of being extremely interesting, and valuable to both countries. As a model, she is artistic, although rather a violation of the old established ideas of naval architecture.

THE STEAM-SHIP "IBERIA."

THE Peninsular and Oriental steam-ship *Iberia* arrived at Southampton from Spain on the 16th ult., having in use on board "Cunningham's Patent Topsail," for reefing from the deck without sending men aloft.

Every one, who is at all familiar with maritime matters, is aware of the great danger attending the operation of reefing topsails in heavy weather, by the usual mode of the men laying out on the yards, and gathering up and confining the sail thereon by "reef points" and "earrings" and many fearful accidents are constantly occurring on such occasions.

Her Majesty's ship *Melville*, with the flag of the late Vice-Admiral Sir John Gore, when coming home from India, in 1833, lost a man off the main-topsail yard in reefing; the Admiral's only son, Lieutenant Gore, jumped overboard to save the drowning sailor. A boat, with a Lieutenant, Midshipmen, and seven men, was also sent on the same duty, when, melancholy to relate, all were lost In her Majesty's ship *Hastings*, with the late Queen Dowager on board, seven or eight men were knocked off the main topsail-yard in reefing; one man was killed on the spot, and the others were badly maimed. In her Majesty's ship *President*, in 1847, a fine young seaman was killed in reefing topsails. These are only a few of many accidents of a like nature

Mr. Cunningham's plan of reefing from the deck, therefore, purposes to mitigate these dangers; and, from the very favourable report of Captain Barney and the officers of the *Iberia*, there is every reason to believe that it will be successful in the accomplishment of the objects which the inventor has in view to this effect, by becoming generally adopted, particularly amongst the nautical marine. The sail can be close-reefed in heavy weather by *one man and a boy*, in *two seconds and a half*—an operation which would otherwise occupy at least half an hour, and require many men.

FOREIGN AND COLONIAL NEWS.

FRANCE.

For some months past, the Paris Journals have been amusing the public with rumours and contradictions of rumours relative to the probability of a fusion of interests being effected by the Elder and Oriental branches of the exiled Royal family, with a view to the speedy restoration of the Monarchy.

The whole fabric of probabilities and presumed intrigues which the fertile invention of unscrupulous writers had thus called into imaginary existence, has been demolished by a manifesto from Claremont, which has been addressed by the Princes of the House of Orleans to the Orleanist Committee at Paris, in which they declare that they will only negotiate on the sol. of France, and that they will abstain from all political questions while they are out of their country. The most respectable of all the Paris papers, the *Journal des Débats*—whose information is usually authentic on this and all other subjects of importance indicates, by a leading article on the subject, that the sentiments thus attributed to the Princes are in full accordance with the views of those Royal personages. The *Moniteur* adds that "the fusion will be accomplished when it shall please heaven and the country!"

According to the *Independance* of Brussels, the Orleans family is about to leave Claremont, so as not to be in England during the Exhibition. The Queen, it says, will go to Brussels; the Duke of Nemours to his father-in-law; the Prince de Joinville either to Scotland or to Portugal; and the Duke d'Aumale to Belgium. The absence of the family, this journal adds, will continue as long as the Exhibition lasts.

The President of the Republic has promoted General Excelmans, Grand Chancellor of the Legion of Honour, to the dignity of Marshal of France. The six Marshals of France are at present, Marshals Soult, Gérard, Sébastiani, Reille, Jerome Bonaparte, and Excelmans.

The *Pays* has received a letter from some of the prisoners at Belle-Isle, complaining of cruel treatment on the part of the director of the prison.

Respecting the formation of a permanent Government, in the place of the present Executive Ministry, reports were prevalent during the week in Paris of a return of the Barochie Cabinet to power

On Sunday the Professors of the College of France met at the Sorbonne, to consider the "tendency" of the doctrines taught by M. Michelet, Professor of the Literature of the South, in the course of his lectures. M. Michelet declined to attend the meeting, but has written a letter, in which he defends himself, and states that his lectures are framed only by the Jaws of the Constitution, supported by the administrator of the college. The determination of the professors is not yet known, but it is supposed that M. Michelet's course of lectures will be closed

PRUSSIA

The only fact of interest in the political world at Berlin is the rejection by the Lower Chamber of Baron Vincke's motion for a committee to inquire into the state of the nation, by a large majority. The numbers were—for the motion, 41; against it, 228. On the German question the Ministerial organs advocate a return to the old Confederation.

Another destructive fire has taken place at Berlin. On Monday evening last, at seven o'clock, the building containing the Hall of Meeting of the Upper Legislative Chamber took fire, and on Tuesday afternoon the flames were raging furiously, with little prospect of arresting them. The hall was a temporary building, erected in 1849, in the gardens of a range of houses fronting to the Französische Strasse. It was a high structure, with galleries arranged precisely in the same manner as the Second Chamber, but smaller. The cause of the fire is not known. The Upper House was in the centre of the best quarter of the capital, and was almost surrounded by its finest buildings: the Theatre, the Opera House, the Library, the Prince of Prussia's Palace, that of the Princess of Leignitz, and the University, are all within a short distance, but no danger was apprehended for any of them.

CAPE OF GOOD HOPE

Accounts to the 3d of February were received in town on Thursday from the Cape.

The principal fact contained in the intelligence thus communicated is an attack made by the Kaffirs on Fort Hare and the town of Alice, on the 21st of January, when the inhabitants were begun the attack, were repulsed with great loss. A smart skirmish also occurred on the 24th of January, near King William's Town, when the Kaffirs were again defeated. The colonial troops and Hottentot levies available without reinforcement amount to between 5000 and 6000 men. Sir Harry Smith was still at King William's Town on the 24th, and had communications with the Town were open by the Buffalo River. As soon as his Excellency should have obtained his expected reinforcements, which were daily arriving, he would march against the enemy, and no doubt was entertained as to the result of his conflict. So confident were the people at the Cape as to the success that would attend the efforts of the colonial troops, that they looked forward to the termination of the war in two or three months.

UNITED STATES

The advices from New York this week are to the 26th ult.

The President had issued a message regarding the Fugitive Slave Law, which was called forth by a riot in Boston and the liberation of a convicted fugitive. The President commands all persons to aid the law officers, and proceedings are to be taken against any party that was in any way concerned in violating the said law.

A duel between two members of Congress, viz Stanley, of North Carolina, and Inges, of Alabama, had taken place; and, after the ineffectual exchange of shots, a reconciliation was effected through their seconds

A bill has passed the House in the Wisconsin Legislature, limiting the future possession of land by the same person to an area of 640 acres

The only proceeding of interest to European readers in the American Congress relate to the Postage Bill, which has been under discussion, but without any conclusion being arrived at

On the 22nd instant, the anniversary of the birth of Washington was celebrated at New York on Feb. 22 with a pomp All the public buildings were adorned with flags, and in procession, composed of all the militia forces and the officers of the benevolent institutions,

PAPAL AGGRESSION.

RE COMMENCEMENT OF AGITATION.

The interest in Papal Aggression seems reviving. For a shot to do any damage, it must encounter a resisting object; on the yielding air it spends harmless its destructive force. We seem, especially in Ireland, to have made the Papal shot very destructive, by encountering it with a Parliamentary measure, which has knocked to pieces and threatens to damage, if not destroy, other things, such as Ministerial power put forth to resist it. The measure intended to stop it being knocked to pieces, the public are again called on to resist it. The Earl of Winchilsea, over one of the first in the field on such occasions, has published in the *Times* a letter to his brother Protestants, in which he denounces the "mutilated bill" as the grossest and most daring insult ever offered by any Government to the Protestant feeling of the great empire. "The question now before them," he says, "is whether our Protestant Sovereign shall possess supreme authority in the realm, and undivided allegiance, or an intolerant, ambitious, and unrestricted foreigner" He quotes Lord Eldon's declaration, that the Catholic Emancipation Act of 1829 would be the destruction of the Monarchy; and he calls on every Protestant of the empire, by the memory of our immortal ancestors, who have manfully laid down their lives in defence of our Protestant faith, to spurn this grovelling and contemptible measure, and unite heart and soul in addressing the Throne for the protection of Parliament.

Acting on views similar to those expressed by the noble Earl, the FARRINGDONERS OF WHITECHAPEL met on Tuesday evening, under the presidency of the Rev. W. W. Champneys, the Rector, to consider the propriety of petitioning in the Ecclesiastical Titles Bill. They unanimously passed resolutions, that late events demonstrate the necessity of increased vigilance on the part of the Protestants, to show that their determination to defend the faith, and maintain the dignity of the Crown, and the independence of Great Britain remains unshaken; that the principles of Papacy are opposed to the Gospel, and contain a conspiracy against the liberty, property, and lives of all who refuse to join the communion; and every legitimate means must be used to resist its encroachments. A petition was adopted against the removal of the effective clauses of the Ecclesiastical Titles Bill. The speakers in the name of the parishioners were the Rev. — Lyon, the Rev. Hugh Allen, the Rev. C. B. Gribble, and the Rev. C. B. Stonar, Baptist minister

On the other side, the ROMAN CATHOLIC LAITY OF ENGLAND are circulating a declaration, and procuring for it as many signatures of that body as they can, protesting, particularly in relation to the Ecclesiastical Titles Bill, against any interference whatever with their right to the unfettered exercise of their religion, and against the gross and manifest violation of their religious freedom now threatened, in direct contravention both of the spirit and letter of the Emancipation Act, and of subsequent statutes, and in open defiance of her most gracious Majesty's expressed resolution to maintain unimpaired the religious liberties of her subjects. They accompany this protest with a declaration supported by many in favour of the Pope's late measures; and they conclude thus:—"Inasmuch as, by our religious principles as Catholics, we are bound, and as by our rights as Englishmen we are entitled, to recognise the spiritual and ecclesiastical supremacy of our Holy Father the Pope over the Catholic Church; inasmuch as, by necessary consequence, we are bound to recognise and obey as our lawful ecclesiastical superiors the metropolitan and other bishops under whom, by the valid exercise of a power which belongs to himself alone, we have been placed, &c.; therefore, any legislative enactment subjecting any Catholic, whether bishop, cleric, or layman, to punishment or loss, for his free and willing obedience to the authority of his Church, or prohibiting his full and entire compliance with the ordinances of the Supreme Pontiff concerning the restoration of our hierarchy, will be by us considered as an unjust and oppressive infringement of the rights of conscience; and we solemnly declare that we are firmly determined to resist, by every legal and constitutional means within our power, every attempt to deprive either ourselves or the Irish Roman Catholics of the least portion of religious liberty."

The CATHOLICS OF LONDON met in the Freemasons' Hall, on Monday. There were present Mr. P. Howard, M.P. (chairman), Lord Dormer, Mr. Reynolds, M.P., Mr. G. H. Morse, M.P., Mr. Serjeant Shee, the Hon. Mr. Stonor, Mr. Barnewell, Mr. Henry Stonor, the Rev. J. O'Neil, Mr. Ward, Mr. Ambrose, Mr. Blunt, Mr. Wells, and others. The room was crowded to excess, and a considerable number of females were in the gallery and in the body of the room. The meeting was addressed by the gentlemen mentioned, Mr. Serjeant Shee moving the first resolution, to the effect that their obedience to the Pope was purely spiritual, and they were bound to support their right to the free exercise of their religion, including the free appointment of its ministers. The other resolutions were to the effect, that any penal or other act interfering with the Roman Catholic religion or clergy was unjust or oppressive; that thanks were due and given to the Irish Roman Catholic clergy, the Irish press, and people and representatives who had identified themselves with the cause of religious liberty; that they did not wish for any legislative interference between them and their clergy, and they also thanked the English and Scotch members of Parliament, and the English and Scotch journalists, who had advocated civil and religious liberty. Finally, while they expressed regret that the erroneous impressions had been excited against them by authoritative appeals, they hoped a mutual interchange of charities would be established between them and their Protestant fellow-subjects.

IN IRELAND the Catholics are using their power. The corporation of Limerick has passed a resolution condemnatory of the conduct of Mr. John O'Connell, M.P. for that city, for being absent from Parliament on the introduction of the Ecclesiastical Titles Bill, and calling on the hon. member to resign his seat. The corporators who voted against the hon. member were, a short time since, his warmest supporters, and large subscribers to the fund collected to enable him to retain his seat.

The ADDRESS of the ROMAN CATHOLIC PRELATES OF IRELAND to her Majesty, lately adopted, has been forwarded to Sir George Grey, and by him laid before the Queen. They declare that they regard loyalty as a duty, and they say, "With ineffable pain we have learnt that an internal change lately made in England by the Sovereign Pontuff in the spiritual organisation of the Church to which we belong has been represented as an infringement of your Majesty's royal supremacy. We beg most humbly to assure your Majesty, that we utterly condemn any attempt to assail the authority of your Majesty as our supreme temporal Sovereign." They go on: "The project of a law has been laid before Parliament, the decided object of which is to suppress our hierarchy, and which, with that view, is framed so as to render in the highest degree penal the observance of our ecclesiastical discipline, as well as to confiscate our charitable funds. Such a law, we hope most respectfully to assure your Majesty, would grievously oppress your Majesty's most faithful and loyal subjects, the Roman Catholics of the United Kingdom, and would be utterly subversive of those principles of religious liberty which your Majesty vouchsafed to proclaim from the throne—principles which descended to your Majesty as a precious inheritance from your illustrious father, which grew up with your Majesty, and were strengthened in your loyal bosom by the deliberate judgment of an enlightened mind, and the kindly sensibilities of a heart which pants for the happiness of all your subjects. In that gracious and benevolent hope the undersigned appeal with confidence against the grievous and undeserved calamity threatened by the projected penal law; and they implore your Majesty to secure to them, and to all your Majesty's faithful Roman Catholic subjects, what is denied to no other class of their fellow Christians, the peaceful exercise of their religious worship according to the known discipline of their Church, and may your Majesty reign long and gloriously over every section of a united, happy, and grateful people." It is signed by all the Roman Catholic Prelates Sir George Grey announced that the address was graciously received by her Majesty.

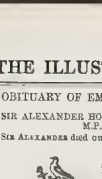
At a meeting of Members of Parliament for Ireland, held on March 6, G. H. Moore, Esq., M.P. for Mayo, in the chair, an address to the ELECTORS AND PEOPLE OF IRELAND was adopted. It has been published and circulated, and is in London among other things —" Carrying with us the hearts, and hopes, and feelings of at least one-third of the people of these kingdoms, and probably representing no less than half of their social opinions on the question in which we are engaged, we form but a tenth part of the numerical power of an assembly in which might is right. We have not the power to protect individual rights or occasionally into the hands of right a power which it would be otherwise unable to exercise, and the chances of a party battle enabled us on a late occasion to avenge a foul insult and vindicate a public right. But the combination among men to permit of its being put in practice, if honestly resisted. But the contest will be long and arduous; our adversaries have the advantage over us that numbers, influence, and Parliamentary resources can supply; and our only trust, in the face of such formidable odds, is, that the same undying energies that achieved the religious liberties of the Irish people, will still watch over and defend them. It was the unbending attitude of the people of these kingdoms, and probably representing no less than half of their social opinions on the question in which we are engaged, we form but a tenth part of the numerical power of an assembly in which might is right. We have not the power to protect individual rights or occasionally into the hands of right a power which it would be otherwise unable to exercise, and the chances of a party battle enabled us on a late occasion to avenge a foul insult and vindicate a public right. But the combination among men to permit of its being put in practice, if honestly resisted. But the contest will be long and arduous; our adversaries have the advantage over us that numbers, influence, and Parliamentary resources can supply; and our only trust, in the face of such formidable odds, is, that the same undying energies that achieved the religious liberties of the Irish people, will still watch over and defend them. It was the unbending attitude of Ireland that won the battle of Catholic Emancipation; it is the concentration of Ireland that we now invite to the rescue. It becomes our duty to remind them that on a late division, involving their religious rights and liberties, a fourth part of their representatives were absent altogether. It is the duty of Irish constituencies to ensure the attendance of every man upon the division that is about to ensue. Neither business, nor partial indisposition, nor personal circumstances should be allowed as an excuse. If their own private fortunes, or interests were endangered, they would be in London at once; and in whose rights, liberties, and hopes are now at stake should not permit them to be elsewhere. We have no hesitation in stating our opinion that every Irish representative that is absent on this occasion is a deserter from his post, and that every constituency whose representative is wanting is unworthy of its franchise. The necessity of the time calls for plain speaking, and we have spoken plainly: the same necessity calls for immediate action; and humbly, but resolutely, we call upon the electors and the people of Ireland to do their duty.—Signed on the part of the meeting, G. H. Moore."

ARCHBISHOP M HALE has published another epistle to Lord John Russell, in which he says .. "Never, perhaps, in any former period of its eventful history, has there been such a strong union of all classes, brought about by the conviction of the hostility with which they are threatened. No mitigation of the bill," he declares, "nothing short of its utter rejection, will satisfy the Catholic people of Ireland." To the Irish members he hints: "The eyes of all are turned now to Parliament, watching to see whether their members are at their posts; though, like the Roman senator of old, they should be carried thither on their couches. No apology can henceforth plead with the people if those members do not exert themselves in stopping the present penal enactment."

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

SIR ALEXANDER HOOD, BART., OF WOOTTON-HOUSE, CO SOMERSET, M.P. FOR THE WESTERN DIVISION.

SIR ALEXANDER died on the 7th inst., in Wimpole-street, after a few days' illness. He was the only son of Captain Alexander Hood R.N., who accompanied Captain Cook in one of his voyages round the world, and, after a long series of services, was slain on board his ship, the *Mars*, in 1798.



To the baronetcy Sir Alexander succeeded at the decease, in 1839, of his uncle, the late gallant Admiral Sir Samuel Hood, K.B.; and he was also in remainder to the Irish barony of Bridport. He was born July 5, 1793, and married, Aug. 3, 1815, Amelia Anne, daughter and co-heir of Sir Hugh Bateman, Bart., of Harrington Hall, co. Derby, by whom he leaves three daughters (the eldest married to James Curtis Somerville, Esq., of Dinder House); two sons 1. the present Sir Alexander Bateman Fenian Palmer-Acland-Hood, Bart., who is married to the eldest daughter of Sir P. D. Acland, Bart.; and 2 Arthur-William Acland Lieut., R.N

The late Sir Alexander, who graduated at Exeter College, Oxford, was a magistrate for Somerset, and represented its eastern division in Parliament since 1847

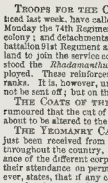
SIR EAST GEORGE CLAYTON EAST, BART., OF HALL-PLACE, BERKS.

THE decease of this Baronet occurred on the 6th instant, in the 57th year of his age. He was the second son of Sir William Clayton, Bart., of Marden, by Mary his wife, daughter of Sir William East, Bart., of Hall-Place, Berks; and succeeded to the property of his maternal uncle, Sir Gilbert East, the second Baronet, whereupon he adopted the surname of East, and was created a Baronet himself, in 1838. Sir E. G. Clayton-East had, at the period of his death, nearly completed his 57th year. He married, 20th June, 1815, Marianne-Frances, eldest daughter of Charles Bishop, Esq., of Sunbury, late Procurator-General, and leaves issue three sons and four daughters: the eldest son, Sir Gilbert East Clayton-East, the present and second Baronet, born 13th November, 1833, married, in 1845, Emma-Jane-Lucretia, eldest daughter of Sebastian Smith, Esq., of Connaught-place West, and has a son, Gilbert-Augustus, and two daughters.

THOMAS CLIFTON, ESQ., OF LYTHAM HALL, CO. LANCASTER.

THIS gentleman, the representative of one of the oldest and most influential families in Lancashire, died at his town residence, in Belgrave square, on the 17th inst. He was born 28th January, 1788, the eldest son and heir of John Clifton, Esq., of Clifton, Westby, and Lytham, by Elizabeth his wife, daughter of Thomas Riddell, Esq., of Felton Park and Swinburn Castle, Northumberland He married, 17th March, 1810, Hetty, daughter of Peregrine Treves, Esq., Paymaster-General of Calcutta, and widow of David Campbell, Esq., of Kildalig, in Ayrshire, by whom he has four surviving sons, the eldest, John Talbot Clifton, Esq., now of Lytham Hall, has sat in Parliament for Lancaster. The precise period when the first ancestor of the Cliftons seated himself at Clifton, cannot be ascertained, but the authenticated pedigree can be traced, in an unbroken line, from William de Clifton, Constable and Aide for Lancashire, temp. Henry III. Among the ancestors therein enumerated, one fought in the French wars of Edward III.; another accompanied Henry V. to the field of Agincourt; and a third was slain, under the Royal banner, in the great civil war. Mr. Clifton, whose death we record, served in the 14th Regiment of Dragoons, under the Duke of Wellington, in Portugal and Spain.

MARIA MARGARETTA, COUNTESS DOWAGER OF SEFTON.



HER Ladyship, whose death took place on the 9th inst., at her house in Arling-ton-street, at the age of 81, was second daughter of Elizabeth, sixth Lord Craven, by Elizabeth his wife, daughter of Augustus, fourth Earl of Berkeley (who is well known, after her second marriage, as the Margravine of Anspach.

The deceased Countess married, Jan. 1, 1792, William Phillip, second Earl of Sefton, and had four sons and six daughters Of the former, the eldest is Charles William, present Earl of Sefton

NAVAL AND MILITARY INTELLIGENCE.

TROOPS FOR THE CAPE.—The Kaffir disturbances, which we noticed last week, have called for a military reinforcement in the Cape Colony. On Monday the 74th Regiment embarked at Cork in the *Vulcan* steamer for that colony; and detachments from the *depôts* of the 6th, 45th, 73rd, and of the 1st battalion 91st Regiment are also to proceed immediately from Ireland to join the service companies at the Cape. For this purpose it is understood the *Rhadamanthus* steam-transport, now at Sheerness, will be employed. These reinforcements will amount altogether to about 900 men of all ranks. It is, however, under consideration whether another regiment should not be sent off; but on this point nothing has yet been decided.

THE COATS OF THE HOUSEHOLD BRIGADE OF CAVALRY.—It is rumoured that the cut of the coat of the regiments of Life Guards and Blues is about to be altered to the long-skirted pattern of former days.

THE YEOMANRY CAVALRY.—It appears from a circular which has just been received from Sir George Grey, by the various Lord-Lieutenants throughout the country, that the Government were so satisfied with the appearance of the different corps of yeomanry last year, that they will not require their attendance on permanent duty this season. The right hon. Baronet, however, states, that if any corps of three troops or upwards choose to assemble for exercise, for a period not exceeding five days, they will be allowed the same pay a day for officers and men; or, if a corps of less than three troops, or of more than three troops, are desirous of turning out at intervals for a period not exceeding eight days, they will be allowed three shillings per horse a day.

GOOD SERVICE PENSIONS.—The following general officers have been granted pensions of £100 per annum, in addition to the sum they already receive for good service in the field; viz. Major-Generals W. Jervois, Sir W. Chalmers, C.B., K.C.H.; W Campbell, C.B.; L Arguimba, C.B.; and F. Calvert, C.B.

THE GOVERNMENT OF MALTA.—It is rumoured that an intention exists, on the part of Government, of re-uniting the civil government of Malta with the military command in the person of a general officer now in command of one of the districts.

NEW BARRACKS AT ST. JAMES'S PARK.—The Government have decided upon building a new wing to Wellington Barracks, sufficiently large to accommodate an additional battalion of the Foot Guards, the expense of which will amount to £40,000.

CONVERSION OF BARON ROTHSCHILD.—A letter, addressed to the *Standard* of Wednesday evening, from Mr. Henry Seymour Williams, states, from "an authentic source," that Baron Rothschild has been converted to Christianity.

DESIGNS ACT EXTENSION.—The object of this measure, which has been referred to a select committee of the House of Lords, is to prohibit inventions in the Great Exhibition, by extending the Designs Act to inventions provisionally registered, and also to foreigners in exhibiting their inventions

THE BRITISH ASSOCIATION.—The meeting of the British Association at Ipswich is to commence on Wednesday, July the 2nd, and extend over seven or eight days. The officers selected by the London council are: President Professor Airy, Astronomer Royal. Vice-Presidents—The Bishop of Norwich, Professor Henslow, Professor Sedgwick, Sir J. P. Boileau, Bart., Lord Rendlesham, M.P., Sir W. F. F. Middleton, Bart., J. C. Cobbold, Esq., M.P., T. B. Western, Esq. Treasurer—R. A. Alexander, Esq. Secretaries—C. May, Esq., W. D. Sims, Esq., G. A. Biddell, Esq., G. Ransome, Esq.

PARLIAMENTARY PORTRAITS.

VISCOUNT DUNCAN, M.P. FOR BATH.

ADAM DUNCAN HALDANE, VISCOUNT DUNCAN, M.P. for Bath, eldest son of Robert, first Earl of Camperdown, by Jannet, daughter of the late Sir Eyre Dalrymple Hamilton, Bart., and grandson of Admiral Duncan, who was raised to the peerage, in 1797, for his glorious victory achieved over the Dutch fleet off Camperdown, on the 11th of October in that year, was born in Edinburgh, on the 28th of March, 1812; went to Eton at thirteen; entered Trinity College, Cambridge, in 1830; passed his degree examination in 1833; and went abroad and travelled on the Continent for two years

At the general election, on his return, following the defeat of the first Peel Administration in 1835, Lord Duncan first took an active part in politics as chairman of the Hon. Fox Maule's committee in the contest for Perthshire, in which the late Sir George Murray, then recently appointed a Cabinet Minister, was defeated

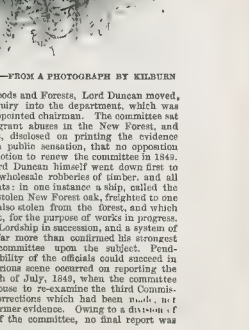
At the general election, on the accession of her present Majesty, in 1837, Lord Duncan became a candidate for Southampton, which was then little above the rank of a fashionable watering-place, and had gained nothing of its now rapidly growing commercial importance. After a severe contest, he was, however, returned.

At the general election in 1841, he was invited by requisition to stand for the city of Bath, in conjunction with Mr Roebuck, and was returned with him, in opposition to Lord Powerscourt and Mr. Ludlow Bruges; the numbers being—Duncan, 1223; Roebuck, 1151, Powerscourt, 930; Bruges, 926. His first speech in the House was on the 22nd of February, 1842, in support of the Hon. Mr Villiers' annual motion for the total repeal of the Corn-laws; and he subsequently took an active part with the Free-traders in the debates arising out of the late Sir R. Peel's Corn-law of that session; but the subsequent commercial policy of the late Right Hon. Baronet had his cordial approval and support.

On the 18th of March, 1845, he moved for a committee of inquiry into the operation of the window-tax; brought forward facts in proof of its being a tax preventive of the health especially of the working-classes; that it sets ingenuity to contrive houses with the fewest possible windows; and that these being let in crowded lodgings to the poor, were ill lit, ill ventilated, and unfit for healthful occupation

On this occasion, Lord Duncan, seconded by Captain Rowe, who differed with him in politics, and supported by Mr. Wakley and other members on both sides of the House, was pressed by Sir Robert Peel, then at the head of affairs, not to take a division on his motion, but to be satisfied with the expression of opinion he had elicited in the course of the debate. Sir R. Peel said, "Thus far will I go, that when the time again arrives for the consideration of our financial policy, this tax shall have a full, a fair, and impartial consideration from us." Lord Duncan, however, thought that on a subject of so much importance it was right the constituencies should at once have the opportunity of knowing the opinions of their representatives; he therefore divided, and was defeated by a majority of 47

Early in the session of 1848, Lord John Russell having proposed to raise the income-tax to 5 per cent., along with a considerable increase in the naval and military establishments, Lord Duncan, on the 24th of February, brought forward his motion for leave to bring in a bill for the repeal of the window-tax: and having, on former occasions, been twitted with not making any proposal to supply the loss to the revenue which would result from his measure, he proposed, that, instead of spending the 5 per cent. in augmentation of our forces, it should go to cover the admission of free air and light to the people; and also pointed out that the system of control in the financial department of the State admitted of a large saving by more efficient management; and that, especially in the department of Woods, Forests, and Land revenues of the Crown, there was the most flagrant waste of receipts, and neglect of sources of income. The only increase in the returns from the Royal Parks and Forests was to be found in the single item of *fat bucks*; official venison had been diligently cared for, whilst the public property was allowed to run to waste.



LORD DUNCAN, M.P. FOR BATH.—FROM A PHOTOGRAPH BY KILBURN

Following up this attack on Woods and Forests, Lord Duncan moved, in 1848, for a committee of inquiry into the department, which was granted, and of which he was appointed chairman. The committee sat through the session, and the flagrant abuses in the New Forest, and other parts of the Crown estates, disclosed on printing the evidence in the autumn, created so much public sensation, that no opposition was offered to Lord Duncan's motion to renew the committee in 1849. In the course of this inquiry, Lord Duncan himself went down first to the New Forest, and discovered wholesale robberies of timber, and all sorts of defalcations in the accounts: in one instance a ship, called the *Light and Sign*, had been built of stolen New Forest oak, freighted to one of the Channel Islands with oak also stolen from the forest, and which was sold there to the Government, for the purpose of works in progress. Other forests were visited by his Lordship in succession, and a system of public plunder disclosed, which far more than confirmed his strongest observations in moving for a committee upon the subject. Pending these inquiries, not all the ability of the officials could succeed in unravelling the accounts. A curious scene occurred on reporting the evidence to the House, on the 29th of July, 1849, when the committee received instructions from the House to re-examine the third Commissioner, touching the important corrections which had been made, but in his hand-writing. In his former examination, he had given it on his own opinion amongst the members of the committee, no final report was agreed upon

In the session of 1848, Lord Duncan renewed his motion upon the Window-tax, and on this time defeated by a majority of 53; and on the 9th of April, 1850, again brought this subject forward, and made so strong an impression by his statements of the sanitary evils of the tax, that his motion was barely defeated by a majority of three in favour of the Government. In the present year, on the announcement of an expected surplus of nearly £2,000,000, it was confidently anticipated by the public that some relief would have been afforded to the taxpayers by the remission of the Window-tax. Petitions poured in from all quarters condemnatory of the tax, large meetings were held in various parts of the metropolis, and deputations waited upon Sir Charles Wood, representing forcibly the insanitary nature and unequal pressure of the tax. The repeal was proposed in the Budget, but the substitution of the House-tax was denounced by Lord Duncan, at the time the financial statement was made, as sure to cause the most bitter disappointment and discontent amongst the people.

Following up the evidence of the committees of 1848 and 1849, his Lordship, on Tuesday last, the 11th instant, pursuant to notice, moved a resolution for the future better management of Woods and Forests, by payment of the gross income into the Exchequer, and requiring that estimates should be brought in for voting the necessary expenses, instead of leaving the department, as at present, "to receive and disburse their revenues and manage their own expenses, without being in any way submitted to the control of Parliament." The motion was brought forward in the present session in consequence of the Government bill on the subject of the woods, works, &c., having been abandoned in the last session without ever having been brought to a second reading, and no disposition having been shown by the Government to deal with the question this session up to the present period. On a division, Lord Duncan, in a House of 244, carried his motion by a majority of one

His Lordship married, on the 3rd of March, 1839, Julia, eldest daughter of Sir George Philip Bart, M.P. for Poole, and has by her three children, two sons and a daughter

Our Portrait is from a photograph by Kilburn.

INTERVIEW OF THE GOVERNOR-GENERAL OF INDIA WITH MAHARAJA GOOLAB SING.

(WITH ILLUSTRATIONS FROM SKETCHES BY LIEUTENANT G. HUTCHINSON, BENGAL ENGINEERS.)

GOOLAB SING. FROM A MINIATURE BY A PERSIAN ARTIST

In our Journal of Feb 22 we briefly recorded this interesting scene. We have since, by official courtesy, had placed at our disposal a series of Sketches of the meeting, by a clever officer of the Bengal Engineers, which we have the gratification to present to our readers. Accompanying them are the descriptive details of the state ceremony, abridged from the *Lahore Chronicle*.

On Sunday evening, December 22, about 4 P.M., Maharaja Goolab Sing reached the neighbourhood of the camp of the Governor-General, ground having been taken up for him and his attendants about two miles in advance of the cantonment on the right of the road to the town of Wuzeerabad

Brigadier Hearsey, C.B., commanding the station, accompanied by his staff; Mr. Montgomery, the Commissioner of Lahore; Mr. Edward Thomas, Under-Secretary; Mr. F. F. Courtenay and Major Ramsay, Private and Military Secretaries to the Governor-General, and two Aides-de-Camp, proceeded, with an escort of Irregular Cavalry, some distance in advance of the Maharaja's proposed camp, to which they conducted his Highness. On reaching the ground he was saluted with 19 guns from Captain Delamain's horse battery.

The Maharaja was attended by troops to the amount of about 2500 men, not presenting a very favourable idea of the vast army the Sovereign of Kashmeer was, in certain quarters, supposed to have under his command. It happened, unfortunately, that two of his said-to-be best regiments, those of Colonel Steinbach (who were on their way to join the *cortége* of their master, having learnt, on arrival at Shupeyoon from Kashmeer town, that a fall of snow, that lasted forty-two hours, had completely blocked up the Peer Punjal Passes), turned back in the hope of finding a better road in another direction. In attempting, however, to make their way through the Baneehal Pass, they were overtaken by a second snow-storm, and suffered a loss of from forty to fifty men. The detention they thus encountered prevented their joining the camp of Goolab Sing before he reached Serokee

The Maharaja had himself considerable difficulty in making his way from Kashmeer to Jumoo, snow lying in many places six and eight feet deep.

On the 26th of December, at about half-past three o'clock, the same officers who went to welcome the Maharaja on his first arrival, proceeded on elephants towards his Highness' camp, and conducted him to the Durbar of the Governor-General.

The following were the arrangements for the reception of the illustrious guest:—The Durbar tent, across the centre breadth of which the two principal rows of seats had been placed, on the right and left of the Governor-General's, in the form of a horse-shoe, was lined at the back by some troopers of the body guard; on the right and left, and along the interior front face, were placed the men of her Majesty's 32d Foot, on escort duty with the camp; the entrance was lined on either side by the Grenadier companies of her Majesty's 10th and 24th regiments of Foot. The Governor-General's band was placed at the southern end of the Durbar tent, and played during the whole of the interview Outside the tent were posted, first, a double rank, mounted, of the body guard; and infantry and cavalry troops forming a double line, not less than a mile in extent. Beyond its termination, the deputation were met by the Maharaja and his attendants, well mounted on elephants, that of the Maharaja carrying an elegant silver howda. The whole *cortége* then advanced in a body, and presented a highly picturesque sight, notwithstanding the dust raised by the crowds of footmen running in attendance on their Prince The effect was considerably heightened by the presence of many ladies, mounted on elephants, who marched with the line outside the street.

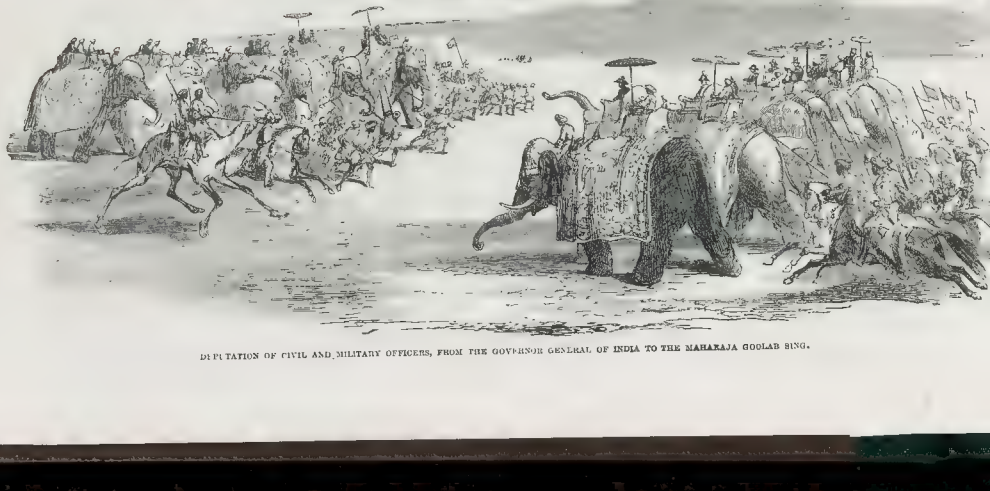
On the arrival of the Maharaja close to the end of the street of the vicereagal camp, at the angle mentioned above, Sir Henry M. Lawrence, the President of the Board, and agent to the Governor-General, as respects Goolab Sing and all other chiefs in and about the Punjab, accompanied by Major Burn, Deputy Secretary to the Board, proceeded on an elephant to receive his Highness, who was welcomed, on his alighting from his howda, by Sir Henry Elliot, the Secretary to Government with the Governor-General. The troops, a double line of which was drawn up along the main street, as above described, presented arms, and the artillery fired a salute of nineteen guns. On reaching the border of the carpet in the Durbar tent, his Highness was met by the Marquis of Dalhousie, who cordially shook hands with the old man, and conducted the Maharaja to a carved and gilt seat on his own right hand. Sir Henry Elliot took the right of the chief, and beyond him were seated Meer Runbeer Sing, the eldest son of the Maharaja, with Sirdars Juwahur Sing and Motee Sing, his nephews and

STATE HOWDAH, AND ELEPHANT.

sons of the late Raja Dheean Sing, and also Colonel Steinbach; on the left of the most noble the Marquis sat Sir H. Lawrence, Sir Walter Gilbert, Mr. John Lawrence, Brigadier Hearsey, Mr. Montgomery, Mr. Courtenay, Major Ramsay, and other aides-de-camp, and in the rear of the front row were at least 120 military, with a slight sprinkling of civil officers.

The Governor-General wore the full dress of a Minister of State, with the star, ribbon, and collar of the Thistle; Sir Walter Gilbert, Sir H. Elliot, and Sir Henry Lawrence also wore their several decorations Goolab Sing had on a showy turban with a green and gold choga, and green trousers. His beard was died black, and thus gave him the appearance of a man of fifty, though his age is above sixty

Immediately after taking their respective seats, the Maharaja, his sons and nephews, presented *nuzzurunas* or wave-offerings in cash to the Governor-General; while all the other attendants, who were not allowed seats, were called upon to make offerings, in the shape of *nuzurs*. A few minutes, taken up in conversation between the guest and his noble host, intervened; after which the presents prepared for his Highness, on the part of the British Government, were displayed. Those for the Chief consisted of an elephant, with a silver howda, of two horses, and forty-one trays of miscellaneous articles. The trays were brought and displayed in a double row on the floor before the Maharaja the Governor-General drawing his Highness' attention to those articles particularly deserving of notice. The peculiar feature of Oriental courts and manners were displayed in the presence of two accomtants, who, seating themselves on the carpet paper, pen, and ink in hand, proceeded to prepare an inventory of the fine things spread out before them on behalf of their lord and master. musical box, with a singing-bird, attracted the particular attention the Prince, who handed it at once to his confidential Minister, Dewa Joala Sahaie. The handsomest portion of the presents was a group silver, of two ancient knights, one of whom is falling, pierced by the spear of his enemy. When the whole of the offerings to the Maharaja had been brought in, the Governor-General rose, and receiving the ornments in succession from the hands of Mr. Thomas, Under-Secretary, whom they were passed by the Bengalese Treasurer of the Toshekhan tied on his Highness' head a very fine diadem of diamonds, placed a gochun round his neck, &c.; the Jumoo Chief, the Common Sowar thirty years past, standing all the while with his body inclined in attitude of submission.



DEPUTATION OF CIVIL AND MILITARY OFFICERS, FROM THE GOVERNOR GENERAL OF INDIA TO THE MAHARAJA GOOLAB SING.

THE RECEPTION IN FULL DURBAR, AT WUZEERABAD, OF THE MAHARAJA GOOLAB SING, BY THE GOVERNOR-GENERAL OF INDIA.

This ceremony concluded, to witness which the whole company stood up, the presents for the Maharaja's son and nephews were brought in respectively, in the same manner as before; his Lordship himself bestowing on each, and also on Colonel Steinbach, the principal articles of jewellery presented. The share of Runbeer Sing, the heir-apparent, was twenty one trays, while the sons of Raja Dheean Sing had each nineteen trays, the other attendants receiving *khelats* according to their rank in the Maharaja's service. The first on the list was Jowla Sahaie; after him came Dewan Hazee Chund, the general in chief of his Highness' army: on his receiving the *khelat*, Sir Walter Gilbert rose, and addressed a few words to the General, expressing a hope that such a solid peace and lasting friendship had been established as would render a collision extremely improbable. The speech was a pleasing one.

The distribution of the presents concluded, the interview was brought to a close by the ordinary Oriental fashion of presenting *pan*, after which the Maharaja took leave, being accompanied by the Governor-General to the centre of the carpet. He was further escorted by Sir Henry Lawrence and Sir Henry Elliot, to the spot where his elephant was in waiting, and to some distance from the camp, by the under-secretary and an aide-camp; a parting salute, also of nineteen guns, intimating to the assembled multitude that the ceremony of that day was concluded. The troops then returned to their respective quarters, and the meeting between the Maharaja of Kashmeer and the Governor-General of India had become a matter of history.

If we are to believe all the protestations of friendship, good-will, and gratitude made by his Highness on the occasion of this visit, the political result may perhaps be commensurate to the trouble bestowed on the show. The expense, it is observed in well-informed quarters, will not be an object of much consequence, seeing that the gifts of his Highness far exceed in value those of the Governor-General.

On the evening of the 26th, the Governor-General entertained a large party of the principal civil and military officers at dinner.

THE RETURN VISIT.

On the afternoon of Friday, the 27th of December, at three o'clock precisely, the most noble the Marquis of Dalhousie, attended by a brilliant staff, all mounted on elephants (twenty-one in number), proceeded in state, under a salute of nineteen guns, to return the visit paid him the day before by Maharaja Goolab Sing.

The procession was preceded and followed by detachments of the body-guard, commanded by Major Mayne.

The whole of the troops were out, and formed in line, as they had done the day before, from the camp of the Governor-General towards that of Goolab Sing, the troops of the latter being also paraded, and completing the line.

His Highness had deputed his son, Meer Runbeer Sing, and some sirdars, as far as the viceregal camp, to meet and escort the Governor-General; and himself came nearly a mile in advance of his own tents to receive and conduct his Lordship to his camp, showing a marked deference in the mode of reception, and establishing his inferiority in a decided manner in the eyes of the swarm of native lookers-on.

On alighting from his howda, which greatly eclipsed anything of the kind in Goolab Sing's *suwarree*, the Governor-General was conducted

THE GOVERNOR-GENERAL OF INDIA PROCEEDING IN STATE TO RETURN THE VISIT OF THE MAHARAJA GOOLAB SING.—THE CAMP AT KASHMEER.

into the Durbar tent by the Maharaja, who assigned to him a seat on his own right; while Sir Henry Elliot took his place to the left, the other British officers in attendance seating themselves on the right of the Governor-General. The Durbar tents were most tastefully arranged and, when all were seated, the Governor-General and the Maharaja at the top of a long vista of tents with full one hundred officers, in their glittering uniforms, forming a double line on either side, the spectacle must have been imposing.

The attendants of the Maharaja then presented *nuzurs*; and, after some conversation, during which Goolab Sing again pressed on the Governor-General his anxiety to see him in Kashmeer, an anxiety seemingly acknowledged by his cordiality, the Governor-General offered his presents to the Governor-General to be brought in. They consisted of fifty-one trays, with horses and elephants. The tribute-shawls of the year, intended for her Majesty, were in waiting, by the Maharaja's side.

After the offerings to the Governor-General had been disposed of, twenty-one trays were brought in for Sir Henry Lawrence, and twenty-one for Sir Henry Elliott; the other officers in attendance on the Governor-General also participated in the Highness's liberality, a list of their names having been previously sent to the Maharaja. Some *khelats* were further presented by his Highness; after which *attar* was served, and the Governor-General rose to depart. His Lordship was escorted, to the place at which his elephant was in waiting, by the Maharaja and by Meer Rumbeer Sing, to some distance from the camp. The Governor-General was saluted, both on his arrival and departure, by a discharge of twenty-one guns, and did not reach the own camp till nine.

On Saturday, the 28th December, the entire force at Wuzeerabad were paraded, under Major-General Sir Walter Gilbert, G.C.B., and Brigadier Hearsey, for brigade exercise, in the presence of the Governor-General and Maharaja Goolab Sing. The review concluded with the general salute, after which the Governor-General and the Maharaja returned to their respective camps, and the troops to their several quarters.

"It was a fine breezy morning," says another correspondent, "diversified with a few 'mare's-tails,' as seamen call the light floating clouds that portend wind. The hills, between this and Cashmeer, at not fifty miles off, with their sides covered with snow, added to the brilliancy of the scene."

We add a few special details by our obliging Correspondent at Wuzeerabad :—

PROCESSION OF THE GOVERNOR-GENERAL, &c.

In the left is shown Goolab Sing's camp, the large red tent being his Durbar tent. His troops are drawn up—foot soldiers on one side and horsemen opposite; artillery on the left, at entrance of camp. On the right of the picture is shown the end of the street from the Governor-General's camp, occupied by a portion of the 9th Lancers: and in the distance are the Kashmeer Hills, covered with snow.

THE DEPUTATION

The rabble running in front of Goolab Sing are shouting his titles, and are usually the advance guard of a native Prince. His *suwarree* behind is a medley of foot and horsemen: a few men on camels are seen; these have a European costume and the Albert hat: led horses bring up the rear. The Kashmeer Hills are seen in the distance, and Goolab Sing's tent on the right of the picture.

THE DURBAR

The Artist has illustrated that point of the interview at which Goolab Sing is listening to the Governor-General, in the respectful Oriental attitude, with clasped hands

The carpet in front of the Governor-General is covered with trays, containing shawls, silks, &c., which are laid out thus on presentation to Goolab Sing. Behind the Governor-General are attendants with wands of office, also two attendants with large fauces of peacocks' feathers. In rear of the attendants stand the body guard. The sides of the tent are lined with European soldiers. On the left, near the entrance, is shown a table, bearing a portion of the presents; a pair of massive silver candelabra, a solid silver stand, with circular trays bearing bottles and boxes, to contain essences of *otto* and other scents, also a silver equestrian group of two knights encountering. It is stated, in the *Cure Chronicle*, that they have been manufactured as a Doncaster Plate, some five or six years ago, and sold by the winner to some one connected with the firm of Messrs. J. Anderson and Co., at Simla, for 300 guineas. When the proposal for a Gilbert Cup was started, the group was offered to the Committee, but ultimately purchased by the Government of India for presentation, it is said, to Meer Alee Morad, of Khaipoor. The dissatisfaction induced at some of this individual's proceedings led to a change of the Governor-General's opinion, and it has found its way to the treasury of a more favoured guest than the Meer.

CALENDAR FOR THE WEEK.

SUNDAY, March 16.—Second Sunday in Lent. Battle of Colloden, 1746.
MONDAY, 17.—St. Patrick.
TUESDAY, 18.—St. Edward. Princess Louisa born, 1848.
WEDNESDAY, 19.—Le Brun born, 1648, died, 1690.
THURSDAY, 20.—Spring Quarter begins. Newton died, 1727.
FRIDAY, 21—Berkeley died, 1753.
SATURDAY, 22.—First Protestant charity school opened in England, 1688.

TIMES OF HIGH WATER AT LONDON BRIDGE,
FOR THE WEEK ENDING MARCH 22.

MR. JOHN PARRY'S ENTERTAINMENT.—MR. JOHN PARRY will give his NOTES, VOCAL and INSTRUMENTAL, on MONDAY and TUESDAY EVENINGS NEXT, at OXFORD; and on Monday, March, 24th, at Hertford; Tuesday and Thursday, 25th and 27th, at Cambridge; and Friday, 28th, at Lynn.

LOVE'S ENTERTAINMENTS, MUSIC-HALL, Store-street. Mr. THOMAS BARNETT'S ENTERTAINMENT of NATIONAL MELODIES EACH NIGHT MONDAY, MARCH 24, LOVE IN ALL SHAPES, with LOVE'S LABOUR LOST, with other Entertainments. On Wednesday, March 26, A VOYAGE TO HAMBURGH, to be followed by PAST TEN O'CLOCK and A CLOUDY NIGHT, with other Entertainments on Friday, March 28, the Performances will commence with LOVE'S INVOCATIONS. With VOCAL EXPERIMENTS, and other Entertainments. Grand Pianoforte, Camillo Celmar.—Particulars in Bills. Begin at Half past 8. Private Boxes, 31s and 15s.; Boxes, 3s.; Upper, 2s; Pit, 1s.; Back, 1s.—* March 26, at Blackheath; March 27, at Greenwich; March 31, at Woolwich, March 31, at Kensington, April 2, at Richmond. April 3, at Walsham, and April 4, at Stratford

DR. KAHN'S GRAND ANATOMICAL MUSEUM (never exhibited before) is NOW OPEN at his GRAND EXHIBITION ROOM, No. 312, Oxford-street, near Regent's-circus, from Ten in the morning till Ten in the Evening.—Admission, 2s each.

WONDERFUL, Amusing, and Astonishing EXPERIMENTS in the SCIENCE of ELECTRO-BIOLOGY, or the Electrical Science of Life, at the MARYLEBONE LITERARY and SCIENTIFIC INSTITUTION, 17, Edwards-street, Portman-square, every TUESDAY, WEDNESDAY, THURSDAY, and SATURDAY EVENINGS. By Mr. WARNE.—Admission Reserved Seats, 2s; Unreserved, 1s. Doors open at Half past Seven, to commence at Eight o'Clock

THE HIPPOTOMUS, presented to the Zoological Society by H. H. the Viceroy of Egypt, is exhibited daily at their GARDENS in the REGENT'S PARK, from Eleven till Four o'Clock. Visitors desirous of seeing the animal in the water are recommended to go early. Admission ONE SHILLING; on Mondays, SIXPENCE

TO CORRESPONDENTS.

ERRIE.—The select ale is good. Austria might be added. The arms are given in the "Heraldic Register," published by Charles, 1650

A READER HERE FROM THE START.—Hobson is a Gloucestershire family. Adams belongs to Northamptonshire, Warwickshire, Pembrokeshire, &c

O P Q.—The Roll of Battle Abbey Annotated," published a year or two since

CLIO.—It is no pencil.

PEGWELL.—Carnal, without a doubt research, sappy, the arms in question

G W R. If the widow of the overseer be the executrix of the late master, in possession any of the deceased's property, she will be liable for the deficiency to the extent of the assets she obtains. She is not liable for any deficiency in the testator's property left in his hands while

T C E.—On assuming the additional surname and arms of his wife, an heiress, the gentleman in question would be entitled to bear the same quarterly with his own, and the two crests

J F. 1. "The Officers in Waiting" are the Herald and Pursuivant, whose month of attendance it is. 2. Any of the Heralds can bind

W I T. Apply either personally or by letter, to Mr H Bohn, York-street, Covent-garden

WYNDERLAD.—Dr. Johnson's derivation of "Gas, a fine name, new coined," is "a chaldæan." Of Askaloy—"Arg a chev engr sa."

W W. Boxford—Box-tester is a corruption from Buffetier, and therefore, incorrect

INQUIRER.—Almost any Insurance Office will effect what you desire

A B. We think Mr. Field's series of Sailing Sea Boats would make Mill Engineering

FIFE-HILDEBRAND.—George Chalmers' "Caledonia"

A B C.—The marriage of a man with the child of his half-sister is not allowed

*** AN ANATEUR CONCERT IN THE HALL OF UNIVERSITY COLLEGE, DURHAM.—The Literature of the Entertainment is unavoidably deferred till next week; as also the continuation of "A Story of the Present Day."

BOOKS, &c., RECEIVED DURING THE WEEK.

The Scottish Inquisition.—Sketch of Marwara.—British Peasy.—Legends of the Commandments.—Four in the Indian Islands.—The Dreamer and the Worker. 2 vols.
MUSIC.—The Alicia Polka.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 15, 1851.

THE particulars which have reached this country on the subject of the new and serious outbreak of the Kaffirs at the Cape of Good Hope—few and imperfect as they are—are still sufficiently precise to make John Bull look and feel uncomfortable. A war has broken out, which threatens to be a difficult and protracted, and is certain to be an expensive, one. The colonists, it is alleged, are disobedient children; they will not take their fair share of the burden of that great Empire with which they desire to be associated. They will not receive our convicts on their shores. They protest against our authority, they snub our officials, and behave themselves in many respects in the most undutiful manner. They have been told by the Colonial Office, that, if such be their sentiments and their pranks, they need not for the future expect that England will pay for their wars with their neighbours in Kaffraria; and that if England fights for them under such circumstances, the colonists must pay the cost. The country, when it had to pay the last long bill for the Cape war, approved of this determination of the Government, chiefly because it is unpleasant to pay; but now that another war has burst forth in the same quarter, the country feels, notwithstanding the high tone assumed by the Ministry, that this bill also will have to be paid from the same source as the last. Lord John Russell states that Lord Grey has written to the Governor of the Cape, enjoining him to take care that no expense be incurred except such as the colonists themselves will undertake to pay; but it seems to us that all this is mere vapouring, unworthy of the Government. It is not consistent with our dignity to make threats which we cannot and ought not to carry into execution. The colonists cannot pay the charge; and, even if they could, we are not entitled on any ground of reason or justice to demand from them any more than a rateable proportion of it. The Cape colony is necessary to Great Britain for various weighty reasons. We must retain it. We cannot afford to let the colonists be massacred by their savage neighbours, as they probably would be, if left entirely to their own resources; neither can we afford to allow any other nation to come to their rescue, and assume thereby the sovereignty of the country. Besides, it must not be forgotten, when we talk of forcing the colony of the Cape of Good Hope to pay the expenses of this new war with the Kaffirs, that British Kaffraria is not the Cape. As Mr. Adderley reminded the House of Commons on Monday night, Kaffraria is altogether a separate British possession, under a separate administration, and neither politically nor fiscally connected with the Cape. Its liberty is the duty of the mother country, on its own cost, to maintain tranquillity in Kaffraria and along its frontier, and to prevent the savage Kaffirs from taking the lives and destroying the property of the inhabitants of that colony and the adjoining colony of the Cape. It is doubtless much to be deplored that such an expense should have to be incurred at this moment, when the country is expecting a relief from the overwhelming pressure of taxation upon its industry; but, inopportune, disagreeable, and mischievous as this state of things may be, Government has no right even to talk of punishing the Cape for its misfortune in having such neighbours. To vent spite against a disobedient colony, which might, perhaps, have been obedient if justice had been done it, and if the free institutions which it desired had been granted it in proper time, is not only unworthy of the servants of the Crown, but will not be submitted to by the nation. We have enormously enlarged our frontiers, pushing them on to the interior of Africa—a very questionable policy—but having done so, we must take the consequences. Our authority must be maintained against the Kaffirs—the war must be vigorously carried on, so that speedy peace may be the result. Whatever the cost may be, we must pay it. The only other alternative is to abandon both Kaffraria and the Cape—an alternative which the Government is not likely to suggest or the country to submit to. What we have to do in the Cape is to make it more contented and a prosperous country, by giving it the right of local self-government which it demands, and thereby enabling it to extend its resources, and to enter into such a fair understanding with this country relative to the widely-extended northern frontier towards Kaffraria, as shall be effective for the purpose, and prevent all further disputes between Great Britain and her colonial possessions.

COURT AND HAUT TON.

THE COURT AT OSBORNE PALACE.

The Queen and Prince Albert, accompanied by the Prince of Wales, Prince Alfred, Prince Arthur, the Princess Royal, the Princesses Alice, Helena, and Louisa, and attended by the Viscountess Canning, Hon. Amelia Murray, Colonel Hon. Charles Grey, Lieut.-Colonel Hon. A. Nelson Hood, Colonel Bouverie, and Mr. Birch, left Buckingham Palace at twenty-five minutes before ten o'clock on Saturday morning, for Osborne, Isle of Wight. The august party left the Palace in six carriages, escorted by a party of the 16th Lancers, and proceeded to the Nine Elms station, travelling by a special train on the South-Western Railway to Gosport, where her Majesty embarked in the Royal Victualling Yard. The *Fairy*, followed by the little *Elfin*, ran through Spithead, dressed in a beautiful style, and here her Majesty was greeted with a salute from the heavy guns of the *Cumberland*, 70, Captain Seymour, which was tastefully dressed out in colours. To the officers and ship's company of this vessel, it was, no doubt, a deep gratification to be able to pay this, their last act of homage to their Queen, previous to proceeding on a three years' absence, as flag-ship of Vice-Admiral Seymour, on the North American station. Her Majesty arrived at Osborne-House a few minutes past one, at which time the Royal standard was hoisted from the tower.

On Sunday, her Majesty and the Prince Consort, with their Royal Highnesses the Prince of Wales and the Princess Royal, attended divine service at Whippingham Church. The Rev. Mr. Protheroe officiated.

The Royal family took out-of-door exercise daily when the weather permitted.

The Marchioness of Douro has relieved the Viscountess Canning as Lady in Waiting to her Majesty.

THE QUEEN'S COURT, &c.

On Friday (last week) her Majesty held a Court and Privy Council at Buckingham Palace. At half-past two o'clock a deputation from the corporation of the city of Dublin had the honour to present an address to her Majesty, on the subject of the abolition of the office of Viceroy of Ireland, to which her Majesty returned a most gracious answer. The Lord Mayor of Dublin had the honour of being presented to kiss hands on the occasion.

MARRIAGE IN HIGH LIFE.—The marriage of the Hon. Henry William Parnell, brother and heir-presumptive of the present Lord Congleton, with the Hon. Caroline Matilda Stewart, eldest daughter of Lady Elizabeth Dawson, and one of the Maids of Honour to her Majesty, was solemnised on Tuesday at St. George's Church, Hanover-square, in the presence of a very numerous circle of the relatives and friends of both noble families. The ceremony was performed in a very impressive manner by the Bishop of Ripon, assisted by the Rev. H. Howorth. At its close, the happy couple left the church in a travelling-carriage and four, *en route* for Cobham Hall, the seat of the Darnley family, in Kent.

COUNTRY NEWS.

PROTECTION.—On Tuesday, at Newmarket, a public meeting, under the presidency of the Earl of Hardwicke, Lord-Lieutenant of the country of Cambridge, was held for the purpose of taking into consideration the evils resulting from and the operation of Free-Trade legislation. Upwards of 1500 persons were present, of whom the vast majority were tenant-farmers, the remainder consisting of tradesmen of the town and neighbouring villages, and a large number of agricultural labourers. Resolutions, strongly demanding from Parliament redress of the grievances alleged to be inflicted on the landed interest by the operation of Free Trade, together with petitions to both Houses, embodying their complaints, were agreed to on the occasion.

MACKEREL FISHERY.—The boats employed in taking this description of fish at Devonport have been most successful during the commencement of the present season. Last week 135 tons were despatched by the South Devon Railway. On Saturday, Sunday, and Monday 46 tons were sent off, and about 60 tons on Tuesday. Besides those forwarded for inland consumption, several of the French vessels waiting to purchase have been fully freighted, and have gone across the Channel. The fish were very fine; prices ranging from 9s. to 18s. per cwt.

COLLISION AND LOSS OF LIFE.—We regret to have to record another of those casualties which will go far to render the present season memorable in the annals of steam navigation on the Clyde. The screw-steamer, *European*, Capt. M'Kinnon, sailed on Saturday at midnight for London, and when off the Cloch, about one o'clock, was run into by the screw-steamer *Castlehill*, of Bangor, from Holyhead to Glasgow, laden with lime, which went down almost instantly from the violence of the collision, and one of the crew met an untimely death. The night was dark, with strong breezes from the south-west, and the unfortunate schooner only remained above water for about four minutes, when she went down, leaving her mast sticking in the *European*'s rigging, and her crew, which consisted of the master and three men, struggling in the water. The steamer's boats were instantly got out, and three of the men picked up, but the fourth, named Lewis, was never seen. The master of the schooner, who was one of the survivors, states that his vessel bore no light, as he had caused it to be taken in when past the Cloch, imagining that he should meet no more steamers or other vessels at that time of the night. The crew were engaged in taking in the foresail, which prevented them from seeing the steamer's lights, and when they were observed, the master states that he lost self-possession, and gave the usual order to port the helm, which had the effect of throwing her right across the steamer's bows. The *European* did not suffer much damage.

DEATH FROM TIGHT LACING.—Last Monday, Mr. Grindon, coroner for Bristol, held an inquest in that city on the body of a young female, aged 23, whose death was caused, or at least much accelerated, by the pernicious practice of tight lacing. The coroner directed that a very careful *post mortem* examination should be made; and the medical testimony clearly showed that the deceased was perfectly free from disease, and that there was no visible cause of death except the compression of the stomach and viscera from tight lacing. The jury returned, as their verdict, that death was caused by idiopathic asphyxia, hastened by tight lacing.

FORGERS EXTRAORDINARY.—At Rochdale petty sessions, Mr. John Whitaker, a respectable-looking man, aged fifty-eight years (brother-in-law of the late John Fielden, Esq., late M.P. for Oldham), was committed for trial at Liverpool, on the charge of having paid forged Bank of England notes at Todmorden, Burnley, and other towns. When taken into custody, he had upon him £220 in forged notes, namely, thirty-six £5, and four £10 Bank of England notes. Joshua Butterworth, a dealer in wool, charged with a similar offence, has also been committed for trial. The prisoners were found upon him one £10 and two £5 forged notes. Several other persons, residents of Rochdale, Littleborough, and Todmorden, who are supposed to have been carrying on a similar business, and are connected with the prisoners, have absconded, but the police are making great exertions to apprehend them. The notes are said to be excellent imitations.

FOREIGN REFUGEES IN LIVERPOOL.—During the week, meetings have been held at Liverpool, to explain to the Polish and Hungarian refugees lately arrived there from Turkey, that the Government would provide them with a free passage to America; and that temporary means of support, until they should get employment, would be furnished them on their arrival there; but on Wednesday only 30 signified their intention of availing themselves of the offer of the Government, the majority preferring to remain in this country, where they are little likely to find the means of support.

THE YARMOUTH RIOTERS.—The five sailors, who were committed by the magistrates a week or two back, for being concerned in the riot at Yarmouth, have been tried before the Recorder, at the quarter sessions in that town. The prisoners were identified by the police as having been actively engaged in the riotous proceedings, but several witnesses for the defence, nearly all of whom were sailors, spoke stoutly to the peaceable demeanour of the accused on the occasion of the jury acquitted them. The Recorder expressed his dissent from the finding of the jury, and discharged the prisoners.

THE RECENT BURGLARY AT UCKFIELD.—On Wednesday, at Lewes, on the Home Circuit, the men who, at the close of December last, broke into and robbed the house of the Misses Farncomb, at Uckfield, in Sussex, of bank notes, plate, and other property, to the amount of £360, were tried before Lord Chief Justice Jervis. Their names were William Brooks, John Smith, James Smith his brother, Thomas Morgan, William Hillyer, and Joseph Carter, and they were all of the humblest labouring class. At the same time, Elizabeth Oliver was charged with feloniously receiving a portion of the stolen articles, knowing them to have been stolen. The circumstances of the case were published at the time, and it is unnecessary, therefore, to repeat them. The prisoners were found guilty, and sentenced—the men to transportation for life, the woman to transportation for fourteen years.

METROPOLITAN NEWS.

MEDICAL SOCIETY OF LONDON.—On Saturday last, the 76th anniversary of this society was held at the Alfeion Tavern, Aldersgate-street. There was a numerous attendance of the Fellows to hear the oration of Dr. Rowland, and to witness the award of the annual medals and a purse of coffee, in order to compete with the less scrupulous and fraudulent dealer (I presume) who, that a very serious and unnecessary loss is thus caused to the revenue, the deliveries of coffee in the year 1850 having been 6,343 lbs less than in the year 1849, while the consumption of every other article of large and general use has materially increased.

Considerable surprise from the petty retail dealers ensued on the reading of this resolution, and the proceedings throughout were characterised by noisy interruptions. The advocates for adulterated coffee moved an amendment, in a sense contrary to the resolution, but it was rejected, and the original resolution was carried. The following resolutions were also agreed to:—

That, in the opinion of this meeting, the lower class of consumers of coffee in this country pay a much enhanced price for what a supplied to them under the name of coffee, and are not the power to protect themselves from imposition, the practice of adulterating coffee with various deleterious ingredients being so general, as to be almost universal.

That, in the opinion of this meeting, it is highly impolitic, as establishing a precedent fraught with serious evils, to legalise the adulteration of articles of consumption, which can and low-priced substitutes to be mixed with and vended under the name of the genuine tax-paying article; and does not the only existing instance of adulterating coffee carried on under the authority of Government sanction, prosecutions having been recently instituted by Government against persons for adulterating tea, which is produced and sold under the same authority of Parliament.

That, while we admit that the operations of the said Treasury minute this conclusive evidence of opinion that it is a serious and unmixed evil, being, as it is, partly to favour the honourable honest dealer the grower and importer, the revenue, and the consumer; the latter, for whose benefit it was originally framed, being the only party that has not approved.

That the chairman of this meeting be empowered and solicited to seek an interview with the First Lord of the Treasury and the Chancellor of the Exchequer, to the view which the Council of this Society will so pleased to receive a deputation, who will wait upon them for the purpose of expressing upon their lordships the various and important facts connected with the subject, which this meeting has been led to urge upon Government the adoption of prompt and effective measures for the remedy of the grievance.

WESLEYAN REFORM.—A public meeting of the London district of Wesleyan reformers took place on Wednesday evening at St. Martin's Hall, Long-acre. Mr. Joseph Child, who occupied the chair, in opening the proceedings of the meeting, said that they had representatives from the various districts, consulting as to the best mode to be adopted for forwarding the Wesleyan Reform movement, and he was happy to say that the cause was progressing fast and blessed amongst them, and they were all anxious to come forward to promote the great object in view. (Hear.) The funds of the society were in a very prosperous state, and all the preachers were actively employed in carrying out their various duties in a most exemplary and becoming manner, which their progress sufficiently evidenced. There were in connexion with the reformers 48 chapels, 46 preachers (ten on trial), 194 leaders, 168 class meetings, and 2238 members. Mr. Chipchase moved that this meeting was desirous of recording its gratitude to "Head of the Church" for the signal success that had attended the movement for promoting the cause of Wesleyan Reform. Mr. Leak seconded the resolution, and said that he considered the Wesleyan ministers were assuming sacerdotal functions to an extent they were not aware of. As far as he himself was concerned, he was opposed to a priesthood in a church, as it led to a misinterpretation of the scriptures and the direction of the sacred word from a general to a particular application. In the speeches having made few remarks in favour of the resolution, it was carried unanimously. Several gentlemen addressed the meeting at some length, and a resolution was passed, pledging the meeting to support, with increased energy and zeal, the Wesleyan reform movement in favour of Wesleyan reform. A collection was made in aid of the funds

SCHOOL FOR THE INDIGENT BLIND.—The annual meeting of the governors of this charity was held on Thursday, at the London Coffee-house, Ludgate-hill; Lord Radstock in the chair. The report showed that the total receipts for the year had amounted to £4,797; and in the printing and the sale of goods manufactured in the school. The ordinary expenses had amounted to £705 16s. 7d., and the extraordinary expenses for new buildings and repairs to £594. In addition, a considerable sum had been paid for the rent of £242 had been consumed in the house. It is also stated that several remarkable specimens of the ingenuity of the pupils, the number of whom now amounts to about 150, were exhibited. The report was adopted, and the usual routine resolutions passed.

ARCHITECTS' BENEVOLENT INSTITUTION.—On Monday, the first annual meeting of the members of this institution took place at the Freemasons' Tavern, Great Queen-street, Lincoln's Inn-fields; Mr. Sydney Smirke, the president, in the chair. The report of the proceedings of the society since the 27th November last, when the society commenced its legal existence, the council had been chiefly occupied in the preparation of the bye-laws, upon the fitness and efficiency of which the stability of the institution mainly depended. The rules and bye-laws, they had invited themselves of analogous societies, more especially of the "Artists' Benevolent Institution," and also of the rules of those of the present institution. The treasurer's statement of the accounts was extremely satisfactory, considering the very short time the society had been in existence. The receipts during the year had been £1,000, including subscriptions in such a position, that, though they had invested £500, a fair balance still remained to meet the charitable purposes of the society. The total amount of receipts to the 31st December 1850, was £587 8s.; and that of the expenditure £30 3s., leaving a balance of £307 5s. During the present year this balance had been increased to £360, which had been still further augmented by subscriptions and donations announced at the meeting.

FISHMONGERS' AND POULTERERS' INSTITUTION.—On Tuesday evening, about eighty gentlemen assembled at the Albion Tavern, Aldgate-street, to celebrate the fifteenth anniversary festival of this institution. From the report, it appeared that the charity was established in the year 1836, with the view of affording relief to distressed members of the trades, and also for the purpose of providing them with permanent residence and pensions. For some time the operations of the society were confined to the relief of members of the trade of the manager, and to a considerable extent, no less than two hundred and twenty-two applications having been made for assistance in various parts, amounting in all to nearly £1000. Within the last fifteen months the chief object of the society had been accomplished by the exertions of the committee, in the purchase of a piece of freehold ground, and in the erection on it of seven cottages, at Wood-green, near Hornsey. Already had seven individuals reaped the benefit of this establishment, and were now in the receipt of weekly allowances of half a guinea, together with a plentiful supply of fuel. The amount of subscriptions announced during the evening was £300.

RAGGED SCHOOL UNION.—On Wednesday evening the annual meeting of the Westminster Juvenile Refuge and School of Industry was held in the lower room, Exeter Hall.: Lord Ashley, M.P., in the chair. The report stated, that during the year 170 candidates for admission had been examined by the visiting committee: 32 were not considered eligible; 11 withdrew after being accepted, did not avail themselves of the opportunity afforded to them. The remaining 127 had entered the institution, many of whom were so extremely destitute of friends and means, as to render it absolutely necessary to provide for them lodging in addition, as well as food and instruction. In some cases, the luxury of a bed in a room had not been enjoyed for six or eight months prior to admission. The whole of the apprentices referred to in the last report were still going on satisfactorily to their masters. Other boys had been apprenticed to respectable working tradesmen, and were likely to become good mechanics. The youths who had emigrated to the colonies occasionally sent home letters of a pleasing and satisfactory character, and their statements were sometimes confirmed by letters received from respectable residents in the colonies. Fourteen boys and girls had emigrated during the past year. There had been added to the industrial employments in the boys' school, knitting, netting, turning, and brush-making, and a profit of £21 had already arisen on the work executed. The majority of the boys had been employed either as tailors or as shoemakers. The improvement of the girls in cleanliness and other virtues was manifest, and at the department there had been 225 garments made, and 280 others repaired and altered. During the year 44 girls had been admitted, and 37 had left, 69 had gone to service, two to needlework, four had emigrated to the colonies, two had left to sell in the streets, seven had returned to the workhouse, four to other schools, and five had run away, but of these not yet ascertained. The committee were in treaty for some new and spacious premises near the Park, the lease of which would cost £300, and which were designed to form a ragged school emigrants' home for children from all parts of the metropolis The expenses of the year amounted, including a balance of £30 12s. 3d., to £768 11s. 6d. The receipts had come chiefly from two sources —from a lady, whose beneficence on former occasions had been the means of continuing the institution for the present year, and from the subscribers to the Ragged School Union, who had advanced upwards of £300, so that a very small portion of the sum expended had been contributed by the public generally.

MEETING OF SEAMEN.—The adjourned meeting of the London seamen was held on Monday night, in the Temperance Hall, Princes-street, Ratcliffe-highway, for the purpose of receiving the reply of the Board of Trade to a memorial praying the withdrawal or the suspension of the objectionable parts of the Mercantile Marine Act. Mr J. Kavanagh presided, and it appeared that the Board of Trade had returned an unfavourable answer to the memorial. Under these circumstances the meeting considered what course should be adopted; and, after several speeches, it was resolved to petition Parliament for the repeal of the act.

THE ILLUSTRATED LONDON NEWS.

NEW HOSPITAL FOR KING'S COLLEGE.—The corporation of King's College intend making application to Parliament in the present session, for a bill to authorise the purchase of the old burying-ground of St. Clement Danes, in Portugal-street, Lincoln's Inn-fields, and to erect thereon a new and enlarged hospital, to accommodate an additional number of patients.

LEARNED SOCIETY OF ALEXANDRIA.—On Monday, a wardmote was held in the ward of Cornhill (the Right Hon. the Lord Mayor in the chair), when, Messrs. Nicol and Hodgkinson having resigned, Mr. Carter was unanimously elected an alderman, in the room of Sir John Pirie, Bart., deceased.

EASTER VACATION.—ORDER OF COURT.—"Whereas, by the first article of the General Orders of the High Court of Chancery, of the 8th day of May, 1845, it is provided that the Easter Vacation is to commence and terminate on such days as the Lord Chancellor shall, every year specially direct: and whereas, Easter Week, or a period equal thereto, has usually been observed as a vacation in the several offices of this Court: and whereas, Easter Week will, within the present year, fall within Easter Term, his lordship doth order, that the Easter Vacation, for the present year, shall commence on Monday, the 31st day of March, and terminate on Wednesday, the 9th day of April next, both days inclusive; and that this order be entered with the Registrar, and set up in the several offices of this Court."

EASTERN COUNTIES RAILWAY.—The committee appointed at the special meeting of this company on the 12th ult., to consider the working agreement entered into by the directors with the Eastern Union and Norfolk Companies, issued their report on Thursday. The committee state, that, after deliberate consideration, they have arrived at the conclusion "that the terms of the proposed agreement are not based upon an equitable regard for the interests of the Eastern Counties Company, and they therefore strongly and without hesitation recommend to the shareholders that they do not confirm the proposed arrangement."

NEW HIPPODROME.—The Royal Commissioners have received innumerable applications from theatrical and equestrian managers, &c., for permission to erect in Hyde-Park temporary theatres, circuses, shows, &c., during but the Executive Committee have positively refused all such requests. Among other managers who petitioned the board was Mr. Batty, the lessee of Astley's, for a site in the park for the erection of a temporary hippodrome, after the style of the celebrated one in the Champs Elysées at Paris, but on a more extended scale, and for which privilege he would contribute to the funds of the Commissioners 500 guineas, but the offer was declined. Mr. Batty has since become lessee of an extensive plot of ground, admirably adapted for the purpose, at Kensington, near to the Kensington turnpike, and within a few minutes' walk of the Crystal Palace, where a large number of workmen are now actively employed on the works; and from the estimates, models, and plans furnished by the architects, surveyors, builders, artists, and others, it would appear that it would be completed will cost little less than £6000. It will, it is understood, be opened by Mr. Batty, on the last of May, the day appointed for the opening of the Exhibition

CHEESEMONGERS' BENEVOLENT INSTITUTION.—The annual meeting of this society took place on Tuesday at the London Tavern; Mr. Edward Hewitt in the chair. The report stated that since the formation of the society, 67 individuals—61 men and 6 women—had been placed on its books, of whom 30 had died. At the present time there were 12 males and 18 females remaining on the funds, which, with the two elected that day, made a total of 32, the payments to whom would be £241 6s. 8d. per month, and £616 per annum. The total amount distributed in pensionary relief and donations to the families of deceased pensioners, since the formation in 1836, was £5049 10s. 6d. The funded property of the institution amounted to £7449 16s. 1d. During the past year Miss Ann Dennis had bequeathed certain cottages and lands, situated at Clay-hill, to be occupied by such poor persons as the trustees and directors might think deserving. They were concerned to state that during the past year they had been obliged to trench upon the funded property of the institution, as the pay in pensionary relief had exceeded the amount and teadrest for that purpose. The receipts for the past year amounted to £830 9s. 10d., and the expenditure to £691 8s. 8d., leaving a balance of £130 1s. 2d. The report was adopted.

THE SEAMEN'S HOSPITAL.—On Wednesday evening the thirteenth anniversary festival of the Seamen's Hospital in the Society of Shipowners was held at the London Tavern, Earl Hardwicke in the chair, his Lordship being supported by Mr. Alderman and Sheriff Carden, Mr. Sheriff Hodgkinson, Sir J. L. Lushington, Admiral Berkeley, Captain Fitzroy, R.N., Captain Fox, Rear-Admiral Walker, Gordon, and Macpherson; the Russian, Prussian, and Danish Consuls, &c. The object of the charity is the maintenance of the *Dreadnought* Hospital, off Greenwich, for the reception of the sick and wounded seamen of the mercantile service. From the report laid upon the table, we gleaned that from the date of its establishment, its patients had numbered no fewer than 68,316; comprising—Englishmen, 37,322; Scotchmen, 1736; Irishmen, 5029; Frenchmen, 535; Germans, 841; Russians, 789; Prussians, 1233; Danesmen, 260; Danes, 849; Swedes and Norwegians, 2018; Italians, 873; Portuguese, 404; Spaniards, 287; Asiatic Indians, 1046; West Indians, 1088; British Americans, 859; United States, 1173; South Americans, 127; Africans, 374; Turks, 16; Greeks, 80; New Zealanders, 20; New South Wales, 31; South Sea Islanders, 12; Lascars, 1; and Chinese, 1. These had been employed in the Royal Navy, 3.01; in the East India Company's Service, 1797; and in merchant vessels of different nations, 58,447. The number of patients admitted into hospital during the year was 3,238; of out-patients, 1658; total, 3623. The receipts during the year had been from donations, £1458 6s. 2d.; subscriptions, £1062 2s. 6d.; interest on stock, £2775 8s. 6d.; percentage of merchant seamen's money received, £1 2s. 6d.; fines at the port of London, £507 3s.; penalties and forfeitures under 7 and 8 Vic., cap. 112, £344 4s. 9d.; ditto, under 8 and 9 Vic., cap. 116, £25; bequests, £1294 0s. 10d.; [illegible] 9d.; total, 8563 14s. 6d. The disbursements during the year had been [illegible] 7s. 1d.; donations, £32 10s.; invested, £ 082 2s. 1d. Subscriptions amounting to £814 were announced during the evening.

SEIZURE OF FOUR THOUSAND GALLONS OF WHISKY.—A seizure of considerable magnitude has just been made, by order of the Commissioners of Inland Revenue—viz. of 24 puncheons of whisky, 30 to 40 gallons each over proof, and amounting in the gross to 4000 gallons, at Downe's Wharf, East Smithfield, at which place it had recently arrived by one of the trading steamers from Scotland. Mr. Thomas Brain, the gauger acting under the orders of the officer to Downe's Wharf on the arrival of a steamer from Scotland, and on overhauling the cargo, found 24 puncheons of whisky. As the exporters are required to mark on the outside of each cask the precise contents, he felt sure that in each one of them which he gauged was properly marked, and determined upon having the same measured. The result was, that the contents of the cask were found to be from 9 to 4 quarts more of spirits than had been represented. This discovery led to a further investigation, which proved that a systematic fraud had been committed, as every cask was found to contain more than the declared quantity. He accordingly placed the entire stock under seizure, and communicated to the Commissioners of Inland Revenue upon the subject, who ordered the removal of the spirits to Queen's warehouse, Tower-hill, and which has been returned to the Court of Exchequer for condemnation. Proceedings will also be instituted for the recovery of penalties to the amount of £1000. In consequence of the large quantity of spirits thus seized, the order has been issued to the commissioners that, from henceforth, all spirits arriving in the port of London shall be measured instead of being gauged by calipers as heretofore

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, March 8:—Males, 1936; females, 1851; total, 3787. Deaths during the same period—Males, 882; females, 665: total, 1247. The average number of births for the six corresponding weeks in 1845-50, was 1412. This return of the amount of the mortality exhibits an unfavourable state of health among the population of the metropolitan districts. It was formerly shown that the mortality rose in the third week of February to 1218 deaths, and slightly declined in the subsequent week, when the number was 1195; but the deaths registered last week, as shown above, amount to 1247. Taking the ten corresponding weeks of 1841-50 for comparison, no example occurs in the series of so great a mortality: the highest return (in the third week of 1845) has but 1141, while the average did not exceed 1001 deaths. This average, with a corrected increase for annual rate of increase of population, is 1078 in 1851; and 307 deaths returned for last week show an excess of 155. Last week 670 children died under fifteen years of age, whilst the corrected average is only 478; 372 persons died at fifteen years and under seventy, while the average is 361; and 203 persons of sixty years and upwards died, though the average is only 229. Hence it appears that the young and persons in advanced life are now the principal sufferers. The excess last week on the previous week is 155, and principally due to diseases which effect the organs of respiration. Hooping-cough carried off 70 children, considerably more than usual at this period; bronchitis 61 persons; and various pleurisy to one corresponding week. Among the greatest number in any corresponding week was not more than 95, asthma, 10 persons; laryngitis and laryngismus stridulus, 8; croup, 13; influenza, which is increasing. Phthisis, the great destroyer of the human race, killed in 90 cases, a great majority of which were among children; but the number attributed to this cause is not remarkable. Consumption destroyed 154 lives, which, with one exception, is a greater number than in any other corresponding week. The zymotic class, besides hooping-cough, croup, and influenza, already mentioned, comprises small-pox and measles, both of which are more fatal than usual; also scarlatina, typhus, and other complaints, which discover no remarkable results. Two cases of cholera are recorded, of which the following are the particulars:—At 11, Douglas Gardens, St. John, Westminster, on the 6th March, the son of a journeyman painter, aged 6 years, died of "sporadic cholera (2 days' illness)." And at 9, Anchor-yard, City-road, on the 1st March, the wife of a general dealer, aged 53 years, "diarrhœa (1 day), cholera, low fever (4 days)." With references to 26 cases, in which small-pox proved fatal, it is recorded only in three, these of females aged respectively 7 months, 1 year, and 24 years, that vaccination had been performed at some previous time. The daughter of a carpenter, aged 12 years, died on the 1st March, at 29, Emma-street, Hackney-road, of "confluent small-pox (26 days)." Inquiry reports that this is the third death from the disease which has occurred within a month in the same house, and that the house is situated before a tenant pond. On the 2nd of March, at 2, Hemmingford-terrace, Islington, a gentleman died of bronchitis and natural decay, who is stated to have arrived at the extraordinary age of 106 years, and to have enjoyed the possession of all his faculties till the last

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer was above 30 in. on Sunday and Monday; the mean of the week was 29 890. The mean daily temperature was on each day rather below the average of the seven days in ten years, except on Tuesday and Wednesday, when it slightly exceeded it. The mean of the week was 39 4.

THE THEATRES.

HAYMARKET.

A new candidate for the highest histrionic honours appeared on Saturday—Mr. J. William Wallack, son of Henry Wallack, and nephew of James Wallack. The gentleman has matriculated on the American stage, and achieved there, we understand, a great reputation. The boards of the United States have now furnished several powerful performers; and, if we may judge from the present example, it will be well for us to look to them as schools of acting, now that our own provinces are deserted. The English towns are at present rather the arena for talent that has culminated, than for that which seeks experience. Mr. Wallack made his *début* in *Othello*. The actor is a man of stalwart proportions, of magnificent height, a commanding presence, and a slow and graceful deportment. Nevertheless, in his style of acting there was no affectation of the heroic; but we saw at once that his *Othello* was after a familiar and domestic type. Even the oration before the Senators was delivered conventionally; and the quarrel scene in the court of guard was decidedly undertoned. In touches of tenderness, however, both were made to render tribute where possible. Desdemona, I love thee; but never more be officer of mine," received natural distinction in this way. We were, therefore, prepared for this quality of art, and expected instances which, if the more passionate bursts were safely weathered, would ensure general success. We were not disappointed

Mr. Wallack's third act is the most original on the stage. The reading and conception are new; the execution has nothing conventional, and the passion is at once true and natural. In the *jeu* passages of the dialogue Mr. Wallack is free and graceful, in the more poetic he rises into musical emphasis, and in the passionate he surrenders himself to the whirlwind with the confidence of one skilled to ride and control it. But it is in pathos that he excels: his very anger melts into tenderness; and his fury at its height, effervesces into play. With this, too, Mr. Wallack unites the appearance of great simplicity of character. His *Othello* seems to be a child in the hands of the rompter, so unsuspecting is he, so inexperienced, so thoroughly innocent—such an amiable "gull" and "dolt" as he might have appeared in the eyes of *Iago*. Such, we say, is the conception of his character, and, if we mistake not, Mr. Wallack's performance abounds with novel points and beautiful inventions. But it is not free from faults: tricks and transitions of voice, with repetition of words, are vices of which he must cure himself as speedily as possible. He should also trust more to the onward flow of the passion, and not pause in his lines for the mere sake of effecting some verbal subtlety. This serves to distract attention and interrupt sympathy. Despite these drawbacks, however, Mr. Wallack's *Othello*, we must confess, gave us much more refined delight; and we feel a strong desire to see him in another character, that, upon more advised search, we may arrive at an ultimate determination. With the audience, Mr. Wallack was decidedly successful: with the critics, and professional, the originality of his performance naturally induced a difference of judgment. In the end, it will conduce to his triumph. For our own parts, our impressions and anticipations are of the warmest. We are certain Mr. Wallack is a good actor, and we believe that he is a great one.

HER MAJESTY'S THEATRE.—Mdlle. Caroline Duprez, accompanied by M. and Madame Duprez, reached London on Thursday. Calcolari, a new singer from Florence, and Formes, are already at their posts. The season will be inaugurated with the "Lucia di Lammermoor," in which Mdlle. Duprez will make her *début*. Auber's grand opera of "Gustave," which is in active preparation, will afford especial interest from the union of Mdlle. Duprez' performance of the *Page* with the *Madame Ankerstrom* of Florentini. All the arrangements of the theatre will, we presume, be combined in the production of Auber's new work. A general rehearsal has already taken place of the new "Le Nozze di Figaro," in which Amalia Ferraris will appear. The effect of the groupings, and the quaint picturesqueness of the costumes of Louis XV., were greeted with considerable applause by the favoured few who were present. The opening night is fixed for Saturday, March the 22nd.

MRS. FANNY KEMBLE will resume her "Readings of Shakspeare," at the St. James's Theatre, on Monday, the 24th inst., and will continue them every Monday, Wednesday, and Friday evening, until Easter

MR. REED announced, on Wednesday evening, a series of lectures explanatory of the subjects connected with the Great Exhibition. They are said to be delivered under the patronage of Prince Albert. Dr. Reed's first lecture was simply introductory, and consisted of general observations on art, science, laws of nature, and the purposes of the Exhibition itself. The utility of this course is not to be questioned, and there is reason to believe it will be successful

ELECTRO-BIOLOGY.—Mr. G. W. Stone, from America, has commenced a series of experiments in what he calls Electro-Biology, at the Marylebone Institution. We witnessed one of his lectures on Wednesday. The results, however, were not very successful, the greater part being taken from among the audience, and tested for the first time, were identical with those of mesmerism in general, and hypnotism in particular. Mr. Stone, however, tells us that his is a different science; Mesmerism being dependent on "animal magnetism," and Electro Biology on "impressions." The latitude process is peculiar. The patients are required to look for a quarter of an hour at a small coin of zinc, with copper in the centre, and a certain effect being produced on the nervous centre of the eye, they are then in the operator's power. Out of more than twenty gentlemen tried on Wednesday, the subjects were three or four at first; and with only one was Mr. Stone successful in any great degree. However, the phenomena produced were sufficient to prove the reality of the method, and there was no room to doubt the influence of the system.

DR. KAHN'S ANATOMICAL MUSEUM.—This museum, exhibited at 315, Oxford street, consists of an extraordinary collection of subjects, showing the progress of life from the embryo of two weeks to the last stages of decline and decease, and the appearance after death. So large and curious a collection was, perhaps, never before exhibited. Women and children are of course excluded. The preparations, illustrative of microscopic anatomy and physiology, presents a series of minute and curious interest, "such as," the solector says, "no university affords." To the medical student and physician they must be of infinite value. The plastic models of the heart, arteries, veins, and nerves, are skilfully and beautifully executed in leather, wax, &c., particularly a head in wax, with the skin on the right side taken off, exposing the superficial veins of the face, &c., and permitting the opening of the right pupil, so that the eye may be seen in the vertica. section. Besides these, there are some full-length figures in cases, among which is one representing the blood circulation, and a female figure showing the fatal consequences of tight lacing. The figure illustrating the Cæsarean operation is beautifully executed; so, too, is the anatomical Venus,' capable of separation into 85 or 8 parts. Such an exhibition will prove highly useful to many who have not other means of anatomical study.

FOREIGN VESSELS IN BRITISH PORTS.—A Parliamentary paper, just issued, contains a return of the sum paid out of the consolidated duties of customs in the year 1850. In the difference of rates and charges due by corporations, companies, or individuals, for foreign vessels which, under treaties of reciprocity or otherwise, are admitted into the ports of the United Kingdom at the same rates of charge as British vessels, the total amount paid within the year was £24,262 18s. 1d. The [illegible] reciprocity treaties up to the 31st December last [illegible]

FRANCHISE EXTENSION.—The measure to be proposed by Mr. Locke King on this subject is as follows:—A bill to make the franchise in counties in England and Wales the same as that in boroughs, by giving the right of voting to all occupiers of tenements of the annual value of ten pounds. Whereas it is expedient to extend the elective franchise to many of her Majesty's subjects who have not heretofore enjoyed the same: Be it therefore enacted by the Queen's most excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this present Parliament assembled, and by the authority of the same—1. That, from and after the passing of this act (the words printed in *italics* are proposed to be inserted in committee), every man person of full age, and not subject to any legal incapacity, who shall occupy, as owner or tenant, any lands or tenements of a clear yearly value of not less than *ten pounds*, or for which he shall be liable to a clear yearly rent of not less than ten pounds, and who shall be entered in the list of voters in the register of the shire to serve in any future Parliament for the county, riding, part, or division of the county in which such lands or tenements shall be respectively situate, provided always that such lands or tenements be not situate within the limits of any city or borough now entitled to return a burgess or burgesses to Parliament: provided also, that such occupier shall not be entitled so to vote, unless he be duly registered as such voter, and shall not be entitled so to be registered in any year unless he shall have occupied lands or tenements of such value or of such rent as aforesaid for *one calendar month* at least next before the last day of July in such year. 2. That the act passed in the 2nd year of King William the Fourth, to amend the representation of the people in England and Wales, and an act passed in the sixth year of her present Majesty, to amend the law for the registration of persons entitled to vote, and to define certain rights of voting, and to regulate certain proceedings in the election of members to serve in Parliament for England and Wales, and the present act, shall be construed as one act

FIRE AT GUNNERSBURY HOUSE, ACTON.—A fire broke out on Wednesday morning, about half-past three o'clock, at Gunnersbury House, near Acton, formerly the residence of the late Baroness Dimsdale, and now in the occupation of Thomas Farmer, Esq. The fire was occasioned by the warming flues in the greenhouses, the heat of which was communicated to some of the bond-timbers, which ignited. The magnificent greenhouses, containing, articles of furniture, pictures, &c., were speedily in flames. Miss Farmer, who slept in the house, awoke at one, and was with some difficulty rescued from her perilous situation, being nearly suffocated. The firemen, after some labour succeeded in extinguishing the fire. The damage done was very considerable.

AMERICAN PACKET-STATION.—The grand jury of Roscommon county have adopted a petition to Parliament, praying that an American packet-station might be established on the west coast of Ireland. A committee was appointed to forward the design of an American company to adopt Galway as a packet-station

On Tuesday last, the Marchioness of Waterford laid the first stone of a new church about to be erected at Portlaw. The trowel, plumb, and hammer being handed to her Ladyship, she placed some coins in the stone cavity, and, with all due architectural gauging, in its proper position. The stone bears the following inscription:—"To the Glory of God, in the name of the Holy Trinity, this stone was laid by Louisa Marchioness of Waterford on the 4th day of March, 1851."

FINE ARTS.

NAPOLEON IN EGYPT ("FORTY CENTURIES LOOK DOWN UPON HIM.")—PAINTED BY KARL GIRARDET.*

NAPOLEON IN EGYPT.

I.

BENEATH him stretched the sands
Of Egypt's burning lands,
The desert panted to the swelt'ring ray,
The camel's plashing feet,
With slow, uneasy beat,
Threw up the scorching dust like arrowy spray,
And fierce the sunlight glowed,
As young Napoleon rode
Around the Gallic camp, companionless that day.

II.

High thoughts were in his mind,
Unspoken to his kind;
Calm was his face—his eyes were blank and chill;
His thin lips were compress'd:
The secrets of his breast
Those portals never pass'd, for good or ill;
And dreaded—yet adored—
His hand upon his sword,
He mused on Destiny to shape it to his will.

III.

"Ye haughty Pyramids!
Thou Sphynx! whose eyeless lids
On my presumptuous youth seem bent in scorn,
What though thou'st stood
Coeval with the flood—
Of all earth's monuments the earliest born;
And I so mean and small,
With armies at my call,
Am recent in thy sight as grass of yesternorn!

IV.

Yet in this soul of mine
Is strength as great as thine,
O dull-eyed Sphynx that wouldst despise me now;
Is grandeur like thine own,
O melancholy stone,
With forty centuries furrow'd on thy brow:
Deep in my heart I feel
What time shall yet reveal,
That I shall tower o'er men, as o'er these deserts thou.

V.

I shall upbuild a name
Of never-dying fame,
My deeds shall fill the world with their renown:
To all succeeding years,
The populous hemispheres
Shall pass the record of my glories down;
And nations yet to be,
Surging from Time's deep sea,
Shall teach their babes the name of great Napoleon.

VI.

On History's deathless page,
From wondering age to age,
New light and reverence o'er that name shall glow.
My deeds already done
Are histories begun,
Whose great conclusion centuries shall not know
O melancholy Sphynx!
Present with Future links,
And both shall yet be mine. I feel it as I go!"

VII.

Over the mighty chief
There came a shadow of grief.
The lips gigantic seemed to move and say,
"Know'st thou his name that bid
Arise yon Pyramid?
Know'st thou who placed me where I stand to-day?
Thy deeds are but as sand,
Strewn on the heedless land.
Think, little mortal, think! and pass upon thy way!

VIII

Pass, little mortal, pass!
Grow like the vernal grass—
The autumn sickle shall destroy thy prime.
Bid nations shout the word
Which ne'er before they heard,
The name of Glory, fearful yet sublime.
The Pharaohs are forgot,
Their works confess them not:
Pass, Hero! pass, poor straw! upon the gulf of Time!"

CHARLES MACKAY.

* From a print engraved by Gautier, published by Goupil and Co., Paris and New York; and Gambart and Co., London.

TERRACE VIEW OF OSBORNE.

AMONGST the different Views of Osborne which we have from time to time published, we have given representations of different portions of the marine residence of her Majesty, and have incidentally mentioned the Terrace Front, of which we now present a View.

That part of the building nearest the spectator is the Pavilion, solely appropriated to the use of the Queen and Prince Albert. The Tower with the Royal ensign floating from its summit, is on the entrance-front, which we have delineated before. The mass of buildings between the Pavilion and the Clock-Tower, at the other extremity, contains the Music-Room, and an immense number of apartments for visitors, &c.

The terrace is laid out with parterres of choice flowers; and there are a fountain, and vases, and statues, adding to the tasteful character of the scene. At a lower level, overlooked by the chief terrace, is another, laid out in similarly elegant taste, and to which access is attained by two flights of steps: fountains and statues adorn this terrace, as well as the upper one. Owing to the conformation of the ground, which forms a rapid descent towards the sea, these terraces command extremely pleasing views over the Solent and the bordering coast of Hampshire; and, as the grounds of Osborne have been skilfully laid out and improved, under the correct judgment and supervision of their Royal owners, the marine retreat may well be the favourite abode of her Majesty.

OSBORNE, HER MAJESTY'S MARINE RESIDENCE, ISLE OF WIGHT.—THE TERRACE.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—FRIDAY, MARCH 7.

ECCLESIASTICAL TITLES ASSUMPTION BILL.

In the notice of the Parliamentary proceedings of Friday, the 7th inst., which appeared in our Postscript of last week, we gave a summary of the modifications proposed to be made by the Government in this measure.

Sir G. GREY prefaced the statement of these modifications by arguing, that those who agreed in thinking the best course to be pursued was that pointed out by Lord Stanley were mistaken in the nature of the compromise which the noble Lord, while deprecating immediate legislation, still contemplated the passing of resolutions immediately by both Houses of Parliament, the discussions upon which would take up as much time as the discussion on a bill. They could not, therefore, proceed with the ordinary business of the country under the plan of Lord Stanley, any more than they could by proceeding with the bill. It was also contended that Ireland should be excluded from the operation of the bill; and, looking at the distinctions between England and Ireland, it became necessary for Government to consider and re-consider the propriety of including Ireland; and the result was a confirmation of the previous opinion of the Government, that, unless they included Ireland, they would be proclaiming that the Queen's authority had less avail in one part of her dominions than in another. Still it was impossible to overlook the fact that Ireland was for the most part a Catholic country, and that the Roman Catholic prelates had been chosen in unbroken succession since the Reformation; at one time, it was true, prohibited, at another tolerated, and at another fostered and encouraged. This constituted a very material distinction; and, in addition to this, the manner in which bequests were made in Ireland would, it was found, be materially interfered with by the bill as it now stood. After the best consideration, the Government thought it better to proceed with the present bill, but without unnecessarily interfering with the rights and privileges hitherto enjoyed by the Roman Catholics of Ireland. He should, therefore, propose—should the House sanction the second reading of the bill—that, in committee, the second and third clauses should be altogether omitted from the bill. It might be said that the bill, thus denuded, would be of no value; but this he denied, as it would be a national protest, having all the authority of Parliament, against the Papal aggression which had taken place. In reply to a question which had been put by Mr. Oswald, as to how far this bill would apply to the Bishops of the Protestant Episcopal Union in Scotland, he would say that they were not contemplated at all in the framing of this bill, but still he would say that the law he believed they had no right to the titles they assumed, but that was a question upon which he would not then give a very decided opinion. The right hon. Bart. then concluded by moving that the second reading of the bill should be postponed for a week.

HOUSE OF LORDS.—MONDAY.

PASSENGERS ACT AMENDMENT BILL.

Earl GREY moved the second reading of his bill. Its main object was to amend an act passed a year or two ago. By the law, as stood, the Kingand Commissioners had the power of fixing the particular time to which a voyage should extend; and with reference to a voyage to America, for instance, passenger ships were bound to carry provisions for six weeks. Steam-vessels, however, were frequently employed in conveying emigrants, and of course they would perform the passage in less time than sailing-vessels; but the commissioners had no power to alter the period of a voyage for different classes of vessels; and the object of the act was to enable them to lessen the time for steamvessels. The existing act also furnished a scale of diet for emigrants; and the law officers of the Crown had given it as their opinion that the commissioners could not deviate from the prescribed scale, and allow an improved description of diet for a better class of emigrants—the ship being obliged to carry a certain quantity of provisions of the ordinary kind, whether the emigrants would buy them or not. The bill also proposed to remedy this defect. Then there was a third provision, which enacted that when a vessel was obliged to put back in distress, she should not be allowed to go to sea again until she was fully repaired and rendered fit for the voyage. The act passed two years ago had given great satisfaction to shipowners and to emigrants, and seemed to work most satisfactorily.

Lord REDESDALE suggested, that a clause should be inserted to prevent the owners of vessels from carrying passengers on the deck for less than their proper charge for cattle, by which means so many poor Irish were shipped off, and paid by the Irish unions for going, to this country, and subjected to great privations on the passage.

Lord WODEHOUSE thought that some provision should be made for the protection of cabin passengers on long voyages, and that the inspector should be authorised to see that a sufficient quantity of water and provisions were on board, and that a properly qualified surgeon was engaged for the voyage. He also considered that all vessels should be obliged to advertise their tonnage by the new measure at Lloyd's, and that every difficulty in the way of emigration for all classes should be cleared away.

Lord COLCHESTER hoped some clause would be introduced in the bill to prevent emigrant ships from carrying a greater number of persons than they could properly provide for. A case had occurred some time ago where the hatches of a vessel carrying Irish emigrants were battened down in a storm, and in consequence of the great number of persons on board many died of suffocation.

Earl GREY would be afraid to hazard the bill by the insertion of the clause which had been suggested. He thought cabin passengers, being generally a superior class of persons, could take care of themselves; and the number of ships which carried only cabin passengers, did not generally require very stringent regulations.

After some further conversation, the bill was read a second time and ordered to be committed.

SALE OF ARSENIC.

The Earl of CARLISLE introduced a bill for regulating the sale of arsenic, which was read a first time.

REGISTRATION OF DEEDS BILL.

The Marquis of LANSDOWNE gave notice, on behalf of his noble friend the Lord Chief Justice, that he would, on Monday next, move the second reading of this bill.

DESIGNS ACT EXTENSION BILL.

On the suggestion of Lord BROUGHAM, the Earl of GRANVILLE consented that this bill should be referred to a select committee.

Ordered accordingly.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

SCHOOL ESTABLISHMENT (SCOTLAND) BILL.

In reply to Mr. F. Mackenzie, Lord MELGUND said, it was his intention to move for leave to bring in his School Establishment (Scotland) Bill on the 9th of April.

THE MERCANTILE MARINE.

Mr. LABOUCHERE said, that he had intimated his intention of bringing in a bill to consolidate the laws relating to our mercantile marine, but subsequent information induced him to hope that he had better postpone his intention. With respect to his bill of last session, he believed that experience had confirmed its utility; but it required some amendments, which he would submit to the House, in the shape of a bill, during the present session.

THE KAFFIR WAR.

Lord J. RUSSELL referred to the questions asked on a previous night respecting the war in KAFFRARIA, and stated that the Government had received despatches containing official accounts of the disturbances, to the same effect as those that had appeared in the journals some days since, but not coming down to so late a date. Reinforcements had been despatched to the Cape of Good Hope, whose numbers at present were only 3699 men. The subject of the expense must be a matter for future consideration; at the present time, the great necessity was to provide for the defence of the colony.

Mr. HUME regretted that the demands of the colony, so often reiterated, with respect to the composition of their local legislature, had not been conceded. As they were still kept without the means of self-government, there could be no doubt that the a country must undergo all the cost of their defence

Mr. LABOUCHERE vindicated the Colonial-office and the Government, which, he said, had last year done all that was possible to construct a liberal constitution for the Cape colony.

Mr. ADDERLEY hoped that the House would be afforded an opportunity of discussing the subject.

Mr. V. SMITH inquired whether the Government would give any information as to the conduct that had preceded, and the causes that had provoked, the present outbreak?

Lord JOHN RUSSELL promised the speedy production of all information it might be received. With respect to the extension of the system of penitentiary measures accompanied within the last few years, the effect had been, according to the best authorities, to render the British frontier much more defensible than before.

ABUSES ON BOARD STEAMERS.

Mr. B. COCHRANE, in reference to an inquest lately held upon the child of a woman named ANN CONNELL, which died in consequence of exposure to the cold on its passage from Cork to London on board a steamer, said he understood that these steam-vessels commonly carried about 750 deck passengers, at 1s. 6d. per head, who were exposed to all the inclemency of the weather for three or four days, and asked the right hon. gentleman at the head of the Board of Trade if he contemplated taking any steps on the subject?

Mr. LABOUCHERE regretted that he had received no notice that the question was to be asked, but reminded the hon. gentleman, that, two years ago, he had introduced a bill with a view to regulate the number of passengers to be carried by steam vessels in proportion to their tonnage. With respect to the case referred to, inquiry should be immediately, if it had not been already, instituted, and steps would be taken to prevent the recurrence of such unhappy accidents.

THE METROPOLITAN SEWERS

Sir B. HALL wished to ask the right hon Baronet the Home Secretary, whether it was the intention of the Government to introduce a bill to extend the powers of the present Commissioners of Sewers, who, he would explain, he believed to be the cause of the present sheer evil? He might also state, that a report was in general circulation, that it was the intention of the present Commission to raise a large sum of money on the security of the present rates. He therefore wished to know when it was intended to bring in a bill to enlarge the present powers of the Commission, and whether the Government intended to give their sanction to such a loan as he had alluded to?

Sir G. GREY said, the powers of the Commission expired with the present session, and it would be therefore necessary to bring in a bill to extend them, but he could not say when the bill would be introduced. As regarded the loan, the report of the Commission, which his honourable friend had in his hand, stated the steps that had been taken by the Commissioners to raise a loan, and the obstacles they had found to their doing so. The Government had no power to interfere in the matter, but they had been unable to effect the loan they contemplated, and he was not aware of any other intention on their part to borrow. As regarded the expenditure of the Commission, he might state, that, in accordance with his duty, he had, for the last two years, appointed an auditor, recommended by the Audit Commission, to examine their accounts, and that gentleman had stated that the accounts were kept in a clear and satisfactory manner, and that they had substituted a system of contract for their former proceedings, which would, he apprehended, be a decided improvement.

THE NAVY ESTIMATES

On the question that the House should go into Committee of Supply upon the Navy Estimates,

Mr. WILLIAMS reminded the Government that they had promised a new edition of the finance scheme of the year, and the House that they had from session to session voted enormous sums without a sufficiently mature consideration. He moved, as an amendment, that no supplies should be granted previous to the amended Budget being laid before them

After a few words from Mr HUME and Sir J. GRAHAM, the amendment was negatived without a division, and the motion for going into committee was put and carried

The Speaker having left the chair,

The FIRST LORD OF THE ADMIRALTY proceeded to open the general question of the Navy Estimates, preparatory to proposing a series of votes on account of that service. Referring to the objections he had urged, in past years, to the system of taking scanty votes of money, and thereby rendering annual introduction of an item of "excess" to make up the deficiency, Sir F. Baring rejoiced to state that no such item would now appear; but, on the contrary, the expenditure during the two years last past was nearly £700,000 less than the amount voted by the House, and the accounts of the current twelvemonth would present a continuance of this saving to a considerable amount. Coming to the successive votes, he stated that the first, fixing the number of men, would be the same as last year, viz. 39,000; and remarked that France, with much smaller demands for the protection of colonies and commerce, kept on foot a body of 25,000 seamen. Since 1839, again, which had been assumed as a "model" year, the increase of expenditure on this item had been much larger with our neighbours than ourselves. While the number of men remained the same as last year, the next vote, namely, that of the money wanted to defray the cost, would be slightly increased, owing to some increase in the pay and allowances. After explaining the mode in which a reduction of £1,396,000 had been effected in the dockyard expenditure for building, repairs, works, &c., as compared with the votes of 1848-49, the right hon. Baronet went through the remaining items of the votes, some of which small diminutions were apparent, and others, among which was that for the packet service, exhibited an increase. Altogether the result was, that the sum total required for the navy service would be £171,000 below the estimates of 1850; and this, he repeated, was far less than the probable reduction in the actual expenditure. Reviewing his own career as head of the Admiralty board, Sir F. Baring recorded the fact, that the financial results of 1848-49 had been accomplished in the two years of his administration. He contrasted his saving with the far smaller reductions accomplished during Earl Grey's Ministry, from 1831 to 1835, during which period little more than a million was retrenched from the navy estimates, and contended that the comparison was one of which the present Government had no reason to be ashamed.

The first vote, viz. 39,000 men, including marines, for the naval service of the country in the ensuing year, having been proposed,

Mr. HENRY BERKELEY addressed a few observations to the House on this subject moved always in a vicious circle, an overgrown establishment in France being quoted to justify an overgrown establishment in England. As a better comparison, he referred to America, a country similar to ours, where the navy afloat in ordinary consisted but of 7 ships of the line, 12 frigates, 4 brigs, and 7 steamers, and the list of officers was cut down to even a narrower scantling In our dockyards in 1848 there were 3,000 men of war which had been put to sea; and since the peace had built a number equivalent to the whole existing navy, merely to rot in the slips. Two millions a year were thus wasted upon shipbuilding. Now, he remembered that during various returns of charges and services in past years, dwelling especially upon the successive increments made to the African squadron, which had now attained the dignity of a fleet, and demanded why a system should not be framed founded on the model of the year when the number of seamen was 10,000 less than had been asked for that night? After commenting upon the events of the Russian "crisis," which had carried us to the brink of war, which had never been at peace, and since the peace had built a number equivalent to the whole existing navy, merely to rot in the slips. Two millions a year were thus wasted upon shipbuilding. Now, he remembered that during various returns of charges and services in past years, dwelling especially upon the successive increments made to the African squadron, which had now attained the dignity of a fleet, and demanded why a system should not be framed founded on the model of the year when the number of seamen was 10,000 less than had been asked for that night? After commenting upon the events of the Russian "crisis," which had carried us to the brink of war, which had never been at peace, and left us practically without a Government, he appealed to the Protectionists to support him in his efforts to enforce retrenchment, of which he drew an outline, shadowy, but not impossibility of alleviating the pressure to the extent of many millions a year. Mr. HUME concluded by moving that the number of seamen to be voted should be reduced to 30,000. This amendment found no seconder in the chair

Mr. M'GREGOR concurred in believing that the public dockyards were scenes of lavish and useless extravagance. He saw no reason for maintaining a number of first-rate ships on a half-war establishment, as in former times, when we were, and contended that the merchant navy of England, and especially our steamvessels, were abundantly strong enough to protect themselves. He contended that the estimate of 39,000 men was unnecessarily large, and that it might easily reduced below five millions. Nothing, however, could obviate the necessity of an early revision of the whole question of taxation and expenditure.

Mr. CRAWFORD was astonished at the enormous cost of the navy, and asked, that, of all manufacturers, a government was the worst; and long experience showed how wasteful and ruinous was their career in the manufacture of ships which continued, in some after times, vainly endeavored to amend. The evils were inherent in the system, and rendered of more importance a reduction in the amount of the number which was so loudly called for. No member briefly contemplated the existing condition of the world with that of 1845, when the naval estimates were so moderate. Then there were dynastic and boundary questions unsettled, involving overwhelming interests in Russia and France, Oudgen, Syria, and Tahiti. Now, if ever, the world might be said to be in a normal and pacific condition. The French were using our arguments and following our course, by reducing their establishments as we were reducing ours. Was it impossible to accomplish some amicable arrangements, by which two great nations might put a stop to this childish game of beggar-my-neighbour?

Lord J. RUSSELL admitted that a popular prejudice existed against the management of the public dockyards, but denied that it was well founded. Considerable improvements had been effected, rendering the works more economical and more efficient, and removing the stigma of corruption and favouritism. As to the number of men, it was below the average of the past ten years; and, with respect to construction expenses, it must be remembered that a new power had lately obtained a vast development, rendering attacks more easy and rapid, and compelling a prudent provision of similar means for defence. Steam had gone far to deprive the country of the security it once enjoyed from its insular position, and obliged us to look with more jealousy upon the means of offence possessed by our neighbours. Under these circumstances, with an army comparatively so weak, and no reserve of militia, the naval defence of the country were of incalculable importance. He did not fear invasion, yet could not to a moment entertain the idea of any extensive retrenchment in the existing force upon its impossible; and those very free-trade measures which extended relationships of social content upon the African squadron; but affirmed that the efforts of our cruisers had been very successful, and the cause was one of which we had reason to be proud.

Mr. MILNER GIBSON joined issue with the Premier upon the plea that Free-Trade had rendered a large naval force more necessary. The commercial influences were certainly stronger, and the increase of our merchant shipping was a practical increase to the available maritime strength of the country. The proposition was not to abolish the navy, but turned upon a question of degree. Considering that steamers propelled by screws were less injurious, especially in bad weather, men had heretofore been found amply sufficient for the naval service, he felt justified in voting for the retrenchment moved by Mr. Hume. He feared that the proceedings of the slave squadron had been injurious, especially in the West Indies, because it was intended to support, by provoking hostility and preventing the development of anti-slavery doctrines in that country.

Mr CARDWELL contended that the presence of our ships on the coasts of Brazil had strengthened the hands of the British negotiators, and aided in enforcing treaties by which the slave-trade was prohibited.

Captain BERKELEY apprehended that merchant seamen, ignorant of gunnery would prove very inefficient if drafted upon an emergency, into the war navy.

After a few words from Mr. PLUMPTRE and Mr. S. CRAWFORD

Colonel THOMPSON declared that he should vote for Mr. Hume's amendments, though not for that hon. member's reasons.

The committee divided—

For the amendment	..	..	..	..	61
Against it ..	..	..	..	..	169
Majority	..	..	..	..	108

The vote then passed as originally proposed by the Government

Two following votes, for wages and victualling, respectively £1,435,723 and £960,539, were also passed after short discussions.

The vote for Admiralty salaries, £138,535, being proposed,

Colonel SIBTHORP accused the Board of, general incompetence and extravagance, and pronounced that the Navy was in a deplorable condition. He suggested the propriety of reducing the official salaries, now that bread was so cheap.

Mr WILLIAMS remarked that the salaries this year were £11,000 higher than in 1844, when the effective force of seamen was quite as large.

Sir G. Pechell, Mr. COBY, Mr. Henley, Mr. Cobden, Mr. Hume, Mr. Sharman Crawford, and Mr. H Drummond having made some desultory remarks and inquiries, to which Sir F. BARING replied, a division took place, when Colonel Sibthorp's amendment was negatived by 193 votes to 34: majority, 159.

£48,635 for the scientific branch; £134,699 for establishments at home; £23,554 for establishments abroad; and £516,416 for wages to artificers, were also voted, after some miscellaneous discussion.

The Valuation (Ireland) Bill was read a second time *pro formâ*, and ordered to be referred to a select committee, after a few words from Mr. CLEMENT.

The Improvement of Towns (Ireland) Bill was read a second time, and ordered to be referred to a select committee, after a few words from Sir R. FERGUSON.

APPOINTMENT OF A VICE-CHANCELLOR (ANNUITY).

The House went into committee on the annuity for the new Vice-Chancellor.

The ATTORNEY-GENERAL said, the amount was the same as had been paid before, viz. two-thirds of the salary, and which was £5000. The vote, however, did not pledge the House to the same.

The vote was agreed to.

COMMONS ENCLOSURE.

The Commons Enclosure Bill was read a second time, and ordered to be committed.

RAILWAY AUDIT.

Mr. HUME moved for leave to bring in a bill for the audit of railway accounts. It was nearly identical with that introduced by the Government, and passed in the House of Lords last year

Mr. LABOUCHERE would not oppose the motion, but would reserve his opinion until the bill was printed

Leave was given.—Adjourned at 1 o'clock.

HOUSE OF LORDS.—TUESDAY.

Their Lordships sat for a short time and received some petitions.

THE PAPAL AGGRESSION BILL.

In reply to some observations from Earl Fitzwilliam, the Marquis of LANSDOWNE professed himself ready to prove, when the time came, that the changes expected to be introduced in the Ecclesiastical Titles Bill, were not in contravention of its original purport, and would leave its practical efficiency still unimpaired. At present, however, the bill was not before the House, and any discussion would be premature on the subject.

HOUSE OF COMMONS.—TUESDAY.

NEW WRIT.

A new writ was ordered for the borough of Dungarvan, in the room of the Right Hon. R. L. Shiel, Esq., who has accepted the office of Steward of the Chiltern Hundreds.

CEYLON

Mr. BAILLIE gave notice that it was his intention to move the following resolutions:—

"1. That this House, having taken into consideration the evidence adduced before the select committee appointed to inquire into the grievances complained of in the Crown colony of Ceylon, is of opinion that the punishment of the natives of that island implicated in the disturbances of 1848 has been excessive and unnecessarily severe.

"2. That this House is of opinion, that the execution of eighteen persons, and the transportation, imprisonment, and corporal punishment of 180 other persons by military tribunals, for offences, after those disturbances had been suppressed during which every individual only of her Majesty's troops had been slightly injured), is at variance with the merciful administration of the British penal laws, and is not calculated to secure the future affection and fidelity of her Majesty's colonial subjects.

"3. That this House is therefore of opinion, that the conduct of Earl Grey, in signifying her Majesty's unqualified approbation of Lord Torrington's administration, has been precipitate and injudicious, tending to establish precedents of rigour and severity in the government of her Majesty's foreign possessions, and injurious to the character of this country for justice and humanity."

THE PEACHRISE SCOTLAND.

Mr. V. SMITH gave notice it was his intention to move that the right of voting be extended to the 40s. freeholders in Scotland.

RAMSGATE AND MARGATE HARBOURS.

Mr. MOFFATT asked the First Lord of the Admiralty whether it was the intention of Government to adopt the recommendation of the Select Committee of last session on Ramsgate and Margate Harbours in regard to the abolition of dues or tolls now exacted from vessels not actually entering the harbour of Ramsgate?

Sir F. BARING replied that the House was aware that the Government had no control over these dues. An alteration must be made in them by Act of Parliament. He had directed inquiries to be made, and as soon as an answer had been received, information would be given to the House.

INTRAMURAL INTERMENTS

In reply to a question from Mr. MOFFATT, Sir G. GREY said that many preliminary measures had to be adopted before the measure of last session respecting intramural interments would be brought into effect. The Board of Health had been endeavouring to make arrangements on the subject with the interment metropolitan companies, but had not as yet succeeded. It was the earnest desire of the Board of Health to bring the bill of last session into operation at the earliest possible opportunity

THE COMMISSION OF WOODS AND FORESTS

Lord DUNCAN moved, "Whereas it appears by returns laid before this House, and before the Select Committee of Woods, Forests, Works, &c, that, during a period of seven years (from 1843-44 to 1849-49), the gross income derived from the possessions of the land revenues of the crown has amounted to £2,447,775, and that out of this sum only £774,000 has been paid into the public account at the exchequer; and whereas, during the same period, it appears that a sum amounting to £1,673,785 has been withheld for charges of collection and management, and for other expenses charged upon the said revenues, it is expedient, with a view to put the expenditure of the said revenues under the public review at more immediate control of Parliament, that the gross income derived from the said revenues should hereafter be paid into the exchequer, and that the necessary expenses for collecting and managing the same should be voted by this House, upon estimates to be annually submitted to Parliament by her Majesty's Government."

In support of his motion, Lord Duncan read copious extracts from the evidence taken before the select committee of which he was chairman. These extracts brought out the prevalence of lax and wasteful practices in the management of the royal property. No sort of surveillance seems to have been exercised by the Commissioners of Woods and Forests. Peculation had gone on to a great extent; many of the accounts were not accurately kept, and expensive lawsuits had been entered upon by the commissioners; and, when once undertaken, no care was taken to bring them to a close. Would the House believe it?—during the seven years embraced in his resolution, £79,341 had been paid for law expenses The only cure for these enormous abuses was to be found in agreeing to his motion. The necessity of applying annually to Parliament for the expenditure to be incurred would prove a salutary and efficient check

Lord SEYMOUR, in answer, stated that he was not responsible for the management of the Woods and Forests during the period in question. Upon a review, however, of the whole case, he did not think that the state of the landed property of the Crown in England and Wales was in so deplorable a condition as had been set forth. He found that while in 1789 the gross revenue derived was £.7,600, in 1849-50 it had increased to £303,360. Lord Duncan stated in his motion that £1,673,785 had been withheld for certain expenses, of which Parliament had no cognisance. This did not convey a correct idea of the truth. In April, 1849, an unexpended balance of £145,000 stood at the credit of the account; and Parliament had appropriated £116,920 for the formation of Victoria Park. To these sums had to be added numerous charges which had to be removed under acts of Parliament, and these amounted in the seven years to £138,690 For improvements in Piccadilly, and for other purposes, £78,000 had been expended. The proper mode to secure these charges which had to be removed under the department of woods and land revenue This would place the expenditure under one head, and the income under another. Lord Seymour, Rose, and several other members gave leave to give to introduce a bill to separate the department of Works from the department of Woods, Forests, and Land Revenue.

Mr. HUME advised the House to affirm the resolution in the first instance, and to enter agree to the introduction of the bill.

Sir B. HALL suggested, that portions of the property should be put up to auction, on the same principle that regulated the sale of encumbered property in Ireland

After a short speech from Sir H. WILLOUGHBY,

Lord JOHN RUSSELL replied, calling upon the House to affirm the great principle of complete responsibility to Parliament.

The House divided—

For the motion	..	..	..	..	120
Against it ..	..	..	..	..	119
Majority against the Government					1

Mr. LACY obtained leave to bring in a bill to prevent the forcible detention of females in religious houses

The report of the Committee of Supply was agreed to

The Commons Inclosure Bill passed through committee.

Adjourned at a quarter-past seven o'clock.

HOUSE OF COMMONS.—WEDNESDAY.

The House sat from noon to a quarter-past four o'clock.

COUNTY RATES EXPENDITURE.

Mr. MILNER GIBSON moved the second reading of the County Rates and Expenditure Bill. By this measure all the county financial boards were established, composed partly of magistrates and partly of representatives elected by the ratepayers. The principle of admitting the latter body to a share of control over the expenditure to which they contributed had been sanctioned by Parliament last year, and was widely supported throughout the country.

Sir J. PAKINGTON strongly objected to a measure which, he said, would materially interfere with the functions of the county justices, especially by taking out of their hands the control over the police and the gaols. He appealed to the House and the Home Secretary not to meddle with that valuable magistracy of the country, by adopting an unjust and mischievous bill.

Mr. [illegible] replied to the appeal by declaring that he considered the principle on which all measures were founded, viz. the admission of the ratepayers to control over the county rates, perfectly unobjectionable. There were, however, many details that would require amendment in committee, some of which the right hon. Baronet proceeded to point out.

Mr. W. MILES thought it was the duty of the Government to undertake the responsibility of passing a measure whose principle they adopted. From his own experience he doubted the possibility of managing the county affairs better or more economically than they were at present.

Mr. HUME supported the bill, as carrying out the great principle that representation and taxation should go hand in hand.

After some further discussion, the bill was read a second time, with the understanding that it was to be referred to a select committee, with the consent of Mr. Milner Gibson, and under the promised protection of Lord John Russell.

EXPENSE OF PROSECUTIONS.

On the order of the day for the second reading of the Expenses of Prosecutions Bill, Mr. HUME took occasion to recommend the appointment of a public prosecutor

Sir G. GREY explained that the design of the measure was to check the irregularities and extravagance that had arisen from the payment of prosecution expenses out of the Consolidated Fund.

The bill was read a second time, and ordered to be committed on Wednesday next.

TREATMENT OF SERVANTS.

Mr. BARNES moved the second reading of the Servants and Apprentices Bill, the object of which is to place the law in a better position as regarded the protection which should be extended to servants and apprentices, so as to prevent the recurrence, as far as it was possible to do so, of such cases as those of Jane Wilbred and others, which had recently occurred in various parts of the country. He also proposed that, in the case of pauper apprentices, there should be a periodical visitation of the apprentice by the parish authorities, until such apprentice should reach the age of eighteen years. It was likewise provided, that, in cases such as that of Sloane, the parish authorities should be authorised to prosecute, and to pay the costs out of the parochial funds.

After some observations from Mr. Healey, Col. Rawdon, and Sir J. Duckworth, the bill was read a second time.—Adjourned.

HOUSE OF LORDS.—THURSDAY.

SALE OF ARSENIC.

The Earl of CARLISLE moved the second reading of the bill for restricting the sale of arsenic. The provisions of the present bill were extremely simple. It enacted that no person should sell any arsenic without entering it in a book to be kept for the purpose, under a penalty, a statement of such sale, the quantity of arsenic, and the purpose for which it was required, or stated to be required. Thus would be obtained the identity of the person, his residence, and the purpose for which it was wanted. He would now just mention two points, which might possibly occur to their Lordships. The first was, that the provisions of the bill were confined to the sale of arsenic, whereas it was, of course, obvious there were many other kinds of poison which would take away life; but it happened that arsenic, on account of its comparative absence both of taste and colour, afforded greater facilities for the commission of crime; and he was told by those who had attended to the history of the criminal judicature on these matters, that arsenic was, in fact, synonymous with poison. (Hear, hear.) Of course he could not pretend to debar the use of poison by those whose knowledge, opportunities, and instruction gave them greater facilities for obtaining it. (Hear, hear.) And he apprehended it would also be extremely difficult to draw up a schedule of all the poisonous materials which might be used for the purpose of taking away life, and he believed, even if that could be done, that it would not be desirable. (Hear, hear.) It would not be desirable to advertise, as it were, the different poisons which might or might not be used, and to show persons what articles they must have recourse to if they wished to perpetrate crimes. Therefore, it had not been thought proper by those who had attended to the matter to extend the bill to other poisons than arsenic. The other point had reference to the minimum amount of arsenic which parties should be allowed to sell. Arsenic was very cheap, and those who wished to have it for legitimate purposes would not be deterred from purchasing the quantities they required; but, if they were to purchase more than they wanted, perhaps, they would leave the surplus carelessly about, and thus afford an opportunity for evil-disposed persons to get it into their hands. Therefore, he thought it was advisable not to introduce any provision of that kind into the bill. He was not ambitious enough to suppose the bill could deal with all cases of poisoning. The noble Lord concluded by observing, that he hoped some plan would be devised which

SENOR DON SANCHO PANZA, GOVERNOR OF BARATARIA.—PAINTED BY JOHN GILBERT. EXHIBITION OF THE BRITISH INSTITUTION.

SENOR DON SANCHO PANZA, GOVERNOR OF BARATARIA. PAINTED BY JOHN GILBERT.

THIS is Mr. Gilbert's contribution to the Exhibition of the British Institution; and in brilliancy of colouring it equals, if not excels either of his former works. He has chosen one of the happiest phases of Cervantes' masterly portrait of brief authority. The "declared perpetual Governor of Barataria" is here seated in his chair of state, meditating upon the cares and perplexities of his newly-assumed office. The portraiture is exceedingly characteristic. The picture is an excellent specimen of the Artist's clever drawing and richness of colouring; doing full justice to the honest and simple squire in the full blaze of his long-promised dignity

MUSIC.

PHILHARMONIC SOCIETY

The excellent effect of the new regulations for the exclusion of visitors from the rehearsal was sufficiently manifested in the first concert on Monday night The symphonies—Mozart's, in D, No. 3, and Mendelssohn's, in C minor, No. 1 were both beautifully executed; and familiar as is the last-mentioned work it was invested with a new interest, owing to the delicate observance of light and shade: this was particularly remarkable in the flowing and lovely andante in G. The Mendelssohn Symphony, has been before played under Costa's direction The irresistible energy of the opening movement, the undulating grace of the andante in E flat, the piquant vivacity of the *intermezzo* in G minor, replacing the original scherzo and trio, which the composer discarded, and the brilliant finale, so replete with picturesque variety, made a deep impression on the auditory; the *intermezzo* is of immense intricacy, but the pilot-age was steady, and the breakers were avoided by the executants with resolution. The overtures were Weber's "Oberon," which was encored; and Beethoven's "Leonora Fidelio"—that is to say, one of the four overtures which he wrote for his opera of "Fidelio." The one played on Monday was not the well known "Leonora," or the popular "Fidelio," which is so frequently heard, but it was the version which pleases the Conservatoire *habitués* in Paris so much: here it was not likely to be accepted as the bar of the sour composotions, although its beauties, when the difficulties are thoroughly mastered, which was not the case in the present instance, are not unworthy of the genius of Beethoven. Instead of a concerto for pianoforte or violin, Beethoven's sextet, Op 20, in E flat, omitting the adagio in A flat, nine-eight time, and the minuetto and trio was executed by Sainton (violin), Hill (viola), Lucas (violoncello), Williams (double bass), Nicholson (flute), Barrett (oboe), Williams (clarionet), Mackintosh (bassoon), and Harper (horn). Mr. [illegible] brilliant variations, was [illegible] Lucas, in the violin and violoncello and first variation, left nothing to be desired; whilst Baumann and C. Harper were fully alive to the beauties in their portions of the score. The vocal gleanings comprised Handel's air, "Amor nel mio penar," from "Flavio," passionately sung by Miss Dolby; Rossini's air from "Zelmira," "Ah! già trascorsi ôi," impressively interpreted by Mr. Whitworth; Mozart's air from "Il Seraglio," "Se il nostro," given by Mr Lockey; and the Rossinean duo from "Maometto d'Anjou," by Meyerbeer, "Ah! tu non sai," rendered by Miss Dolby and Mr Whitworth with truly dramatic feeling. Nobody could have suspected, from this duo, that the composer would, in after-times, produce the "Huguenots," "Robert le Diable," and the "Prophète:" from a pagatrist, Meyerbeer turned to be a writer of creative genius.

The second concert will be on the 24th inst. A trial night of new compositions took place last Wednesday, which, it is to be hoped, will lead to the production of some novelties; for, although there can be no desire to witness the transformation of the Philharmonic into an experimental society, the "do nothing" principle in these days is out of the question.

SACRED HARMONIC SOCIETY.

Handel's oratorio, "Samson," was revived on Tuesday night, at Exeter Hall, conducted for the first time by Costa. This work, which, in point of merit, may rank after the "Messiah" and "Israel in Egypt," has not yet established itself permanently in favour of the Society. From 1838, when the members first performed it, up to the present period, the oratorio has been only given six times, the last in February, 1845. At the Gloucester Musical Festival, in 1844, an attempt was made to alter Newburgh Hamilton's adaptation of Milton's "Samson Agonistes," for Handel, by Professor Taylor; but the essay signally failed, like the pasticcio attempted of "Israel," the musical public resenting with proper indignation any liberties taken with Handel's scores, or even with his words, however indifferent may be many of the poems for his oratorios. The book of "Samson" is open to many objections, even as it now stands; but Handel's greatness is so apparent in the music and the execution is now so astonishingly improved, that fair hopes may be entertained of hearing more often such a magnificent production. The argument opens before the prison gates of Gaza, with the rejoicings of the Dagon worshippers, followed by the plaint of *Samson* at his loss of sight. The impiety of the pagans is finely contrasted with the devotional confidence of the Israelites. In the second part is the temptation of *Samson* by *Delilah*, the taunts of *Harapha*, the leader of the Philistines, and the antagonistic adoration of Jehovah and Dagon by the Israelites and Philistines. The last part comprises the destruction of the temple, with the death of *Samson*, the lamentations for his loss, the Dead March in his honour, and the final outpourings of the essential concert to indicate the immortality of the soul. Handel has marvellously treated the varied themes in the present opus. The marked distinction between the sensual orgies of Dagon, and the pure simple worship of Jehovah, is evidence of Handel's poetic and intellectual inspiration. In no oratorio has he manifested greater dramatic feeling and energy in his solos and duos, than in "Samson." More than ordinary justice was done to these pieces by the principal performers, Mr. Whitworth, they were signally deficient in pathos, but, with the exception of Mr. Whitworth, they were signally deficient in pale, but, with the exception of Mr. Whitworth, they were signally deficient in the delivery of the recitatives, rendering them infinitely more monotonous and torpid than usual. Mr. Whitworth made a great hit as *Manoah*, Samson's father. Whitworth made a great hit as *Manoah*, Samson's father. Whitworth made a great hit as *Harapha*, the giant of Gath: the bass air, "Honour and Arms," was not only sung with finish and energy, but with excellent accent and proper refinement; there was no vulgar barking, too often heard in the air. He was equally successful in the admirable duo with Lockey, "Go, waffled Coward." Miss Birch and Mr. Lockey's artistical snoring of the clever duo, "Traitor to Love," must also be referred to with praise. The choral snoring has never been surpassed, except in one or two instances of unsteady intonation in difficult chromatic passages, the most tedious ear must have been gratified: it was not merely correct note-reading, but there was a poetry in the colouring of the music by the choralists, of irresistible charm. The trebles in the "Her faith and truth" sang delightfully in tune. The contrasts between the dignified supplication of the Israelites, "Hear, Jacob's God," and the wild pagan orgies of the Philistines in the "To song and dance," were finely marked. The auditory were quite thrilled by the colossal chorus "Fixed in his everlasting seat."

Altogether, this revival reflects the highest credit on the Sacred Harmonic Society and on its great conductor, who, in addition to his labours in the direction of the masses, has judiciously written additional accompaniments, where the thinness of Handel's score has justified such liberties. The organ part, well played by Mr. Brownsmith, has been added by Costa, as well as the companiment of the viola. The brass has been sparingly used, but the new effects for the wood band have been calculated with the spirit of a thorough musician, fully reverencing the genius of the immortal Handel. It is on hearing "Saul" and "Samson," as now executed at Exeter Hall, that, with all the boasted declamations of art-prowess, the hearer is struck with the mighty conceptions of the great Handel. Whatever may have been gained in forms, the ideas in these two oratorios are still sufficient to supply modern composers with inexhaustible themes to work upon, to paraphrase, and to re-produce. "Samson" will be repeated on the 26th inst.

ROYAL SOCIETY OF MUSICIANS.

There are three institutions in London to aid the distressed artist: the Ancient Royal Society of Musicians, established in 1738; the Choral Society, in 1791, and the Royal Society of Female Musicians, in 1839. The formation of the two last-mentioned societies arose out of the rules and regulations of the parent institution not including every class of professors. But the three societies, taken together, are not sufficiently comprehensive, as measures are now in progress to establish a fourth institution. Whether the statutes of the Royal Society might not be so modified and arranged as to include every branch of the musical profession, so as to have but the expense of one executive, we shall not now inquire, but the excellence of the most ancient of the three societies is unquestionable. It is, however, a great mistake to call the Royal Society of Musicians a rich and flourishing institution; so long as the annual claims upon it exceed the income, there can be no permanent prosperity. Now, if we examine the abstract of the accounts for the year 1850, we find the vested property, that is, interest on stock and ground-rent, amounts to £1643 19s. 3d.; and the expenditure, in monthly payments to aged musicians, widows, and orphans, £2060 6s. 10d., besides £186 4s. 6d. in temporary relief and funerals; £39 10s. in premiums with apprentices, rewards to ditto, and schooling; and £56 10s. in benefactions to aged claimants, also to indigent musicians, widows, &c., having no claim on the institution. It will thus be seen that the outlay is far beyond the fixed revenue of the society, and it has, therefore, to look anxiously every year to other sources for the sinews of war, and these are thus provided for:—First, from the professional members' subscriptions and premiums, £399 12s.; secondly, from honorary life and annual subscriptions, £279 5s. 6d.; and, thirdly, from donations and legacies, £154 1s. It will be at once seen how important is the anniversary festival to the funds of the society, as the attractive musical arrangements, and the gathering of the amateurs amidst the professors, lead to the raising of an important sum of money to carry out the benevolent objects of the institution. We understand, that, if any increased demands on the exchequer had taken place this quarter, the society would not have been in a position to have met such claims without cutting off the item of occasional aid, one of infinite value in hard times. When it is stated that in the expenditure of the sum of upwards of £4650 last year, the business of the society was entirely carried on for £209 12s. 5d., which includes nearly £60 for printing, &c., it may be judged that the governors and assistants, who gave their services gratuitously, exercise a proper vigilance in the distribution of the funds. At the 113th festival, held on the 7th, in Freemasons' Hall, the financial condition of the society was not clearly explained by the representative of the musicians charged with the task; but, fortunately for the interests of this noble institution, the Earl of Carlisle was in the chair, and his tact and eloquence in proposing the occasional toasts, had the effect of swelling the list of donations and subscriptions, without which the Royal Society of Musicians would indeed be limited in the exercise of charity. Mr. Parry's account of the origin of the society is an admirable text for commentary on its excellence. It is curious to look over the names of its benefactors. Handel, who, during his life, gave so many noble performances for the Society, bequeathed a legacy of £1000; and there are, besides, annually, a public rehearsal and execution of his "Messiah," two performances which are fixed this year for Monday morning, May 5th, and Wednesday evening, May 7th, the proceeds of which are to be vested in trustees' accounts. The Royal family, Sir Robert Peel, Lord Mahon, Mr. Benedict, Sims Reeve, Cipriani Potter, Jullien, Ella, Mrs. Anderson, Rovedino, Moscheles, Braham, Miss Masson, Miss Birch, Professor Taylor, &c., &c., have been amongst the list of names of those who, by her Majesty and Prince Albert incessive, have been liberal from George III. to the present time. Amongst the existing contributors may be cited the firm of John Mitchell, £100. Amongst the existing donations, have given £697; R. Cocks, Storace left £1000; Mr. Bland, £1000; C. Rayner, £200; J. P. Salamon, £200; Broadwood and Sons, who, in twelve donations, have given £2385; Cramer, and family, £99; Collard and Co., 50 guineas; Addison and Co., £26; Cramer, Beale, Addison, and Co., £26; Jenny Lind, £100; Ernst, £74; besides the names of Grisi, Mario, Thalberg, Costa, Balfe, Benedict, Sims Reeve, Cipriani Potter, Jullien, Ella, Mrs. Anderson, Rovedino, Moscheles, Braham, Miss Masson, Miss Birch, Professor Taylor, &c., &c., whose am

THE NEWLY ELECTED ROYAL ACADEMICIANS.

and lively orator of the noble President, and to the excellent musical arrangements, passed off with unusual spirit.

MUSICAL EVENTS.

Our notes of the week must be brief, the important concerts noticed above having taken up our space.

Mr. Hunter, on Monday, gave a new entertainment, "The Songs of Scotland," at the Music Hall, for the first time in London.

Mr. F. Enckel, on the same evening, had a concert at the Sussex Hall; assisted by Miss Bassano, Mdlle. St. Marc, Miss L. Lewis, Mdlle. Maguer, the Misses Alexander, Signor F. Ronconi, Signor Agosti, Mr. Drayton, and Mr. Jonghmans.

M. Billet, on Tuesday, gave his third and last pianoforte *soirée*, at St. Martin's Hall.

Mr. H. S. May, the pianist, on the same evening, had a concert at the Horns, Kennington, aided by Miss Ransford, Miss Messent, the three Misses Collins, Miss Townsend, Signor Zezi, Mr. J. Howe, Mr. Leffler, Mr. Buckland, G Taylor (harp), H. Griesbach (violin), Miss V. Collins (violoncello), Miss R. Collins (violin), and Mr. Collins (flute).

Selections from Mendelssohn's "Paul," and Beethoven's Mass in C, were performed at Mr. C Salaman's Amateur Choral Society, on Wednesday

Mr. R. Carte delivered his second lecture on Instrumental Music, "classical and unclassical," on Thursday, at the Whittington Club, illustrated by Messrs. T. C Severn, H. and R. Blagrove, Reed, Clementi, Weslake, and Carte.

Mr. W. Ree's third and last pianoforte *soirée* took place on the 14th, at the Queen Anne-street Rooms.

Last Saturday, Mr. W. H Holmes, the pianist composer, gave his second *matinée musicale* at the same locality, assisted by Miss Rushforth, Miss Dolby, Miss Messent, Mrs. J Macfarren, Mr. Reed, Mr. W. Macfarren, Mr. F Bodda, Mr. S. J. Noble, Mr. Thomson, &c.

This morning (Saturday), the Royal Academy of Music will give the first concert for the season.

The third concert of the Amateur Musical Society will be on Monday next, as also Mdlle. Graumann's *matinee*, and Kiallmark's morning concert

On Tuesday there will be the three classical *soirees* of Mr. W. S. Bennett, Mr. H. Blagrove, and M. Rousselot.

On Wednesday will be the fiftieth of the monthly concerts of ancient and modern music, at St. Martin's Hall, under Hullah's direction; and Mr. C. Field will present his entertainment, "The British Naval Service," at the Hanover Rooms. On Thursday, Mr. Lucas's third musical evening takes place

Our Continental advices this week are brief but interesting. Another change has taken place in the direction of the Brussels Royal Grand Opera; MM. Octave and Bouchez having given up the management to M. Haussens. Five directors filled at this establishment in 1850, the cause assigned being the exorbitant salaries demanded by the principal singers. Rosenhain's "Demon de la Nuit" was to have been produced on Wednesday, at the Parisian Grand Opera, to be followed immediately by Gounod's "Sappho." Madame Montenegro will appear soon at the Paris Italian Opera-house as *Norma*, and Mr. Sims Reeves as *Ernani*; Madame Fiorentini and Signor Calzolari having gone to London to join the company at Her Majesty's Theatre

Mdlle. Dupres's benefit took place last Sunday; she played *Lucia*, and *Desdemona* in the third act of Rossini's "Otello," her father sustaining the character of *Otello*. Madame Sontag and Labiache also played in the first act of "Il Barbiere."

At a charitable concert in Berlin, Madame Castellan, who has been playing at Hanover, sang an air by Haydn, and a romance by the Earl of Westmorland, with great success.

The King of Prussia has ordered Meyerbeer's portrait to be placed in the Royal gallery of celebrities.

A new opera by Signor Batiste, "Ermelinda," the chief parts sung by M. and Mdlle. Evrard, has been produced at the Teatro Nuovo, with complete success. The composer was called for eleven times.

The Queen of Spain has saved the new Italian Opera House, Orients, from closing by a grant of £30,000. Alboni had been re-engaged up to the 19th of March, a month longer

Vogt, the great organist of Friburg, has recently died, at the age of 38.

Mdlle. Elise Krinitz, an accomplished pianiste from Paris, has arrived in Lisbon for the season. Signor Rotondi, the great double-bass player, will soon be here, from the Havana, where he was director of the Italian Opera

Miss Clara Novello, after her brilliant triumph at Lisbon, will return to London for the season, where she will be warmly welcomed. Strot and Vieuxtemps may be soon looked for. M. and Mdme. Oury have returned to town from Paris; Mdme. Oury played at Erard's rooms with the greatest success.

THE OFFICIAL EXHIBITION CATALOGUES.—Preparations on a large scale have been made by the contractors for printing the various catalogues of the Great Exhibition. The first step towards the accomplishment of this vast undertaking was the creation of the type necessary to print four editions; and Messrs. Clowes and Son, being type-founders as well as printers, came to the resolution of having the whole of the type cast specially for the purpose Their first effort was directed to produce the type for the small English, French, and German catalogues; the quantity cast for the purpose was 16,000 lb. For the large and illustrated edition they have, in addition to their own foundries, employed those of Messrs. Figgins, Messrs. Besley and Co., and Mr. Caslon, of London; and Messrs. Miller and Richards, of Edinburgh. The joint exertions of these firms have added 25,000 lb. more to the general stock set apart for this vast undertaking; making a total of 41,000 lb. a weight sufficient to set up 48 London daily newspapers. The casting of this large quantity of type gave employment to 250 persons for ten weeks. The number of separate pieces in 20 tons of type amounts to upwards of 26 millions; and each type or piece of metal passes from the hands of five persons in the process of manufacture.

INCLOSURE OF WASTE LANDS.—Sir George Grey has introduced a bill to authorise the inclosure of the following lands in pursuance of the sixth report of the Inclosure Commissioners.—Tamworth (Warwick), Broomsberrow Heath (Gloucester), Abergwilly (Carma. then), Cellan Mountain (Cardigan), Kington (Hereford), Rougiet and Minnies Common (Monmouth), Blaenpenal (Cardigan), Colby Moor (Westmorland), Mapperhall (Herts and Beds), Twyford Down (Southampton), Owslebury (Southampton), Lurkenhepe Common (Surrey), Ash (Surrey), Marshfield (Gloucester). Smallridge Common (Devon), Ipplepen (Devon), Towednack (Cornwall), Lodgersball (Wilts), Bentley (Southampton), Compton Abbas (Dorset), Droxford (Southampton), Stourpaine and Ash (Dorset), Whitley (Berks), Shinfield Greens (Berks), Scaleby Moss (Cumberland), Newton (Cambridge).

THE ROYAL ACADEMY.

A VERY rare occurrence in the history of art in this country took place at the Royal Academy of Arts on the 11th of last month—the election of four Academicians from the ranks of the Associates, to fill the vacant places occasioned by the deaths of Sir Martin A. Shee, Sir William Allan, Mr. Etty, and Mr. Deering. One vacancy a year is considered to be the average of the vacancies; but death, in 1850, had been busy among the forty members, and none of the four can be said to have died young

The twenty, or rather nineteen, Associates, from which the thirty-six members proceeded to recruit their ranks, consisted on the day of election of the following names:—Francis Danby; George Patten; Richard Redgrave; Sir John Watson Gordon; Thomas Creswick; John Hollins; Francis Grant; William Calder Marshall; Alfred Elmore; Thomas Sidney Cooper; William Powell Frith; Edward Matthew Ward; William Edward Frost; Paul Falconer Poole; Frederick Richard Pickersgill; Sidney Smirke; Robert Thorburn; Augustus Leopold Egg; John Henry Foley; that is, seventeen painters, one sculptor (Mr. Marshall), and one architect (Mr. Smirke).

After an active canvass (worthy of a rotten borough contest in the heat of Ministerial animosity), the elections fell on Mr. Redgrave, Sir John Watson Gordon, Mr. Creswick, and Mr. Grant. Nor has the public been much disposed to quarrel with the selection.

How one vacancy would be filled up was known beforehand; the Royal Scottish Academy having elected Sir John Watson Gordon (then only Mr. Gordon) to fill the office of President of the Royal Scottish Academy, vacant by the death of Sir William Allan, and her Majesty having chosen him her principal painter in ordinary for Scotland, and conferred the honour of knighthood upon him. To have withstood such claims to attention would have been inconsistent with the courtly policy of the Academy, and Sir J. W. Gordon's election (independent of his great merit as an artist) was, therefore, a matter of certainty. This, however, was not the case with respect to the other vacancies. People (not generally misinformed) were of opinion that Mr. Grant would hardly get in *this* time, as the Academy would be unwilling to elect two portrait painters. Mr. Creswick was freely named for election; and if there had been any R.A. sweepstakes, Mr. C. would have stood well in the betting. Frith, and Ward, and Frost, and Marshall were deservedly favourites: indeed, Mr. Marshall ran Mr. Grant very hard, and, but for Mr. Grant's seniority as an Associate, would probably have taken his place.

To become an R.A. is the leading object of an artist's life; it is his K.G. and G.C.B., and his "collar of Esses." To be one of forty chosen out of four thousand is no inconsiderable honour. But this is not all. The fact of his being an R.A. gives him a position in society; he is admitted into the Athenæum Club without going to the ballot; and at a Macready dinner has his seat on the dais; and, while all below is *cold* and *poor*, has his *hot* chickens, and his *first*-class champagne. Then, too, within his own walls in the National Gallery, he has a right, however bad his pictures may be, to his *fortieth* portion of the best space upon the walls. Ay, and he takes it too; though at times he will do a generous act, and remove one of his own pictures to give a junior a chance. It is wonderful how soon he becomes a thorough-paced member of the body, though, while an outsider, he has been clamorous in the extreme against the Academy. Attack an Academician in his company, or prefer an A.R.A to an R.A. as an artist, and see how he gives battle, as if the reputation of the whole forty was in danger. Before he has been a year in office he has acquired bits of Leslie's lectures by heart, has re-read Sir Joshua's discourses, and is trying his voice at a speech for the annual Academy dinner.

Mr. REDGRAVE achieved a sudden reputation by a most touching picture from the "Vicar of Wakefield," and soon confirmed that reputation by his "Reduced Gentleman's Daughter" and his "Country Cousins." Latterly he has scarcely been up to his old mark; and, finding himself superseded for a time by Frith, and Ward, and Egg, he has taken to landscape painting; and, by his taste in appreciating, and his skill in transferring to canvass the beautiful lane and glade scenery of our country, has extended his reputation for variety of subject and for skill as well. He must seek, however, if he wishes to obtain a reputation hereafter, to poetize his subjects a little more, and to remember the famous remark of Fuseli, that "selection is the invention of a landscape painter."

Sir JOHN WATSON GORDON has built his style as a portrait painter on Velasquez and Sir Henry Raeburn, and has struck from out the two masters a broad massive style of his own that does honour to our school of art. For the portrait of a *man*, no living artist can touch Sir John Gordon. He rejects the common types of portraiture; and, unlike other artists, when he has a fresh sitter, rather relies upon himself, nature, and the sitter before him, than flies to the engraved works of Sir Joshua for a position or a background. He scorns the schoolboy commonplaces of a curtain and a column. It was long, however, before he reached this broad excellence of manner, for his portraits of Sir Walter Scott and the Ettrick Shepherd are hard daguerreotype likenesses, very untrue to the style of Sir Henry Raeburn.

For skill in transferring a shady pool, or a green lane, to canvass, no one has surpassed Mr. CRESWICK. He loves

> To wander
> Adown some trotting burn's meander,

and never fails to light on a Jaques-like spot sacred to solitude, and fit for the pencil and colours he has with him. The inmost glades and tumbling waters have formed delightful additions to every exhibition within the last fifteen years. And now that he has extended his art, and sought to represent a large tract of country under a particular atmosphere, he has found a wider circle of admirers, and still continues to please and enchant all whom he pleased and enchanted before. To our tastes, he is the greatest painter of *English* landscape now among us; but he is not necessarily, therefore, the greatest landscape painter we possess; he wants the poetry of Turner, the sublimity of Martin and Danby, the indescribable something of Linnell, and a certain charm for which Mr Lee is so remarkable. He has, however, not yet achieved his best; and he is young, with the world of nature before him, to supply fresh scenes of a still loftier character than any that he has yet attempted.

As Sir John Gordon is not to be surpassed in painting a male head, Mr. GRANT is not to be surpassed in painting a female head. One can render the strength and intellect of man; the other, the fascinations of female loveliness. Mr. Grant has built his style on Gainsborough and Reynolds—more on the former, however, than the latter He is not so original in style and treatment as Sir John Gordon; and it is a very easy matter to trace his borrowings to the pictures from whence they were taken. He steals (if he will pardon the word) in a bold, highwayman-like manner; and what he borrows, makes his own, by the graceful use to which he turns it. Beginning his career as an artist late in life, Mr Grant is a remarkable instance of taste, talent, and perseverance. A gentleman by birth, fortune, and education, you see in his pictures the well-bred air of one who is fully alive to the ease and charms of good-breeding. There is the well-born appearance—or what Pope called the nobleman-look—about all his portraits. Those sitters who bring it, find it transferred to canvass; and those who do not bring it, find it given to them. A painter with such a skill in pleasing cannot but succeed

The portrait of Mr. Redgrave is from a photograph by Beard, taken for this occasion. We have not here engraved Mr. Grant's portrait, it having already appeared in our Journal, No. 153.

POPULATION OF THE UNITED STATES.

The Superintendent of the Census has published the following table of the population of the United States, as near as can be ascertained at present from the certificates of the Marshals; the ratio of representation and number of representatives to each State which that amount of population will give; the fractions left to each State, &c

States.	Free population.	Slaves.	Representative population.	No. of Representatives and fractions.
Maine	583,026	—	—	6 22,976
New Hampshire	318,063	—	—	3 34,415
Massachusetts	994,724	—	—	10 62,964
Vermont	314,322	—	—	3 34,794
Rhode Island	147,543	—	—	1 34,374
Connecticut	370,913	—	—	3 91,385
New York	3,098,818	—	—	33 24,010
New Jersey	469,858	82	—	5 24,019
Pennsylvania	2,341,254	—	—	25 11,804
Ohio	1,981,940	—	—	21 25,344
Indiana	990,338	—	—	10 58,498
Wisconsin	305,396	—	—	3 36,058
Michigan	397,376	—	—	4 24,872
Illinois	846,000	—	—	9 11,416
Iowa	192,000	—	—	2 5,648
California	200,000	—	—	2 13,648
Maryland	492,661	90,368	546,874	5 80,994
Virginia	940,000	460,000	1,216,000	13 4,712
North Carolina	480,000	280,000	648,000	6 88,944
South Carolina	280,000	350,000	490,000	5 24,170
Georgia	555,000	365,000	774,000	8 28,592
Florida	45,000	22,000	58,200	1 —
Alabama	440,000	330,000	638,000	6 78,954
Mississippi	300,000	320,000	492,000	5 20,420
Louisiana	250,000	200,000	370,000	3 90,472
Texas	100,000	30,000	130,000	1 30,824
Arkansas	150,000	45,000	177,000	1 83,878
Missouri	590,000	91,547	644,932	6 85,872
Tennessee	800,000	290,000	950,000	10 18,240
Kentucky	782,000	211,000	908,600	9 70,016
Delaware	90,277	2,332	91,076	1 —

ENTIRE POPULATION.

	Free.	Slaves.
Free States	13,574,797	
Slave States	6,294,938	3,067,334
District and Territories	197,365	3,500
	20,067,790	3,070,734

The entire *representative population* is about 21,710,000. The ratio of representation will be about 93,170.

As the law of 22nd May, 1850, determines the number of representatives at 233, and as but 223 of these are provided for in the foregoing table, without taking them from fractions, it will be necessary to select from the States thirteen having the largest fractions, to each of which are to be assigned a representative to make up the entire number

The States entitled to representatives for such fractions will most probably be New Hampshire, Massachussetts, Rhode Island, Connecticut, Indiana, Maryland, North Carolina, Alabama, Louisiana, Texas, Arkansas, Missouri, and Kentucky 13.

The States which gain, irrespective of the fraction, will be Pennsylvania 1, Illinois 2, Mississippi 1, Michigan 1, Missouri 1 = 5

The States which gain, in all, are as follows; viz. Arkansas 1, Indiana 1, Illinois 2. Massachussetts 1, Mississippi 1, Michigan 1, Missouri 2, Pennsylvania 1—10.

The following States lose: viz. Maine 1, New Hampshire 1, New York 1, North Carolina 2, South Carolina 2, Vermont 1, Virginia 2

Thus free States gain six members, and lose four. The slave States gain four, and lose six.

REPEAL OF THE TAXES ON KNOWLEDGE.

THE GREAT MEETING IN ST. MARTIN'S HALL, LONG ACRE.

WE have repeatedly drawn the attention of our readers to the subject of the impolitic tax upon education and general knowledge, imposed by the Excise duty on paper; and to the threefold amount of taxation imposed upon political knowledge by the paper duty, the advertisement duty, and the penny stamp. In presenting this week a Sketch of the animated scene which took place at St. Martin's Hall, Long Acre, on Wednesday, the 5th instant, when Mr. Cobden held up to the meeting a copy of a large American daily newspaper, published at less than a penny, we might leave the subject so treated to speak for itself, and forbear making any comment upon it; but the question has assumed so much importance, and the Chancellor of the Exchequer is a gentleman who will not yield even on a right point without an amount of external pressure that would suffice to convince half a dozen abler ministers, that we must continue to do our best towards making the subject more fully understood, with the full conviction that public opinion is fast ripening upon it, and that the Government will sooner or later yield to reason and justice in this matter, and cease to treat so great a social question as one of mere money.

Mr. Cobden, Mr. Milner Gibson, and the other gentlemen who have lately taken up this question with a vigour that augurs of success, seem inclined to attach more importance to the repeal of the Newspaper Stamp Duty than to the abolition of the Excise Duty on Paper and the Duty on Advertisements. We believe, however, that all three taxes are equally injurious, but in different ways. Upon the first two of them we are not aware that a difference of opinion exists in any quarter, even in the offices of the Government itself. Upon the third there is considerable difference of opinion in many quarters; and these differences must be reconciled, before any real progress can be made in the settlement of that question. A few words on each of them, separately, will enable our readers to understand what interests are involved in them.

In the first place, as regards the *Excise Duty on paper*. Paper, considered without reference to its ulterior uses as the vehicle for the dissemination of knowledge, is an article of manufacture, which ought not to be taxed any more than cotton, or woollen cloth, or silk, or hardware, or any other product of industry which gives employment to the population, and administers thereby to the happiness of the labourer and the resources of the State. Upon this point, we shall show, in a future Number of our Journal, that an unwise Government once placed a tax upon cotton goods, and that a wise Government took it off. We shall show at the same time what were the results of the abolition of that foolish impost, though it was not a whit more foolish than the Excise Duty on paper; and how great an impetus was thereby given to the trade of a large district, and consequently to the resources of the country. In the meantime, we would ask what there is about paper that should subject it more than cotton to the operation of the Excise laws? Were not a book made of paper, and did no question of education, morals, or religion enter in any degree into the consideration of the subject, the tax would be an indefensible one. As such it would affect large classes of consumers, wholesale and retail dealers, and many important trades, of which the *papier maché* manufacture would perhaps be the most unfairly dealt with. But when paper is the material without whose aid the education of the people is impossible, the impolicy—to use no harsher word—of subjecting it to taxation becomes almost incredible. To combat irreligion, ignorance, and crime, to diminish pauperism, to eradicate intemperance, to make the working-classes self-supporting and self-respecting—objects which every Government ought to have at heart—there is no adequate means at the disposal of the State, nor of any party in it, so long as there is a tax upon paper. To talk of the education of the people, or of this country being able to keep pace in the great struggles of the world with such a nation as the United States of America, is a mere mockery, while every comprehensive attempt to enlighten the masses is rendered nugatory by the exciseman. The £100,000 per annum voted by the Government for educational purposes is a confession of the importance of the subject; yet the very same Government that aids education to this extent, impedes it to an amount at least a thousand-fold greater, by enhancing the price of the material by which alone education can be conveyed.

As regards the second question—the *Advertisement Duty*—it is a tax upon trade, and therefore impolitic; but, as it is a tax which only operates upon advertisements which are inserted in newspapers, it is, therefore, unjust to publications which no Government can deny to be essential to the well-being of a civilised community. A civilised country without newspapers, would be a contradiction in terms; and were there no other means of establishing such public instructors, the Government itself would be glad to undertake the task, or show itself less enlightened than the Sultan of Turkey or the King of the Sandwich Islands. While any man may advertise without being taxed in any and every possible way, even in modes that are public nuisances, it is gross injustice that he should be taxed as soon as he puts his advertisement in a newspaper. The tax, in fact, is wholly indefensible. No one has a plea to urge for its continuance, except that it brings in money to the State; and this plea has so little to stand upon that it is doubtful whether the obstruction to trade which it causes, does not in effect make the State a loser rather than a gainer by it. It is, moreover, a tax that presses more severely upon the poor than upon the rich. It mulcts the servant girl in want of a place to the same extent as the public company that advertises the sailing of its steam-ships or the departure of its trains. It stands between the buyer and the seller—the producer and the consumer—the labourer and the employer—and bears as its most distinctive feature that it is a piece of fiscal spite against newspapers, imposed originally by foolish statesmen (active), who dreaded free discussion, and loved to punish it; and retained by another class of foolish statesmen (passive), who prefer their present ease to the welfare of the country.

As regards the *Stamp Duty on Newspapers*—the third and last of these unwise taxes—it must be admitted that there is a greater show of argument for its continuance than can be adduced in defence of the other two. Newspapers have power for evil as well as for good; and it is desirable that they should be conducted by men of substance, who, if they attack private character, may be made to pay the penalty; and who, if they foment sedition, may be reached and punished. But the question is, does the penny stamp effect these objects? and would not the newspaper press of this country, appealing to a sober, a steady, and a religious people, find it its best interest to reflect public opinion? The history of the American press seems to us to answer the question, and to prove that there is no fear that the English press, if perfectly free, would be otherwise than worthy of the English people. Doubtless, some disreputable papers would start up under a system of perfect freedom; but so they do now; and, what is curious is, that the law does not reach them, and that they may deal in lies and slander without being subjected in any degree to the supervision and the call of the Stamp Office. The argument founded upon the abuse of the liberty of the press in France will not apply to this country. The English are not so impulsive or so violent a people. The French, it is well known, cannot assemble, to the number of a few hundreds, in a public meeting, without danger of insurrection; and our Government might as well restrict the liberty of public meeting in this country on the ground of danger to the public peace having resulted in France, as continue to impede the dissemination of political knowledge because another people, differently constituted, and acting under totally different circumstances, had not always known how to use without abusing a great social right. It is too late in the day for such arguments. Another excuse for this tax, which is sometimes alleged that by its means newspapers enjoy the privilege of freely passing through the Post-office, is as worthless as the rest. No one wishes that newspapers should pass through the Post-office without payment; and no one buying an untaxed newspaper would object to expend a penny on a stamp to place upon it, when he wished to send it to a distance. Indeed, we believe, that, as far as the Post-office is concerned, the Government would gain money by the abolition of the stamp; and that hundreds of thousands of papers which now pass through the Post-office a dozen times for a penny each, would pay a penny every time they were dropped into the Post-office box. Of course a large increase of revenue would be the result.

We believe the Government is prepared to "do something:" but, whether or not, we are certain that the question will not be allowed to drop. If the Government would but give us untaxed paper this year, we might be content to wait until next year for untaxed newspapers. It has an opportunity upon this, as well as on some other questions, of recovering the ground which it has lost. The memory of the men who untaxed food will live in the hearts of the present and future generations. The men who shall untax the food of the mind—who shall bring the means of education and enlightenment to the poorest cottager, and enable the hard-working man to read the daily history of the world to his family at his own fire-side, instead of sending him to the ale-house and the gin-shop, to hear it read at a greater money cost and at an incalculable amount of positive demoralisation, will entitle themselves to a reward as splendid and as enduring.

MEETING FOR THE REPEAL OF THE TAXES ON KNOWLEDGE, IN ST. MARTIN'S-HALL, LONG ACRE.

GREAT INDUSTRIAL EXHIBITION.

THE "World's Great Fair" is at present in one of its most interesting stages, the competitors at this high festival are pouring in their treasures on all sides, whilst every becoming effort is being made for their due distribution and display. Even to the ordinary spectator, the amount of contributions collected and daily augmented in the Hyde Park treasury, is eminently surprising and suggestive, when he reflects on the labour and faculty which have been expended on the myriads of wares before him, and on the management and providence which have received, accommodated, and which are to array and set in order this vast accumulation. For ourselves, we may say that every visit impresses us with the wonderful and incessant activity and progress of the workers of the nineteenth century.

Of the decoration and equipment of the great Building in time for the promised opening in May, as far as official arrangements are concerned, and as we have repeatedly remarked, let us not entertain the smallest doubt (Messrs. Fox and Henderson have an European reputation by this time to sustain); the delay, if any, will rest with the Exhibitors themselves. The next two months, as has been well observed, must therefore witness an expenditure of energy and labour such as has been rarely displayed on one undertaking, if all that is required be punctually accomplished.

Our French contributors must again be specially assured that the 1st of May is irrevocably the opening day. If they choose to show bare walls and black spaces, and to miss the most important occasion of the Exhibition, such laxity will not damage the character of the Exhibition. The setting forth of each foreign compartment rests with the responsible and recognised agent, and the exhibitors of the country to which it has been appropriated; and certainly the English authorities of the Commission will bear no part of the culpability or neglect.

In the western division the home consignments amounted to 2613 packages, up to the 13th instant. Of those received from our colonies, the return exhibits 516 cases.

In the department of raw materials there are deposited 463 packages: in machinery, 1036 packages; in manufactures, 587 packages, and in sculpture and plastic art, 145 packages. Thus it is agreeably evident, that, in the departments in which we reasonably excel, our manufacturers have well bestirred themselves up to the present date, and have especially quieted our fears respecting our promised exhibition of machinery. Indeed, the scene of constant activity presenting itself in the British side of the Building well confirms the promise of these returns. The laying of the foundation for the machinery on the north side is all but complete; for machinery (as we have previously told our readers), which will be in work in cotton, silk, woollen, and flax manufactures; for the new printing-press of the ILLUSTRATED LONDON NEWS; for the great hydraulic press, &c. Here, too, in this division, already are locomotives; a large carriage-wheel of Crossbill's, 13 feet in diameter; immense cranes; lathes and planing machines from Manchester and Birmingham. For the marine steam-engines, also, the foundations are being well advanced; and the boiler-house outside, for supplying steam to the working machinery, has been begun. In the nave, preparations for the fountains are visible. In the galleries, counters, stalls, and even the cabinets or finished cases themselves, are already erected. At the extreme west the frames of the great organ are set; and in the south galleries, several of the goods have been hoisted and deposited in their respective allotted spaces. Carpenters, painters, decorators, cabinet furnishers, mixed with the orderly groups of the Sappers, are in all parts of the Building in full work. Mr. Newman, the artists' colour manufacturer, has erected a case in the south gallery for the display of pigments and colours, valued at £700. Commencing at the transept, on the ground-floor, allocated to our Colonial contributors, the bustle is similarly bewildering. In the East India department, great advancement in the carpenters' work, &c., is apparent; while an immense store of cases, &c. appear in the division under the superintendence of Dr. Lindley. Adjoining it, in the Fine Art section, is the court for the church ornaments, &c., of Messrs. Welby Pugin and Crace. And here we may remark, that great variety will be obtained in the department for London furniture, as several decorators will furnish the ceilings of the bays as specimens of their skill and taste. Further on, the agricultural implements and machinery are thickly strewed about, some of them being of unusual size and ponderousness.

But little additional progress is noticeable in the Foreign compartments. The Zollverein, as we mentioned last week, is still at the head of the foreign contributors, though good deal narrative in the French division. Several pieces of French sculpture are highly attractive: a colossal group of St. Michael overthrowing Satan, by M. Jean du Seigneur; a bronze hunting group, groups of animals in bronze, a marble Bacchus, Cupid and a drunken faun or satyr, in metal, are among those mentioned to us.

A mosaic table from Barcelona, to be offered for her Majesty's acceptance, is also commended as a wonderful and minute specimen of workmanship, together with a chess-board, among the productions of the Zollverein, valued at 1200 guineas, the checks of which are of mother-of-pearl and tortoise-shell, the rim of gold, and the figures of elaborately worked silver and gold, being historical portraits of the time of the Emperor Charles V. The Queen and Court of Portugal inspected the articles to be shipped from Lisbon. The marbles are said to be very fine, principally prepared and polished by Frenchmen. Some heavy antique silks, made fifty years back, and (in woollens) carpeting specimens are noted. Carvings in wood and ivory, by a gentleman named Braga—especially a statuette of Prometheus bound—had been admired. The best specimens are those in the mineral and vegetable kingdoms.

The American frigate *St. Lawrence* is on its way to Southampton with her precious cargo, above 200 tons in weight; and the list of articles, in 600 packages, printed in the New York journals, extends over three columns. One of the most remarkable productions is the model bale of cotton from Mr. Merriwether, of Montromery, county Alabama, weighing 480 lb., and as fine almost as silk, which is to be presented to her Majesty.

The return of foreign goods delivered up to the 13th instant inclusive gives 3317 packages, of which 200 are from Tunis.

Another alloy for the susceptibilities of the alarmists respecting the strength of the galleries has been afforded in the presence of the Executive Committee and their staff, Mr. Cubitt and several scientific gentlemen, and Lord Granville and Mr. Cobden, of the Royal Commission. At the suggestion of Mr. Field, of the firm of Messrs. Mandsley and Field, a strong square frame containing thirty-six compartments, in each of which was a 68-pound shot, was placed on the floor of the gallery, attached to this were six other frames similarly constructed. The total number of shot was thus 252, and the weight 17,136 lb., or about 7½ tons. These frames being on wheels, by means of ropes were then rolled along the gallery by a large body of Sappers; but the pillars and girders betrayed no weakness, and the flooring did not vibrate to any sensible extent. As Mr. Brunel had determined that the greatest weight, by packing men as closely as possible on any given space, was 95 lb. to the square foot, this test, representing 160 lb. to the square foot, established amply the security of the galleries. The pressure of an ordinary crowd in the pit of a theatre, or at a meeting, does not exceed from 50 lb. to 60 lb. to the square foot; and it must be remembered, that, as a great part of the gallery space will be occupied by light articles displayed on stalls, the number of spectators that can circulate there at one time must be limited. The passages are formed, moreover, at the sides, close to the pillars, where the strain is least likely to be dangerous, so that the experiment made on the 11th with 203 68-pounders must be considered conclusive. Subsequently, on the 13th, the experiment was repeated along the passages of the north-western galleries: the Sappers, dragging the frames, marched at slow and quick intervals, and then, releasing their hold on the shortframes, placed in double-quick time in close rank of nine rows, three men abreast, along a considerable length.

The decisions by the Commissioners meeting on the 5th, respecting the formation of the juries, have been published: the number in each jury is kept as small as possible, to render them effective; six being the lowest number in a

jury, the highest twelve, and the whole number 270. Of these, 135 will be foreigners. A figure is attached to each of the thirty sections, settled by Dr. L Playfair's elaborate classification, to which we have so frequently alluded The different towns will send in their lists of qualified persons to act as jurors, and the Commissioners will reduce the lists to the standard number [illegible] will, of course, be exercised; but the necessity to have the jurors as small and as compact as possible, cannot be questioned. The decisions, determining the most important points, run as follows:

"There shall be one jury to each of the 30 classes. The number of jurors in each jury is determined by the amount of arts exhibited in each class, and the greater or less diversity of the subjects, from an abstract idea of the relative importance of the classes is involved in the numbers attached to them.

"If exhibitors accept the office of jurors, they and their firms cease to be competitors for prizes in the class of which they are elected jurors. Jurors who become foreigners to their country de facto advisable. Juries of another class may also be called in aid to a jury. Juries may act in matters of detail by subcommittees, but no award can be made except by the united body. Before a jury can publish its awards, they must be submitted to a council consisting of the chairmen of all the juries. The awards of a jury, when reported by the council of chairmen, are final. The juries will commence their duties on Monday, the 12th of May, at 10 o'clock, and will be aided by a num[illegible] assessors, who, by consent or by a deputy, may be present at their deliberations, for the purpose of explaining the rules of the Commission, but will have a vote in any of the juries, or at all interfere with the awards

"The jury will in general consist of an equal number of British subjects and of foreigner. If foreign commissions do not send a sufficient number of foreigners to represent one-half of the jurors in each class, the deficiencies may be filled up by British subjects. Country as well as metropolitan districts will be represented on the jury. Each jury will be presided over by a chairman to be nominated by the Commissioners, and he will be aided by a deputy-chairman to be elected by the jury. Juries may appoint one of their own body as reporter.

"The chairmen of the 30 juries will be associated as a body, to be called the council of chairmen." In the absence of a chairman, the deputy-chairman will take his seat at the council. The council of chairmen will be equally constituted, as far as practicable, of British subjects and foreigners. The first duties of the council of chairmen will be to frame rules for the guidance of the juries. The council will also have to determine the conditions under which the 1st, 2nd, and 3rd class medals respectively are to be awarded, and to define the general principles for the awards in the several departments. It is the wish of the Commissioners that medals should be awarded to articles possessing decided superiority, of whatever nature that superiority may be, and not with reference to a merely individual competition. The three classes of medals are intended to distinguish the respective characters of subjects, and not as first, second, and third in degree for the same class of subjects. The council of chairmen must see that awards of the individual juries are in accordance with the rules, before they are considered final. Although the Commissioners may be disposed, under peculiar circumstances, to consider the propriety of pecuniary awards to individual exhibitors, they will only consider such applications on the recommendation of the council of chairmen, honored by the council of chairmen. The duties of the council, being preliminary to the action of the juries, will commence on Monday, the 5th of May. In order to represent the wishes of the Commission, and to explain its rules, a nominee of the Commission will attend the meetings of the council, and aid it in the transaction of business; but he will not have a vote, or act as a member of the council.

"Towns exhibiting to a considerable extent in any of the classes will be invited to send a list of names of persons who would efficiently represent the knowledge of those classes as jurors. It will be necessary to state, according to the classes you list, the subdivision of the class with which the person recommended is specially acquainted; and all nominations must be made in classes and not in the aggregate. It is necessary to reduce the lists to the standard number of each jury, the Commission charges itself with this duty. Those persons who have been recommended as jurors, but who from the large numbers of the jury are not placed on it, may, on the application of a jury, be called in on special occasions to give aid, under the title of associates, but without a vote. Although it is impossible to set apart special days in which the juries alone can examine the articles exhibited to the exclusion of the rest, arrangements will be made to carry on these examinations with as little inconvenience as possible."

The only section exempted from the preceding arrangements is that of agricultural implements, which is left to the hands of the Royal Society, transported to the Royal Agricultural Society, with this simple proviso—that foreigners may be added to the list of judges named. The fact of an exhibitor having served as a juror will be no bonâ fide in the article exhibited by the firm to the public, as a special mark of distinction. It is under consideration in what manner a juror may also receive a memorial of his service, so that this exclusion from the possession of a medal may not be observed by the public. The principle upon which foreign jurors should be elected was postponed until after the 15th, when the agents of the Foreign Commissioners were to send in their opinions. It is to be hoped that the foreign agents will act on the recommendations of the Commissioners relative to the distribution of their goods, according to the classification made by British exhibitors, for this would materially aid a fair decision, by affording a system of immediate comparison of articles

An common posting-bill has been issued as to the removal of packing-cases, declaring that all those which are [illegible] six days' notice from the Finance Committee will be sold, as they inconveniently cumber the ground.

In answer to several inquirers, we may observe that persons desiring season tickets, and accompanied [illegible] usual visitors, will be able to join one another in the Building, within 12 feet of the entrances doors at the south transept: they will never be out of sight of each other, and will be speedily united by the hand-rails. Those with season tickets will enter at the doors appropriated for [illegible] numbers; those who pay, will find an entrance on both sides of the doors for season tickets.

The following is an accurate list of the officers charged with the multifarious duties and responsibility of the vast undertaking

When the Commissioners met on Saturday, the superintendence of all important subjects comes before *H. R. H. Prince Albert*: *Lieut Granville*, as Chairman of the Finance Committee; *Mr. Cubitt*, as Chairman of the Building Committee. *Mr. Scott Bowring* is the Acting Secretary for the Commissioners.

The acting members of the Executive Committee are *Colonel Reid*, *Henry Cole, Esq.*, and *Charles Wentworth Dilke, Esq.* In the particular division of duties, we believe that *Colonel Reid* and *Mr. Dilke* have the control of the Buildings; general superintendence of the police, charge of the correspondence, &c., while *Mr. Cole* takes the department of space and arrangement.

The departments in connexion with the above duties are entrusted to –

Mr. Owen Jones, the general decoration of the Building, &c.

Mr. D. Wyatt, the assistance and the bills for the Building, and preparation of plans for any alterations required.

Mr. Grace Dalrymple acts as the Secretary for general correspondence.

Lieutenant Oversman has charge of the Correspondence respecting Space and extension of Time, &c.

Mr. R. G. Wylde acts as the Secretary in connexion with Foreign Commissions.

Captain Grib and *Lieutenant Stapleton* have charge of the admittance of Exhibitors and the provision against Fire.

Lieut Cowper has the reception of Strangers, so that Visitors may be referred to the proper quarter for answers to any questions.

Mr. Barsi is the Clerk of the Works on the part of the Commissioners.

Mr. Bridges is charge of the Police. *Captain Goodi*, and *Captain Rafter*, of Foreign and Colonial Goods. *Mr. Bontell* has the superintendence of the actual unloading on the Foreign side.

Mr. F. S. Carpenter is the head of the financial department.

Captain Bowdoin Bidston acts for the Registration of Designs

Captain Colhoun in respect of British Goods, and *Captain Owen* in respect of Foreign, examine the [illegible] of each department, and superintend generally

Mr. Grove, of the Society of Arts, has charge of the sale of the Season Tickets, of which we hear that 50 on Wednesday evening more than 5000 had already been sold. His assistant is *Mr. Kendall*

Captain Owen is entrusted with making the arrangements for the admission of visitors during the time the Building is open.

Mr. [illegible] and *Mr. Fairman* are the Senior Officers of the Customs, who are present in the Building.

Mr. J. Wade is Registrar of Letters.

Mr. Doddi[illegible] charge of the space and Drawingroom; Assistant, *Mr. [illegible]*.

Mr. Osman is in charge of the Cone Post-Office and Parcels Departments.

Mr. Pearce is Superintendent of the Police.

Mr. Murray is Superintendent of the Special Constables.

The division of the English goods is to be into thirty classes.

Class 1 is under the superintendence of *Pro*[illegible] 13, 14, and 15, *Mr. George Lance Austed* and *Mr. Robert Hunt*, Assistant, *Mr. W Hawkins*

Assistant, *Mr. Harrison*

Class 2, *Dr. Lyon Playfair* and *Mr. A* Class 17, *Mr. Owen Jones*, Assistant, *Mr T Phillips*; Assistant, *Lieut Heard* *H. Hay*.

Classes 3 and 4 *Dr. Lyddon* and *Dr Ro*[illegible]

Assistant, *Mr. Hutchinson*

Class 5, *Mr. Hennyman*; Assistants, *Lieut* [illegible] *Hawkins*

Duncan and *Mr. Biddle*

Class 6, *Mr. Hennyman*; Assistants, *Lieut* [illegible] *Lieut-Col Crozier* and *Mr. Colson*

Class 7, *Mr. Hennyman*; Assistants, *Lieut* [illegible] *Mr A Thompson*

Colson and *Mr. Heal*

Classes 8, *Capt Wentworth* and *Mr Watts*.

Class 9 *Mr Brandreth Gibbs* [illegible] Assistant,

Class 10, *Lieutenant-Colonel Lloyd*; Assistant, *Lieut Trevor*

Class 30, *Mr Owen Jones*

The East Indian Collection is to be arranged by *Dr. Royle* and *Professor Solly*

The representatives of the British Colonies will be assisted by the [illegible]

Dr. Lindley, who lends constant and gratuitous aid: Assistant, *Lieut. Bainbrigge*

The Chinese and Persi[illegible] collections will be exhibited after the arrangement of *Col. Lloyd*.

Professor Playfair will see to the working [illegible] the Juries, assisted by *Mr. Ward*; Clerk, *Mr. Melville*.

The contractors for printing and preparing the Catalogue are [illegible] *Spicer and Clowes*. Their representative at the Building is *Mr [illegible]* The scientific Editor is *Mr. R. Hunt*; [illegible] assistant.

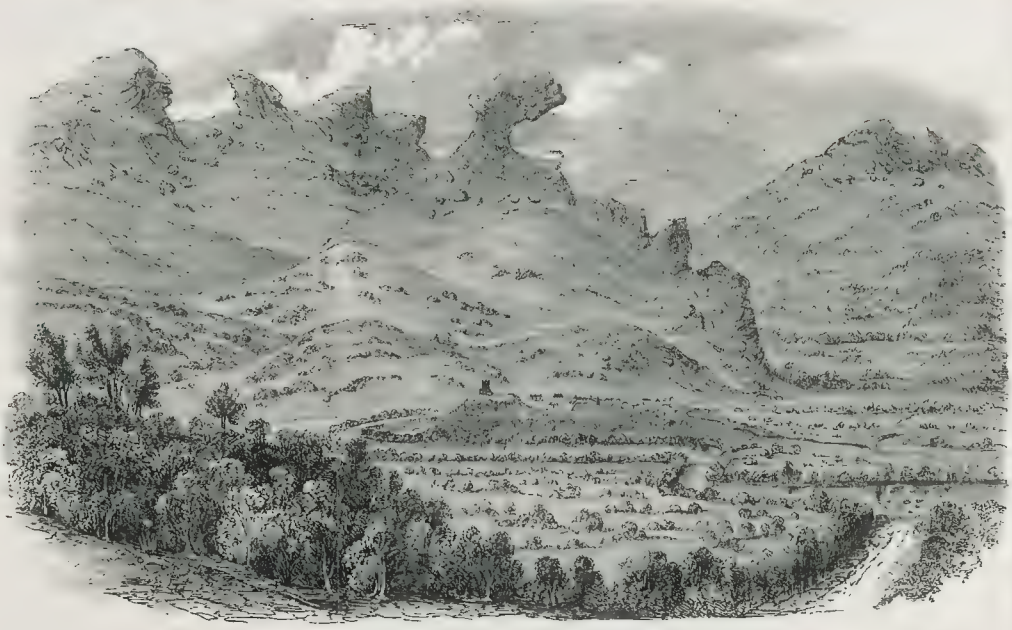
The contractors for the Refreshment-rooms are *Messrs. Schnapp*[illegible] *Youngbusband*, of Gerrard's Hall, has undertaken [illegible] supply of refreshments to the staff and to the exhibitors

The electric telegraph is under the charge of *Mr. Gamble*.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

The tendency of the English Market during the past week has been upward, although the extent of the improvement has not exceeded per cent. Tuesday was the monthly account day in Consols; it proved, however, a comparatively trifling affair, the fluctuation during the period having not exceeded to one per cent As Money Stock was not very plentiful, prices became firmer upon the settlement terminating, and a further to 96¾ to 1 was the closing quotation This price has been well maintained since, the market becoming firmer upon the receipt of the last Cape news. Reduced New Three and a-Quarter per Cents, Long Annuities [illegible] now closed until after the payment of the [illegible] dividends, are [illegible] have advanced a few shillings. The new March [illegible] the course of delivery by the Government [illegible] India Bonds also quote a [illegible] improvement At the close of transacti[illegible] the official list gave prices as follows:—Consols, [illegible] Annuities, 1885, Reduced, [illegible] 30 years, 7 9-16; India Bonds, under £1000, 60 2-; Consols for A [illegible] Exchequer Bills, £1000, June, 56 [illegible] Ditto, £500, [illegible] Ditto, Small, [illegible] Bank Stock, [illegible] Ditto for the Account, [illegible] Reduced, [illegible] New Three and a-Quarter per Cents, [illegible] Long Annuities, [illegible] Bank Stock, [illegible] Exchequer Bills, [illegible] India Bonds, [illegible] Ditto, Small, [illegible] Ditto, under £1000, [illegible] Ditto, for the Account, [illegible] Consols



FORT ARMSTRONG, KAT RIVER.

FINGO WOMAN.

b order, opposite the Gaika territory, were the first to feel the destroying stroke. At mid-day, while the peaceful inhabitants were seated at their Christmas dinners, the savages surrounded their dwellings, and in a few minutes nothing but smoking ruins and corpses horribly mutilated marked the sites where the villages had stood. More than seventy men, women, and children perished in these massacres. Two women, one of them wounded, alone escaped to tell the awful tidings. The Galkas then poured across the boundary in marauding parties, devastating the open country across the frontier, and as far west as Graham's Town. The *Graham's Town Journal* of January 4th, says:—"It is expected with confidence that a diversion will be made in favour of the colony from Port Natal. In the settlement of Port Natal there are many thousands of Zulu warriors friendly to the British, a portion of whom might effectually engage the attention of hostile tribes, and prevent them assembling with the other tribes in the war now waging with the colony."

Hottentot Washerwomen.—Between Cape Town and Table Mountain there is a stream of water, which is rendered picturesque by numerous cascades. This stream presents a curious scene to a European in the beginning of every week, by literally hundreds of Hottentot and other coloured women beating and washing linen in the water. Some of them are accompanied by their husbands and children, and the gift of a few halfpence to the latter is acknowledged by the parents with extreme expressions of gratitude. Many of these females are naked from the

AMAKOSA KAFFIR.

waist upward, with the petticoat tucked up some inches above the knees. Some of the younger ones display very fine figures; and the whole scene, to one especially who sees it for the first time, is most extraordinary and ludicrous. My appearance among them was always the signal for great laughing and chattering.

Next is an *Amakosa Kaffir*. These people inhabit Kaffraria, near the Gaika's

We present a Sketch of a *Zulu Hut*. The Zulus live eastward of the Great Fish River.

HOTTENTOT WOMAN.

tion, saying, 'We have no arms to protect ourselves against the Queen's enemies and traitors.' It was expected there would be sufficient force there not only to protect the post, but to scour the country."

At the close of the last Kaffir war, the Governor, Sir Harry Smith, visited the Kat River settlement, and expressed himself highly pleased with the district; and, whilst admiring the cultivated valleys from the top of the Kat Berg, he said that the settlement did its founders great credit; and that if the Kat River had failed, then had the whole world failed. The people were delighted with their new Governor. He also appointed the native Field-Commandant, Groepe, Justice of the Peace for the Division of Albany.

THE EUPHORBIA TREE, NATAL.

FORT ARMSTRONG, KAT RIVER.

This is one of the frontier localities which the war has almost reached. The View shows Fort Armstrong, on the Kat River, which separates the eastern province from the country of the Amakosa, or Kaffirs Proper.

According to the *Cape Monitor*, dated Jan. 18, the Kat River Hottentots were greatly disaffected, and it was feared that they would join Hermanus, by whose order several Englishmen had been murdered in Winterberg, and who was carrying fire and brand into every farm. The Kaffirs had attempted a strong combination with the coloured classes, which had succeeded in Kat River, where, from the paucity of troops, none had been detached. The account adds:—"A great many women and children were in the camp at Fort Armstrong on the 31st of December, and numbers of the loyal inhabitants were flying there for protec-

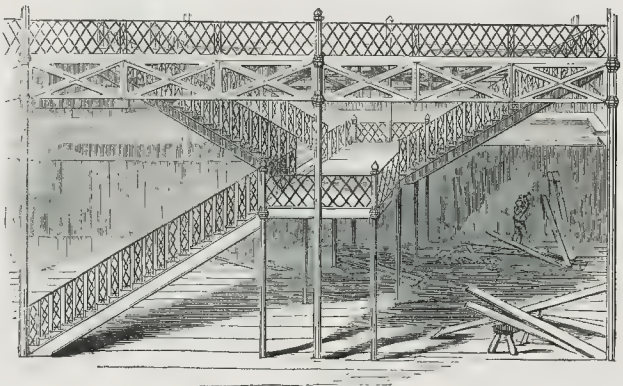
THE ILLUSTRATED LONDON NEWS

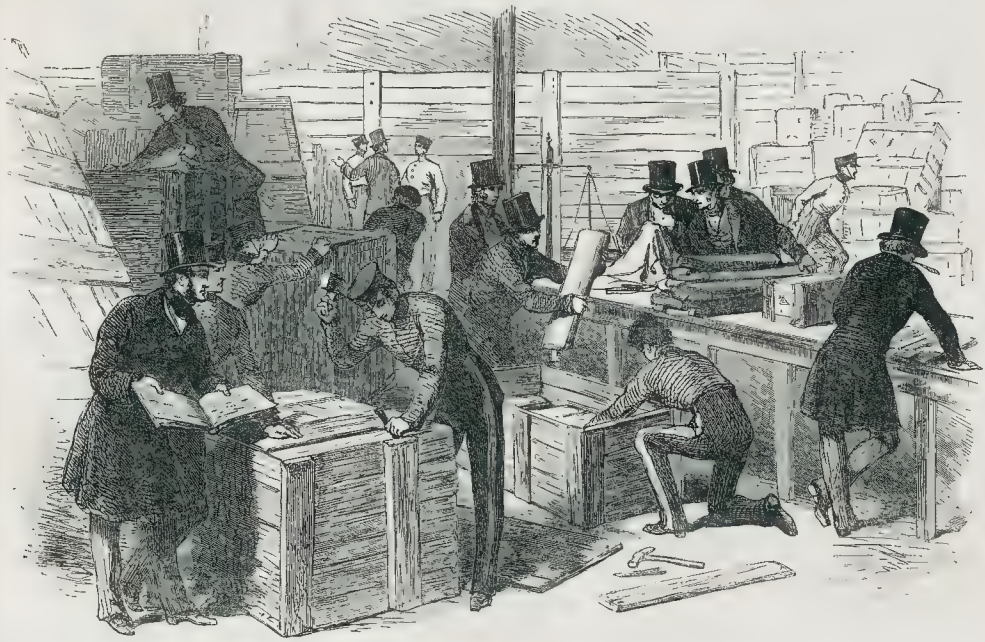
No. 475.—Vol. xviii.] SATURDAY, MARCH 22, 1851. [Sixpence {WITH SUPPLEMENT, GRATIS.

COTTON, AND COTTON-WASTE.

England, as a manufacturing country, may be said to live by its cottons, its woollens, and its hardware. The Government never, that we know of, levied an Excise duty upon the manufacture of wool, for that would have offended the landed interest; nor upon hardware, because it would have cost more to collect such a tax than it would have brought into the Treasury; but it sent Excisemen for many years into the cotton-mills, as it now sends them into the paper-mills. From the very infancy of the cotton manufacture until the year 1830, this important branch of the national industry was burdened with an Excise duty, to the great vexation, annoyance, and injury of the manufacturer, and to the loss and detriment of the people—compelled to pay more for their clothing than they would otherwise have done, and deprived of remunerative employment which they might otherwise have obtained. The amount of the duty was 3½d. per square yard, amounting, on pieces seven-eighths of a yard in width, to an average of from 4s. 9d. to 5s. 6d. per piece; and on those nine-eighths of a yard in width, to 5s. 9d. up to 6s. 3d. Each piece was stamped by the Excise officers at the time of printing, and marked with the length in yards and with the width in centesimal parts of a yard. A drawback was allowed on exportation. The packing of the goods was carried on under the surveillance of the Excise, and each package was sealed by the officers, and an account sent by them to the Excise Office at the port of shipment; and in about a month after, the duty was returned to the exporter. This tax was felt to be a nuisance of the worst kind, as it prevented the natural expansion of a most important trade, diminished the consumption of a necessary and a luxury of life by largely increasing the price, and consequently impoverished the country. But there was so much vitality in the cotton trade, that, in spite of this ill-judged Excise duty, the manufacture continued to increase. In the year 1796, the number of yards that paid duty was 20,620,000; in 1800, the number was 32,870,000; in 1814 it reached 124,610,000; and in 1830, after fifteen years of peace, and the consequent development of every branch of the national industry, it amounted to 347,450,000 yards. For some years prior to the date last mentioned, the manufacturers of Lancashire had begun to agitate against the grievance of the Excise duty. Many of their number very constantly evaded it, thereby causing the Government to keep up a large staff of Excise officers to watch over suspected persons. Early in the session of 1831 the subject was brought under the notice of the Legislature,



STAIRCASE OF THE GREAT EXHIBITION BUILDING.—(SEE NEXT PAGE.)



INTERIOR OF THE GREAT EXHIBITION BUILDING.—(SEE NEXT PAGE.)

and it was stated, that, out of the £2,000,000 sterling annually levied by this means, more than £1,500,000 was expended in the cost of the extra Excise establishment employed in its collection. The Whig Chancellor of the Exchequer, the late Lord Althorp, in introducing his Budget, on the 11th of February, 1831, acknowledged this fact, and stated explicitly that the Treasury only received 25 per cent. of the whole sum levied for the duty on printed cottons. His Lordship stated further, "that the tax not only operated as an impediment to our manufactures, but was partial in its pressure, and fell almost exclusively on the poorer classes of consumers. It was a tax," he added, "which it was most desirable to have repealed;" and, without bungling or equivocation, such as some of his Whig successors in the same office who might be named would possibly have employed under similar circumstances, he announced that the Government had determined to repeal it, and to provide for the estimated deficiency of revenue of £500,000 by imposing an import duty of five-eighths of a penny per pound on raw cotton. The measure was carried, but the import duty was afterwards reduced to five-sixteenths of a penny per pound. It was left to Sir Robert Peel, on his reform of the tariff, to sweep away the last remnant of the burdens upon the manufacture of cotton, by abolishing this small, but vexatious import duty; and to justify, in 1845, the sagacious prediction of Mr. Hume in 1831, who said in committee on Lord Althorp's motion, "that he was sure the duty on raw cotton would only be temporary."

The result is well known. Immediately that the Excise duty was repealed, the trade increased. Employment was extended. Where 100 persons found work in 1830, double the number were employed in five years afterwards; and the quantity of cotton employed in our great manufacturing districts, which in 1830 was upwards of 269,000,000 lb., amounted in 1835 to 326,000,000 lb.; and in 1840, to 531,000,000 lb.; and in 1849, to 775,000,000 lb.; valued by Mr. Porter, in his "Progress of the Nation," at £36,125,840; or an increase in the trade since the duty was repealed of upwards of £51,000,000. Printed cottons in 1851 can be, and are, sold at prices under the amount of the Excise duty levied upon them in 1831; and we learn that calicoes, which formerly paid from 4s. 9d. to 5s. 6d. duty, are offered wholesale, at the present time, at prices varying, according to quality, from 4s. to 5s. 9d. Not even Sir Charles Wood will allege, that the Treasury or the country lost anything by this wise measure of his predecessor.

So much for the Exciseman in the cotton-mill, and the national benefit which resulted from his extrusion. It lay pens, however, that the Government, in freeing cotton from the Excise, kept its hard and impolitic hand up on cotton in another shape. In all the large cotton manufactories of Great Britain there is an immense quantity of waste or refuse, of no value in itself to the manufacturer, and it is only, as far as he is concerned, to be burned, destroyed, or otherwise put out of the way. This waste or refuse, like straw, and other vegetable substances, is, however, the material of which an article of great beauty, utility, and indeed prime necessity in every civilised community, is manufactured. Cotton-waste is the grand ingredient of manity, is manufactured. Cotton-waste is the grand ingredient of paper, and is purchased from the cotton-mills by the paper manufacturers at a very cheap rate. If the mill-owners would burn or bury this substance, Government would not interfere, by duty or otherwise, to prevent them; but, as soon as the paper manufacturer takes it and converts it into wealth, the Government sends the excisemen to demand, in the name of the nation, the sum of 1½d. per pound, or £14 per ton, before he can be allowed to dispose of it to the public in the shape of the beautiful article of paper. Simply as a question of trade and of employment for the people, the Excise duty upon cotton-waste is quite as important in a national point of view, as the Excise duty upon cotton itself. England manufactures printed calicoes for nearly the whole world. We know of no reason why she should not be the world's paper manufacturer at the same time; unless it be the obstinacy of the present Government that will not, even though it have a surplus of revenue at its disposal, relax its hold upon the money which the tax produces. The tax is evaded to such an extent, that the Government in this case, as in that of the Excise duty on cotton goods, is compelled to keep up a staff of Excisemen, which nearly swallows up the total proceeds in order to watch over dishonest or suspected manufacturers. The manufacture of paper, like that in cotton, wool, hardware, or any other article with which the Exciseman does not meddle, would, if left to its natural expansion and growth, employ on a moderate calculation 100,000 additional pairs of hands in two or three years from this time, if it were made free; and vegetable refuse, that now rots on the ground, would be converted into national wealth. If paper were a mere commodity, with which education, literature, morality, and religion had nothing to do, the manufacturers would have a right to demand of the Government—independent altogether of the question of present loss to the revenue—to free them from a burden so unjustifiable and so onerous; but when paper is the vehicle of thought, the instrument of knowledge, the substance of all others which a civilised country most needs for the purposes of education and enlightenment, the folly of taxing it in the first instance, and the obstinacy of retaining the tax when its injurious effects are proved to all the world, is nothing less than wicked. The old plea of lazy officials, that they must get money somewhere, will not do in this case. Apparent gain to the Exchequer, may be a real loss to the nation. Such gain ought to have no attractions, even to the most *nonchalant* of Ministers.

If the present Government want encouragement to do what is right upon this question, and if its claims upon their attention, as one of Literature and Religion are not of themselves sufficient, let them refer to the debates in "Hansard" upon the repeal of the Excise duty on cotton, and to the industrial history of England since the day it was taken off. We think that, simply as a question of trade, and the legitimate extension of manufacturing industry, they will then want no further inducement to make worthless cotton-waste as free of the Exciseman as valuable cotton; and that they will cease to stand between 100,000 or perhaps 200,000 persons and their remunerative employment, and between millions of the uneducated people and the cheap instruction that would be provided for them if there were a free-trade in Paper.

TURNPIKE TRUSTS AND THE SECRETARY OF STATE.—The committee of the House of Commons now sitting on the applications of the various turnpike trusts throughout the kingdom for a renewal of their local acts, have received a report from the Secretary of State, to the effect, that, it having been represented to him that considerable saving of expense in these matters might be effected by preliminary inquiries, he has caused such inquiries to be instituted into the circumstances of each of the 14 trusts applying to Parliament this session. In conducting the several inquiries, and endeavouring to effect equitable arrangements between opposing parties, Sir George Grey states that he has been desirous to recommend, as far as practicable in each case, that a portion of the annual income of each trust should be applied to the redemption of the debt at present existing, so that the trust may be in a better financial condition annually, with a prospect of being entirely relieved of its debt as early as possible, without imposing any additional burthens upon the parishes or the public travellers.

At a meeting of the subscribers to the Cooper Testimonial, held on Saturday last, at the Thatched House Tavern, it was decided, by a large majority, that the bust should be placed in the Royal College of Surgeons. The subscriptions having exceeded the amount required, a statuette will be presented to each contributor of one guinea.

On Saturday night, the keepers of the Ribble Lighthouse, Lytham, captured no less than 160 birds, some of excellent quality. On foggy or hazy nights they are attracted by the light, and fly against the glass lantern. Some come with such force that they instantly kill themselves, others dash in themselves, but the greater number receive no injury, and keep fluttering about outside till they are laid hold of.

THE GREAT EXHIBITION BUILDING.

THE STAIRCASES

THE View of one of the Staircases, which are all precisely of the same design and construction, is taken from the cross gallery on the west side of the transept.

In each staircase there are four flights of steps, two on the same side, ascending from the ground-floor to the half-way landing, and two, one on either side of the half-way landing, ascending to the galleries. In each flight there are twenty-one steps, which are 13½ inches wide, 7 feet 4½ inches long, and 1¾ inch thick, and are made of wood at present very little known in this country, called *sobica*—a species of mahogany, but of greater specific gravity: it is of a reddish-brown colour, and very hard, and appears likely to suit the heavy traffic of the millions who will ascend and descend the staircases during the continuance of the Exhibition.

The risers are of deal, 6½ inches high and 1½ inch thick, and are bolted to open spandril irons having proper flanges; and these again rest on the cast-iron stringers of carriages, to which they are bolted. Each stringer is 12 inches in depth, with top and bottom flange, the former being 4½ inches wide and parallel throughout, and the latter 7 inches wide in the middle, and tapering to 5 inches at each end. The web is ⅜ inch thick at bottom, and ¼ inch at top.

The lower stringers are firmly secured by bolts to extra strong wooden joists where they rest on the floor, and at top are bolted through the tops of the cast-iron columns to the larger columns of the building, already alluded to, and also rest on concrete foundations.

The newels and ballustrading are of cast iron, the latter of a diamond pattern, to correspond in some sort with the gallery railing: the handrails are of rounded Honduras mahogany.

The wells of staircases are each 15 feet 7½ inches long, and 7 feet 9 inches wide, formed by cross bearers, 16 inches deep by 7 inches thick, and trimmers, 18 inches deep and 3½ inches thick. The joists of the cross gallery floor are supported at one end on wooden plates resting on the tops of girders, and at the other end are framed into the trimmers. The staircases have been constructed especially with a view to strength, but are nevertheless worthy of commendation from their general design, which is exceedingly pleasing to the eye.

THE REFRESHMENT COURTS, &c.

The Refreshment Courts and other conveniences are situated in three separate parts of the Building: that for first-class feeders, at the northern end of the transept; while the second class court is in the north-west division of the ground-floor, near the machinery in motion; and the third-class court in the north-eastern division, in the district appropriated to foreign contributors.

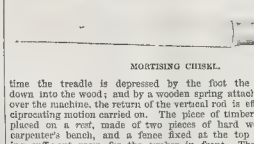
An inspection of the second-class Refreshment Court discovered to our astonished vision other "conveniences" presenting an unseemly appearance, the whole being enclosed with brick walls, hitherto so strictly repudiated, which causes this to be one of the most disagreeable features of the interior. The only way to get over this unfortunate affair is to cover the exterior of these unsightly enclosures. If covered with looking-glass, in panels, properly decorated, under the direction of Mr. Owen Jones, this sad eye-sore would be got rid of.

MORTISING MACHINE.

Among the various useful machines which have been made available for facilitating the operations in the erection of the Great Exhibition Building of Glass in Hyde-park, and which have mostly been described in the ILLUSTRATED LONDON NEWS, there is one used for making mortises in wood, which we omitted to notice.

Our attention was called to it a few days since, and we now present an Illustration of this useful contrivance, the invention of Mr. Furness, of Liverpool. Some of our readers may not understand the meaning of the word *mortise*, which is simply "an excavation recessed within the surface of a piece of timber to receive a projection called a tenon, left on the end of another piece, in order to fix the two together." Usually, these excavations, or mortises, are made by hand; but, owing to the thousands of mortises in the sashes of the Great Building, it would have been a most tedious process, and also caused much delay in the completion of this part of the work. By Mr. Furness' machine, seven or eight mortises are cut out during the time occupied in cutting out a single one by hand.

The machine is worked by the foot of the operator, who moves a treadle, which with levers connected by round iron bands gives motion to a vertical rod in front of the machine, to which is attached the chisel, which may vary in size from the eighth of an inch up to 2 inches: that used for the sash-work at the Building is here shown. Every



MORTISING CHISEL.

time the treadle is depressed by the foot the chisel is brought down into the wood; and by a wooden spring attached to a beam fixed over the machine, the return of the vertical rod is effected, and so a reciprocating motion carried on. The piece of timber to be mortised is placed on a rest, made of two pieces of hard wood, in front of a carpenter's bench, and a fence fixed at the top of the rest, leaving sufficient room for the timber in front. The joiner, while the operation is in progress, presses the wood against the rest. In the middle of the frame of the machine is a gauge-wheel worked in connexion with a horizontal screw attached to the frame of the machine, by this contrivance the chisel may be moved backwards or forwards at pleasure. The iron frame of the gauge-wheel is attached to two horizontal round rods, working between the front and back uprights of the machine, and, being connected with the vertical chisel rod, great accuracy is attained in forming the mortises.

THE HUNGARIAN REFUGEES IN LIVERPOOL.—Subscriptions have been opened for these poor exiles, to raise funds for their support. Those who have gone to America, before leaving, addressed the following letter, signed by twenty-six of them, to Mr. Dicey: "Respected countryman!—You are hereby requested to interpret our feelings of gratitude towards the Government of this glorious and free country, for the generous and liberal way in which we have been provided for during our stay here, as well as for the arrangements which have been made for our passage to America. You will, in like manner, offer our warmest thanks to the worthy Edward Rushton, Esq., the magistrate of this town, for the humanity and kindheartedness he evinced in mitigating, like an endearing father, our sufferings. You will further bring to public notice our thanks towards the generous inhabitants of this town, who received us with so much sympathy, and so generously subscribed for our relief. You will personally see G. H., Esq., Messrs. G—th, P gh, and their Welsh friends, and assure them that we shall never forget the kindness which we have received at their hands."

EXTENSIVE WOOLLEN-CLOTH ROBBERIES AT LEEDS.—On Saturday last the Leeds magistrates brought to a close several lengthened examinations arising out of a charge of felony brought against Mr. George Oddy, a woollen-cloth manufacturer and dealer, residing at Worsley Moor Side, near Leeds. The prisoner, in addition to manufacturing cloth on his own account, has bartered a good deal for other goods, and carried on a rather extensive business. Recently, several robberies of cloth-mills have taken place at Pudsey and the neighbourhood; but, until last week, nothing transpired to lead to the detection of the thieves or the recovery of the stolen property. On Monday, from information previously received, Inspector Child obtained from the Leeds justices a warrant authorising him to search the house of Mr. Oddy. In the meantime his house was watched by the constables of Pudsey (Messrs. John Fearnley and James Halliday), in order to prevent anything being conveyed away; and, after watching at the New Inn, kept by Mr. Pickles, which is near Oddy's house, from Sunday to Monday afternoon, Oddy was seen to leave his premises with two ends of blue cloth upon his back, he being followed by his wife, carrying another end. The cloth was seized, and Oddy taken into custody. Inspector Child and police-officer Kell arrived soon after this, and on searching the house, found two ends of blue cloth in a finished state, some remnants of cloth, and other articles detailed in the evidence. In defence, the prisoner said he had received the cloth of a woman named Huggon, who resides near him, but this was denied by her, and, after a long examination, the prisoner was committed for trial.

HORSEMEN.

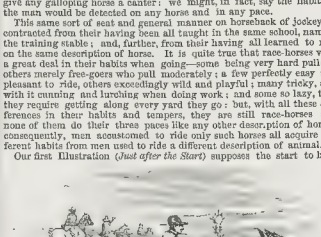
ANY person accustomed to pay the slightest attention to horsemanship, must have remarked the striking difference between the seats, manner, and general appearance of men on horseback: this arising from very natural causes, namely, the different way in which each has been first taught, the description of animal he has been accustomed to ride, and the different situations in which his practice in riding has been called forth. There is a slight difference in the manner of every class of men accustomed to ride for each particular purpose: but the most striking difference of manner is exhibited in the jockey, the huntsman, the post-boy or postillion, the dealer's man, and the military rider. These are all horsemen in their several ways; and we propose giving our readers different Illustrations of the manner, seat, and general appearance of each of these classes of horsemen, with such remarks as, we trust, will be found useful; and, further, pointing out where the marked difference is most strongly shown, and the causes that have produced such different effects. We begin with

THE JOCKEY.

Men accustomed to see jockeys in their saddles would at once detect the man in the habit of riding race-horses, if he was merely asked to give any galloping horse a canter: we might, in fact, say the habits of the man would be detected on any horse and in any pace.

This same sort of seat and general manner on horseback of jockeys is contracted from their having been all taught in the same school, namely the training stable: and, further, from their having all learned to ride on the same description of horse. It is quite true that race-horses vary a great deal in their habits when going—some being very hard pullers, others merely free-goers who pull moderately: a few perfectly easy and pleasant to ride, others exceedingly wild and playful; many tricky, and with it cunning and lurching when doing work: and some so lazy, that they require getting along every yard they go: but, with all these differences in their habits and tempers, they are still race-horses and none of them do their three paces like any other description of horse: consequently, men accustomed to ride only such horses all acquire different habits from men used to ride a different description of animal.

Our first Illustration (*Just after the Start*) supposes the start to have



JUST AFTER THE START.

taken place; and, as such a horse as it represents is usually a ready starter, we conclude him to have jumped off, either with the lead, or among the leading horses. He is going faster than our jockey wishes, but he well knows the temper of such a horse will not bear contradiction; and, should he attempt to check him at once, or rudely pull him together, he would fight at such restraint, and with that exertion and fretting, which he certainly would do, he would exhaust himself more than by being permitted for a short distance to have, in some measure, his own way. Our jockey is seen sitting close to, and quietly on, his saddle, his hands moderately low, steadying his horse's head; his feet placed so as to give him firm hold of his stirrups: an incautious movement of a hand, an arm, an undue pressure of a leg, or a sudden shifting of the seat would, with such a horse, cause a swerve, or probably a bolt, or an attempt to bolt, out of the course. Our jockey is patiently waiting till his horse, from having to a certain degree had his freak out, will become more placid in his temper, and disposed to yield obedience to the hand, bridle, and wishes of the rider

We will now look at the horse. The upward turn of the dock or tail, the ears neither pointed backwards nor forwards, but kept so as to catch every sound; the strain upon the martingale, the stare of the eye, and the expanded nostril, all show great excitement, which our jockey evinces judgment in not further arousing, but, in Scotch phrase, "biding his time" to subdue.

We next see him, as we suppose, a mile from the starting, and half a mile from the ending, post. He has now got him

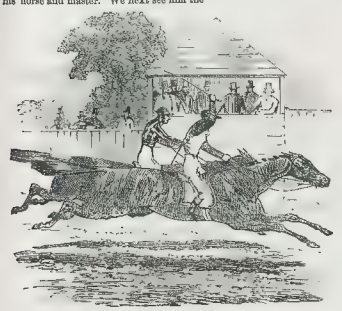
SETTLED TO HIS STRIDE.

We here perceive our jockey in a different position on his horse. He is leaning forwards, so as to take a portion of his weight off the loins, and throwing it more on the stronger part of his horse. He having become amenable to the bit, the jockey has his hands well down, so as to keep his horse's head in its proper place, and pacing fairly and steadily on the bit. He is resting quietly on his stirrups, and man and horse now seem on good terms with each other.

Our jockey has probably been told to "make the pace pretty good," to "make good use of his horse," or, in more concise terms, to "take the lead and keep it;" such directions, or in more racing phrase "orders," are perfectly understood by the experienced jockey, though they are somewhat dangerous ones (particularly the last) to be given to boys. Our jockey knows perfectly well, that leaving the lead and keeping it does not comprehend his racing with and beating off every horse that may during the race come up head and girth with him; for he is quite aware that horses are sometimes entered in a stake (that is known they have no chance of winning) merely for them to force the running for some favourite from the stable, so disputing the lead with such would only be, our jockey knows, expending the powers of his own horse to no purpose. He knows that taking the lead only means as it relates to particular horses in the race, whose powers of speed at the finish may be known, or considered, to be greater than those of the horse he is upon; and, relying on his stoutness, the orders given mean that the pace may be such as to so far cut down other horses dangerous from their speed, and thus bring them at the finish to be no better, in that particular, than the stouter but less speedy horse: our jockey thus lets his horse stride along at a pace that, from its continuance, becomes telling on the flyers. On nearing home, the best horses begin to single themselves out, that is, come away from their horses, and come up to, or even take, or attempt to take, the lead from our jockey. This is a moment when *heed* is wanted. He has hitherto ridden to orders, he must now act on his own judgment. He must not only be guided by

how he feels his own horse under him; but, by watching those in his sight, must judge of how far they are, or are not, in difficulty. If he finds a horse come up and challenge, that he sees is full of running, and feels that the pace has told on his own, he must, in such a case, decline any contest; for the least increased exertion, or perhaps a continuance of the same, will induce, or in truth oblige, his horse to shut up, or what is the same thing in effect, suddenly diminish his rate of going. He must, on the contrary, at all risks, take a pull at his horse, trusting the pace the leading horses are going will bring them back to him. But, whether it does or not, he will be quite aware that a contest between a nearly beaten horse, and one with his powers less exhausted, will, in most cases, be more than useless, and perfectly so in all, unless the one in point of speed is beyond all comparison superior to the other; and even then the chance of success will depend upon how far the one is more or less exhausted than the other, for it must be quite clear to every one that speed ceases when the powers of exertion are prostrated.

We will conclude our Jockey to have used his own judgment at the critical moment in the race that we have described; we will suppose him to have eased his horse off for a few strides; and, from having husbanded his powers, he finds, from the renewed energy with which he goes, that, win or lose, he did the only judicious thing to do for the benefit of his horse and master. We next see him the



LAST STRIDE BUT ONE

rom the winning-post. He has quietly shifted his seat, and is sitting down in his saddle. A few strides before this, we should have seen him more in his first position, but his arms higher yet shaking, supporting his horse. He then takes his reins in one hand, gets his whip up, and threatens his horse. If he springs to that, and as he sees his antagonist is doing his best, he is justified in hoping the race is his; for he feels he has enough left in his horse to go in and win. If, on the contrary, his horse being a free one, he finds he cannot come when he calls on him, or answer to a threaten—if he is not then actually leading, he feels his chance is all but out. To punish a free horse at any distance from the finish would be more likely to make him swerve, or shorten his stroke, than extend or quicken it: he reserves, therefore, this last resource, and the latest moment—a very few strides from home; and at the last stride but one, we see him, with his arm extended, giving his horse the free use of his head, to make all the momentary exertion he is capable of, and, further, in so close a thing, to gain perhaps half a head by the elongation of his horse's neck, and the projection of his nose: he made his rush six strides only from the winning-chair. His game horse answers to the whip and spur: each of the last half-dozen strides brings him a few inches in advance, and he lands him a winner by a head. Had he made his rush before he did, probably his horse would not have lasted at the pace to the finish; had he deferred it longer, he would have been too late: as it was, he just nicked it.

RUNNING MATCH OF TEN MILES FOR TWENTY-FIVE POUNDS A SIDE, BETWEEN COOK OF GREENWICH, AND BIRKHEAD OF SHEFFIELD.

This event, which had occupied a good deal of the attention of amateurs of pedestrianism, came off on Monday last, at Copenhagen House. In honour of the several matches fixed for Monday and Tuesday, the running-course had been widened, and newly gravelled for the occasion; and, had the weather been even moderately propitious, would have afforded one of the finest circular runs in the neighbourhood of London, three times round completing a mile.

In hopes of the deluge of rain ceasing, the men did not come to the starting-post till past four o'clock. In such inclement weather, no attempt was made of any display of the preliminary canter; but, on the word "Go!" being given, like *Lady Macbeth's* guests, they went at once. Odds on starting nearly even—perhaps Birkhead for choice. Cook jumped off with a slight lead, but Birkhead soon collared his man, and on coming round to the starting post they were abreast. In this way the first five miles were run, each alternately leading a few yards. These five miles, notwithstanding the soaked state of the course, were done considerably under the hour minutes. Cook certainly showed as the handsomest runner, and, to ordinary observers, the strongest also; in proof of which, at this period of the race, odds were betted in his favour, and this opinion prevailed till the seventh mile was completed. In going the next mile, Cook fell. He was picked up by his friends, and Birkhead then, patronising a great coat, slackened his speed, and finished the distance at his leisure. Cook, after being taken from the ground, was brought back, and also completed his ten miles

On ascending to the large room, we found it crammed, and our ears were saluted by strains more loud than sweet from the partisans of the winning and losing men. Controversy was at high pressure, till the arrival of Mr. Garrat, the proprietor of the grounds, who had voluntarily accepted the responsible and unpleasant office of referee, put a stop to it, by fearlessly, decisively, and in true sporting spirit, doing the only thing a man determined on straightforward and honourable conduct could do, namely, awarding the prize to the winning man. Cook said he was knocked down by Birkhead's elbow: in reference to that we merely say "Bah!"

After this, in spite of the lateness of the hour, the match came off between Cook of Notting-hill, and Hannant, of Stepney, 140 yards, to clear six hurdles; Hannant, to the surprise of many, winning by about thirty yards.

Notwithstanding the inclemency of the weather, from 600 to 700 of a sort not to be deterred by trifles were on the ground, many of whom were professionals; among them old Smith, who was engaged in an eight-mile walking match on the following day, looking fresh as paint and hard as nails—long may he continue so!

The weather on Tuesday being worse, if possible, than Monday, the three events to come on were very properly put off under such untoward circumstances.

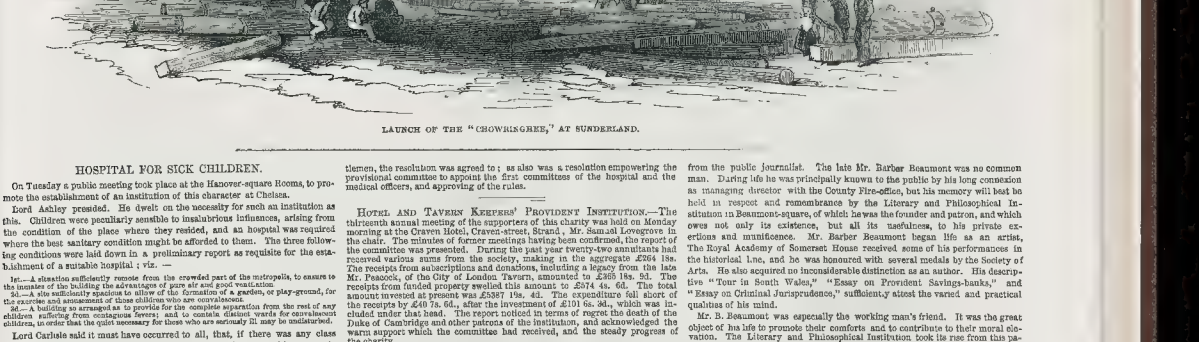
C. Westhall and Jesse Smith, who were to have run a mile race on this day, Smith receiving 80 yards start, had a little spurt by way of keeping their notes in tune, three times round the course. As this was merely done in the best spirit and good fellowship to keep something alive, and themselves in exercise, though a foolish thing, it matters little how it was run; indeed, stating particulars might mislead: but, from the different style of running of the men, whenever the match comes off, as far as our opinion is concerned—if all is meant straight, which we have no reason to doubt—we book the event on one side as certain.

LAUNCH OF THE "CHOWRINGHEE," AT SUNDERLAND.

This fine vessel was launched from the ship-building yard of Mr. William Pile, jun., Northland, Sunderland, on the 3rd inst. The weather was fine, and the spectacle was witnessed by thousands of spectators, without any accident.

The *Chowringhee* is a frigate-built ship, of 1000 tons burthen, new measure, classed A. 1, 13 years, and is the property of John Hay, Esq., of Cresswell House, near Sunderland. Length of keel and rake, 170 feet; extreme breadth, 34½ feet; depth of hold, 21½ feet. This is the first vessel built in Sunderland whose length is five times her breadth, and the longest ever launched in the Wear. She is a beautiful model, combining great carrying capacity with fast-sailing qualities and extraordinary strength. Her iron fastenings are peculiar, and embrace many important improvements, the iron knees alone being upwards of 60 tons weight! The cabins are capacious; and the fittings, which are in a style of great elegance, have been executed under the superintendence of Captain George Brown, her commander. The decorations are by Messrs. Lindsay, of Sunderland, and are of beautiful design, richly relieved with black and gold. The figure head represents a Bengalese struggling with a tiger.

Altogether, the *Chowringhee* will add greatly to the ship-building reputation of Sunderland. Mr Pile is also building a ship of 600 tons; two clipper brigs, of 300 tons each; and a clipper barque, of 800 tons.



LAUNCH OF THE "CHOWRINGHEE," AT SUNDERLAND.

HOSPITAL FOR SICK CHILDREN.

On Tuesday a public meeting took place at the Hanover-square Rooms, to promote the establishment of an institution of this character at Chelsea.

Lord Ashley presided. He dwelt on the necessity for such an institution as this. Children were peculiarly sensible to insalubrious influences, arising from the condition of the place where they resided, and an hospital was required where the best sanitary condition might be afforded to them. The three following conditions were laid down in a preliminary report as requisite for the establishment of a suitable hospital; viz.—

1st.—A situation sufficiently remote from the crowded part of the metropolis, to ensure to the inmates of the building the advantages of pure air and good ventilation.

2d.—A site sufficiently spacious to allow of the formation of a garden, or play-ground, for the exercise and amusement of those children who are convalescent.

3d.—A building so arranged as to provide for the complete separation from the rest of any children suffering from contagious fevers; and to contain distinct wards for convalescent children, in order that the quiet necessary for those who are seriously ill may be undisturbed.

Lord Carlisle said it must have occurred to all, that, if there was any class with whom we might not run any risk, it was the sick poor: with respect to them, we know that the Saviour ever attended to them; and of the young children, they were not to be prevented from being brought to him. The young and the sick were the peculiar care of those who had within them the kind sympathies of human nature. The statistics of infant mortality were the strongest argument which could be used in favour of an institution like this. The noble Lord moved—

That, as great and numerous evils are experienced by all classes of the community from the want of an hospital exclusively devoted to the reception and medical treatment of sick children, the formation of such an institution may be made, under the blessing of Almighty God, a means of relieving the sufferings of the poor, and of conferring important benefits upon society at large. (Hear, hear.)

The Bishop of London stated that they were met that day to supply a want which had been long felt in this country. The population of this vast metropolis had for a long period increased at the rate of 30,000 a year, but the charitable institutions had not increased to a proportionate extent. He had contributed thirty years ago to the formation of the Dispensary for Children, and that institution had dispensed its aid to 12,000; and in that number the mortality was 1 in 40, while it was 1 in 25 with respect to other persons; but a dispensary could not render all the aid that was required. The healing art with respect to young children was far behind what it was with respect to adults. The welfare of the poorer classes of society was peculiarly dependant upon the state of their health, and no person could visit the poor without perceiving how their diseases were aggravated by imprudent management. This institution was intended to afford the means of treating their diseases in a manner of which their own homes did not admit; and it was to be expected that it would afford the means of advancing the medical art, by the opportunities it offered for observing the diseases of childhood.

After some observations from Sir R. Inglis, M.P., Dr. Burrows, and other gentlemen, the resolution was agreed to; as also was a resolution empowering the provisional committee to appoint the first committee of the hospital and the medical officers, and approving of the rules.

Hotel and Tavern Keepers' Provident Institution.—The thirteenth annual meeting of the supporters of this charity was held on Monday morning at the Craven Hotel, Craven-street, Strand, Mr. Samuel Lovegrove in the chair. The minutes of former meetings having been confirmed, the report of the committee was presented. During the past year twenty-two annuitants had received various sums from the society, making in the aggregate £264 18s. The receipts from subscriptions and donations, including a legacy from the late Mr. Peacock, of the City of London Tavern, amounted to £369 18s. 8d. The receipts from funded property swelled this amount to £574 4s. 6d. The total amount invested at present was £5387 19s. 4d. The expenditure fell short of the receipts by £40 7s. 6d., after the investment of £101 6s. 3d., which was included under that head. The report noticed in terms of regret the death of the Duke of Cambridge and other patrons of the institution, and acknowledged the warm support which the committee had received, and the steady progress of the charity.

Metropolitan Commission of Sewers.—On Tuesday, an adjourned court of the Metropolitan Commissioners of Sewers was held at the office, Greek-street, Soho. Present: Viscount Ebrington, M.P., in the chair; Capt. Dawson; Messrs. Stevenson, Lawes, Hawes, and Hardwicke. A report, drawn up by the district surveyor, and approved of by Mr. Forster, recommending the laying down of water pipes, and the employment of other means for the sanitary improvement of various unhealthy localities in Jacob's Island and other parts of the metropolis, was read and adopted. The following works, which had been examined and approved of in committee, were also determined upon: The laying down of 92.0 feet of 9-inch pipe sewers in different parts of the Bevington district, the total estimate being £180; laying down 70 feet of 12-inch pipe sewer in Cross Keys-mews, Marylebone district, estimate £10 10s.; constructing 900 feet of sewer along Burton street and Collingwood-place, Belmark-green district, estimate, £360; 500 feet of 2-feet barrel drain, and 900 feet of 18-inch pipe sewer in High-street and Sydenham-hill; 550 feet of 12-inch in Willow-street, and 350 of 9-inch in Sandy's-row district, estimate, £580; construction of gullies in the Hammersmith, Kent-road, and Whitechapel districts, estimate cost, £60. A rate of 6d. in the pound, for two years, was ordered to be levied upon the Finsbury and Coppersmith districts; after which some routine business was transacted, and the court adjourned.

LITERARY AND PHILOSOPHICAL INSTITUTION, BEAUMONT-SQUARE, MILE END.

Among the many useful institutions in this country formed for the purpose of instruction and amusement for the middle classes, the Literary and Philosophical Institution, founded by the late Mr. Barber Beaumont, merits especial notice from the public journalist. The late Mr. Barber Beaumont was no common man. During life he was principally known to the public by his long connexion as managing director with the County Fire-office, but his memory will best be held in respect and remembrance by the Literary and Philosophical Institution in Beaumont-square, of which he was the founder and patron, and which owes not only its existence, but all its usefulness, to his private exertions and munificence. Mr. Barber Beaumont began life as an artist, The Royal Academy of Somerset House received some of his performances in the historical line, and he was honoured with several medals by the Society of Arts. He also acquired no inconsiderable distinction as an author. His descriptive "Tour in South Wales," "Essay on Provident Savings-banks," and "Essay on Criminal Jurisprudence," sufficiently attest the varied and practical qualities of his mind.

Mr. B. Beaumont was especially the working man's friend. It was the great object of his life to promote their comforts and to contribute to their moral elevation. The Literary and Philosophical Institution took its rise from this patriotic feeling. No sooner was the idea perfected, than it was carried out with the accustomed energy of its originator. Mr. B. Beaumont was untiring in his superintendence during the progress of the works. The building rose, it may be said, beneath his eye: and there is reason to believe that the constant exposure to the weather while engaged in this work had the effect of aggravating those asthmatic paroxysms to which in the latter years of his life he was subject, and finally of putting a period to his career of practical usefulness. Mr. Beaumont, besides giving the land on which the building is erected, endowed it with the sum of £13,000: making an amount little short of £20,000, which he voluntarily gave for the instruction and improvements of the public. From the time when the institution opened, in 1840, up to the present period, it has made most gratifying progress. The number of members for the first year was 117; the number for the year 1850 was 900. The institution is fitted up with a commodious reading-room and a library, already exceeding 3000 volumes in extent. There are classes for instruction in music, languages, and literary subjects. Lectures by popular lecturers are given at stated periods; and, in order to combine amusement with the higher purposes of the institution, a series of concerts and musical entertainments are arranged for the autumn and winter months.

Mr. Barber Beaumont left his son, Mr. J. A Beaumont (the managing director of the County Fire-office), to carry out his views and wishes in this and other public objects. This duty has been faithfully and most successfully discharged; and the Silver Medal, of which the accompanying is a copy, has been struck for the purpose of being presented to the numerous friends of the late founder of the Institution, and to those who have afforded to Mr. Barber Beaumont their valuable assistance in carrying out a work which involves so many gratifying associations. The Medal is by Cobbs, and is esteemed a very fine work of art. We understand it will form one of the subjects for exhibition in the Crystal Palace.

THE LEAMINGTON MILITARY STEEPLE-CHASE CUP.

LEAMINGTON PRIZE CUPS.

THESE elegant prizes, contested for at the Warwick and Leamington Spring Meeting, during the past week, are from the establishment of Messrs. Hunt and Roskell (late Storr and Mortimer), 156, New Bond-street.

The Military Steeple-chase Cup has a round body, ornamented with a shield on each side, one bearing a representation of a Jockey; the other, of the Race. The Cup has an ornamental foot and stem, and handles; and a military figure on the cover for button: it is gilt throughout.

The Leamington Hunt Cup is of Grecian form, and has a bold relief on each side: one, saddling for the race; the other, preparing to start. The body and foot are flat-chased, Grecian ornament; and on the lid is a figure of Victory for the button.

PLATE PRESENTED TO CAPTAIN W. ALLAN, OF THE ROYAL MAIL STEAM-PACKET "DEE."

PLATE PRESENTED TO THE 73RD REGIMENT.

A PAIR of superb Claret Jugs, of large size, have just been presented to the 73rd Regiment, by Major-General Sir John Grey, K.C.B., Colonel of that corps. We have engraved one of these magnificent vessels. They are from the factory of Messrs. Turner, New Bond-street; and, for graceful design, correct modelling, and exquisite finish, may be pronounced as among the finest specimens of art.

PLATE PRESENTED TO THE 73RD REGIMENT.

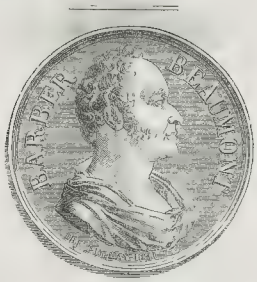
PLATE PRESENTED TO CAPTAIN W. ALLAN, OF THE ROYAL MAIL STEAM-PACKET "DEE"

THE Silver Speaking Trumpet represented in the Engraving, is the gift of the saloon passengers on board the Royal mail steam-packet *Dee*, on her twentieth voyage from San Juan to Chagres, and subscribed for by them, on the 6th October, 1850, as a token of their esteem for him as a gentleman, an officer, and a seaman.

The Trumpet was manufactured by Mr. Simpson, No. 55, Strand, and is beautifully engraved, representing the *Dee* on one side of the mouth of it, with emblematic designs of England and America. The Royal arms of England, with Americus above, and the town arms of Arbroath (Captain Allan's native place), are represented on the side shown in the Engraving.

The reverse side is engraved in the same style, and contains the following inscription, according to the expressed wish of the passengers (chiefly Americans):—

Presented to CAPTAIN ALLAN, of the Royal mail steam-packet *Dee*, by the saloon passengers, on her twentieth voyage from San Juan to Chagres, as a memorial of their respect and esteem. October 6th, 1850.



THE BEAUMONT INSTITUTION SILVER MEDAL.—(SEE PRECEDING PAGE.)

THE LEAMINGTON HUNT CUP

GRAND FANCY BAZAAR AT THE PAVILION, BRIGHTON.

ON Thursday and Friday week, the Pavilion was thrown open to the public as a Bazaar, to assist in the liquidation of the debt incurred in building the Brighton Dispensary.

The work of charity was patronised by her Royal Highness the Duchess of Gloucester, and a long list of the nobility and gentry; whilst Lady Jane Peel, the Hon. Mrs C. Hanbury Tracy, Mrs Jenks, Mrs. Charles Thellusson, Mrs Romeyn Tyrrte, and Mrs. Furner engaged to render more active service, by presiding at the stalls. Col. Shewell, of the 8th Royal Irish Hussars, also granted the attendance of the regimental band, and the London and Brighton Railway Directors consented to issue return tickets from London and back on the two days of the Fair.

Under these auspices, the Bazaar was opened on Thursday morning, at eleven o'clock; and during the whole of that day, up to five o'clock, the rooms were thronged with elegant company, including all the rank and fashion of the town and neighbourhood.

In the vestibule, the band of the 8th Hussars, Kœnig conductor

THE ANDERSON TESTIMONIAL.

FANCY FAIR IN THE PAVILION, BRIGHTON, FOR THE BENEFIT OF THE BRIGHTON DISPENSARY.

ghestlace to the celebrated Herr Isenegg, [illegible] to-day, as the company passed into the state apartments. The whole of these were divided both [illegible] Bazaar number 2 the Music-room Gallery, the Saloon, the Banqueting-house Gallery, and the Banqueting-room.

In the Music-room Gallery, in front of the organ were presided over by Lady Jane Peel, assisted by Miss Peel, Lady Catherine Loftus, Miss Louisa Lane, Miss Acton, and others. The appearance of this, and, indeed, of all the stalls, was very splendid, festoons of rosettes, varying in colour and arrangement, hanging from the summit and breaking the lines of the framework. Mr. Messrs. Nash and Hull was each of the back of the stalls, and they [illegible] it most successfully.

In Lady Jane Peel's stall was the American instrument which we have engraved, but also was a beautiful model of the Brighton Dispensary, made by Braybe, one of the Brighton police-force, an elaborate piece of workmanship, by Mrs. Langworthy the carving of the frame by Mr. Cowden, and a great deal of elegant needlework by the Duchess Lady Jane Peel.

Facing the stall of Lady Jane Peel which occupied the northern side of the Music-room was that of Mrs. C. Thellusson, who was assisted by Miss Livingston and Miss Hammond.

The third stall was that of Mrs. Jenks, who was assisted by Miss Johnstone and Miss D'Arcy.

Passing out of the Music-room into the adjoining gallery, we found ourselves presided over by Mrs. Cordy Burrows, assisted by Miss Dendy, Miss Shelley, Miss Holden, and Miss [illegible].

In the room were also two gifts—one by Colonel Trickey, a monkey shaving a cat, in a glass case, with animals old favourites of the donor, and another stuffed, the other, a statuette of Sir Robert Peel, given by Mr Pelper.

The saloon, or centre room, attracted large numbers with its wheel of fortune, kept by Miss George and Burrow.

The Drawing-room had been [illegible] the saloon into the Banqueting-room, [illegible] a Post-office, [illegible] fitted up with several apertures, at which applications were received, and letters furnished to all comers at a [illegible] notice. The contents of these letters, to which the postage was one shilling, repaid the investment in good time. The Post-Office, [illegible] had been the [illegible] Brighton Dispensary Post-office, Thomas Attree, [illegible] Postmaster-General, and his receipts must have

CONCERT IN THE HALL OF UNIVERSITY COLLEGE, DURHAM — (SEE NEXT PAGE.)

been considerable. Opposite to the Post-office was a refreshment table, supplied by Mr. Shaw, who has given the profits to the institution.

In the Banqueting-room, the left side was occupied by the stall of the Hon Mrs C Hanbury Tracy, presided over by that lady, assisted by Mrs. Clive, Mrs. Charles Craven, Miss Craven, Miss Herbert, Miss Cobbett Darby, and Mdlle. Cattarll.

Facing Mr. Tracy's was a double stall, the lower section presided over by Mrs. Kemey- Tynte, assisted by Miss Brabazon, Miss Courtenay, and Miss Rose

Mrs Furner's stall was enriched by a great deal of beautiful needle-work, which brought her many purchasers.

A large number of artistic donations were made, and the donors were San Giovanni and Messrs. Pepper, Penley, Leatham, G. Smith, Scott, F. Woledge, and Arundale. Among the contributors to the fair was Mr Brinley Richards, of London, who composed a waltz for the occasion, which was sold in manuscript.

On Thursday, the sum of £143 10s was taken at the door, and on Friday £100 19s. The receipts at the stalls were proportionate. The committee wisely determined to keep open the Bazaar on Saturday, reducing the admission to one shilling. Altogether, the Bazaar has produced a handsome sum for the Dispensary; and certainly the Pavilion was never seen to better advantage than in this benevolent work

The annual general meeting of the governors of the Dispensary was held on Monday the 13th, when the report was presented. After recording the continued success of the institution (now in the 42nd year of its existence) in alleviating the sufferings of the poor, it stated that on the 1st of January, 1850, the number of patients remaining on the books was 321, which, with 4693 admitted during the year (being 178 more admitted than in the year 1849), make a total of 5014, of whom 1959 have been visited at their own homes. During the year 4660 were discharged, thus leaving 354 patients on the books on January 1, 1851. The number of persons vaccinated since the opening of the institution, including those of the past year, amounts to 3204.

The statement of accounts showed a balance of £247 11s. against the institution to the 31st December, 1850.

Ten guineas were presented to the building fund by Mr Pouchée (of Messrs. Rigge's establishment, East-street),—that sum having been collected by him in *sixpences*

The "Anderson Testimonial," of which we annex an Engraving, is an elegant silver vase, formed by three large leaves of a marine plant springing from masses of rock, and supported by three horses, the bodies of which stand out from the base in bold relief. The design is spiritedly executed in frosted silver, with burnished chasings, and is eighteen inches in height, exclusive of the pedestal. It has been designed and manufactured by Messrs. Garrard, of the Haymarket. On a silver medallion in front of the pedestal is engraved the following inscription :—

Presented to the Rev. J. S. M. ANDERSON, upon his resignation of the Perpetual Curacy of St. George's Chapel, in record of the graces of his character, the beneficences of his life, and the holy influence of his ministry, by which, during a period of twenty-five years, he enshrined himself in the memory of the inhabitants of Brighton. 1851.

Within the lip of the vase is engraved, "Presented to the Rev. J. S M Anderson, by the inhabitants of Brighton, with £1000."

CONCERT IN THE HALL OF UNIVERSITY COLLEGE, DURHAM

THIS spacious Hall presented a brilliant and animated scene on Thursday, the 27th ult., when there were assembled within its ancient walls nearly 500 of the neighbouring gentry, at the invitation of the University, to an amateur concert by her members.

The Hall is of great antiquity, the present structure having been built *de novo* by Bishop Hatfield, who assumed the mitre about 1350; and, though it has undergone several alterations since his time, which disfigured its beauty and decreased its size, it still retains his original decorated window, and much of its pristine grandeur; its dimensions even now being 101 feet long by 36 feet wide, and 50 feet high. The roof of oak, which age has blackened but not decayed—stern and massive as that bold solid style of architecture, which forms so remarkable a type of the individual character of the Norman race—and even when devoid of ornament excites wilder ideas of pride and admiration, because, unlike man's transitory nature, it can endure for centuries the violence of war and tempests

At the northern extremity of the Hall, just beneath a large new ornamental window, a stage was erected for the performers. The upper wall is decorated with two casts of groups from the Elgin marbles, and by pieces of armour, and various flags and weapons which the Durham Corps of Volunteers used during the Free Trade Revolution; while both the side walls are adorned with pictures and portraits of the prebendaries by whose munificence the revenues which formerly went to support "Durham College," in the University of Oxford, were restored to their legitimate head—the present University of Durham. But the most interesting and remarkable features in these walls are two niches for minstrels, whose rude yet exciting strains have found a pleasing substitute in the more accomplished science of the present age.

Since the Castle of Durham came into possession of the University, this Hall has been used as the dining-hall of University College; but formerly it was set apart for state purposes, the great gatherings of the county, the last of which was held in the year 1827, when Bishop Van Mildert, assembling the high nobility of the shire, entertained the two greatest men of his day as companions of the same board, the noble hero of England's military glory and the great captain of her literature—the Duke of Wellington and Sir Walter Scott: some were present at the Concert who had not visited this Hall since that great event; and, recalling the brilliance and grandeur of that gorgeous scene of conviviality, contrasted it, in colours that detracted not a whit from its lustre, with this less sumptuous but equally animated and more intellectual entertainment.

THE THEATRES.

ROYAL ITALIAN OPERA.

The prospectus for the fifth season has at length been issued, the opening night being fixed for next Saturday, the 29th instant. The company since last year has undergone some changes. Mdlle. Guiseppina Morra is named as the successor of Mdlle. Vera; Mdlle. de Meric and two new contraltos are also announced to be succeeded by Mdlle. Angri (an invaluable acquisition) and a Mdlle. Vitale. Lavia, Zelger, Massol, and Tamburini have retired, and the gaps have been filled by Signor Salvatore, a baryton of high repute from Italy and Spain; Signor Ferrari, late of Her Majesty's Theatre; and Signor Bianchi, a basso of fame from Berlin. It remains to be seen how far such artists as Tamburini and Massol (the latter is now at Her Majesty's Theatre) can be adequately replaced by the new-comers. Grisi and Viardot remain the stars of the troupe; and Madame Castellan, who has recently created such a sensation at the Berlin Italian Opera, is also retained, also Mario, Lablache, Cotti, as second. The tenors are the same as last year—Tamberlik, who has had a brilliant success in St. Petersburgh; Maralti, who has been well received at the Parisian Grand Opera, Mei, Selli, and the unrivalled Mario, fresh from his Russian triumphs. The "Bassi Baritoni," and "Bassi Profondi," again display the names of the inimitable Ronconi, who has been electrifying the Madrid dilettanti, Signori Rommil, Tagliafico, Cresce, Picchiny, and Herr Formes, who has been acquiring lyric glory in Spain since the recess. The principals are, therefore, arranged as before—Grisi and Tamburini excepted, and the *debût* of their successors will be looked for with interest. The choral and orchestral arrangements are stated to be as complete and perfect as heretofore, with Mr. Godfrey in superintend the military band.

Costa is the director of the music, composer, and conductor.

According to the custom of the two preceding seasons, the ballet performances will be confined to short divertissements, and those incidental to operas. M. Alexandre is the ballet-master, and Mdlle. Louise Taglioni the chief *danseuse*.

Graves and Telbin are the scenic *artistes*.

The most striking feature of the prospectus is the passage in reference to the works to be produced during the year 1851. After specifying the thirty-three operas which had been mounted during the seasons of 1847, 1848, 1849, and 1850, the intention is declared of giving each of the grandest works at least once. The musical public may, therefore, expect to witness in fine style the "Guglielmo Tell," "Semiramide," "Donna del Lago," "Moïse in Egitto" (Zora), "Otello," of Rossini; "La Juive," of Halévy; "Der Freischütz," of Weber; "Massaniello," of Auber; "Nozze di Figaro" and "Don Giovanni," of Mozart; "Lucrezia Borgia," "Anna Bolena," and "Favorita," of Donizetti: "Norma" and "Puritani," of Bellini; and "Robert le Diable," "Les Huguenots," and "Le Prophète," of Meyerbeer. Independently of this very rich and varied repertoire, the following eight operas are mentioned as novelties, the Directors pledging themselves to the production of at least four out of the list:—Auber's "Enfant Prodigue," now performing at the Paris Grand Opera; Gounod's "Sappho," about to be produced at the same establishment, having been composed for Madame Viardot, Mozart's "Il Flauto Magico," Donizetti's "Les Martyrs," Weber's "Euryanthe," Spohr's "Faust," Spontini's "La Vestale," and Beethoven's "Fidelio." As regards the last-mentioned work, it has figured in the programmes of the last three seasons, without having been produced: it is to be hoped there will be no disappointment in hearing Beethoven's masterly production, his only opera, this year. The admirers of the German school will be delighted to find the names of Spohr and Weber in the prospectus; thus carrying out the fundamental principle of the founders of the Royal Italian Opera, to produce operas by the most eminent composers, "without distinction of country." In due course, we hope to see the name of an English composer weighing the merits of the *répertoire*, without fear of the foundation being shaken by such an astounding event.

The prospectus has been issued as the address of the "Directors of the Royal Italian Opera;" but it is stated, that Mr. Frederick Gye is now the sole lessee and manager, the commonwealth of artists being at an end. Mr. F. Gye has had three years' experience in the management of Covent Garden Theatre, since the establishment therein of the Italian lyric drama.

DRURY LANE.

Mr. Dance has contributed a small dramatic piece to the *répertoire* of this theatre. It is in one act, and entitled "The Morning Call." The main situation is obvious enough from the title, and is made the vehicle of a courtship between a *Sir Edward Ardent* (Mr. Anderson) and a *Mrs. Chilkington*, a widow (Mrs. Nisbett). They woo, they quarrel, and they woo, with the unreserved approbation of the audience. This little drama is partly founded on M. Alfred de Musset's well-known French *proverbe*, "Il faut qu'une porte soit ouverte ou fermée."

HAYMARKET

Mr. William Wallack appeared on Monday in a second tragic character—the Shakspearian *Macbeth*. It is known that Mr. Wallack is not Mr. Macready in the assumption of such parts. Mr. Wallack is, however, strengthened by his amount of talent and great personal qualifications, and engaged in the arduous task with much spirit and confidence. His impersonation of *Macbeth*, indeed, is exceedingly striking and impressive. His conception is for the most part good, and would be better if it were consistently original. The ordinary stage version we hold to be altogether erroneous. It loses sight of the political conditions of *Macbeth*'s character altogether. Mr. Wallack made prominent the point concerning the Prince of Cumberland. His exclamation to the succession is evidently a wrong one to *Macbeth*, who otherwise had himself a fair prospect of election, and, indeed, felt himself at that moment entitled to *Duncan*'s throne, and the crown which his lady was ambitious he should wear. But the means of gaining it are the question. He "would not play false"—she would. It is with invincible shame and remorse that the noble thane condescends to the assassination scheme; not without strong compulsion—but, indeed, until his moral sense is corrupted by a degrading superstition—he yields to the temptation, and becomes, like the ruined archangel himself, a murderer The deed once done, and appearances thrown off, *Macbeth* regains his self-possession. His less scrupulous consort, on the other hand, loses hers. Mr. Wallack played very ably that wonderful scene in which are blended such wild poetry, superstition, and stern purpose, and on which the having commanded the murder of *Banquo*, *Macbeth* maintains his recovered authority, as a man and a king, by concealing the design from his wife; and yet, while endeavouring to reassure her drooping spirits, and

THE POPE'S CHAIR.

We have been favoured by a numismatic correspondent with an impression of a rare Medal of Pope Alexander VIII., whose pontificate lasted from 1689 to 1691. The reverse represents the celebrated Chair

of St. Peter, the identity of which has excited so much controversy of late. The Medal belongs to the late Sir George Chetwynd, and is preserved in his extensive collection of Papal Medals at Grendon Hall.

PAPAL AGGRESSION.

MEETINGS particularly directed against the assumption by the Papal Bishops of territorial titles, and for promoting petitions to Parliament to suppress them, are again becoming frequent. Such meetings have been held at Chelsea, Finchley, Islington, and other places; but they are rather meetings of certain congregations, than of the inhabitants at large.

THE COURT OF COMMON COUNCIL resolved, on Thursday week, after some discussion on the motion of Mr. Anderton, seconded by Mr. Norris, to petition both Houses against the late Papal aggression. Mr. C. Gilpin moved the previous question, which was very feebly supported: and the petition was ordered to be presented to the House of Commons by the Sheriffs. An amendment, to protect private persons from the influence of Catholic priests exercised at the point of death, was rejected.

A REMARKABLE PETITION, concerning a Miss Talbot, has been presented to the House of Commons by Sir Robert Inglis, from Sir Graves Haughton Berkeley, which we must notice under this head as an illustration of Papal power. The petition states: "The petitioner intermarried with Augusta Talbot, the widow of George Henry Talbot, who was the half-brother to the present Earl of Shrewsbury. That the said George Henry Talbot left two children John, their presumptive heir, and Augusta, an infant, now of the age of nineteen years and upwards. That Augusta Talbot resided with your petitioner and her mother till the death of the latter, on the 25th of April, 1841. That since, and to the month of September last, she has resided with the Earl and Countess of Shrewsbury. That, in consequence of the death of the said John Talbot, Augusta became absolutely entitled to a sum of £80,000, and is a ward of the Court of Chancery. That, in September last, the Earl and Countess of Shrewsbury placed Augusta Talbot at the convent called the 'Lodge,' at Taunton, Somerset—not as a pupil, or visitor, but as a *postulant*, with the object of allowing her to take the veil, and become a nun. That, in September next, the period of probation, or postulancy, will have expired, and Augusta Talbot will be compelled by the rules and regulations of the convent, and by the priesthood of the Roman Catholic Church, to take the white veil during her minority, notwithstanding she is a ward of the Court of Chancery. That, having taken the white veil, there is no retreat, for she will be compelled to take the black veil in September, 1853, or shortly afterwards. That, on the 6th of June, 1852, she will attain her 21st year, when she will become entitled to receive the sum of £80,000. That being a minor during that period, the £80,000 will become confiscated to the convent, or to the ecclesiastical revenues of the Church of Rome, or to the endowment, enrichment, or maintenance of some bishopric or deanery, or other ecclesiastical benefice of the Church of Rome; or she will be compelled by some assurance in the law to transfer all her right and interest in the said sum of £80,000." The petition then sets forth, on the authority of Dr. Wiseman, that every member of the Romish Church must be unconditionally submissive to its teaching, and have no will of his or her own. The petitioner proceeds: he "is deprived of all communication and connexion with Augusta Talbot, and your petitioner's daughter, the half-sister and only near female relative of the said infant Augusta Talbot, is also prevented from communicating her sphere of affection, which but for the reason aforesaid would exist and grow up between them to their mutual comfort and support. The petitioner, therefore, humbly prays that the Commons will engraft a clause in the Ecclesiastical Titles Assumption Bill, which will prevent such practices as are detailed in the petition; and will introduce a clause enacting that no infant, whether a ward in Chancery or not, shall be permitted to be placed by her parents, or guardian, or any other person whomsoever, in any convent or seminary, or place of education, or other institution attached to the Church of Rome, as a postulant, implying that she is become a nun; and that, in the event of any such infant being now or hereafter placed within the walls of any convent, seminary, place of education, or other institution attached to the said Church of Rome as a postulant, for the purpose of becoming a nun, that the property, whether absolute or contingent of any such infant or infants, shall vest in and come to the use of her Majesty and shall and may be disposed of as her Majesty shall be pleased, by warrant under her sign manual, to direct and appoint," &c. Since the petition was presented, Mr. Reynolds, M.P. for Dublin, has denied, in the House of Commons, that the young lady is placed in the convent as a postulant, implying that she is placed there merely for education.

AN IMPORTANT CASE has occurred, too, before Lord Cranworth, which has helped to fix public attention on the mendicant pretensions and some not very reputable acts of the Romish priesthood. In that court an injunction was moved for to restrain Cardinal Wiseman—a nominal trustee—and others, from transferring a sum of £7000 in the Three per Cents, and applying it, according to the trusts, for the use of certain Catholic charities. The application was made on behalf of a French person of the name of Metairie, who had claims on the property as heir-at-law. From the pleadings, which extended over eight days, it appeared that Monsieur Carré, who years ago was well known about London as a teacher of French, came to this country at the period of the first French Revolution, as an *emigré*. By dint of great industry and living in a most penurious manner—an apple serving him at times for a dinner—he accumulated a sum of £10,000. He had been in possession of property, and was stimulated to his exertions and his penury by a hope of obtaining the means of returning to France and re-purchasing his inheritance. He was remarkable too, for an aversion to the female sex; and, in the latter years of his life, lodged in Somers-town with a man of the name of Hamilton, who was his exclusive attendant. In February, 1847, being then seventy-seven years of age, and previously in good health, both bodily and mental, he became very ill, and Hamilton summoned a medical man to his aid. M. Gasquet appears to have been a Roman Catholic, and, remarking the low condition of the patient, said he wanted ample nourishment; but he was afraid, from what he saw, that the patient was without the means of providing it. He was then informed by Hamilton, that M. Carré, though living in such misery, possessed £10,000. This piece of information M. Gasquet conveyed to Father Holdstock, a Roman Catholic priest of a chapel in Clarendon-square, Somerstown; and immediately the rev. gentleman went to visit M. Carré, between whom and himself there appears to have been no previous acquaintance or connexion, what passed between the priest and dying man is unknown, for no other person was present at the interview; and then, probably, as on all subsequent occasions, the conversation took place in French, which Carré understood themselves at Carré's residence, with the will engrossed. It was then, however, settled between them and Carré, as £700 would be saved by avoiding the legacy duty, that a deed of gift should be made. If Carré lived long enough to bring such a deed into operation, the money would pass at once; if he died, the will gave it to the same parties. On March 4th the will and deed were both executed, the priest presenting himself into M. Carré's presence; and on the 6th the property was transferred to the trustees, and Carré died on the same day. He died too without priestly consolation, for Holdstock never went near him after the will and the deed were executed, alleging that Gasquet informed him that the poor old man was recovering. A great number of affidavits have been filed and read, but those are the substantial facts of the case. After counsel for the trustees had been heard at great length, the case was postponed from last Saturday for Mr. Bethell, who opened the case, to reply, the learned gentleman being unwell. In the meantime the fund has been ordered to be secured, and the court to await its decision.

A letter in the *Times*, dated Rome, March 10, says: "An official document proves that the nomination of Dr. Wiseman as Archbishop of Westminster took place three years ago, and that the fact was as openly registered in the Government *Gazette* as the elevation of Pius IX. to the holy see. The *Roman Gazette* of the 22nd January, 1848, contains in the third column of the first page, printed in large letters, the following passage:—'In London, his Eminence the Most Reverend Monsignore the Vicar Apostolic, now Archbishop of Westminster' (35, Golden-square).' On the same day, a great Roman Catholic ceremony took place in the church of St. Andrea della Valle, and the official *Gazette* gave a long account of the festival. The charity of the faithful at all of the funds devoted to the erection of the great Roman Catholic church in London was appealed to, and the *Gazette*, in the account it gave, referred to the erection of a Catholic church in London for those of all classes, particularly for those Italians who reside there;' and it was announced that 'contributions would be received in London by *his Eminence the Most Rev. the Vicar Apostolic, now Archbishop of Westminster, No. 35, Golden-square.*' Had this circumstance been brought officially under the eye of the British Government, it would have been impossible for Lord John Russell to have expressed any surprise at the late Papal bull; and the question, therefore, is—Did the gentleman who represents the Foreign Office here notice this fact, and bring it under the cognisance of her Majesty's Ministers?"

The Right Rev. BISHOP GILLIS, one of the Papal Vicars Apostolic for Scotland, has addressed two letters to the Earl of Arundel and Surrey, as the leader of the opposition to the Ecclesiastical Titles Bill, in order to explain the particular case of Scotland. The Bishop reminds the noble Earl, that the supremacy of the Queen is expressly disclaimed by the Church of Scotland; by the separatists from that Church, such as the Burghers, the Free Churchmen, and the whole every class of Dissenters. Her Majesty swears, on her coronation, to observe the statutes which guarantee the religious liberties of the Scotch; and the oath includes the statutes which warrant them in refusing to the Sovereign any spiritual supremacy. The Bishop denies, therefore, that there can be any such thing as a violation of her Majesty's supremacy in Scotland, by any act of the Roman Catholics or anything connected with the Papal power. Papacy was in existence. He dilates, therefore, on the hardship of extending the Ecclesiastical Titles Bill to Scotland—not that it affects any existing interests of the Roman Catholics, for there are no Roman Catholic bishops with titles in Scotland, but that it will prevent them from ever having bishops if they should desire them. He characterises the bill, therefore, as an unprovoked attack on the independence of Scotland, affirms that for the Catholics of England and Ireland it will remain a dead letter, the same as the prohibitory clauses of the act of 1829, because the Roman Catholic hierarchy, both in England and Ireland, is already in existence; and the bill will only severely affect the innocent Roman Catholics of Scotland, by preventing them in future from ever having bishops with territorial titles. That is the substance of the two letters; and, though they are not likely to have much effect in Scotland, where Roman Catholicism is extremely unpopular, it must be admitted that they appeal to some of the strongest prejudices of the Protestant Saxon.

A MEETING AT SHREWSBURY took place on Monday to consider the course now pursued by her Majesty's Ministers in "bringing forward a feeble and inefficient measure." The Mayor at the chair. Petitions were agreed to, praying both Houses of Parliament, declaring the bill before the House of Commons to be insufficient for repressing "Papal insult and aggression," and praying that "measures may be adopted for the protection of the subjects of this realm against foreign prelate from exercising territorial jurisdiction, or adopting any synodical action in this country; and to secure the person and property of private individuals from the undue influence of ecclesiastical authority." Carried.

A PUBLIC MEETING OF THE PROTESTANT INHABITANTS OF SOUTHWARK was held on Wednesday, in a large room of the Bridge House hotel, which was closely crowded by at least 1,500 persons, principally of the working class. Exertions by hand-bills and other means had been employed to agitate the people, and it is not, therefore, surprising that the meeting was of a most excited character. Mr. Cubitt was called to the chair. Mr. Ainsley Bland moved the first resolution, referring to the general indignation against the Papal aggression, and declaring the Ecclesiastical Titles Bill to be an "insult and mockery to Rome, and a mockery of the religious feelings of the Protestants of this country." The Rev. Dr. Armstrong, incumbent of Bermondsey, seconded the resolution, which was carried. Other resolutions and petitions were orderly, but subsequently interrupted, as the remaining resolutions were carried amidst disorder and uproar. The second resolution, declaring attachment to the inestimable blessings of liberty of conscience, and asserting that the meeting was obliged to refuse "to Papists what they claim as their rights, because granting liberty to them would end in the bondage of Protestants," was met by an amendment, that the "best way to put an end to Popery is to spread the Gospel, and enable every man to think for himself;" but after much confusion the amendment was lost, and the original resolution carried. A third resolution, declaring it necessary to petition to prevent Romish ecclesiastics from carrying out their system by means of their execrable canon law, to suppress Jesuit houses, to inquire into conventual establishments, and withdraw the grant from Maynooth, and moving a petition for adoption, with these prayers, was carried amidst great uproar. The petition, according to one journal, was numerously signed at the time, and is to be sent round for signature.

A DEPUTATION TO THE ARCHBISHOP OF CANTERBURY, headed by Lord Ashley, waited upon his Grace on Wednesday, for the purpose of presenting an address to his Grace, signed by 229 800 clerical and lay members of the Church of England, on the subject of Papal aggression. The address asserted that the internal affairs of the Popedom had been invaded, and that the assumption of Papal principles and practices on the part of many of the clergy and laity, and that if they were allowed to prevail in our own Church it could no longer be called the Reformed. The address concluded by stating that he was the first prelate publicly to denounce the errors of Tractarianism, and to forewarn the Church of its fatal tendencies, and it prays his Grace, "in this season of danger and aggression, to take all such measures as the constitution of our Church has provided for the rectifying of evils, and for supplying the masses of our population with Protestant ministrations, and for preventing them against the wiles and delusions of Popish delusions." The Archbishop, in reply, expressed the comfort he felt at receiving the address, and his conviction that the aggressive measures of Rome had been encouraged from within the Church itself. "Your address," the most rev. prelate said, "appeals to authority, and desires that it may be exercised in preventing such practices and innovations as public worship as have crept in error and superstition. I have much satisfaction in assuring you, that I may speak of my colleagues on the episcopal bench as generally agreed upon this subject. The practices which are justly complained of have been introduced with the approval on their part; though in many instances, through the uncertainty of rubrics, and the intricacies of codes as to law, power has been wanting to prevent or prohibit them. But the committee are large, the bishops are alarmed at these indications of a return to principles which the nation has renounced, may rest assured that I, and those united with me in the government of the Church, discountenance the usages by which you conclude, and are anxious to express them by such means as are within our power."

THE METROPOLITAN BUILDINGS OFFICE.—On Tuesday was printed by order of the House of Commons, a report made by Mr. Mellor and Mr. Swift to Lord Seymour, as Chief Commissioner of Works, on the bonds and debts respecting the Metropolitan Buildings Office. The report states, that, serious as are the defects in the constitution and distribution of the functions of the Metropolitan Buildings Act, and the registrar, they have invariably struggle for authority on the part of the registrar, and a consequent jealousy on the part of the official referee very prejudicial to the interests of the public. He would suggest that a number of cases may be taken from the decision of the official referees, rather than the parties would encounter the delay incident to proceedings under the Buildings Act. The present expenses are about £4000, and the report suggests an alteration which would save about £1175 to the public, supposing a new judge to be appointed to decide matters relating to buildings, Dispensing with such an appointment, the annual saving would amount to nearly double the amount. It is suggested by the report that a judge should be appointed to decide matters in open court, and give his decisions in public, which should be final and irremovable, subject only to a case for the opinion of one of the superior courts on points of law, such judge to be paid a salary of £1200. There is now a bill in the House of Commons on the Metropolitan Buildings Act.

CHURCH, UNIVERSITIES, &c.

OXFORD.

THE UNIVERSITY COMMISSION.—The Duke of Wellington, Chancellor of the University of Oxford, has, it is stated, signified to the Board of Heads of Houses at Oxford, that if they should, in pursuance of the legal opinions obtained from certain barristers, petition the Crown against the commission of inquiry to the universities, they are to do so through the Secretary of State, instead of through himself as Chancellor.

BEQUEST TO UNIVERSITY COLLEGE HOSPITAL.—The committee have received notice from A. W. Parsons, Esq., executor of the late Mrs. Mary Peters, of St. John's street-road, of a legacy of £500 Three-and-a-quarter per Cents, by the deceased lady, to the charity.

TESTIMONIAL TO THE REV. MR. BENNETT.—The friends of the Rev. W. J. E. Bennett have determined to raise a general subscription, for the purpose of presenting the rev. gentleman with a sum of money, in evidence of the esteem felt for his great zeal and untiring energy in his office of a Christian pastor. The rev. gentleman, we are informed, has sacrificed the whole of his private fortune in support of the various works of charity which he has established in the parish of St. Paul's, Knightsbridge; and the sum paid to him hitherto to be vested in trustees, for the sake of affording some permanent provision for himself and family.

CHURCH EXTENSION.—On Monday last, at a meeting of the Incorporated Society for Promoting the Enlargement, Building, and Repairing of Churches and Chapels, his Grace the Archbishop of Canterbury in the chair; also present, the Lord Bishop of London; the Rev. Sir Charles Farnaby, Bart.; Rev. Robert Tritton; Messrs. W. Dacres Adams, James Cocks, &c.; in consequence of some of the applications before the board being incomplete, they were able to make only two grants in aid of the erection of new churches, viz. at the railway station, Tunbridge, and at Eastbury, a district of the parish of Lamborne, in Berkshire; but six grants were made towards the enlargement or increase of accommodation in the churches at Whaplode, near Spalding, Lincolnshire, St. Peter Martin, in the town of Bedford; St. Gayth, near Colchester; Ideford, near Chudleigh, Devon; Aylesbury, Bucks; and Talk-o'-the-Hill, in the parish of Audley, Staffordshire. Since the last meeting of the board, a legacy of £400, bequeathed by Mr. Thomas Jones, has been announced, and also one of £200 from Joseph L. Smith, Esq.; an anonymous donation of £100 has been received; and three donations of £50 each have been contributed by Philip Cazenove, Esq., George Harvey, Esq., and E. F. P. The next meeting of the committee will be held on the 14th of April, the usual day falling in the Easter week. The annual general court of the society will take place on the 21st of May.

VACANCIES.—Gamston Rectory, Notts, diocese Lincoln, value £248 with residence; patron, Lord Chancellor; Rev. J. Brooke, deceased. Stanton Fitzwarren Rectory, Wilts, diocese Gloucester and Bristol, value £174; patron, Rev. Dr. Trenchard; Rev. J. T. A. G. Trenchard, deceased. Tedkerswell (Hemaru) Rectory and Vicarage, diocese Connor; patron, Bishop of Down and Connor; Rev. C. Tevers, promoted. Aberavon Vicarage with Baglan Vicarage, Glamorganshire, diocese Llandaff, value £180; patron, J. Rolleston, Esq.; Rev. R. Morgan, deceased. Llanbrynmair, Montgomeryshire, diocese St. Asaph, value £380 and residence; patron, Bishop of St. Asaph; Rev. T. Lewis, promoted. Mastership of Bermondsey Free School; value salary £60; testimonials before March 24

TESTIMONIALS.—The following clergymen have recently received testimonials of respect and esteem.—The Rev. Josiah Day, curate of St. Matthew's, Deanhead-hill, Camberwell, Surrey; the Rev. Conrade Makings Winberley, Sunday evening lecturer of Isleworth, Middlesex; the Rev. David Fenton Jarman, minister of Bedford Episcopal Chapel, Bloomsbury, Middlesex; the Rev. George Bradshaw, late of St. Bartholomew's, Birmingham, Warwickshire; the Rev. J. Dawson, late of Esher, Surrey; the Rev. Wm. Benjamin Findlay, of Bradley, Wigan, Lancashire, from the teachers and friends of the Sunday-school; the Rev. William Kelly, of Shipley, Yorkshire; the Rev. Irwin Lloyd, of St Peter's, De Beauvoir-square, London; the Rev. Malcolm Macdonald, late curate and lecturer of the parish church, Hackney; the Rev. Wm. Carus, of St. Matthew's, Dewsbury, Yorkshire, from the congregation, on his retiring from the incumbency; and the Rev. J. R. Pilling, curate of Cheadle, near Stockport.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently been made.—*Canonries*: The Rev. J. C. Campbell, to Fairsell, the Rev. E. J. Nares, to St. Nicholas; and the Rev. W. Jones, Chancellor of Durham, as Llandaff Cathedral; the Rev. William Carus, to Winchester Cathedral. *Rectories*: The Rev. John Norgrave Baker, to Howe-Capel, with Solers-Hope, Herefordshire, the Rev. J. O. Evans, to Llandyrnog, Denbighshire; the Rev. T. Lewis, to Manafon, Montgomeryshire; the Rev. C. Ievers, to Rasharkan, and Connor Prebendary, diocese Connor. *Vicarages*: The Rev. William Hart Smith, to St. Mawyr, with Portruthy and Enodoc, Cornwall; the Rev. William Carus, to Sidmouth; the Rev. A. Smith, to Barton St. David, Somerset, the Rev. J. C. Wharton, to Wadersboro, with Whitfield, Kent. The Chaplain-General has appointed the Rev. Henry Aden, vicar of Patcham, to the Military Chaplaincy at Brighton.

NATIONAL EDUCATION IN IRELAND.—The sixteenth report of the Commissioners of National Education in Ireland (for the year 1849) has been printed. It appears that, on the 31st of December, 1848, 4109 schools were in operation, and were attended by 307,469 children. At the close of the year 1849, the number of schools in operation was 4321, and of pupils on the rolls 489,033, showing an increase in the year of 219 schools, and a decrease in attendance of 107,436 children. The increase in the number of children attending the schools in 1848, as compared with the preceding year, was 104,837, which the commissioners account for by the fact of food having been distributed to the destitute in many cases by the British Relief Association. To the discontinuance of this provision they attribute a portion of the diminution of the attendance of scholars in 1849. They also attribute it to the cessation of cholera and extensive emigration, which affected the attendances in the schools of other societies in Ireland. There has been a progressive increase in the attendance at the National Schools since the year 1846, and 1847 and 1848. Besides the 4321 schools in operation, there are 253 towards which building grants have at various times been made. The total amount of salaries granted to the national teachers in 1849 was £50,396 4s. 8d., being an increase, as compared with 1848, of £3382 14s. In addition to this, £1694 18s. 4d. was paid as gratuities, &c., making a total for 1849 of £52,091 3s. The commissioners commend the remuneration of the teachers inadequate to their merits, and recommend that an addition should be made to the annual grant for national education in Ireland. The average salary paid to each of the teachers by the board is £14 10s. a year, exclusive of fees which the teachers receive. The national school-books are in demand in England, Scotland, Wales, and the colonies, and orders to the value of £6950 5s. 6d. had been received from these sources. These books are now introduced into the workhouse and factory-schools in England. The model schools in Dublin are said to sustain their high reputation: 308 teachers had been trained in the course of the year, of whom 30 were not connected with the National schools, and of the rest 13 were of the Established Church, 32 Presbyterians, 231 Roman Catholics, and 2 members of different denominations. In 1849 the number of workhouse schools was 111. District model schools had been opened in the course of the year at Newry, Ballymena, Clonmel, and Dunmanway; and early in May, 1850, were opened those of Cavandish, Jailsborough, and Trim. They all promise well. Thirteen model agricultural schools are now in full operation, each of which is connected with an elementary national school, and the commissioners have been rewarded with the erection of an improved, and valuable assistance has been promised in other cases. There are 34 ordinary agricultural schools in operation, and several new applications have been made. The commissioners, in general working, express themselves satisfied with the result. It appears that the receipts for the year amounted to £145,653 4s. 4d., and the disbursements to £138,246 16s. 7d., leaving a balance in favour of the public of £ 415 7s. 9d.

THE CAPE MAIL STEAM-SHIP "BOSPHORUS."

THE return of the *Bosphorus*, Captain I. V. Hall, with the first Cape mails, possesses eventful interest, not only with respect to the bringing our South African colonies into more regular communication with the mother country, but also demonstrating the possibility of regularly maintaining that intercourse, and further developing the peculiar adaptation of the screw propeller for long sea voyages.

The vessel under notice was built by the Admiralty by the General Screw Steam shipping Company, for the conveyance of the Cape mails, the service was to be performed by screw steamers of large dimensions, the building of which was immediately commenced, but as it was desirable that the ships to be first entered upon, four of the Company's vessels were withdrawn from the Mediterranean station, and placed on this new service, there to be employed until the larger steamers are completed.

These vessels are of much the same model as those built by Messrs. Mare, of Blackwall, and combine much elegance of form with great strength and speed; while the machinery, by Maudslay and Field, has proved to be of the first excellence: indeed, every known improvement peculiarly adverse, she thus completed the passage out in forty days. This is, also, the quickest voyage over made to the Cape, even by the fastest vessels, steam or sailing, going direct. Her almost unexpected arrival at the Cape was greeted with heartfelt delight; and the commencement of the line is considered a great boon to the colony. Many of the chief of the inhabitants of Cape Town and environs visited the *Bosphorus* during her short stay in Table Bay, and returned highly pleased with their reception, and the order and cleanliness of the vessel.

Sailing from the Cape February 24, having waited a few hours for the

PORTO GRANDE, ST. VINCENT.—THE "BOSPHORUS" STEAMER.

last despatches from Sir Harry Smith, she reached Sierra Leone in sixteen days, where, owing to some difficulty in coaling, she lost three or four days. At St. Vincent she anchored February 28; sailed same evening, and arrived at Plymouth on the night of March 12—thus making the voyage from the Cape in thirty-eight days, including all delays. The actual time under weigh, on the outward voyage, was 38 days 12 hours; and the time on the homeward voyage was 32 days 7 hours. Also, the distance made outward was 7299 miles; homeward, 6441 miles—giving an average constant speed of 7·27 knots per hour. It is to be observed, that the delay at Sierra Leone was purely accidental, owing partly to the non-arrival of one of the coal-ships: this would be obviated in future. With respect to the anticipated time of the voyage homeward, the Captain discovered that the Admiralty estimate of the distance from the Cape to Sierra Leone was 476 miles too little; therefore, 2½ days were thus unexpectedly taken up. The whole voyage was performed without the slightest accident.

. is worthy of note, that the *Bosphorus* was this voyage fitted with a new description of propeller; and this being the first one ever tried, its details may be interesting:—The two blades, hitherto fixtures on their axis, and thus, though revolving, opposing considerable resistance when sailing, are in this screw made, by very simple mechanism, to turn in the direction of the keel, so that nearly all obstruction is removed. The difference of speed, when under canvas alone, between the old screw and the new one, is a gain of about one knot in seven. On several occasions they had an opportunity of testing it, and found it acted perfectly; and it can be made to assume its different positions in little more than five minutes. This is a great desideratum, especially as in propelling power the screw is as efficient as the old one, and quite as strong.

The accompanying Views of Sierra Leone and St. Vincent, from the frequent communication now with those places, become invested with additional interest.

A Correspondent of the *South African Commercial Advertiser*, in detailing the voyage out, says:—

We had a pleasant run to St. Vincent, where we landed on the 11th day. This island, like most of those under Portuguese rule, presented a miserable account of wretchedness and squalid poverty. We landed, and for a few hours stretched our legs, and ate some of the finest oranges in the world. Some of our party bathed, despite the sharks, with which the bay was said to abound. Passing through the whole group of the Cape de Verd Islands, we made Sierra Leone on the 16th day, all under apprehension on account of its far-famed sickly character, notwithstanding the assurance of its chief magistrate, who was returning to his duties there, after a twelvemonth's sojourn in England on sick leave. However, we are bound to admit, that not one of our party experienced any ill effects from our visit of twelve hours. There we got supplies of oranges, pines, and other tropical fruits, at ridiculously low prices: viz. oranges, about three for a farthing, &c. There we saw a large population of Africa's swarthy stalwart sons, who had been redeemed from the curse of slavery, from the grasp of the infamous "white man," by the noble humanity of our noble country, all ready and willing to give a fair day's work for a fair day's wages, and getting it too. The vessel with our coals being at anchor, they were received alongside, after which tedious operation we sailed again, having been at anchor about twenty-six hours. Oh, the relief of steam-sailing in these sultry latitudes! Only those who have experienced detention from calms and variable winds on an eastern passage, or in tropical latitudes, can adequately appreciate this advantage, which so strikingly shows the superiority of steam to sailing vessels on long voyages. Captain Hall is evidently well qualified for his arduous duties, combining ready knowledge of steam propulsion with the experience and ability of a good sailor.

In the same journal is a letter, dated Table Bay, Jan. 27, addressed to Captain Hall, by nine of the passengers, wherein they say—

We cannot separate without acknowledging the grateful sense we entertain of your uniform courtesy and attention to the personal comfort of the passengers during our voyage from England to the Cape of Good Hope. A table well appointed, and most liberally supplied, combined with untiring solicitude, skill, and vigilance in the discharge of your varied professional duties as commander of this fine vessel, left us nothing to desire; and we look forward with confidence to your advancement and success in an honourable career in connexion with the "General Screw Steam Shipping Company." We request you will kindly convey our thanks and best wishes to those officers of the ship with whom we have had the pleasure of association.

COLONEL MAC KINNON, C.B., COMMANDANT AND CHIEF COMMISSIONER OF BRITISH KAFFRARIA.

COLONEL MAC KINNON.

COLONEL GEORGE HENRY MAC KINNON, C.B., Unattached, Commandant and Chief Commissioner of British Kaffraria, is the eldest son of the late Major-General Henry Mac kinnon (who met with a glorious death, in the moment of victory, at the storming of Ciudad Rodrigo, Jan. 19, 1812), and Catherine his wife, youngest daughter of Sir John Call, Bart., of Whiteford, in the county of Cornwall.

This distinguished officer received his military education at Sandhurst; entered the army July, 1824; and exchanged from the Rifle Brigade into the Grenadier Guards, Nov., 1824. He accompanied his battalion to Lisbon in 1826, and was appointed aide-de-camp to Lieutenant-General Lord Aylmer, Governor-in-Chief and Commander of the Forces in British North America, in 1830. He attained the rank of Captain and Lieutenant-Colonel, by purchase, in the Grenadier Guards, April 24, 1840, and was gazetted to unattached half-pay, April, 1844. In July, 1846, he proceeded, with seven other field officers, to the Cape of Good Hope, where he was appointed Assistant-Quarter-Master and Adjutant-General to the Frontier, by Sir Peregrine Maitland, Jan., 1847. In the General Orders, Dec., 1847, Lieut.-Colonel Mac Kinnon was appointed Colonel on the Staff, Commandant and Chief Commissioner of British Kaffraria; and in 1848 he was made Companion of the Bath, for his services in the Kaffir war. The local rank of Colonel in Kaffraria was also conferred upon him in the same year.

We quote from the *Cape Frontier Times*, of Dec., 1849, the following tribute to this gallant officer, who appears to have merited and obtained the esteem of all parties:—"The present Commandant of British Kaffraria is very highly spoken of in all quarters, as a man admirably adapted for the arduous and difficult office which he fills. Simple in his habits, inflexible in his resolves, stern in his deportment, impartial in his administration, he seems qualified by nature to command respect from the savage tribes by whom he is surrounded."

SIERRA LEONE.

GRAHAM'S TOWN, THE CAPITAL OF THE EASTERN PROVINCE OF THE CAPE COLONY.

GRAHAM'S TOWN.

Graham's Town, the capital of the Eastern Province of the Cape, was, at the period of the departure of the mails received last week from that colony, the scene of great confusion and excitement, from its being the seat of the renewed Kaffir war. The streets of the town were choked up with sheep, cattle, and a vast mass of heterogeneous property, which the affrighted settlers in the farms and villages around had removed for safety or protection.

Graham's Town contains a population of about 10,000, and is a rapidly improving and prosperous city, being the seat of Government of the eastern province. It is about 100 miles from Port Elizabeth, in Algoa Bay. The general appearance of the town, sheltered by hills, is pleasing. The houses being interspersed with gardens and streets of great width, the entire area of the town is so considerable as to afford ample room for the next generation at least. Some of the stores (shops) are spacious and handsome edifices. There are three weekly newspapers published here, two in English and one in Dutch, which are well supported; a joint-stock association, called the Eastern Province Bank, with a capital of £40,000, is in the most flourishing circumstances, the shares bearing a premium on the paid-up capital (£16) of £12 each. The town has its own fire assurance company, which must have suffered severely during the recent insurrection: before this event the paid-up capital of £20,000 bore a premium of 240 per cent. There is also a public subscription library, with 5000 volumes of the best standard works.

There is an Episcopal church, with chapels for the Wesleyans, Independents, and Baptists; but the Roman Catholics have the best and most imposing public building in the town. This church, which is dedicated to St. Patrick, is in the pure Gothic style, turretted, and with pointed arches and pinnacles. The interior is spacious, the large front window of stained glass, and it has a highly ornamented ceiling. The officiating priest receives a stipend from Government of £100 a year.

There is a building occupied as a court-house and public offices, and also a gaol.

Graham's Town, being the head-quarters for the military, contains numerous buildings appropriated for the several departments connected therewith, but which do not call for any particular description. The presence, however, of a considerable military staff adds greatly to the animation of the place.

This town is the emporium of the eastern frontier districts, and its main streets present scenes of incessant commercial activity; while almost every article, whether of utility or ornament, may be as readily obtained as in most of the British provincial towns.

For the accompanying Sketch, we have to thank the proprietors of the clever new colonial Panorama of the Cape and Natal, now exhibiting in Leicester-square.

STEAM TO THE MEDITERRANEAN.

THE "ARABIAN" SCREW-STEAMER.

The advantages of the screw-propeller are becoming daily more appreciated in nautical circles; and in some branches of commerce vessels of this construction are rapidly superseding the ordinary sailing ships. The failure of the *Great Britain*, the precursor in this mode of navigation, did not affect the principle of her propulsion, and the successful experience of similar but smaller vessels has fully restored the confidence which her disaster temporarily disturbed. There are some fifteen or sixteen screw auxiliary vessels now plying between Liverpool and various ports in the Mediterranean, and it is interesting to know that two years ago there was not one. They appear admirably adapted for such a trade, in which, from the character of the goods carried, rapidity of transit is essential. Fruit is a perishable commodity, and fast-sailing schooners have ever been engaged in the trade; but the screw-steamers now make in 14 or 15 days the voyage which it took these craft (the contingency of favourable winds being admitted) from three to four weeks to accomplish. A return cargo from various ports in the Mediterranean is necessary of a very miscellaneous but valuable character, consisting of works of art, dyes essences, wines, oil, and of every article which the most genial of climes can produce. The steamers get a natural preference from their superior speed and safety, and from the correlative and consequent advantage of the lower rates of insurance. The majority of them, however, are of very small size (from 150 to 300 tons burden); the subject of our Engraving, and her sister the *Grecian*, forming the only exceptions.

The *Arabian*, which has lately assumed her station, is the property of the Glasgow and Liverpool Shipping Company, and is intended to ply between the latter port and Constantinople, touching each voyage at Smyrna. The *Arabian*, which is of 800 tons burthen, is of iron, and was built by Napier, of Glasgow, the builder of Cunard's celebrated line of Transatlantic steamers, which, despite the noble and ambitious efforts of American skill, have for strength and speed been hitherto unsurpassed. She is 200 feet in length, 17½ feet deep, breadth of beam 27 feet; and she is propelled by two engines of 70 horse-power each. Her screw has three blades. The *Arabian*, as will be seen by our Illustration, has three masts, very rakish, is rigged as a schooner, and will be capable of carrying a considerable press of canvass. She is painted black, with a red funnel and sits gracefully upon the water. Comfortable houses are provided on the deck for the officers and engineers; and the cabin, which is made to accommodate sixteen passengers, is fitted up with great splendour. The berths are airy and commodious, and the arrangements for light and ventilation, the latter so essential a luxury in a warm climate, are of the most perfect character.

The *Arabian* is to be commanded by Captain Robert Ewing, an able and experienced officer, formerly in the employ of the Royal West India Mail Steam Navigation Company, and subsequently master of the *Viceroy*; and, from her excellent performance on the trial trip, when she ran with ease twelve knots an hour, a well-grounded confidence is felt that she will make the voyage from Liverpool to Constantinople in 14 or 15 days

STEAM TO THE MEDITERRANEAN.—THE "ARABIAN" SCREW-STEAMER.

A STORY OF THE PRESENT DAY.

BY AUGUSTUS MAYHEW,

ONE OF THE AUTHORS OF "THE GREATEST PLAGUE OF LIFE," "HOW TO GET MARRIED," ETC.

(Continued from page 50.)

CHAPTER V

WHICH ENDS WITH A CAPITAL JOKE.

"SHE'S a very long time gone," thought the old weaver, leaving off his work, and going to the window. He stretched his body half way out of the casement, and shading his eyes, looked up and down the street, but no Kitty. "I hope nothing's happened," he said, half aloud. He went to his work again, as if to allow himself no time for the thought. Three or four times he went to the window in this way, each time looking more earnestly, and closing it more sadly than before. But at last he heard the tramping on the stairs, and feeling as if a burthen had been removed from him, he burned to the door to open it.

In burst Kitty, her face all crumpled with smiles, carrying in her arms a poor little half-starved serious-looking baby, that she was fondling as if it had been a doll. After her came the tall, big-boned Jim Bradley, with a child in each arm; both of the young ones bashfully sucking a finger, while their eyes were as round and staring as an owl's.

Jim himself was a man of that peculiar style classified by the boys in the streets under the heads of "old monuments" and "old run-to-seeds." He was so prodigiously tall, that he almost invariably knocked his head against every doorway he entered. In fact, from his great height, and his continual knocks, he had grown into the habit of walking as a man does in a steam-boat cabin—half bent up, as it were. He was a fine-looking rough-headed fellow; and, despite a beard as long as a charity-boy's hair, was as handsome as a half-starved man can be. His was just the head that a painter would have dressed up in a drugget-looking cloak, and called "Hermit, or the Wanderer," or something or other where a good deep-set expression of despair is wanted. The young ones, too, were about as miserable-looking little things as ever needed a wash. Their dirt-coloured rags had slipped off their poor pointed shoulders till their breasts were visible, with the bones forcing out the skin like the wicker-work of a doctor's cloth-covered basket. Their hair was as rough as that of a storm-beaten, commonfed donkey, and was pretty nearly standing from the crown, star fashion. In fact they needed soap and water to make them look human, and food to make them look children.

Tim's costume was peculiar, too. His patched and dirt-stained tail-coat, which was pinned tight at the chin, was sleeveless; but a pair of old blue worsted stocking-tops served instead. A square paper cap covered his head, and a pair of worn-out carpet slippers protected his feet. Altogether, the father and children formed as sad a group as ever knocked at a workhouse door.

Old Lamere had been looking at the little ones more than at the father. They were so miserably clad and dirty, that it made his heart bleed. The serious baby almost brought tears into his eyes. He had gone up to it chucking and chirruping, and had playfully dug his two fingers into its little cheek, when, to his horror, the two pits remained, the flesh was so dead. It seemed as if the old weaver was doing anything and everything to prevent Tim's thanking him. Even when the lad—for had he was (the poor merry early)—at last, as if determined not to be baulked out of his gratitude, went up to him, and, stretching out his hand, said, "Lamere, I owe you one for this," the white-haired old fellow scarcely behaved civilly, but hurried off to help his Kitty to prepare their meal. But Tim understood it all.

As they sat in a circle, eating their bread and sipping their coffee, the question of domestic arrangements was mysteriously brought forward by Kitty. First of all, there was a good deal of whispering between her and her father, and she kept pointing from the curtain that hung before her mattress to the young ones, who were munching the crusts they held in their two hands as fast as monkeys do cakes. Then the old man would whisper in answer, and nod at Tim Bradley, who tried to look as if he was paying no attention at all to what was going on. Once, as a kind of feeler, he asked the poor fellow, as kindly as he could, "Whether he would move his bed in that night;" and when he was answered "That his sacks were coming," he nodded violently to Kitty, who nodded violently in answer, and so the matter was arranged.

"The world hasn't been treating you very well lately, eh, Tim?" asked the old man, as soon as Kitty had got the children to bed.

"Why, it hasn't been spoiling me with kindness," answered the lad, still eating; "I think I could have bore a wee bit more coaxing. As it were, luck seemed to have took a spite agin me. I have been kept down a game going a bit longer, I think he'd a won his point; I do, really. It was beginning to tell agin me dreadful. I had already a-left off sleeping, and that's one of his dodges, that is."

"Ah! we'll have better times yet; never despair" said Lamere, trying to look knowing and prophetic.

"Well, it's a'most time, by gar it is," was the answer. "I've been a-running down the ladder till I've got to the last step. The next place you rests on is the grave. However, we'll try to mount up a bit now." And he seemed to brighten up at the thought.

After he had looked at the ceiling a bit, he began again

"Everything took a turn after my dear old help died. From that moment hope was buried with her. My arms was a-locked like, with these poor little uns a-twining round me. When she was gone, they a-clung to me so tight, I was a'most choked, like a oak with a vine up it. Baby, in perticklar, were more than the cramp for a-stopping work."

At the mention of the baby, Kitty looked up, as if it concerned her, and said, "Indeed!" and looked at him inquiringly, as if anxious for further explanation.

Tim sipped a huge piece of crust into his mouth, and, with his cheek sticking out, went on:—"Why, the two big 'uns I could a'most manage with a-talking to, and a-singing to, and a-sending them every five minutes to see what o'clock it was, until they were tired out. But that baby were a wonder, by-and-by beyond me. Arter I'd put it down, asleep as I thought; but, at the very first move of the batten, it 'ud open its eyes and tune away desperate. It were no use my cluck-cluck-ing, or a-saying, as my poor wench used to, 'By-by, my chick-a-biddy.' It weren't to be hoomsed, but 'ud shout like psalm-singing."

"Why didn't you put it out," asked Lamere.

"Well, I tried a'most everywhere, but they a-wanted a'most more money to keep it than all on us had to live on; and, being a stranger to 'em, they were afraid o' my leaving it with 'em for good, you see. So they wouldn't. One day I was desperate, so I tied it on my shoulders with a blanket, gipsy fashion, and tried to work that way. But it were only hanging the din nearer to my ear, and a-telling I'd pull my hair worse than a fever; and I were at my wits' end. Then off I'd go a-walking up and down the room, and singing to it 'By-by,' and a-telling a pack of lies to it about my having gone to get a hare-skin for it. By that means I might get an hour or two."

As he had all the talk to himself, he continued his story

"Dear, dear! I was sorely put to it. How to feed the child, I didn't know. As first I give it flannel to suck, soaked in gruel; but it would a-swaller it so tight, I a'most wanted a corkscrew to get it up again. Then Mrs. Larrey, as lived in our house, said, says she, 'Why don't you bung up the spout of the teapot, and give it that?' So I did, and got the big little ones to hold it to its mouth. But they didn't understand it much; and I used to hear baby a-pulling the wind up through the gruel as if it were a hookah. It took up all my time, it did. The only plan as ever did any good were this. I made a kind of hammock, as it were, out of the blanket, hung it up near the room, and tied a string from it to the batten; so you see, whenever I swung the batten, I rocked the cradle. I got a little peace that way; only it used to set my arm aching awful. There's no greater curse as I knows of, than a working man with a young family, and never a wife to mind 'em."

"Ah!" sighed Lamere, shaking his head, and looking at the ceiling

"There, now, look'ee there!" continued Tim, pointing to his baby fast asleep in Kitty's arms; "she's put it to sleep in a minute, as if she'd pulled its eyes down with a wire—as they do birds. How she does it, I can't say—it's past me, miles. Whether it's my voice being rather rasps, or whether it's a-holding them wrong with their feet too thick for their heads, maybe. I can't say. For a whole week I can't think I slept more than an hour. As sure as ever I a-closed my eyes, off it 'ud go barking, and never cease till I was up walking the room with it, and a-tossin' it up like mad. Then I'd try a bit of din-a-n-ing, and a-swinging it about as if I were mowing, with the wind a-whistling round me like steam escaping, and a-cutting into my calves as if it were whipcord. Perhaps, after an hour of exercise like that, I'd put it down as cunning as could be, a-flattering myself I'd done it that time. But no such luck; off it 'ud go again, shouting like 'stop thief' till it 'ud wake the other two; and then they'd all three go at it like barrel-organs, whilst the lodgers over-head was keeping up a big-drum 'companiment with the poker. The only relief as ever I got was to light the candle, and set baby bang afore it, till it had stared itself blind a'most. Of course, with all this a-going on, how was a poor man to earn his living?"

"Ah how indeed?" said the old man. "It was enough to try a Job, it was."

"Depend upon it, sir," returned Tom, "if the gentlemen you speak of had had a child in arms to carry about all day, they'd warrant he'd pretty soon have dropped it. Why, lang me, if the clothing of 'em ants worse than a Chinese puzzle; all their limbs is so wobbly, I was afeard to handle 'em. I never put its shoes on the whole time I nussed it; the feet was so puddeny like, I was afeard of 'em. Well, Mr. Lamere, just as if I hadn't trouble enough as my share, all of a sudden work gets slack, and I has a whole three weeks' play-time. It's a queer saying, that 'play-time,' isn't it? as if a poor fellow was a-rattling about, eating four dinners a day, and enjoying himself with Hampton Court vans seven times a week. Ah! our play-time is something like the frogs' half-holidays—there's a good deal o' death in it.'

"That's true, Tim, that's true; it's a queer pl y-time when there's no money at home, and the baker's lost faith."

"Well, I had three weeks of bitter suffering, I had First of all the table went; then we eat the chairs one by one, and at last we was forced to make a meal out of the bed. Every morning I'd run up to the wareho se, and beg a'most with tears—beg for work, but still no luck; and so at the end of a fortnight the room was as bare, all ready for the next lodger. There I'd sit the whole day a-looking hard at the workhouse, till the little ones would wake me up, asking for bread. Ugh!" and he shuddered at the remembrance of his suffering. "Heaven forgive me," continued the man, rousing himself, "I used to promise the poor little things, 'Don't cry, Johnny' I'd say, 'and I'll give you a lump of meat for dinner, and we'll have a pudden, and butter for our bread; so don't cry, Johnny, or you shan't have none.' At first they used to believe me; but at last, even though I got up to venison, it used only to make them shout the more, poor souls, as if it made the hunger worse. As I'm a Christian, we'd last got to that state I could hear their little jaws a-snapping with their pangs."

"Poor little things! poor little things!" said the old weaver, patting the children on the head. "Ah! often though, I've thought that if the ladies of this country knew what those that wove their silks and satins have suffered, they'd pull their garments off—tear 'em off as if they smelt of the workhouse. I'm certain they would."

"Fuck o' nonsense!" said Bradley, laughing bitterly at the idea. "I've often stood looking at 'em when they're a-shopping. Do you think they'd stop fighting for a penny or two as they do, if they cared for us? Why that penny, may be, would make us cosey for a week. The cheaper they gets it, the better they likes it; so the first thing as is knocked off is our loaves. Of course, we've no chance of saving anything; and directly a bit of play comes, we're done. It aint the work we're afraid of, it's that play. We're wearing out our muscles at prices as foreigners won't take. No, we've starved 'em out. They can't compete with us in starvation; we've got so used to it—professors at it, like."

"It's the dispensary parasol silk, and those fourteenpenny velvets, that kills us weavers," sighed Lamere. Then, pointing to the loom, he added, "I've made a bit of a calculation, Tim. For every inch of cheap velvet we weave, we wires have to be cut out 50 times and put in 50 times; we have to throw the shuttle 150 times; and the heavy batten has to be pushed 300 times—and for all this labour we get less than one penny farthing. It's grindstone work, and wears a man down to the back in quick time, it does"

"Well, as I was a-saying," said Tom, returning to the story of his troubles, "we were in a fix of hunger—regular dying, hour by hour I could at myself a-thinking of the workhouse ever so many times. I says to myself, 'Your fate is the workhouse, and it's coming fast; why not it at once?' Then I'd get up a bit, and talk to the children. If I could have left 'em for an hour or two, perhaps I could have got a little work by looking after it; but it was the baby as chained me at home like. However, we hadn't much time left to think over our wrants, for one Saturday night the landlord came for rent. He had heard I'd sold all my sticks, and so he came to get rid of us. I owed him three weeks then, you see. All I had suffered afore was nothing to this—nothing. It regular knocked me over: my head fell on my bosom like a stone. I couldn't answer him a word. I got up quite quiet, obeyed him like a child, and, taking the baby in one arm, and giving my hand to one of the young 'uns, out I walked. I could scarce see, I was so giddy; and when we got into the streets, the air made me feel a'most sick. Well, we walked on till we got to 'the Road:' there I sat down on a step, with the baby. By-and-by, whilst I was resting, a gentleman came to me, and gave me a penny. One of the 'uns picked it up, and I sent for some bread. Eh! it was like pouring fire into us. Up we got, and walked as far as Wiskers Gardens, and wandered about till night come. Where to sleep, I couldn't tell. I looked around, but couldn't see a place to lay down in. Every bit of old swing as had been taken to pieces, and stowed away for the winter like, in one of the gardens. In we got. Then the horrors began again. 'Father, we wants bread!' cried the two poor little 'uns. The baby, to be sure, was quiet enough—it were sleeping as fast as it could. I felt a'most pleased to think it were going. It is here terrible want alters our whole natures, it do; we lose all affection for our children. It's a-going on to kill yourself, it is, upon my word. For myself, I didn't care whether I lived or died. It's a'most a blessing, though I, that God's so good as to take us out of this existence, it's so bitter torturing; that's what I thought I heard all the churches round about a-striking the hours, but there I sat, with my head resting on my knees, and the young 'uns curled up about me with their arms and legs twisted together like worms. At last I grew desperate—'To the Workhouse!' I shouts; and, takin' hold of the children, I dragged 'em off as if I was going to murder 'em. I walked up to the officer's house, and knocked at his door as if the house was a-fire. When he put his head out of window, 'Master,' says I, 'give us an order for the house, we're all dying!' 'A good job, too,' says he; 'knocking people up at this time of night!' At last he threw me the paper out of the window, and off we went to the paupers' home. We slept that night, all of us except the baby, in the vagrants' ward, and, thank God, the young 'uns were too tired to listen to the talk of the place. It were awful; best anything I ever listened to: boys of twelve swearing like a drill-sergeant."

Lamere felt afraid lest he might indulge them with a specimen; and, pouring in his gruel, begged on to Tim Bradley

"Don't be afraid, old man," said Tim, sharply; "I aint going to tell your child what I thanked God mine didn't hear; never fear, not I. Well, the next day they took the young 'uns away—poor little things, they clung to me till they nearly bited. Of course they be the rules, and they must stick to 'em. I don't blame them. After a week I went out to see after work. I asked to leave the little 'uns till I had a home again; but no, they wouldn't. SAVING RAGS—I mean any thing that perhaps they'd right to do it; they're obliged to guard against the rogues, and so we suffer. As it was, it put my spirit up, and so I took 'em with me, baby and all, for it had got nearly again. Father then told me he had some work for me. He couldn't promise for a week, but he'd be disengaged the first Wednesday in every month. Poor old soul, he'd been a'most as bad put to it as we had. I had thought as much, and that's why I hadn't gone near him; it would only have been making his starvation more bitter But he insisted on our going to his room, while we did; and I never felt so thankful in all my life as when mes, here, come"

The old weaver again stopped this expression of thanks by turning the conversation. It seemed as if he were almost ashamed of what he had done. "And now," he said, "I'll tell you how we will manage. My girl shall look after the little ones; she understands it better than you do. It's in 'em by nature, like swimming in a duck, and she'll keep 'em in order and clean, I'll warrant."

"And now," said Tim, "I'll tell you how I shall manage I am a going to work early of morning and late of night Every penny I can save I will, and then I shall apply to Government for emigration pass for me and little once."

He spoke with so much determination, that Lamere and Kitty stared at him

"I've made up my mind on the house. There was a fellow there has been as a convict, and he's determined me I'll leave this cursed land, where you may slave and slave, and yet always know hunger. I'm for the land of plenty, where men each day throw to their dogs more meat than we wretches get in a twelvemonth, and where father can live, his children with his work, and look on 'em as blessings instead of curses. I'm for emigration body and soul

Old Lamere looked as if he could scarcely believe what he heard. At length, recovering from his wonderment, he said:

"Shall I tell you what I call emigration, Tim? Well, I call it transportation without crime. You get a living! well, so you may; but, to get it, you inflict upon yourself the same treatment that the convict is supposed to feel. Where's the home, Tim? Where's the home you must long for wherever you go? You can't help it: you must do it. You would love it for the very reason that now makes you hate it—for your suffering even as the mother loves her child. It won't follow you over the sea, Tim; it stops here in England. In that one word, lad, is huddled together all the joys and sorrows of life—the love of mother, father, all as spoken in that word. Shame upon you, Tim; you would sell all this for a dish of meat; the spot that patriots have bled for, you would part with for a full belly, you would."

"You may talk, Lamere," answered the lad, growing warm in the discussion, "but what sort of home am I leaving? I turn my back upon the garret where my children starve, where I myself grow to hate 'em for the very bread they eats. Is this a home to fight and bleed for? No, not it, faith! Them patriots had a plaguey good larder, and a cellar full of coals, I'll warrant. Bleed for my garret! egad, it's only in the soul we bleed, till we hates the very boards we stand on. Pretty home, indeed! with the children hunting for crumbs that have fallen from their bread, like robins in winter. You may talk, but I'm off the first chance that comes. Yes; I'll carry a good conscience with me while I yet have it, and that'll soon twist my log but into ship-shape, I'll warrant."

The weaver seemed quite upset by the determined spirit Tim had shown, and, wishing to let the matter drop, wouldn't answer him; and as soon as the sacks Bradley had spoken of arrived, Lamere set all hands to work, to make the best arrangement they could for the night.

When a few days had passed, the little ones seemed no longer to be the same children. Their faces were clean, their clothes patched and mended, and Kitty, somehow or other, managed them so cleverly, that there was very little "missie," as Bradley called it. Times seemed to be growing better. The two men working together and clubbing together, could struggle on as well again as singly. Kitty, too, by stealing a half-hour whenever she could, had nearly finished her shooting-coat. She had taken as much pains with it as a cottage girl with a sampler.

One morning, old Lamere, having finished his piece of velvet, packed it up, and, taking his hat, set out for the warehouse. It was a hot day, and he had to rest a good many times before he reached the "Square." When he at last entered the warehouse, he was so tired that he was glad to find he had to wait before he could be paid. Whilst he was sitting on one of the bales in the long passage, a young gentleman, with his white hat cocked on one side, and his hands in his breeches pockets, walked up to him.

"Now, my man, what's a job, eh? Here, Bill, wheel down that little lot of goods for Oxford-street;" and he stood with his legs wide open, whistling, and playing with his thick gold chain.

Lamere knew he had no chance of escaping, and so bore his lot with patience. "Ready every one with a job" of some kind or other whenever they took work home; and, if he did it willingly, he might get another order. So he tried to look thankful for the honour conferred upon him. But he was a little startled when he saw "the little lot of goods" he shoulders were to ache under—it was almost enough for a horse, he thought. The young gentleman seemed to think it would be heavy, for he laughed, and seemed to enjoy the old man's surprise. It was a rare witty thing he had done.

"Don't carry your pins? pretty tough?" he asked; and, as the old fellow scratched his head, he added, "Now then, pop it under your arm, and don't be long, for there are three others waiting."

The poor old fellow's legs trembled like bell-ropings as the load was hoisted on to his back. The young gentleman was in his glory all the time, whistling with great enjoyment to himself. "Steady, steady!" he cried from time to time. Steady, and, mind, no furious driving through the City. No galloping till you're past Temple Bar."

As the old man left the warehouse, the porters watched him as he walked tremblingly along—his teeth clenched, and his eyes starting from his head

"He's a good plucked 'un," cried one of the men; "blow me, if I could do it"

It was capital fun! Every now and then a passer-by would brush against the heavy load—just scrape it with his shoulder—and yet the old man, poor old stagger and fumble, never gave a push, as if it had been some heavy blow. Then the clerk and the warehousemen would roar again—it was so capital!

At last the old man had been looking out for the old man nearly all the day He hadn't been home to dinner, nor to tea, and they were waiting for him, filled with alarm.

"He will be starving," thought Kitty, as she made up the fire and put the kettle on to boil on the flame. Then back again she went to the window. "Look here, Tim," she cried suddenly, as she leant over into the street; "look here, there's such a crowd. What can it mean?"

Full of curiosity, they were both of them watching intently.

"It's a poor fellow on a shutter, I do believe," said Bradley, shading his eyes.

"Poor fellow," sighed Kitty, "I wonder what's the matter with him?"

"Look, there's a lot of straw put under his leg," continued Tim

"Poor soul; I'm sure it's something serious, look how carefully they carry him."

"I wonder who it is?" said Tim, straining his eyes to the utmost.

By this time the men bearing the shutter and the silent crowd drew nearer. Many of the mob looked up at the window, and some of the boys pointed at them. At last it was so near that the poor sufferer's ghastly face was plainly seen.

"Lamere!" cried Tim as the pigeons on the roof opposite fly off in fear, Kitty fell backwards senseless on the floor. It was her poor old father. The cruel joke was not without its point.

(To be continued.)

NAVAL AND MILITARY INTELLIGENCE.

TROOPS AND MONEY FOR THE CAPE.—The Peninsular and Oriental Company's steamer *Singapore*, Captain Purchase, left Southampton on Monday with detachments of the 73rd, 6th, and 90th Regiments for the Cape of Good Hope. She also took out a large quantity of stores and £90,000 in specie for the Treasury, for the Cape. The *Singapore*, after she has been to the Cape of Good Hope, will proceed to Ceylon.

THE FORTIFICATIONS IN MILFORD HAVEN.—The new martello tower, situated at the western extremity of the Royal Dockyard at Pembroke, has been finished and given up to the Government for mounting with guns and occupation by troops. The other is in a very forward state, and these enfilade the approaches to the dockyard, and are in positions reflecting credit on the officers of the engineer department. The small fort on the Stack Rock at the entrance of the haven is progressing under the hands of the contractors. It is in contemplation to erect another and more powerful battery of heavy guns on Thorn Island, commanding the southern entrance of the haven

MONEY DEPOSITED IN SAVINGS-BANKS.—The total amount of the deposits lodged in the Military Savings-Banks during the year ended the 31st of March, 1850, was £96,327 11s. 1d. Of this sum £48,962 was lodged by cavalry and infantry, and £47,364 by the artillery, engineers, and marines. The withdrawals during the year was £37,681, and the balance due to them by the public on the 31st of March, 1850, was £114,123. The total number of depositors on the same day was 9003, viz., 1859 cavalry and infantry, and 1704 artillery.

DANGERS OF BALL PRACTICE.—It has been usual, when the experiments were carrying on at the Royal Arsenal, Woolwich, by a detachment of the Field Guards, for the officer in command, with two non-commissioned officers, to stand behind the target, and the non-commissioned officers to show themselves after each firing, and signal to the firing party with the aid of a small flag on which side the target the balls passed, when they did not hit the object against which they were directed. While the experiments were being carried on on Thursday week, one of the musket balls passed under the target and struck the Cavalier in the rear, passing through his trousers and boot, but fortunately only grazing the skin. During the experiments on the next day (Friday), one of the balls passed through the target in a part which had been previously fractured by the firing, and struck one of the corporals on the back, tearing his clothes nearly the entire breadth of his body, as he stood with his side to the back of the target. These narrow escapes will cause a change in the arrangements for firing in future

SIR JOHN FRANKLIN.—We learn, says the *Globe*, that Lady Franklin has been making enquiries of the Lords of the Treasury, for the admission, duty free, of all vessels imported into the United Kingdom from the British possessions abroad. In the meantime their Lordships have directed their admission free, being for ship-building purposes only, until the privilege shall have been sanctioned by act of Parliament.

COMMAND OF THE ARTILLERY AT HONG-KONG.—Lieut.-Colonel Tomkyns, 4th battalion R.A., is to proceed to China next month, by the overland route, to assume the command of the Artillery at Hong Kong, in succession to the late Lieut.-Colone. Nevett.

Major-General William Wood, C.B., has been appointed to the command of the troops serving in the Windward and Leeward Islands, vice Sir John F. Fitzgerald.

PARLIAMENTARY PORTRAITS.

ARTHUR ANDERSON, ESQ., M.P. FOR ORKNEY AND SHETLAND.

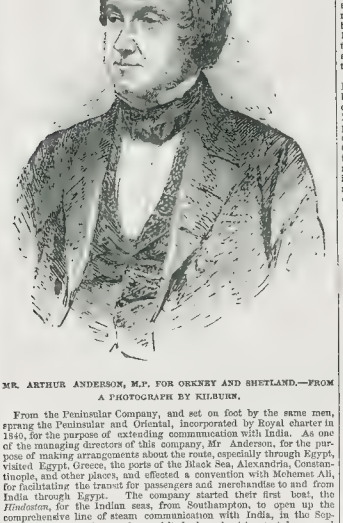
THE honourable member (eldest son of Robert Anderson, of Grimastar, by Elizabeth, daughter of W. Kidland, of Lerwick, both in Shetland) was born at Grimastar, in the February of 1792, educated at home until twelve years of age, when he was sent to school to the Rev. John Turnbull, of Lerwick (who is still living); in 1807, entered the Royal navy as a midshipman, in her Majesty's ship *Ardent*, and subsequently served as clerk in other ships of the navy cruising in the Baltic, North Sea, the Channel, and off the Spanish and Portuguese coasts, and was engaged in several minor actions.

In 1815, the chances of fighting his way to promotion being over, and having no Parliamentary interest, he quitted the navy, entered a mercantile house in London as clerk, and in 1823 became a partner in the firm.

In 1831 and 1832 he took an active part with his partner, Mr. Wilcox, M.P. for Southampton, in the outfit and arrangement of the naval portion of the expedition for the liberation of Portugal, under Don Pedro, and in 1834 he also assisted in various equipments connected with the war in Spain against Don Carlos.

The transaction of business connected with these expeditions pointed out the importance of more regular communication with the Peninsula, and led Messrs. Wilcox and Anderson to form a company amongst their personal friends for the establishment of steam communication with Spain and Portugal; and in 1835, the *Iberia*, 560 tons, was started on the line, on which she is still a favourite ship.

In the course of commerce with Spain, Mr. Anderson found a field for the industry of the Scotch islands, and in 1838 formed fishery establishments in Orkney and Shetland, to improve the fishing and curing, and open the Spanish market to the Islands. After considerable cost and difficulty, he was successful; and a regular and increasing trade has sprung up between Spain and the islands.



MR. ARTHUR ANDERSON, M.P. FOR ORKNEY AND SHETLAND.—FROM A PHOTOGRAPH BY KILBURN.

From the Peninsular Company, and set on foot by the same men, sprang the Peninsular and Oriental, incorporated by Royal charter in 1840, for the purpose of extending communication with India. As one of the managing directors of this company, Mr. Anderson, for the purpose of making arrangements about the route, especially through Egypt, visited Egypt, Greece, the ports of the Black Sea, Constantinople, and other places, and effected a convention with Mehemet Ali, for facilitating the transit for passengers and merchandise to and from India through Egypt. The company started their first boat, the *Hindostan*, for the Indian seas, from Southampton, to open up the comprehensive line of steam communication with India, in the September of 1842. The vessel was visited when about to start by several of the Cabinet Ministers, the East India Directors, the Speaker of the House of Commons, and other official personages, and rarely has any undertaking been more uninterruptedly successful. Their navigation has now attained to a magnitude far exceeding any similar private enterprise. Its fleet, in actual service and in process of construction, numbers thirty-one large steam-ships, the greater part of them from 1000 to 2000 tons burthen; and of the aggregate tonnage of 40,000 tons, and 15,000 horse-power. They employ about 3000 hands on board their steam-fleet, and as many more in sailing-vessels, in the transport of coals to their various stations; and they consume about 150,000 tons of coal annually. Its lines of communication extend from Southampton to Spain, Portugal, Gibraltar, Malta, Egypt, India, China, the coast of China, Smyrna, Constantinople, the ports of the Black Sea, and Is, it is said, about to be extended to Australia and New Zealand. It has reduced the time formerly required by sailing-vessels for bringing these places into communication with each other to about one quarter. Its annual navigation for that purpose amounts to about eight hundred thousand miles, or little short of forty times the circumference of the globe. Its ships, while thus forming such powerful agents of social, commercial, and political intercourse, and consequently of peace and civilization, furnish at the same time a formidable auxiliary navy, being all arranged and constructed to carry heavy armamentsin case of need; and the steam fleet of this company far exceeds the steam navy of any power in Europe, France excepted. Its capital and available funds amount to nearly £2,000,000. The amount of an Indian monthly mail may be imagined by any one who has seen one embarked at Southampton in one of the Company's large India mail steamers. It generally consists of upwards of 300 large boxes, bulking above 20 tons, besides 120 forwarded via Marseilles, to be embarked in the same vessel at Malta; and each box is estimated to hold about 10,000 single letters. The India mail is now looked for with the punctuality of a Channel post, and friends in India seem scarce away from home.

But Mr. Anderson did not devote himself exclusively to these undertakings; he was one of the first members of the Anti-Corn-law League, and took an active part—especially by the publication of several pamphlets and letters—in the agitation.

In 1846 he received a requisition, signed by a large number of his countrymen, to become a candidate, in opposition to Mr. Frederick Dundas, at the next election; and accordingly, at the general election of 1847, had a severe, but victorious contest with the territorial power of the Earl of Zetland.

In the session of 1849 he moved for and obtained a committee to ascertain the practicability of reducing the naval expenditure by rendering the mercantile steam marine available, in case of need, for the national defence; in favour of which a unanimous report was obtained.

In the session of 1850 he spoke in reply to Mr. Disraeli, on his motion to remove local taxation from the agricultural interest to the Consolidated Fund, and stated that the landed interest already enjoyed exemption from taxation pressing upon the rest of the community to the amount of almost £4,000,000 annually. His speech was afterwards published as a pamphlet, and had a large circulation. Mr. Anderson voted for the admission of Jews to Parliament, and for the repeal of the Navigation Laws; but spoke in opposition to several points of the Mercantile Marine Act of last session, as vexatious and unnecessary. He voted against Mr. Disraeli's recent motion, and for the Government bill against the Papal aggression.

The honourable member is opposed to the application of State funds for the purpose of religious endowment, but is in favour of a national, unsectarian system of education. He is an East Indian proprietor, and chairman of the association of proprietors of steam-ships.

In 1822 Mr. Anderson married Mary Anne, eldest daughter of the late C. Hill, Esq., of Scarborough.

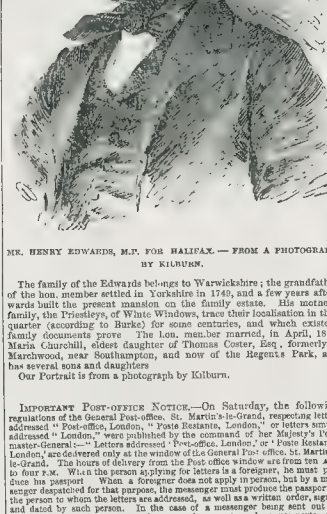
Our Portrait is from a photograph by Kilburn.

HENRY EDWARDS, ESQ., M.P. FOR HALIFAX.

THE subject of our memoir, eldest son of Henry Lees Edwards, Esq., of Pye Nest, near Halifax, by Lea, daughter of Joseph Priestley, Esq., of White Windows, Yorkshire, was born at Pye Nest, in the July of 1812; sent to Captain Whitaker's school at Mortlake, Surrey, when seven years of age; afterwards to Mr. Charnock's, near Ripon; thence to Mr. Delafosse, at Richmond, Surrey, which he left when about seventeen, and for two years studied with a tutor at home. In 1830 he went to Paris, and was present during the three days of July; thence proceeded on a tour through France, Italy, and the Mediterranean; and returned to England in the December of 1831, with the intention of obtaining a commission in a cavalry regiment: in this, in consequence of being past the age for having his name entered, he was disappointed. He afterwards joined the 2nd West Yorkshire Yeomanry, in which he has now reached the rank of Major, and in which, from its formation, he has taken a very active interest. In 1846 (9) he was appointed a magistrate; and, in 1848, a deputy-lieutenant for the West Riding of Yorkshire. The honourable member is in partnership with his brother, in an extensive foreign mercantile house near Halifax. Having always taken a very prominent and active part on the Conservative side in politics, he was invited, by requisition, signed by a large body of the constituency, and came forward as a candidate at the general election in 1847, in opposition to the present Chancellor of the Exchequer, Mr. Protheroe, Mr. Miall, and Ernest Jones. In the course of his canvass Mr. Protheroe withdrew, and Mr. Edwards was returned at the head of the poll, along with Sir Charles Wood, the numbers being:—Edwards, 511; Wood, 507; Miall, 349; Jones, 280.

His first speech in the House was early in the session of 1848, in favour of Mr. Mackinnon's Smoke Prohibition Bill. He had always advocated the shortening of the hours of labour for women and children in factories, and was selected by the party to second Lord Ashley's first motion, in 1849, for the Ten Hours Bill in its integrity, and spoke frequently and at length in favour of the measure as one of great interest and importance to his constituents; and, on the noble Lord's compromise with the Government, in 1850, Mr. Edwards most highly approved him. He has on recent occasions, at large meetings both in Yorkshire and Lancashire, along with the other promoters of that measure, received the thanks of the operatives for the exertions made in their behalf; and, at a very important gathering in his own borough, a special resolution of thanks was unanimously passed

At the close of the last session he made a vigorous reply to Mr. Berkeley's attack on the tyranny of England. He voted against his party for the maintenance of the African squadron, on the ground of protection and keeping faith with our settlers and missionaries. He voted for the repeal of the window tax last session, and esteems the proposed arrangement, as at present understood, about the only redeeming feature in the Budget. In principle the hon. member is a Conservative, a firm supporter of the Established Church, opposed to the endowment of the Roman Catholic clergy, colleges, and schools; not an advocate of Free Trade, but declares himself on the hustings in favour of allowing the measure a fair trial; is desirous of diminishing such taxes on consumption as press especially upon the working classes, such as tea, tobacco, malt, &c.



MR. HENRY EDWARDS, M.P. FOR HALIFAX. — FROM A PHOTOGRAPH BY KILBURN.

The family of the Edwards belong to Warwickshire; the grandfather of the hon. member settled in Yorkshire in 1749, and a few years afterwards built the present mansion on the family estate. His mother's family, the Priestleys, of White Windows, trace their localisation in that quarter (according to Burke) for some centuries, and which existed the family documents prove. The hon. member married, in April, 1838, Maria Churchill, eldest daughter of Thomas Coster, Esq., formerly of Marchwood, near Southampton, and now of the Regents Park, and has several sons and daughters.

Our Portrait is from a photograph by Kilburn.

IMPORTANT POST-OFFICE NOTICE.—On Saturday, the following regulations of the General Post-office. St. Martin's-le-Grand, respecting letters addressed "Post-office, London," "Poste Restante, London," or letters simply addressed "London," were published by the command of her Majesty's Postmaster-General:—"Letters addressed 'Post-office, London,' or 'Poste Restante, London,' are delivered only at the window of the General Post office, St. Martin's-le-Grand. The hours of delivery from the Post-office window are from ten A.M. to four P.M. When the person applying for letters is a foreigner, he must produce his passport. When a foreigner does not apply in person, but by a messenger despatched for that purpose, the messenger must produce the passport of the person to whom the letters are addressed, as well as a written order, signed and dated by such person. In the case of a messenger being sent out for the letters of more persons than one, he must produce passports and orders from each person. If the applicant for the letters is a subject of the United Kingdom, he must be able to state from what place or district he expects letters before he can receive them. Subjects of States not issuing passports are treated as subjects of the United Kingdom. If letters are directed to individuals simply addressed 'London,' and not 'Post-office, London,' 'Poste Restante, London,' they will not be delivered from the window as a rule, but will be sent out by letter-carrier for delivery at the address furnished by the applicant. Foreign letters addressed 'Post-office,' or 'Poste Restante, London,' are retained two months at the Post-office window. Inland letters similarly addressed are retained one month at the window. After the expiration of these periods, both classes of letters are respectively sent to the Dead Letter Office, to be disposed of in the usual manner. Al persons applying for letters at the Post-office window must be prepared to give the necessary explanations to the clerk at the window, in order to prevent mistakes and to ensure the delivery of the letters to the persons to whomthey properly belong. It will much facilitate the business of the Post-office if the words, 'To be called for' are added to the address of letters which are directed 'Post-office, London.'"

A few days ago, a horse belonging to Mr. W. Ridsdale, farmer, of Rowley, near Wetherby, Yorkshire, suddenly became ill and died. After death, a living snake, eighteen inches long, was taken from the animal's stomach.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

General Sir Charles Napier arrived in London on Wednesday morning, at a quarter past one o'clock, having travelled from Dover by the South-Eastern Railway. On arriving at the London-bridge terminus, the gallant General was received with three hearty cheers by the railway officials, who were drawn up to receive him.

A number of missionaries have arrived in London from France, by a steamer from Boulogne, on their way to China, by a vessel about to take her departure immediately for that country. The rev. missionaries take with them a considerable quantity of vestments, plate, ornaments, and other articles of a costly description for church purposes, to assist them in carrying out the intentions of their mission.

We have to announce, that, by the exertions of Mr. E. W. Edwards, of the official assignee, arrangements are now completed, with the concurrence of all parties interested, for the purpose of duly locating all the emigrants sent out by Mr. Byrne to Natal, and confirming their titles to the several allotments. Mr. Byrne leaves this country for the colony by the next vessel, with full power and authority granted to him and Mr. Lampet, as the joint attorney of the assignees, to do all necessary acts to carry out, as far as practicable, the arrangements entered into by the bankrupt with her Majesty's Government.

A license was on Wednesday morning granted to the great *chef* (M. Soyer) for the sale of wines and spirits, &c., at Gore House.

A married woman, living near Winchester, was last week crushed to death between two trees, one of which had been lying out down by her husband, and fell across the other, against which she was leaning at the time.

Sir John Romilly will, it is said, shortly be appointed Master of the Rolls; when Sir A. Cockburn will become Attorney-General; and, it is believed, Mr. Page Wood Solicitor-General.

Several gentlemen connected with the "press" have formed themselves into a society, and intend giving a series of dramatic performances in aid of the charities of the metropolis. Mr. W. J. Hurlston acts as honorary secretary and stage-manager.

We have much pleasure in noticing a subscription of £10 to the Leicester-square soup-kitchen, from Sir Robert Campbell, Bart.

A party of gentlemen are about to form a hawking-club in London. The preliminary arrangements, we understand, will be made at Mr. Bishop's, of Bond-street.

During the operations of the Gas Company's men in Lord-street, Liverpool, a rather interesting relic was brought to light, viz. the old bridge which spanned the pool between Paradise-street and Whitechapel. Exactly before the door of Mr. Gilham's shop, at the corner of Whitechapel, at the depth of a few feet from the surface, may be seen a portion of the coping of the summit of the arch of this old bridge, which, doubtless, the oldest inhabitant never saw in its pristine state.

The sixty-three Poles and Hungarians who had determined on proceeding to America, went on board the *Charles Crooker* on Monday morning, preparatory to sailing for the New World.

The South Shields shipwrights, after remaining out of employment nearly six weeks, and wasting one of the best months in the year, have returned to work, complying with certain rules laid down by the masters.

The *Cambridge Chronicle* states that a requisition is about to be presented to Mr. G. F. Young to allow himself to be put in nomination for Cambridgeshire, and predicts his success in conjunction with Lord George Manners and Mr. Yorke. Mr. S. Crawford having signified his intention of resigning his connexion with the borough of Rochdale in the event of a dissolution, Mr. Peto has been mentioned as his successor.

The general cash account of bankrupt estates, from the 31st of December, 1849, to the 1st of January, 1851, shows that the following sums had been paid out of court within the year:—By order of the Lord Chancellor, £400; by order of the Vice-Chancellor, £10,145 13s.; by order of the Commissioners, £173,048 17s. The net balance on the 1st of January last consisted of £56,393 18s. on account of bankrupt estates; £1,405,819 2s. 5d. bankruptcy fund account; £438 4s. 9d. unclaimed dividend account; £33,032 9s. 3d. on the Chief Registrar's account.

On Saturday an inquest took place at the Grey Mare Inn, Whitworth-road, Rochdale, on the body of a child, the son of Mr. Gaskell, the landlord of that house. A monkey that was in the house made a sudden spring and, alighting on the head of the child, bit it so severely, that, notwithstanding the utmost attention of a medical man, the child died in consequence. A verdict of "Accidental death" was returned. The monkey has since been killed.

The total expenses of the Bankruptcy Court, including compensation to country commissioners, &c., for the past year, amounted to £96,428 18s.

The greatest supply of water to the city of Edinburgh in the month of February was 365 cubic feet per minute, and the least 322 cubic feet.

The Mayor of Southampton, Richard Andrews, Esq., and George Borrett, Esq., have been appointed by the Lord Chancellor magistrates for the town of Southampton.

On Wednesday afternoon, Mr. Linton, well known as "The Bishop of Gretna," died at his residence, Gretna Hall, after a few days' illness. His decease will be lamented, doubtless, by many a loving couple, who have been looking to him for the exercise of that potent spell which should bind them for life.

It is understood in the borough of Lewes, that Mr. Perfect, as soon as Parliament is dissolved, is to retire from the representation, and that his successor will be Henry Brand, Esq., who has for some time been private secretary to Sir George Grey, the Home Secretary.

It is rumoured that at the next election for Cockermouth, John Steel, Esq., will offer himself in lieu of one of the sitting members, who contemplates retirement.

On Sunday morning last, two men and a woman were publicly baptized in the river Nidd, at Knaresborough, by Mr. Franklin, Baptist minister of that town, in the presence of a large multitude of spectators.

In the event of a dissolution of Parliament, John Henry Phillips, Esq., of Williamston, has expressed his intention of becoming a candidate for the representation of the Pembrokeshire boroughs, provided that a sufficient number of the electors should declare their readiness to support him with their votes. Mr. Phillips will come forward on the Conservative interest.

On Tuesday morning, between four and five o'clock, a fire broke out at the Bell Tavern, kept by Mr. Boulter, at No. 5, Leicester-street, Leicester-square. A considerable amount of property was destroyed, but it is insured in the Sun Fire-Office. The adjoining premises were also much damaged.

The line of electric telegraph between Ferviers and Ostend was opened to the public on the 15th inst., and it is probable that the wires between Ferviers and Calais also will be complete within three months.

The heavy charges made by British Consuls abroad, has become the subject of inquiry by a sub-committee of the Shipowners' Association of Liverpool, lately appointed to inquire into the burdens and restrictions affecting British shipping, and strong efforts will be made to procure the total abolition of fees taken by British consuls, and to remunerate them by fixed salaries in lieu thereof.

A melancholy accident, resulting in the death of a person named Pascoe, a porter employed by the South-Western and South Coast Railway Companies, happened at the Portsmouth terminus on Monday morning. The mail train left the Waterloo-road terminus at 8.30 on Sunday night, and on arriving at the joint terminus station, the unfortunate man detached the engine from the train, and gave the signal for the carriages to move on. Subsequently he was found lying on the metals, nearly cut in two, every carriage having passed over his body—the supposition being that he had slipped off the step of the carriage and fell under the wheels, and hence the accident.

Charles Artinson, Robert Roberts, Francis Curran, and Jas. Inversdale, four sailors now on strike with the rest of the body, were charged at Liverpool, on Monday, at the instance of Messrs T. Tobin and Son, with having signed articles as part of the crew of the *Lord Elgin*. Captain Bell, and afterwards refusing to go on board. They were committed for thirty days.

The *New York Sun* gives us the following information:—"Jenny Lind has completely won the affections of the people of New York. When she heard the news of the *Atlantic*'s safety, she wept and sung for joy! It will be remembered (adds the *Sun*) that Jenny came to this country in the *Atlantic*."

Thousands of Americans are preparing to visit London during the "World's Fair," and prices of passage in the packet-ships are advancing.

It is in contemplation to erect a new monument in commemoration of Bishop Hooper, in place of the old and insignificant one now standing in St. Mary's-square, Gloucester.

The ship *Fidelitas*, now in Dublin, sustained much damage by fire on the night of the 16th instant, supposed to have originated in the hold.

On Tuesday morning the infirmary of Sir George Beresford were greatly alarmed, in consequence of a fire breaking out in the town residence, No. 5, Beaumont-street, High-street, Marylebone. It commenced in the third-floor front-room, and was occasioned by a person reading in bed, when a spark flew from a lighted candle and set the bedding in flames. The bed and furniture were destroyed, and the building much damaged.

It is a curious fact, that of all Lord Dinorbin's tenantry in the counties of Anglesey and Carnarvon, there is not a married pair; all are single—either old maids, bachelors, widows, or widowers, together with a bachelor each, constitute the whole. Maintenance, indeed, is very moderate.

The *Western Flying Post* announces that Lord Dunraven, eldest son of the Earl of Cork, a Protectionist, will most likely succeed the late Sir A. Hood, as Lord-in-waiting.

A return has been issued by order of the House of Commons, on the motion of Mr. Labouchere, of the number and description of persons employed on each of the railways in England, Wales, Scotland, and Ireland respectively open for traffic on the 29th of June, 1850, and the length of the line. A similar return has been made of each line and branch line of railway which had been authorised, but which might not have been open for traffic on the same day, distinguishing the length of each line on which the works have been in progress, and the length on which they might not have been in progress on that day, and specifying the act or acts authorising such railway.

The *Cologne Gazette* states that the mental alienation of Abbas Pacha, Viceroy of Egypt, increases; that the country is in a most wretched state; that it is impossible to get in the taxes; and that favourites are squandering what remains of the treasures accumulated by Mehemet Ali.

MR. WYLD'S LARGE MODEL OF THE EARTH.

THE dull and dreary centre of Leicester-square has of late become a scene of great activity, in the commencement of the building to receive Mr. Wyld's large Model of the Earth and surface. Upwards of 100 workmen are busily engaged upon this area. Huge balks of timber have displaced the stunted trees and shrubs; and large trusses have been framed for the support of the capacious structure. The accompanying Illustration shows the labour of raising these gigantic trusses.

The design consists of an immense central dome, of necessity globular, in accordance with the form of the Model. The building surrounding this dome will gradually slope to an external wall, 15 feet in height, in which will be several circular windows, in unison with the general contour of the building.

There are to be four entrances (in the Grecian style of architecture), situated at each of the cardinal points of the compass; and, as these will be 15 feet wide each, the whole structure will have a very imposing effect.

The height of the curb at the top of the dome will be about 70 feet; whilst the interior of Mr. Wyld's model will be upwards of 60 feet in the clear. The entire building is in a great state of forwardness: and it is presumed that it will be in a condition to receive visitors to the exhibition about the middle of April. It is not probable that the whole of the external adornment can be immediately completed, as that must be a work of time, from its dependence upon the weather; but this will in no way interfere with the immediate object of the building, the exhibition of Mr Wyld's beautiful model. Mr. H. R. Abraham, of Norfolk-street, is the architect; and Mr George Myers is employed upon the work.

During the period of erecting and placing the trusses to support the dome in their several beds, those fixed had much the appearance of the ribs of a large ship; and while the men were engaged upon them by gas-light, the scene had the strange effect represented in the Engraving.

We congratulate the inhabitants of Leicester-square upon the prospect of having, in a few weeks, a building erected in the centre of their wilderness which, if the design be fully carried out, will be an ornament to th[illegible] and we also congratulate Mr. Wyld upon having secured [illegible] ble for the purpose

THE CHESS TOURNAMENT.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—It is somewhat strange that nobody, as yet, seems to have hit off the real motives of the hostility shown by a certain clique of Chess-players to the schemes of the approaching Tournament; at least nobody has ventured to expose them. As I have rather a fancy for calling a spade "a spade," I shall stand on no ceremony about it. We have at Cambridge, privately among the second year men, a considerable number of "very clever" fellows, who are very *one pieces* in their freshman's year, do pretty well in their college examinations, excel at the Union, and keep up appearances, perhaps, to a very little go. About this time the good men of the year begin to come out and be acknowledged, when a wonderful change comes over the "clever fellow." He sudden[illegible] to some eccentric reading, gets deep in German, or fancies theology, or possibly turns poet, critic, or philosopher; no matter what, but "he no longer intends to go out in honours," so classics and mathematics may go to the devil. Headache and stomach-aches, which he cannot describe, and the doctors cannot account for, satisfy the governor that reading is dangerous and boating salubrious; so the "very clever fellow," who might have been a high wrangler or a first-class in classics had his health allowed," goes out in the pol. and lives on his freshman's reputation. I fear that the London Chess Club contains some "clever fellows" of the same family! They have had their college examinations, and some of them their little-goes, and have passed with credit; but now that the good men are coming out in strength, from Paris, from Germany, Prussia, Russia, and even America, they decline the competition that leads to honours, and shuffle out of the contest upon frivolous excuses akin to the sick certificates of our university. Much indeed does every real Chess-player rejoice that our national credit at the Tournament will not be peralled by such craven champions as these!

But there is still another deterring motive, which I can illustrate in a similar way. Have you never happened to be at some party of aristocratic tone, into which, by some unlucky accident, a twentieth cousin ten times removed, and but lately caught, finds himself abruptly introduced? How the poor fellow skulks out of observation into the quietest corners! If some benevolent man attempts to draw him out, how he will blush, and stutter, and fumble with his watch chain, gazing on the carpet with downcast looks, as if he heartily wished himself at Jericho, instead of Grosvenor-square! It cannot be doubted that those persons who would degrade chess to the level of the prize-ring—who comment upon games in the slang of the lowest blackleg, or the vulgar smartness of the Stock Exchange—who plume themselves on the laconic rudeness of their chess correspondence—who will not even condescend to meet humble or intelligent inquiry with civility, and rejoice in a sneer at the simplicity of the unskilled beginner—it cannot be doubted that all such men would find themselves out of place and absolved in the society of those superior men who are likely to bring, not only the science, but the refinement of Paris to the saloons of the St. George's Chess-Club. How, then, can we be surprised at their seeking to avoid the self-humiliation of the contrast by any [illegible] A sweep is happy enough in a pot-house, but would be [illegible] drawing-room, even though washed from his soot, and decked out in a gorgeous vest and embroidered front all glittering with ends. No doubt, there is in all scientific excellence a levelling principle. Knowledge in all its branches has somewhat of a republican tendency; but I confess that I for one, who hope as an amateur, though not as a player, to mingle in this distinguished throng, am not sorry that certain well-known individuals have stumbled thus early upon a principle of self-exclusion from the circle.

CANTABRIGIENSIS.

MUSIC.

ROYAL ACADEMY OF MUSIC.

The programme of the first concert for the exhibition of the students, on the 15th instant, at the Hanover-square Rooms, was unexceptionable in character as regards the selection, and very praiseworthy on the whole in respect to execution, thus placing the Academy before the public in a very favourable light. No doubt, there is room for improvement in the orchestral and choral arrangements; but nobody dreams of subjecting the Academy funds to the outlay of securing a first-rate executive, as the principal aim at such concerts must be to show how far the system of tuition be calculated to develope the talents of the pupils. Now, the two pianoforte performances of Miss Wilkins (a pupil of Mrs. Anderson), in Mendelssohn's Rondo in B minor, and of Mr. Cusins (King's scholar), a pupil of Mr. Sterndale Bennett, in Mendelssohn's Concerto in D minor, would not have disgraced concerts of infinitely higher pretensions. Miss Miss Williams must be praised for clever mechanism, Mr. Cusins claims credit for an intelligent interpretation of the text, with no small amount of poetic feeling. He distinguished himself last season as a violinist, so [illegible] anticipate a brilliant future for him. The vocalisation of Miss H. Taylor, in Bach's "Mount of Olives," which was given in its entirety, and of Miss Goodyer, in Mendelssohn's Cantata, Op. 46, "Oh! come let us worship" (96th Psalm), must be especially cited as the most striking efforts. Miss Browne, in Haydn's "With verdure clad," and the quartett in Mozart's "Requiem," in which also gratified the auditory. A "Kyrie" and "Gloria," by Mr. C. Steggall, a student, contained some excellent writing, erring, perhaps, on the side of boisterousness in the instrumentation, and of a want of due solemnity in the

"LORD MINIVER," MR. WIGAN. "COLONEL RUPERT," MR. C. KEAN. "LUCY," MRS. KEAN.

SCENES FROM THE NEW COMEDY OF "LOVE IN A MAZE," AT THE PRINCESS' THEATRE.

general character, but still amply testifying to the ability of the writer. M. Santon was the principal violin, and Mr. Lucas was the conductor.

The second concert will be on the 12th of April.

ST. MARTIN'S HALL.

The fifth of the series of the Monthly Concerts of Ancient and Modern Music took place on Wednesday night, under the direction of Mr. Hullah, the chorus consisting of the members of his first upper school. The selection comprised the "Credo," from J. S. Bach's Mass in B minor, for the first time in this country; Mozart's Motet, "Ne pulvis et cinis;" the second act of Glück's "Orfeo;" and gleanings from Weber's "Oberon." The immense difficulties in the "Credo" exacted more rehearsals than had been bestowed on the work, which, for freshness and vigour, is almost unparalleled. Mdlle. Grammann and Miss Kearns had the duet "Et in unum Dominum;" but it did not go very smoothly. Marchesi sang the air "Etin Spiritum Sanctum," with oboe obligato, steadily. The final chorus indicated how much Handel was indebted to Bach. After the grand "Credo," came an offertorium by Edward Fitzwilliam, Italian in style, excellently sung by Mrs. Endersohn, which was encored. Mozart's Motet was curious, from its strong resemblance to the last scene in "Don Juan." The second act of "Orfeo" created a powerful sensation, so thoroughly dramatic is the conception of Glück. Mdlle. Grammann sang the soli of *Orfeo*, but it would have been better in the hands of a tenor like Mario, a-bit somewhat low for his register. The two symphonies in the second scena are gems, and the accompaniments throughout are replete with fancy. The "Oberon" overture was encored: Mdlle. Grammann had *Fatal's* air, Mrs. Endersohn the grand scena of *Zora*, "Ocean, thou mighty master!" and Miss Kearns the lovely air of the sea-nymph, "Oh, 'tis pleasant to float on the sea!"

The next concert will be on the 16th of April, when Haydn's oratorio, "The Seasons;" a new sacred work by Rossini; Mendelssohn's "Lauda Sion;" and Gounod's "Sanctus" and "Benedictus," will be performed. The concert was full of interest.

MUSICAL EVENTS.

The arrangements for the ensuing week are of much interest. On Monday will be the second Philharmonic concert. On Tuesday will be Mr. H. Blagrove's Third Quartet evening at St. Martin's Hall; Mr. Benler, on the same evening, will give his fifteenth annual musical entertainment, at the Hanover Rooms. On Wednesday M. Rousselot has his third performance of classical music, at the Queen Anne-street Rooms. The Sacred Harmonic Society will repeat Handel's "Samson," at Exeter Hall, on Wednesday, conducted by Costa. On Friday, the London Sacred Harmonic Society will give Handel's "Jephthah," at Exeter Hall, conducted by Mr. Surman. On Tuesday, Thursday, and Saturday, Italian opera at Her Majesty's Theatre; and, on Saturday, the opening of the season at the Royal Italian Opera. This evening (Saturday) will be the last meeting at the Round, Catch, and Canon Club, at the Freemasons' Tavern.

The fourth concert of the Amateur Musical Society took place last Monday, at the Hanover Rooms.

Mdlle. Mathilde Graumann's *Matinée Musicale* was given last Monday at the Harley-street Beethoven Rooms; Mr. Charles Salaman, conductor. The solo instrumentalists were Madame D'Eschthal (harp), Ernst (violin), Piatti (violoncello), Osborne and Salaman (piano): the vocalists were Mdlle Graumann, who sang a new ballad by Mr. F. Mori, "Life's seasons," to Southey's words; Miss Dolby, and Mdlle. Rummel; Signor Marchesi, Herr Meugis, and M. Jules Stockhausen.

Mr. Kialmark, assisted by Molique, Lavenu, Grattan Cooke, Miss E. Birch, Miss Pyne, and Herr Kroff, had his second pianoforte performance, last Monday morning, at the Queen Anne-street Rooms.

On Tuesday evening, Mr. W. Sterndale Bennett, at the Hanover Rooms, gave his second concert of classical pianoforte music, aided by Molique, Lando, Lucas, W. H. Holmes, Lazarus, and Miss Dolby.

Mr. H. Blagrove's second Quartet concert, at St. Martin's Hall, took place on Tuesday evening.

M. Rousselot's second classical concert, at the Queen Anne-street Rooms, was given on Tuesday night, with the co-operation of Mdlle. Rummel, a German quartet of vocalists, and Sainton, Cooper, Hill, and Goffrie.

Mr. Turner gave his annual concert on Tuesday at Crosby Hall, aided by Misses Poole, E. Lyon, L. Stuart, Wells; Messrs. Genge, Shoubridge, G. Ford, Cooper, F. Smith, Leffler, Longhurst, and Rochelau.

M. Muhlenfeldt, on Wednesday, at the Queen Anne-street Rooms, gave a *soirée* of classical and modern music, assisted by Sainton, Rousselot, Aguilar, and Miss Dolby.

Mr. C. Field presented on Wednesday his entertainment, "The British Naval Service," at the Hanover Rooms, assisted by Mrs. A. Gibbs (formerly Miss Graddon), Miss A. Powell, Miss E. Macnamara, Master J. Field, Mr. F. Wustemann, jun., and Mr. C. A. Field.

On Friday, Signor Mondoli commenced at the Princess's Concert-Room a series of Italian operatic and instrumental concerts, Mdlle. Angri being engaged as the principal singer.

At the Marylebone Literary Institution, "The People's Concerts, Vocal and Instrumental," were begun on Friday.

The London and South-Western Literary and Scientific Institution, Nine Elms, presented Mr. Williams with a piece of plate for his gratuitous services in the music class.

Miss Catherine Hayes performed "Maria di Rohan," in Donizetti's opera, twelve times, to crowded houses, at the Apollo Theatre, in Rome. The season closed on the 4th instant, the performance, strange to state, taking place in the morning, beginning at the early hour of ten o'clock, according to an old custom, allowing time for the ball in the evening, as all amusements were to be terminated in Rome before midnight, the last day of the Carnival. Miss C. Hayes sang on the farewell performance, not only "Maria di Rohan," but the cavatina and duo from "Linda," in both characters being much cheered. Dancing being prohibited in Lent, the musical parties had begun at Rome. Miss C. Hayes sang on the 13th, at the first, given by the Princess Borghese, when she was presented to the Princess Doria by the Duchess Salvati. The Santa Cecilia Academy had presented Miss Hayes with the diploma of honorary member. This is one of the oldest musical institutions in Italy. Miss Hayes was to leave Rome on the 20th, to be in town early in April for the season; and in the autumn she will depart for a tour in America.

We learn from Paris, that Mr. Sims Reeves's *début* at the Théâtre des Italiens, last Saturday night, as *Carlo*, in Donizetti's "Linda," was perfectly successful. At the end of the opera he was called for by the audience, with Mdme. Sontag. Mdms. Montenegro's *début* as *Norma* was foiled by an attack of influenza; Mdms. Giuliani was put *hors de combat* by the same malady, and she was replaced by Mdms. Santiago, as *Adalgisa*, at a moment's notice. Alary's new opera, "I tre Matrimoni," was in rehearsal, at the Italian Opera. Rosenhain's "Démon de la Nuit" was performed for the first time last Monday; and M. Gounod's "Sapho" will be produced forthwith, at the Paris Grand Opera. Mdme. Flora Fabbri's return in *Poquita* had produced a sensation, so wonderful were her executive feats. Mdlle. Priora, the new *danseuse*, was to make her *début* in a novel ballet. Auber's "Enfant Prodigue" is still running at the Paris Grand Opera, and was this week produced at Brussels, Ghent, and Antwerp. Meyerbeer's "Prophète" had met with immense success at New Orleans. Scribe and Auber's "Corbeille de Fleurs" will be brought out for Alboni in May, at the Grand Opera in Paris. Mr. Lumley has purchased from Messrs. Brandus and Co., the publishers of Auber's works, his exclusive copyright for Her Majesty's Theatre.

Mr. R. Carte, on Thursday, delivered the last of his course of lectures on Instrumental Music, classical and unclassical, at the Whittington Club, assisted in the illustrations by Miss Kate Loder, Mr. T. C. Severn (piano), Mr. Nicholson (oboe), Mr. Lazarus (clarionet), Mr. C. Harper (horn), Mr. Larkin (bassoon), and Mr. R. Carte (flute.)

Mr. Henry Russell's new vocal and pictorial entertainment, "The Far West; or, the Emigrant's Progress from the Old World to the New," will be presented, for the first time, at the Olympic Theatre, on the 14th of April. The panoramic views, and Mr. Russell's explanatory "notes," are intended to convey practical information, as well as impart amusement, as to the boundless plains and clear broad rivers of the "west."

We regret to learn that Mr. Parry, sen., has again been attacked with paralysis, and is now in a precarious state. His son, Mr. John Parry, has been unable to continue his tour in the provinces, in consequence of his respected father's serious illness.

PRINCESS' THEATRE.

Mr. Bourcicault's pleasant comedy of "Love in a Maze" continues to be performed, but it has been found expedient to reduce it in length, by which means its incidents have been brought closer together, and the effect correspondingly improved. There is no doubt that the author had been seduced by the brilliancy of his dialogue to dally with the theme, and overlay his structure with ornament. The main strength of the piece lies in the contrast instituted between the noble lover and the military husband of the lady; the former all froth and pretension, the latter a sound sterling character, full of faith and confidence in others, because deserving of the same from them. While bearing the badges of honour, and entering its privileges, *Lord Minver* would, in the first instance, succeed by his cunning and wit, being vain of both; but finding himself outmatched, he resorts to force, and would kill the man in a duel whom he could not extinguish by an argument or a jest. He is, however, hereditarily blind to the injustice of these assumptions, and accordingly seems to think that everything must be fair which he resolves on doing. He pays no attention, therefore, to the rights of *Colonel Rupert*, but assails his wedded wife to the extinction of all principle, and against all the rules even of etiquette and convention. Placing the husband, as he thinks, *hors de combat*, he is not ashamed to take advantage of his position, and to urge his suit at a secret interview with the lady, in which he is surprised by the gallant *Colonel*. The latter, with infinite tact, concedes to the position to which he finds himself reduced, and, without attempting to defend it, consoles himself with defining it, by means of an illustrative *historiette*, and thus places both parties in a condition of judging the matter from a true point of view. In a word, he leaves it to the prudence of the one and the honour of the other. It is to this scene that our artist has directed attention—*Lord Minver* surprised at the feet of *Mrs. Bucketthorne* by her husband, *Colonel Rupert*. A comedy so elegant in its design and treatment will no doubt prove attractive to the fashionable audiences that now habitually visit this theatre.

The comedy was followed on Monday by an adaptation in three acts, by Mr. Oxenford, called "Pauline," founded on the drama of that title, by MM. Grangier and X. de Montepin. The hero is a kind of Monte Christo, who, living by assassination, fascinates a lady in Bengal, and marries her; but she having discovered his practices, is confined in a subterranean chamber, where, however, she escapes starvation through the agency of a relation, who afterwards is compelled to fight a duel across a table with the infamous husband. The characters were supported by Mr. and Mrs. Kean and Mr. J. Vining, with unquestionable success. But the piece is not of a class of which we should recommend the continuance.

THE ASYLUM FOR IDIOTS.

The Anniversary Dinner of the patrons and supporters of this excellent Charity took place at the London Tavern, on Wednesday, and suggests the reiteration of its claims upon the benevolent.

In our Journal for March 31, 1849, we engraved the first Asylum opened by the Society, at Park House, Highgate, which was in 1849 reported full. "It was, therefore, necessary that the Board should look abroad for increased accommodation. It happened that Essex Hall, at Colchester, was presented to their attention. Samuel Morton Peto, Esq., M.P., had wished that it might be devoted to some such benevolent use; and he generously offered to subscribe £200 a year to the funds of the charity, and to lend £1000, without interest, to meet the first expenses of occupation, if they should be disposed to take charge of it. A proposal so noble in itself, and so beneficial to the infant charity, left the Board no option. They accepted the offer: they took possession at Christmas, 1849, and early in 1850 a considerable portion of the family was located there. The Board cherish a hope, that, while this arrangement meets their present want, they may finally dispose the Eastern Counties to adopt it as their own, and thus leave themselves at liberty to look to a final location, more within the range of the metropolis."

The accompanying illustration shows this new location of the Society.

In a "special appeal," distributed at the Festival on Wednesday, it is stated to be "now ascertained by correct statistics, that the number of idiots exceeds that of lunatics. In fact, the applications made to the board since the establishment of the Asylum have been nearly overwhelming; and at this time we have 170 eligible cases earnestly craving admission; and the board cannot prudently advance on their numbers, except as they are sustained by increased contributions.

ASYLUM FOR IDIOTS.—ESSEX HALL, COLCHESTER

During the short time the Asylum has existed, the Board have taken a bonus of considerable capacity—they have filled it, and enlarged it, and again it is full. Subsequently, by the liberal assistance of a benevolent individual, another house of larger capacities has been secured; it is now occupied, and will in a couple of years also be filled. These and other considerations, with many of a kindred character, which will readily arise to the benevolent mind, have led the board to the conclusion, that to do their duty by the trust committed to them, and to work out successfully the great experiment in favour of the most afflicted and debased portion of the human family, they must erect a dwelling, with all the appliances and facilities indispensable for the undertaking." They purpose to raise a model institution worthy of the subject, as one alike of science and of humanity, and worthy of the country in which we live—great in everything, but greatest in charity; and this excellent object was eloquently urged at the Anniversary on Wednesday

At the dinner, at the London Tavern, on Wednesday, the Right Hon. the Earl of Carlisle presided. The company consisted of more than a hundred noblemen and gentlemen, among whom were Lord Ebrington, Mr. Sheriff Carden, and Mr. Alderman Wire. The noble president having proposed the usual loyal and patriotic toasts, drew attention to certain specimens of draughtsmanship, basket-making, and other handicrafts, which were exhibited on the tables with the dessert, as the work of the inmates of the institution, and as evidences that the objects of its charity were capable of being instructed and rendered useful. In the course of an excellent speech, his Lordship remarked on the apparently unattractive character of the idiot's misfortune, and its want of association with the poetic and picturesque. Milton was blind, Virgil asthmatic, Horace blear-eyed—even about insanity there was a moody majesty; but the poor idiot could not be made the *Lear* or *Belvidera* of tragedy. He was also subject to insult and contempt in real life—the butt and scarecrow of the village green, the drudge of the domestic hearth. At best, his life was one of negatives. Dead to noble human impulses, the unstructed idiot was powerful for mischief, while free from responsibility. Here, then, was the want and the justification of the present institution. Not that its promoters expected to convert the patients into philosophers, orators, poets, statesmen; but, confirmed by experience, they knew that much might be done, and trusted to do more, by judiciously administering to the requirements both of the physical and moral organization, orderly habits, steady employment, rational tastes, kindly feelings, just sensibilities of the affections and the conscience, as the story into the arts of right and wrong, the fear and love of God: in fact, the soul may, as it were, be re-created; so that, in the best instances, the idiot may be converted into a decent and creditable member of society. The work, however, had been begun full late, both in this country and elsewhere; but it was a cause for thankfulness, that at length it has been put into the minds of benevolent men here and in America. An esteemed friend of Earl Carlisle's—Dr. Howe—by his singular success in the treatment of Laura Bridgman, born blind, deaf, and dumb, had shown how every form of human bereavement might be coped with. At present, the means of the institution were deficient. One hundred and seventy-four candidates were waiting for admission. It was requisite to erect a building of sufficient capacity: a building fund of £10,000 should be promoted; and his Lordship concluded an eloquent address with recommending its claims.

Lord Ebrington, in replying to the toast for the president and vice-presidents, drew attention to the fact, that the ancient societies of Greece and Rome were wanting in remedial charitable institutions. Our superiority in this respect was due to our Christianity. This sentiment was also dwelt upon with much fervour by Alderman Wire.

During the evening, the treasurer several times made reports of subscriptions received, amongst which was a 266 guineas contribution from the Prince of Wales, 200 guineas from the Corporation of the City of London, 100 guineas from the Drapers' Company, with others, exceeding £2500.

The intervals of business were enlivened by songs and airs, selected by Mr. Jolley, and executed by Miss Thornton, Miss Henderson, Mr. Young, and Mr. A. Novello: Mr. Thomas Jolley presided at the pianoforte.

THE PAPER DUTIES.

On Monday several members of Parliament connected with Ireland, and gentlemen connected with the press both in England and Ireland, assembled at the King's Arms Hotel, Palace-yard, Westminster, to consider the best means of pressing on the Chancellor of the Exchequer the necessity of abolishing the Excise duty on paper; Mr. John Reynolds, M.P., in the chair

Amongst those present were:—Mr. Higgins, M.P.; Mr. Fagan, M.P.; Mr. Cowan, M.P.; Sir Timothy Colclough, M.P.; Captain Greene, M.P.; Mr. T. M'Clelagh, M.P.; Herbert Ingram, Esq.; Dr. Gray, of the *Dublin Freeman*; Mr. Duffy, of the *Nation*; Mr. Peter Borthwick, Mr. Thom, &c

The Chairman having referred to the exertions of the Irish Association for the Abolition of the Duty on Paper, for the object for which it was called into existence, and to promote which that meeting was then assembled, proceeded to observe that he looked upon this as a "labour question," inasmuch as the abolition of the paper duty would certainly supply a large portion of the population with work, and this would undoubtedly be a very great benefit. Besides, though the duty was supposed to yield a gross income of about £800,000, yet the net produce was very much less than that amount and in those mills where only a small quantity of paper was manufactured, it was found, that, although the manufacturers produced almost nothing, it cost an enormous sum to superintend the collection of the tax. Upon a calculation of the whole amount received, it would appear that in some instances the cost was about £2000 to collect £400. In order to impress upon the mind of gentlemen present the anxiety felt in Ireland, and particularly in Dublin, upon this important question, he observed that he had had the honour to present a petition from that city, signed by 20,000 inhabitants, and the whole of the signatures were attached in about 48 hours. Upwards of 150 petitions from various other parts of Ireland had been forwarded to London, and it was, therefore, evident that Ireland deeply sympathized in the object to promote which they were now assembled. It occurred to them that the Chancellor of the Exchequer, having withdrawn his Budget, and declared his intention to remodel it, might probably deem the present claim worthy of reconsideration. They must, therefore, appoint a deputation to impress upon his mind the absolute necessity for extending to Ireland some relief in his reconstructed Budget. The time had undoubtedly arrived when he ought to stretch a point to diminish the sufferings of the poor, and to decrease the burdens of the poor-rates.

Mr. Ingram suggested that the deputation should wait on Lord John Russell, as likely to be more useful than waiting on the Chancellor of the Exchequer.

Mr. M'Callagh moved the first resolution:—

That the Excise duty on paper impedes the progress and extension of its manufacture, and, by paralysing enterprise, operates most injuriously on the interests of trade and the employment of the people

The object of that meeting was specially confined to endeavouring to obtain a repeal of the paper duties, irrespective of the other duties on fabrics. As a sincere friend to a repeal of the whole of these taxes, he felt justified in supporting the repeal of this tax, as a primary measure. (Cheers.)

Mr. Fagan seconded the resolution, which was unanimously passed.

Captain Greene moved—

That as her Majesty's Government have expressed their intention of making some modifications in their Budget, a deputation, consisting of the following gentlemen, be appointed to wait upon the Chancellor of the Exchequer, for the purpose of impressing upon him the expediency of removing the Excise Duty on Paper, an impost which presses with great severity on an important branch of trade, and which is peculiarly objectionable in Ireland; and that Mr. Ingram, chairman, requesting that he would favour the deputation with an interview for that purpose.

Sir T. O'Brien seconded the resolution.

The Chairman hoped the deputation would be very numerously attended by Irish representatives.

Sir T. O'Brien recommended that the deputation should not consist entirely of Irish members.

Mr. Cowan, M.P., expressed his admiration of the manner in which this question had been carried on in Ireland, and he regretted that it had not been taken hold of equally by all in Scotland. He was of opinion that, as the press there was exclusively for it Ireland, they would do well to take it in the first place an Irish question.

Mr. Courtney said the increase of flax would tend very materially to the increase of the paper trade

Mr. Cameron said that the question was one of general interest. The association in Dublin consisted of a large number of persons totally unconnected with the trade. The brown paper trade had been recently stated by Sir E. M'Donnel to be nearly extinct, in consequence of the Irish manufacturers not being able to advance 2s. 6d. a ream on paper, the value of which, without the duty, was only 12s. 6d. When the duty was reduced it was found that the manufacture increased about 80 per cent.; and, if it were totally repealed, the increase would be 100 per cent in a very short time. The duty fell most on the Irish taxes which affected only this country. Four millions sterling was now the value of the paper made in the United Kingdom, the actual produce of labour and material that otherwise would be utterly worthless. Whatever increase in the use of paper might be produced by the removal of this tax, would be so much wealth created. The extension of the growth of flax in Ireland was another point to be considered as affecting the manufacture of paper, and there were a variety of substances which could be made into paper, but without any profitable result, unless the duty were repealed. The tax was a great impediment to employing the people in a country where employment was so much required

The Chairman said they were associated for the sole purpose of procuring a repeal of the duty on paper, and they did not wish to embarrass the question by mixing it up with any considerations which affected the other taxes on knowledge.

Mr. P. Borthwick stated that 235 petitions, signed by 39,837 persons, had been presented to the House of Commons in favour of the repeal of the paper duty

The resolution was then passed.

Mr. Higgins, M.P., moved that the chairman be requested to ask the Chancellor of the Exchequer to fix a day for the deputation to attend in Downing-street.

After some further conversation, it was agreed that the deputation, whilst mainly consisting of Irish members, speaking in their capacity as representatives of that country, should include such English members as might be willing to further the object desired

POISONING.

THE recent convictions at Suffolk, and inquiries at Clavering, in the famous poison county, Essex, re-arrays an army of facts and influences to which Journalism can oppose little better than a paralytical pen. This feeling of weakness in regard to the crime of poisoning is well understood among Journalists. Given an enormity, of whatever magnitude, and if only it is to be fastened upon, there is a power and a disposition in the press speedily and satisfactorily to solve it. Indeed, most frequently, the greater the wrong the more easy its overthrow; its very weight topples it to destruction. With the evil in consideration, however, the case is totally different; with it those very principles which make up the sum of its horror are just those which disarm attack—almost scare consideration: certainty, secrecy, secrecy, and that infatuation, strange as strong, which these seem to engender, and which seems capable of spreading through a whole village, as at Claverinr where, it would appear, murder by poison is a matter of familiar conversation, among other domestic occurrences—where English wives and mothers warn towards this home-hold treachery, and threaten any of the society who should traitorously expose it.

The secrecy of this "dread yearning unto crime" (and that such a fascination has existed in certain localities, there can be but little doubt, after the late revelations), it would be curious and useful first to discover, and we have no doubt they would principally be found among those little influences which act so mightily upon the human mind; and poisoning, be it remembered, is an entirely *vast* crime—as gentle, quiet murder as even *Macbeth* could have chosen to indulge in. Here is no garment obstinately bloody, no ensanguined knife, no gaping wound to shock the stranger, or terrible ache in the story into the hearts of justice. Here is no startling transition—one moment a strong, struggling man, the next an ugly corpse; but a gentle oozing away of life—mere every-day death, with calmness upon the face of it—a calmness which serves to still disagreeable ideas of guilt, even in a murderer's breast. Now, judging from facts and human nature, we have no doubt that in these tribes alone lies a fascination towards this phase of crime, almost equal in influence to those motives of self-safety which would induce the criminal to choose it when he resolves upon murder; and when it combines with that, certainty and secrecy which renders its victims so helpless, and the traces of the enormity so difficult of detection, this seemingly wide-spread crime of poisoning is a hopeless matter indeed.

But so much more hideous in moral deformity is poisoning than that mere murder which we are accustomed to regard as the *acme* of crime, and its prevalence is so great, that it is time some signal measures were taken to check it. The number of trials for this crime averages about twenty-two annually; the average number of convictions amounts to seven, chiefly females; and when we recollect the meagreness of proof in almost every one of these instances, the painstaking necessary to arrive at even so little, and the mere accidents and far-fetched suspicions which led in the first place to inquiry, no one can suppose that even a tithe of the fearful enormity reaches an earthly tribunal a circumstance which, we think, fully justifies us in saying that vigorous and unsparing example should be made where ever the crime can be fully proved.

Far from us be the wish to "shut the gates of mercy on mankind," but surely not the most liberal sentimentalist who ever wept drops of sympathy over the annals of the pet prisoners, can allow a single argument why every poisoner should not meet with the severest punishment which the laws of a Christianised county can award; unless, indeed, we are to arrive at a state of things historical of certain Continental cities, where inconvenient husbands and other relatives were quietly destroyed by the hundred annually.

Now, this position of affairs, one which may easily be fostered into existence by laxity in regard of it, we consider desirable in no, not even the Malthusian point of view in a home light, perhaps, than that which would cast a national odium upon that class of our country women among whom these deplorable cases have so frequently occurred a class notwithstanding numerous proofs to the contrary of devotion and truth, whose unmurmuring patience in poverty and suffering, and whose sterling common-sense at all times, have worked and are still working a mightier political influence upon the destiny of this nation, than that which is finally formed "the collective wisdom of the country" can ever effect or even appreciate.

It would seem that the executive justice of the country views the crime of poisoning in the same delicate point of view with the perpetrators and abettors themselves; that is, that the less the press, pens, and tongue are drawing distinctions between slow, bloodless, quiet murder, and that hacking and howling, and therefore more blatant and honest phase of it as the outstanding murder which the public bestows its thumbs from, and

SALUTING THE "ST. LAWRENCE," ON HER NEARING SOUTHAMPTON.

compound microscope, brushes, brooms, whistles, lard oil, candles, improved bank lock, beef, tallow, lard, flour, morticing and boring machine, corn, starch, geological specimens, stuffed back-eye squirrel, surgical instruments and plough, patent churn, corn-broom, steam-dried corn meal, commercial and banking tables

Rhode Island.—Printed calicoes, cotton goods, meat-cutters, and stuffs.

Tennessee.—Gin cotton, cotton and wool cards, steam-engine, quartz-cutter, gold and other ores.

Pennsylvania.—Artificial teeth and dentists' gold foil, flour, subsoil plough and implements.

Indiana.—Flour extractor, self-weighing grain scales, grain drill, and agricultural machinery.

Maryland.—Netting machines and specimens, reaping and mowing machines, pig iron, iron ore, soap, glass ware, soap-stone, &c.

Kentucky.—Planetarium, mustard, bed-quilts, and farm specimens.

New York.—Bevel sawing machine, harness, trunks, anti-friction presses, prepared animals, birds, mineral paint, tanning mills, samples of wheat and maple sugar, Indian corn, chairs, railroad car springs, stone machines, furs, machine for finishing and backing books, bobbin for the blind, pianofortes, pin-gins, oars, sweeps, scales, bonnets, saddle iron, frame, blocks, self-fed. var. compass, model waggon, agricultural implements, pony sleigh, herbarium, stoves, Argill's knobs, leather, lithography, farm products, starch, daguerréotypes, Saxony wool, needlework, body braces, ivory articles and combs; willow, bead, silk mats; flint-glass, flour, farina, American forest and other woods, ladies' shoes, model for tempering saws, coal, pantaloons, axes and edge tools, dental instruments, stone pitch and plumbago, books and specimens of binding, specimens of printing materials, salamander, telegraph register and keys, barley, oak chairs, hats, merino wools, harness, wagon, &c., gold pens and cases, oil floor-cloth, India rubber shoes, centrifugal pump, brick machines, printing and paper, map of United States, model water-wheel, furnaces, self-operating oil-press, mathematical instruments, iron bridge, railroad horse-power seed-planter, oil painting of wild flowers, elastic trusses, kiln-dried Indian meal, extra Genessee flour, oil of peppermint, &c.

Arkansas.—Minerals, cotton, rice, corn, hominy, flour, and varieties of grain.

Missouri.—Raw iron ore, cotton and mineral produce.

New Jersey.—Zinc, iron, and steel manufactures, iron wire, rivets, shears, trimmers, scissors, floor oil-cloth, &c.

Illinois.—Virginia grass reaper, patent reaper, and varieties of agricultural produce and implements.

South Carolina.—Sea Island cotton, Upland cotton, clean rice, sheaf rice, spirits of turpentine, phaeton carriage, cypress canoe, sobbing, drilling, sheeting, palmetto, oak, cedar, poplar woods, sweet gum wood, circular table, basket.

Mobile.—Iron ore and iron works, manufactured tobaccos, mining and other implements, &c.

Michigan.—Burt's solar compass, agricultural productions, and mechanical contrivances, &c.

Our own Correspondent, who, through the kindness of the South-Western Company, specially visited the frigate on the 18th inst., speaks well of her orderly equipment, trim spars and rigging, general cleanliness, and the healthy and contented looks of her seamanlike crew. The captain and officers all showed him the greatest courtesy, and complimented the proprietors of the ILLUSTRATED LONDON NEWS for their desire to further acquaintance of the public with that vessel and its noble mission. On visiting the lower decks, the frigate did not seem to bear a full cargo, though she only carries guns on her spar-deck.

The Mayor of Southampton had invited the officers to visit Winchester and its notabilities on the following day, and they were afterwards to be entertained by him at a *dîner* at his private residence near the city.

A banquet to the United States Consul, at Southampton, is to be given by the inhabitants on the 26th inst., at which the captain and officers of the *St. Lawrence* will be present.

Next week we shall give additional Illustrations of this very interesting arrival.

THE "ST. LAWRENCE" ENTERING SOUTHAMPTON DOCK.

NEW BOOKS, &c.

THE LANDED INTEREST.
Now ready, complete in two very large vols., double columns (equal to 3l ordinary vols.), price £3 3s. bound,
BURKE'S LANDED GENTRY for 1851, corrected to the present time, and including many additional families. This important national work comprises a Genealogical and Heraldic Dictionary of the whole of the Landed Gentry of Great Britain and Ireland, with particulars of 100,000 persons connected with them, forming a necessary companion to all Peerages
HENRY COLBURN, Publisher, 13, Great Marlborough-street.

Published this day, Third Edition, in post 8vo, with numerous Illustrations, price 8s bound in cloth, or 12s morocco antique,
INEVEH and PERSEPOLIS: an Historical Sketch of Ancient Assyria and Persia, with an Account of the Recent Researches in those Countries. By W. B. W. VAUX, M.A., of the British Museum
*** This edition has been thoroughly revised and enlarged, and several new Illustrations introduced from recent discoveries in the sculptures in the British Museum.
ARTHUR HALL, SARTON, and Co., 25, Paternoster-row.

MR. RUSKIN'S NEW WORK.
Just ready, in Imperial 8vo, with Twenty-one Plates, and numerous Woodcuts, from Drawings by the Author,
THE STONES of VENICE. Volume the First.—THE FOUNDATIONS. By JOHN RUSKIN, Author of the "Seven Lamps of Architecture." Modern Painters," &c.
Price Two Guineas, in cloth boards, gilt top and gilt edge.
*** A few copies of the Folio Edition remain.
NOTES on the CONSTRUCTION of SHEEPFOLDS. By JOHN RUSKIN, M.A.
London: SMITH, ELDER, and Co., 65, Cornhill.

INTERESTING NEW HISTORICAL WORK.
In 2 vols 8vo, with Portraits, 30s bound,
MEMOIRS of HORACE WALPOLE, and his CONTEMPORARIES, including numerous Original Letters, chiefly from Strawberry Hill. Edited by ALOIT VON REDEN, Esq.
Perhaps no name of modern times is productive of so many pleasant associations as that of "Horace Walpole," and scarcely an author who is not unconsciously connected with so many different subjects in connexion with Literature, Art, Biography, and Social Life. The position of various members of his family, connecting Horace Walpole with the Cabinet, the Court, and the Senate, his own intercourse with those characters who became remarkable for brilliant, social, and intellectual qualities, and his reputation as a Wit, Scholar, and a Virtuoso, cannot fail, it is hoped, to render his memoirs equally amusing and instructive.
HENRY COLBURN, 13, Great Marlborough-street.

Now ready at all the Libraries sworn 8vo, 7s 6d cloth, with portrait.
THE FEMALE JESUIT; or, the Spy in the Family. Including her Autobiography, or "Seventeen years of Convent Life," and her recent intrigues in a Protestant family near London.
AUTHOR'S COMPLETE EDITION.
Under the authority of the Author, by whom this edition has been revised and nothing added to the original.
THE AUTHORITY of GOD; or, the True Barrier against Romish and Infidel Aggression. Being Four Addresses by the Rev. J. H. MERLE D'AUBIGNE, D.D. With an Introduction written exclusively for this Edition, which embraces also a Sketch of the Present Position.
London: PARTRIDGE and OAKEY, Paternoster-row; and 70, Edgware-road (Banbury and Co., Agents). Edinburgh: Oliver and Boyd; and all Booksellers.

THE NEW WORKS OF FICTION
Now ready at all the Libraries, in 3 vols,
MR. HOWITT'S NEW WORK, MADAM DORRINGTON of the DENE. The Story of a Life.
"We have now to welcome Mr. Howitt as a fiction writer of high excellence. He has evinced rare power in the construction of the plot, vigour of the main character of this most interesting story, the admirable Madam Dorrington. The characters of the subordinate sex, too, are admirably drawn. Jeremiah Grind, the learned Vicar of Westwood, would have done no discredit to Goldsmith's pen."—Spectator.
II.
THE DREAMER and its WORKER. By R. H. HORNE, Esq., Author of "Orion," "Cosmo de Medici," &c. 3 vols.
III.
TALES and TRADITIONS of HUNGARY. By FRANCIS and THERESA PULSKY. 3 vols.

SECOND LOVE; or, Beauty and Intellect. By Mrs. TROLLOPE. 3 vols. Just ready.
HENRY COLBURN, Publisher, 13, Great Marlborough-street

NEW WORKS BY THE REV. JOHN CUMMING, D.D
I.
This day is published, New Edition, price 6s. revised and corrected, with additions,

TO THE FAMILIES OF THE CLERGY
CLERGY MUTUAL ASSURANCE SOCIETY, Established 1829.
PATRONS.—The Archbishops of Canterbury and York.
TRUSTEES.—The Lord Bishop of London, Durham, and Winchester.
CHAIRMAN OF DIRECTORS.—The Archbishop of London.
VICE-CHAIRMAN.—P. L. Wollaston Esq., M.A.
Assurances upon Life are effected in this Office in which all the profits made upon assurances are divided quinquennially amongst the assured (nothing being taken from the profits of the assured for shareholders, fathers, mothers, brothers and sisters, uncles, aunts, nephews, and nieces of clergymen, and they are the sons of clergymen, and of the fathers, mothers, brothers, sisters, uncles, aunts, nephews, and nieces of clergymen.
Prospectuses to be had at the Office of the Society, No. 31, Parliament-street, Westminster.
JOHN HODGSON, M.A.,
JOHN HUTCHINSON, } Secretaries.

ROYAL EXCHANGE ASSURANCE, A.D. 1720.—Incorporated by Charter of King George the First. For Fire, Life, and Marine Assurances. Chief Office, Royal Exchange, Branch, 29, Pall-mall.
Life Assurances are granted with or without Bonus; and for any sum not exceeding 250,000 on one life.
The twenty-first Bonus on British Participating Life Policies has averaged 3 per cent per Annum on the sums assured, and has been paid on the Premium paid; or equivalent reductions have been made in subsequent Premiums.
The experience acquired and reputation maintained, by the Corporation during the last 130 years, afford a guarantee that the Bonus will be declared sufficiently out of a realised surplus, and not by the modern system of estimating future profits, to the prejudice of persons after wards assured.
The Premiums are moderate and fairly adjusted
The fees of Medical Referees are paid by the Corporation.
Forms of proposal and every information on advantageous terms
Persons assured with this chartered Corporation are EXEMPT from the liabilities of Partnership.
Annuities are granted, while the payment of their claims is secured by the ample Capital stock.
ALEX. GREEN, Secretary.

GRESHAM LIFE ASSURANCE SOCIETY, for ORDINARY and "SECLINED" LIVES.—Offices, 37, Old Jewry, London
Trustees—The Right Honourable Lord Viscount Marshall, Esq.; Stephen Olding, Esq.; William Snow, Esq.
This Office will be found highly eligible for every description of Life Assurance.
Perfect security is guaranteed by an ample paid-up Capital, subscribed by persons of the highest honour and respectability.
The Policies are indisputable, unless procured by fraud, and claims are promptly and liberally settled.
Medical fees to be effected without loss of time, the Directors, together with the Medical Officer, being in attendance at the Office every day.
The lives of individuals whose habits are regular and temperate, and who, though neither diseased nor strongly predisposed to disease, have been declined by other Offices, are assured at equitable rates, because the probability of lives being rejected by the "Gresham" is found in the Society's Premium limits
Policy Holders may obtain Loans on real or personal security.
The Funds of the Society are invested in the most advantageous manner, so as to promote security, and to afford the first possible investment to the assured in the proportion of 40 per cent.
The Management of the Society is conducted in the most economical manner, as is shown by the Annual Reports.
Upwards of Two Thousand Proposals for Assurance were received in the two years ending July, 1850, amounting in the aggregate to nearly a Million Sterling; and the Directors were enabled to agree upwards of Five Hundred Pounds to the Society's Rest during the Second Year alone, chiefly from the Premiums taken during that year
A liberal Commission allowed to Agents and Sol citors.
Active and influential persons will be appointed in Districts where no Society is not already represented
THOMAS ALFRED POYT, Secretary.

NEW MUSIC, &c.

UNADULTERATED COFFEE.—One of the two firms so honourably distinguished by the Analytical Sanitary Commission, and by the Lancet, for the genuine quality of their Coffee, is that of KNIGHT and SONS, Tea-dealers and Grocers, 63, Gracechurch-street, Corner of Fenchurch-street, "say the Commissioners, "Coffee of excellent quality and high flavour may be obtained." At 4s, 4s 6d, and 5s per lb. Knight and Sons' Coffee is of equally pure and genuine, at moderate prices. Country orders, accompanied by cash or a reference for payment in London, will meet immediate attention

HOMŒOPATHIC COCOA, prepared by JAMES EPPS and BROTHERS, London, the most eminent Manufacturers of Cocoa in the world, are now supplying their Homœopathic Cocoa in packets, tins, and cases of the finish and quality of their well-known Cocoa, but differing from the latter in being prepared with the utmost skill and experience of TAYLOR BROTHERS, who have had many years' practical experience in this article, it is a most essential article of diet, and especially adapted to those under Homœopathic treatment. It is very delicious in flavour, and is and agrees with the most delicate and irritable digestive organs. It is purifying to the blood, and, acting as a mild aperient, promotes a healthy action. Attention to the alimentary canal, and proves, at the same time, a powerful restorative. EPPS and BROTHERS confidently challenge a comparison between this and any of the so called Homœopathic Cocoas offered to the public. A single trial will suffice. The advantages of TAYLOR BROTHERS over other manufacturers are, that they have had many years' experience in their manufacture, larger capacities, greater command, and consequently, proportionate economy, and etc. In preparation enabling them to offer every kind of plain and fancy COCOA and CHOCOLATE at moderate prices. Also, a highly concentrated SOLUBLE and DIETETIC COCOAS, the latter strongly recommended by the Faculty to Invalids, Convalescents, and Delicate Constitutions.
EPPS and BROTHERS, Homœopathic Chemists, 112, Great Russell-street, and 420, STRAND, CAUTION.—Observe that the name "TAYLOR BROTHERS" is on every packet.

BRITISH COLLEGE of HEALTH, New road, London. Whereas ungrounded parties in different parts of the country are praising the Liquid Hair Specific of JAMES MORISON, which they (after upon long-lived people), this is to caution the public against such a system of fraud. The fallacy of the Hygeian Specific, a necessary should be preserved.—March 3, 1851

LONDON: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand aforesaid. SATURDAY, MARCH 22, 1851.

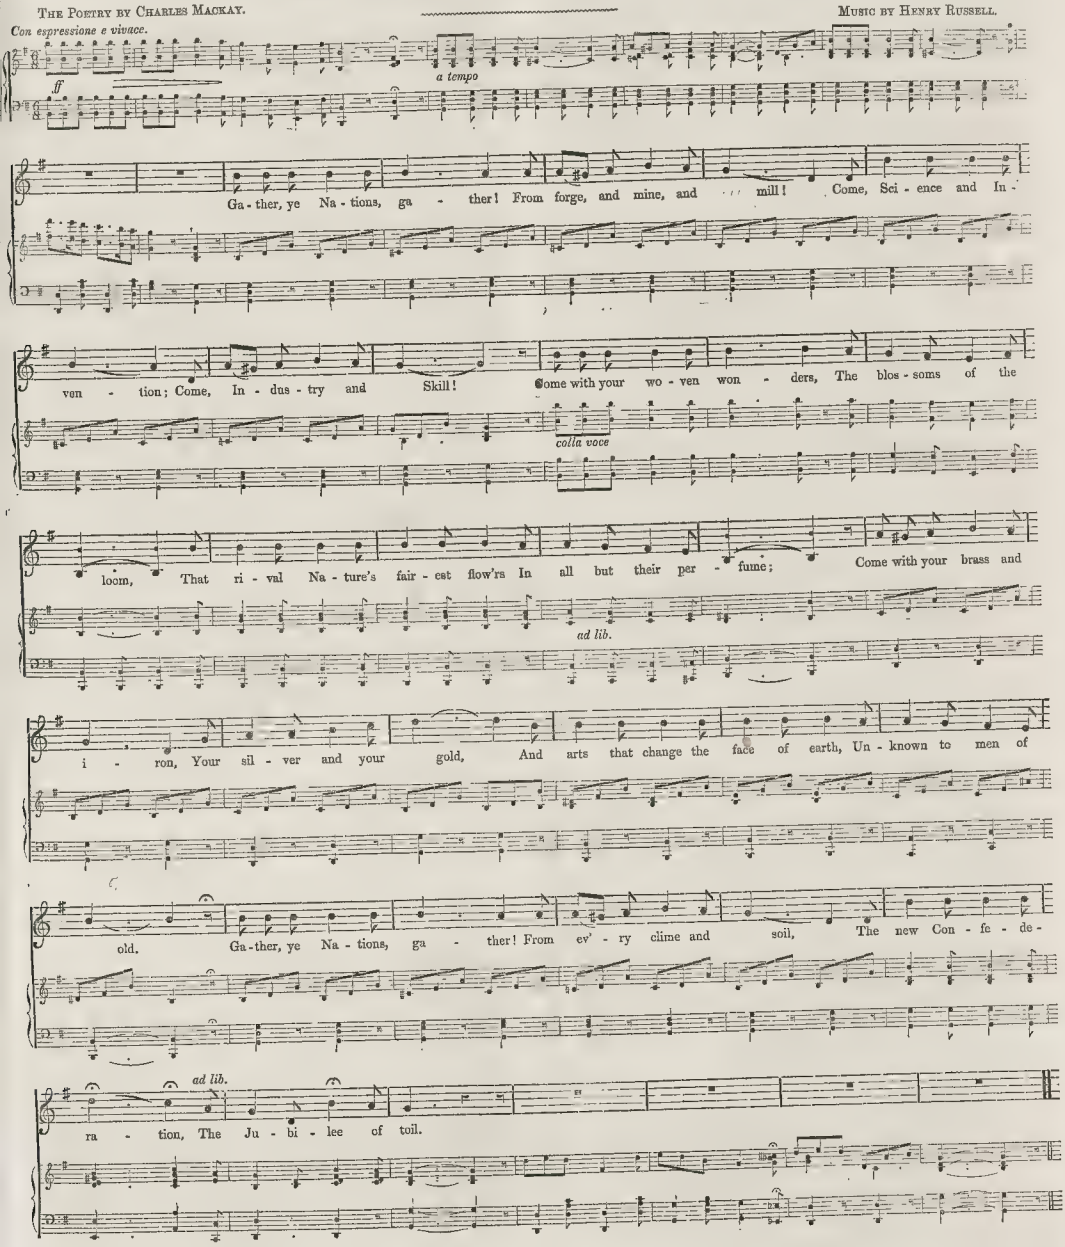
VOL. XVIII.] SUPPLEMENT, SATURDAY, MARCH 22, 1851. [GRATIS.

THE FESTIVAL OF LABOUR.

THE POETRY BY CHARLES MACKAY. MUSIC BY HENRY RUSSELL.



Con espressione e vivace.
ff
a tempo
Ga - ther, ye Na - tions, ga - ther! From forge, and mine, and mill! Come, Sci - ence and In -
ven - tion; Come, In - dus - try and Skill! Come with your wo - ven won - ders, The blos - soms of the
colla voce
loom, That ri - val Na - ture's fair - est flow'rs In all but their per - fume; Come with your brass and
ad lib.
i - ron, Your sil - ver and your gold, And arts that change the face of earth, Un - known to men of
old. Ga - ther, ye Na - tions, ga - ther! From ev' - ry clime and soil, The new Con - fe - de -
ad lib.
ra - tion, The Ju - bi - lee of toil.

SECOND VERSE.

We strive not for dominion;—
Whoe'er the worthiest be,
Shall bear the palm and garland,
And crown of victory.
In kindly emulation
His willing hand we'll seek,
And own him brother, and a friend,
Whatever tongue he speak,
Whate'er his clime or colour,
His lineage or his creed,
To him shall honour due be given
For honourable deed.
Gather, ye Nations, gather!
Exult then—for you can—
The dignity of labour,
The brotherhood of man.

THIRD VERSE.

The world is growing wiser,
New thoughts and hopes are born;
Too long we've dwelt in darkness,
And tarried for the morn.
Too long in foolish warfare
We've dipp'd our bleeding hands;
But wisdom, taught by suffering keen,
Comes beaming o'er the lands.
Our princes and our people
The grateful truth have learned,
And strive for glory, purer far
Than battles ever earned.
Gather, ye Nations, gather!
Let ancient discords cease,
And earth, with myriad voices,
Awake the song of Peace.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The news from our neighbours across the channel this week, is of little importance. The rumours of a change of Ministry have subsided, and the "transition" Cabinet looks as though it would become a very permanent one. The Assembly was occupied on Monday with the ministerial Sugar Bill, the object of which is to protect home and colonial beet-root produce, but at the same time to reduce the differential duties on foreign sugar, by way of exciting competition. The bill is not likely to pass without a strong opposition.

The Parliamentary Initiative Committee sat on Tuesday, to consider M. Saint Beuve's motion for an alteration of the Customs duty tariff, upon the Free-trade principle. After some discussion, the motion was rejected.

The Bishop of Chartres has published a pastoral letter, in which he attacks the circular issued by the Archbishop of Paris on the 1st inst. of January, for having recommended the clergy to abstain from politics, and to yield obedience to the laws of the country. The Bishop, on the contrary, considers that when destructive principles are promulgated, the clergy should be found ready to oppose their progress; besides which, he sees no reason why the ecclesiastical body should be subjoined not to take part in the affairs of the nation. The Archbishop replies to the Bishop by denouncing his conduct as an unjustifiable interference with jurisdictional authority, and a want of proper respect which should always be paid to Metropolitan dignity. The Archbishop concludes by referring the Bishop's pastoral to the Provincial Council, which is to be held in Paris during the present year

On Tuesday a Cabinet Council was held at the Elysée, to take into consideration the dispute between Austria and Prussia, respecting the admission of the states belonging to the former into the German Confederation. It was eventually resolved to forward instructions through the French Minister at Vienna to that Court, reiterating the disp easure of the Republic at the conduct of Austria, intimating at the same time that should any conflict take place between the two German powers, France would support Prussia.

An article in the *National* says, that the uncertainty connected with political affairs has had a very depressing influence upon trade; so much so, that the working classes may look forward to a long want of employment. This alarming statement, calculated to produce much uneasiness in the public mind, does not appear to have rested upon the slightest foundation, and fortunately very little credit was given to it.

The *Moniteur du Soir* states, that the complaints made by the Government at the limitation of space allotted to French productions intended for the Great Exhibition in Hyde-Park have been satisfactorily removed by the Royal Commission. This fact is mentioned as another proof of the good feeling which subsists between England and France.

The President of the Republic is said to have dissolved the Municipal Council of Toulon, the reason for which was not publicly known.

Serious disturbances broke out at Saint Amand, in the Nièvre, on Sunday last, occasioned by the Socialists of the town first plying some young conscripts with liquor, and then inducing them to march about with revolutionary emblems. The mayor and the sub-prefect endeavoured to put down the riot, but these officials were repulsed and driven out of the town. Some of the ringleaders were, however, arrested. The military were sent for, who it was thought would soon restore tranquillity.

GERMAN STATES.

The only news of importance is a rumour, which requires authentication, that M. Manteuffel, the Minister who is regarded as the head of the peace party in Prussia, as contradistinguished from M. Von Radowitz, the chief of the war party, is out of favour with the King, on account of his being thought too ready to make concessions to the ambition of Austria in the negotiations at the Dresden Conferences for the re-establishment of the Central Federal Authority, and great difficulties are, in consequence, anticipated in coming to an agreement with Austria in the matter.

The anniversary of the Prussian Revolution was Tuesday last (the 18th instant). Our advices only come down to the 17th; but it was believed that no attempt would be made to excite a disturbance of the public peace.

At Vienna, the anniversary of the Austrian Revolution (the 13th instant) passed off without any manifestation of political feeling whatever. In the morning the Emperor reviewed the garrison at Vienna.

UNITED STATES.

The advices from New York this week are to the 5th inst. The political news is of considerable importance, as it comprises the close of the session of Congress, which has developed the customary excitement attendant upon that national event. Mr. Allen, a member of the representatives, from Massachusetts, had startled the country with a charge against Mr. Webster, the Secretary of State, to the effect that Mr. Webster had been bribed by a sum of money (some 50,000 dols.) to accept his present office to advance the interest of his patrons. Mr. Webster, had received money incidentally, but merely in the way of a friendly advance, and from individuals in no way connected with public affairs, and without expectation of advantage from such affairs. The necessity for this pecuniary aid grows out of the sacrifice of Mr. Webster's large professional revenue, and the limited salary of the secretaryship

A scuffle disgraced the last evening of the session in the House, between Messrs. Stanley and Clingman. The altercation grew out of a conversation upon a speech of Clingman's, upon the River and Harbour Bill. All the accounts state that Clingman struck the first blow, and, says a correspondent, "folled him in the face!" No wonder that there was a scuffle in the House. Had not members promptly interfered in person, the consequence must have been most unfortunate.

A second session of the 31st Congress thus terminated its existence on the 4th instant. The next session will be opened in December

On the 3rd instant, in the House of Representatives, Mr. M'Clernand, of Illinois, moved the adoption of the resolution previously agreed to by the Senate, requesting the President to authorize one of the United States vessels in the Mediterranean to carry Kossuth and his companions to the United States. The resolution was passed by a large majority. The efforts made to get the United States Mail Steam-ship Company to procure an increased grant of contract money for carrying the mails to and from New York and Liverpool had failed. Mr Henry Clay attempted to succour the company, but was defeated. On the 1st instant, a message from President Fillmore, inclosing information concerning the difficulties between the British and Nicaragua authorities, was presented; also a petition from the Governor and Legislature of Delaware in favour of the Liberia steamers. Subsequently, up to the period of its adjournment, after midnight of the 4th instant, the Senate discussed a variety of special bills; Deficiencies Appropriation, Naval and Harbours, &c. The bill for the establishment of cheap postage has passed, and will come into operation on the 1st of July. A protracted debate on the Bill for the improvement of Rivers and Harbours was held in the Senate, calling forth an extraordinary display of political strategy. The bill was finally lost. The Senate has passed a bill limiting the liability of shipowners. Congress had rejected all measures for new steam lines to Norfolk Island, Canton, &c.

The miscellaneous news is inconsiderable. On the 24th ult. a terrible tornado nearly destroyed the town of Fayetteville, Tennessee.

Samuel G. Goodrich, the author of the celebrated "Peter Parley's Histories," has been nominated Consul at Paris, in place of Mr. Wadd, resigned.

Four persons had been committed for trial at Boston for assisting the escape of the slave Shadrach.

From Texas the accounts (to the 12th ult.) still refer to the protracted hostilities with the Indians, whose sanguinary depredations on the settlers were incessant. The Government treasury was exhausted, and the army of about 17,000 troops were without pay and clothing.

CANADA, NOVA SCOTIA, &c.

In the Halifax House of Assembly, the bill to incorporate the European and North American Railway has passed. The bill provides that the province shall take stock in the proposed undertaking to the amount of £250,000, and issue debentures to that amount, the balance to be paid by private subscription. The bill provides that for every pound subscribed and paid up one acre of Government land will be allowed. It is generally expected that the sum necessary to construct the railway through the province will be readily subscribed; and the mechanics of St. John's, New Brunswick, have made an offer to the Legislature to take stock in the railway to the amount of £100,000, provided they be employed upon the work.

From Canada our accounts are unimportant.

INDIA.

Advices *vid* Trieste have been received in town during the week, anticipating the usual despatches. The dates are, Bombay, February, 17; Calcutta, February 8; and Hong-Kong, January 23. The Bombay journals announce the surrenditions. surrender of the Fort Dharoor in the Nizam's dominions, on the 4th of February; and give a report that a portion of the Prince's territory has been made over to the Government of the East Indian Company, as equivalent for the debt of £50,000 due to it

In the Punjab, 400 miles of canals, nearly half a million acres, were under construction. Lord Dalhousie is occupied with education in the Punjab

The sum of £10,000 sterling has been stolen out of the coffers of the Oriental Bank.

The Governor-General was in Rawul-Pindee on the 31st of January, *en route* to Peshawur; the Commander-in-Chief was at Agra on the 8th of February. The Governors and Commanders-in-Chief of Bombay and Madras were at their respective residences.

The Calcutta papers announce the arrival of the three prisoners, Sikh-Sirdars, on their way to Singapore; the proposed erection of a lighthouse on the Sauger Island for shipwrecked mariners; the sentence of death upon the murderer Very; and the arrival of the Oriental steamer on the 1st of February, with the English mails of the 24th of December.

The China papers confirm the intelligence of the death of Commissioner Lin. Keying had fallen into disgrace at the Chinese court, for showing a predilection to Europeans. Fears were entertained of a new Chinese insurrection in the disturbed provinces.

The state of health of the troops at Hong-Kong had improved.

A smuggling company of great extent had been discovered at Shanghae.

The *North China Herald* announces the discovery of an interesting race of Jews in the interior of the country, 350 miles from Pekin, by some missionaries of the London Society.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—FRIDAY, MARCH 14.

In our Postscript of last week we noticed the Parliamentary proceedings of Friday (se'nnight).

POSTPONEMENT OF THE AMENDED BUDGET.

Lord J. RUSSELL, referring to the notice he had given, that, on Friday, the 21st (last evening), the Chancellor of the Exchequer would state the alterations he proposed to make in his financial arrangements, observed, that, since that time, Mr. Baillie had given notice of a vote of censure upon the Government respecting the affairs of Ceylon, and he did not think it right, that, with such a vote hanging over their heads, the Government should proceed any further in their financial arrangements; therefore, he should wait until it was decided whether they or any future Government were to bring forward the financial arrangements.

ECCLESIASTICAL TITLES ASSUMPTION BILL.

The debate on the order of the day for the second reading of this bill was commenced

The Earl of ARUNDEL and SURREY, who moved, as an amendment, that the bill be read a second time that day six months, proceeded to contend that the reason why the Pope had created a hierarchy in this country, was to remedy the irregularities arising from the want of a systematic discipline, a sense of which had induced the Roman Catholics of England, both lay and clerical, to petition the Pope to establish a hierarchy. That the Government was aware of the Pope's intention, Lord Arundel showed from what had been stated in that House by Sir R. Inglis upon two occasions in 1848; and he endeavoured to deduce from Lord J. Russell's replies that the establishment of a hierarchy at that time, though it would not have been sanctioned to, would not have been opposed. He argued that neither the act itself nor the language of the Papal rescript and the archiepiscopal pastoral infringed the Queen's prerogative, and he pointed out the ill consequences of enforcing this measure if passed into a law, even in its amended form.

Mr. REYNOLDS, in seconding the amendment, severely criticised the course pursued by Lord J. Russell with reference to this question; and avowed that he had voted in favour of Mr. Disraeli's late motion, not upon its merits, and was prepared to record similar votes of no confidence in the present Government until this Algerine and lana ting measure was abandoned.

In the discussion which ensued, Sir B. Hall, Sir R. Inglis, Sir R. Peel, and Mr. Fagg Wood supported the bill. Sir ROBERT PEEL's was a maiden speech, and was strongly in favour of the Government measure. He said that he looked upon religious toleration to be a sacred principle of political economy; he held that it ought to be extended to all sects; and it was because he believed that this bill would not interfere with the legal exercise of rel gious liberty, but would merely control the abuse of it, that he gave his support to this measure, deeply regretting his inability to arrive at the same conclusion as one (Sir J. Graham) to whom he bore a strong political attachment. It was precisely because he was an advocate of civil and religious liberty (which could not be reserved) that he gave his adherence to legislation upon this so called Papal aggression; though he regretted that the enactments of the bill were extended to Ireland, the circumstances of which differed from those of England.

The arguments of the bill were Mr. ROEBUCK, Mr. FRANCIS and Mr. M'CULLAGH. The latter hon. gentleman touched but lightly on the questions at issue, but Mr. Palmer entered fully into the whole subject. His opposition to the bill was founded on the belief that the spirit of legislation was not required by the emergency. The aggression was, he acknowledged, a spiritual aggression upon the Church of England, meant to present to certain members of that Church the seductive spectacle of a better organised Church; but this did not inspire him with any alarm for our Church, nor justify a coercive bill like this, all the less and most especially as the Pope, however, were to be entrenched.

Mr. PAGE WOOD's speech was a reply to Mr. R. Palmer's, whose arguments he endeavoured to show were all founded on fallacies, since in his (Mr. Wood's) opinion not a single agreement to the supremacy of the national Sovereign had been committed by the late Papal brief

The debate was adjourned to Monday

HOUSE OF LORDS.—MONDAY.

DESIGNS ACT EXTENSION BILL.—LAW OF PATENTS.

Earl GRANVILLE brought up the report on the bill to extend the intention of the Government to introduce a bill on the subject of the patent laws in that House before the end of next week. The noble and learned Lord opposite (Lord Brougham) also, he believed, intended to introduce a bill on the subject; and as it would not be desirable to have the two bills before the House at the same time, perhaps their Lordships would allow him (Earl Granville) to have his bill read a second time, in order that it might be referred to a select committee, to have evidence taken on the subject upon which a bill of this sort ought to be founded. The noble and learned Lord would be able to attend the committee, and no doubt would render his valuable assistance in improving the details of the measure. (Hear, hear.)

Lord BROUGHAM was quite ready to acquiesce in the proposition of the noble Earl.

PASSENGERS' ACT.

The Passengers Act Amendment Bill was read a third time and passed.

REGISTRATION OF PITT DEEDS

Lord CAMPBELL moved the second reading of the Registration of Assurances Bill. His Lordship, at some length, detailed the technical formulary by which the measure was designed to facilitate the registry of all titles to estates and real property, with the object of securing and facilitating sales and transfers of such property, and affording a better security for loans on mortgage

Some conversation ensued, in which Lord Beaumont, Lord Brougham, and Lord Cranworth, joined.

The bill was then read a second time, and referred to a select committee.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

SUNDAY TRADING PREVENTION BILL.

Mr. RAINING WALL gave notice, that, on the order of the day being read for the second reading of the Sunday Trading Prevention Bill, he should move, as an amendment, that the bill be read a second time that day six months.

THE ROMAN CATHOLIC BISHOP OF NEWFOUNDLAND.

Mr. B. OSBORNE begged to put a question to the Under-Secretary for the Colonies. Recently the Roman Catholic Bishop of Newfoundland had, in a public document, announced himself as, "by divine grace and by favour of the holy see Bishop of Newfoundland." Had this fact been communicated to her Majesty's Government; and, if so, what course had her Majesty's Government taken?

Mr. LABOUCHERE regretted that his hon. friend (Mr. Hawes) had not been able to attend in his place; but, from information furnished to him, he (Mr. Labouchere) was in a position to answer the question. It appeared that in September last a despatch was received from the Governor of Newfoundland, referring to a letter written by the Bishop of Newfoundland, in which attention was drawn to the fact that a newly-appointed Roman Catholic ecclesiastic had styled himself in public documents "by divine grace, and by favour of the holy apostolic see, Roman Catholic Bishop of Newfoundland." The answer returned by Lord Grey was written in October; and in this, that noble Lord referred, by way of reply, to despatches of March, 1848, July, 1847, and March, 1850, on the subject of Roman Catholic prelates in the colonies; and added that the prefix of "Roman Catholic" to the title of the Roman Catholic Bishop of Newfoundland rendered the assumption in question of no importance.

Sir R. INGLIS asked if that despatch, giving this answer, would be laid on the table?

Mr. LABOUCHERE saw no objection to doing so.

SUBDIVISION OF PARISHES.

Mr. S. HERBERT wished to know from the noble Lord (Lord J. Russell) what course the Government was to take in reference to the report of the commissioners appointed last year on the subject of the sub-division of parishes. Would the bill withdrawn last session be re-introduced this year?

Lord J. RUSSELL said that the bill was being re-modelled; but a final arrangement of the doubtful clauses had not yet been made. The bill would be introduced, in that or the other House, before Easter.

METROPOLIS BUILDINGS BILL.

Alderman SIDNEY asked when this bill would be proceeded with?

Lord SEYMOUR would fix an early day for the bill.

CEYLON.—IMPENDING VOTE OF CENSURE ON THE GOVERNMENT

Lord J. RUSSELL, in laying upon the table some papers relative to Ceylon, asked Mr. Baillie if it was his intention to persevere in his motion of censure against the Government which stood on the books for the 25th inst.?

Mr. BAILLIE complained of being unfairly treated by the Government. They had postponed the financial business of the country, and thus placed him in the invidious position of appearing obstructing public business by the notice of motion which he had placed upon the books. Under these circumstances, he felt compelled to withdraw his motion from the books; but with the distinct understanding of again bringing it forward at his discretion, when it could not interfere with the financial or other business of the country.

Lord J. RUSSELL submitted, that, when charges of cruelty were brought against an officer in the confidential service of the Government, involving the honour of the department, the Ministry were bound to have those charges formally brought to trial. Contrasting the conduct observed by the opposition in this instance with the honourable generosity manifested on all sides during the past session, he complained of the unfairness of preferring such serious accusations, and then shrinking from the proof, but keeping the question indefinitely in suspense over the heads of the Government.

Mr. DISRAELI referred the charge of unfairness upon the Ministry, declaring that they had consulted the public interest most authentic evidence back to Ceylon, and now the Premier affected a virtuous indignation because the charge was postponed, to prove which that evidence was indispensable.

Sir G. GREY remarked, that a new reason just discovered for the delay. Mr. Baillie, after deliberately fixing the date for his motion, had withdrawn it on the plea of not impeding business. It now appeared, however, that the motion was postponed because they dared not proceed with a charge which they knew themselves to be unable to establish.

Mr. ROEBUCK agreed in thinking the proceeding factious, but distributed the blame between Mr. Baillie, the Government, and Mr. Disraeli; assigning, however, the larger share to the last-named hon. member.

Sir R. HALL agreed in all that had fallen from Mr. Roebuck, with the exception that in his opinion Lord J. Russell was justified in the course he had pursued while such a vote of censure as that involved in Mr. Baillie's motion was left undecided.

The subject then dropped.

ECCLESIASTICAL TITLES BILL.—ADJOURNED DEBATE.

The adjourned debate on this bill was resumed by Mr. MOORE, who opposed the second reading. If it passed it would, in his opinion, be a severe blow to the principles of religious liberty.

Mr. WIGRAM contended that throughout the world Roman Catholic countries had fallen into the rear in the progress of civilization, which he believed to be attributable to the ecclesiastical system of that religion, and he, therefore, regarded with apprehension every attempt to extend that system to this country. It was admitted by Dr. Wiseman that the Roman Catholic hierarchy was established in England for the purpose of introducing the canon law, which was directly at variance with the Queen's supremacy, and also with the liberty of conscience prevailing in this country.

Mr. E. B. HOCHE opposed the bill, which would be wholly inoperative in Ireland, where it would kindle a flame of hostility when it would be difficult to allay.

Mr. H. D. SEYMOUR said the bill interfered where interference was unnecessary, and did not at all interfere with monastic establishments, which really required supervision and restraint.

Mr. GOULBURN viewed the recent aggression of the Pope as a breach of the compact of 1829, as well as an encroachment on the authority of the Crown and a violation of the laws of the country. The aggression was the more unjustifiable, because unprovoked, and was an ungrateful return for the concessions constantly made to the Roman Catholics of the kingdom. Even while Catholic Emancipation was still pending, the Propaganda itself admitted that the Roman Catholic Church in the country required no higher functionaries than vicars apostolic to regulate its ecclesiastical discipline. Although he did not think the bill before the House at all adequate to the nature of the aggression, yet it gave an opportunity of protesting against the course pursued by the Pope, and he should therefore support it. He hoped, however, that the Pope might yet be induced, as in the Gorham case, to withdraw his rescript, and replace the vicars apostolic instead of bishops.

Sir H. W. BARRON expatiated upon the mischiefs which this bill would inflict upon Ireland, which would not recover its effects for one hundred years. He warned the Government that the course they had pursued would be to make every man who could put £5 in his pocket quit Ireland for ever.

Mr. CALVERT contended, that he was only acting on the principle of self-defence in resisting the recent Papal aggression, and supporting the second reading of the bill. There was a constant attempt on the part of Rome to make encroachments, and this rendered it the more necessary to watch every movement of the Pope with a jealous eye. He believed that the liberties of the country could only be maintained in safety by the temporal superior to the spiritual power.

Mr. DUNCAN was of opinion that no legislation was called for on the subject, and would, therefore, oppose the second reading of the bill. He could not view what had been done by the Pope as a temporal aggression, and he believed if they had an ambassador at Rome they would have been no necessity for them to be then discussing the present bill; but the fact was, that the spirit of intolerance lay at the root of all the difficulties of dealing with their Roman Catholic fellow-subjects, for it was impossible to appoint bishops by any other authority than that of the Sovereign. He argued at considerable length, that the power exercised under the Pope's rescript was of a temporal as well as of a religious character. In other Protestant countries Catholic bishops were appointed by arrangement between the Sovereigns and the Pope, and why, he asked, had not the same course been pursued in the present instance? Instead of tramp ing on the law, the Catholics should have come to Parliament if they felt aggrieved at not having bishops, or applied to the Crown to have a communication opened with the head of Rome with a view to a remedy. It was said that this appointment of bishops was necessary for the purposes of synodical action; but, in the proceedings of the Synod held at Thurles, they had seen fit to make them feel that it was by no means desirable to have such assemblies in the country. In fact, amongst the higher ranks of the Roman Catholic clergy there prevailed a spirit of encroachment, of arrogance, of ambition, and of unbounded dominion, which it was requisite to guard against with firmness and determination. He deeply regretted the necessity of introducing Ireland into the bill, but the application of the Irish Archbishops and Bishops, and that elected by the clergy of Ireland rendered it necessary, or the Pope might hereafter send over to that country a whole bench of Italian bishops, over whom they would have no sort of control.

Mr. CARDWELL said he most certainly looked upon what had been done by the Pope as an aggression of a very serious character upon the rights of the Sovereign of this country; but he must say, that the course which had been taken by the noble Lord at the head of the Government, and many of the Irish members before the House which prevented the introduction of the canon law into this country, was calculated to prevent synodical meetings, of which the hon. and learned gentleman appeared to be so much afraid. In the case of Dr. Cullen, the law officers of the Crown in Ireland said there was no doubt that he had violated the law; but the course pursued with regard to him, and the wars, the worst would be a bit.ke war about religious matters; and, believing that the bill was insufficient for any good purpose, while it would go far to render Ireland ungovernable, he would not take any part of the responsibility of such a measure by voting in its favour

On the motion of Mr. MILNES, the debate was adjourned.

THE BUDGET

Mr. DISRAELI inquired if the Budget would come on on Friday?

The CHANCELLOR of the EXCHEQUER replied, not on Friday. It was impossible to say to what length the present debate would extend, but on the first night after the debate closed he would go on the Budget. (*Oh!*)

The HOUSE rose at half-past twelve o'clock.

HOUSE OF LORDS.—TUESDAY.

LORD TORRINGTON AND THE GOVERNMENT OF CEYLON.

Lord TORRINGTON gave notice, that on Tuesday week he will bring under the consideration of their Lordships the affairs of Ceylon, and intimated to their Lordships that he had been very much misrepresented in the House of Commons by the chairman of the Ceylon committee, and should, therefore, avail himself of that opportunity to set himself right with the public.—Adjourned.

HOUSE OF COMMONS.—TUESDAY.

THE IRISH CHURCH.

Mr. MOORE gave notice, that on Tuesday, the 1st of April, he would move that the House do resolve itself into a committee of the whole House to take into consideration the revenues of the Irish Church.

BORNEO.

Mr. COBDEN (for Mr. Hume) postponed to that day fortnight the motion of which the hon. member for Montrose had given notice with respect to Borneo.

JEWISH DISABILITIES.

Sir G. GREY (for Lord J. Russell) postponed until Monday next the motion of which the noble Lord had given notice with reference to oaths of abjuration.

THE CENSUS.

Mr. GOULBURN desired that the right hon. gentleman (Sir G. Grey) would explain more fully than he had done, in answer to a similar question on a former night, what was the precise meaning of certain papers of a vague and uncertain character issued recently from the office of the Registrar-general on the subject of the census. The paper in question had been issued to all the ministers of the Established Church and of other religious denominations; and the requirement made of them was that they should return an account of the average number of persons who have attended in their churches during a considerable period, which would be very difficult, if not altogether impossible, to do. These clergymen were also required to furnish to the commissioners complete details of their income, and it was required of them to do this in a manner even more minute than was necessitated under the assessment to the Property-tax. There was no doubt that such returns as these were contemplated by the act; and what he wished to know was, whether this offensive proceeding was to be persevered in.

Sir G. GREY could only repeat what he had said on a former night—that the information applied for, under the Census Act, was of two kinds: that information which parties were bound to supply, under penalties; and that second class of information which it was most desirable to obtain, but the communication of which was quite voluntary, the refusal of it subjecting the parties to no penalties whatever. The information sought from the officiating ministers, churchwardens, or others, in parishes, was of the latter kind; and the letter addressed to such persons (and he was wrong the other night in stating that this letter had been already sent) expressly stated that the commissioners sought the "co-operation" of such parties, and only in reference to information upon the "means of education" and "religious worship" in their neighbourhoods. With regard to the inquiries as to the sittings in churches, and that the House would be no objection to withhold them if they were considered objectionable. With regard, however, to information in respect to education, and to the accommodation for religious worship, he thought that this was a fitting opportunity for obtaining, in a legitimate way, information of that kind, and he apprehended that in the majority of cases there would be every willingness to supply it.

THE NEW HOUSES OF PARLIAMENT

In reply to Lord Duncan, Mr. GREENE stated that the decorations of the new House of Commons would be as plain and inexpensive as was consistent with the design and style of the whole edifice, and that the House would, in all probability, be ready for the reception of hon. members at Whitsuntide.

CUSTOMS BOARD.

Mr. MITCHELL, in postponing his notice of motion to Friday, the 21st, for a committee to inquire into the management of the customs, stated that it was the intention of the Government to grant the committee.

TITHE COMMUTATION—IRELAND.

Mr. SADLEIR having refused to postpone his motion to allow the debate on the

second reading of the Ecclesiastical Titles Assumption Bill to be resumed, preceded to move "That it is expedient to substitute, for the existing mode of varying the amount of tithe rent-charges in Ireland, a self acting system."

Sir G. GREY had great objection to the House being pledged to a distinct line of conduct on the subject of Irish tithes. If Mr. Sadleir would introduce a bill, his provisions would meet with due attention from the Government.

After remarks from Mr. HAMILTON, Mr. FRENCH, Mr. SHARMAN CRAWFORD, and other members,

Mr. SADLEIR intimated that he would adopt the suggestion of Sir George Grey, and introduce a bill.

The motion was withdrawn.

THE RAJAH OF SATTARA.

Mr. ANSTEY proceeded to call attention to the alleged obstruction offered to the claims of the infant Rajah of Sattara, in the denial of a hearing before the Court of Privy Council, complained of in the petition to the House of Commons of the second of the said infants, presented on the 14th instant; and to move for a resolution to the effect that the grave matters contained in the petition referred to deserved the serious attention of the House.

The motion fell to the ground for want of a seconder.

ECCLESIASTICAL TITLES BILL.—ADJOURNED DEBATE.

The adjourned debate on the Ecclesiastical Titles Assumption Bill was resumed by

Mr. BLEWITT, who regretted that Lord J. Russell should have given utterance to sentiments in direct contradiction to the liberalism of his whole life, and which had re-awakened all that sectarian bigotry which so much pains had been taken to uproot and destroy. He did not think it was the intention of the Pope either to insult or in any way injure the Sovereign or people of this country. He believed the bill to be inefficient to meet even a problematical danger, and he would therefore oppose it.

Sir R. PEEL, in supporting the bill, said he could have wished that it had been more guarded in the character of its enactments.

Mr. WALTER would support the second reading of the bill, in the hope, that, during its progress through committee, some means might be found of rendering the measure worthy of the occasion.

Mr. ANSTEY opposed the bill as an aggression upon the liberties of the people, and more particularly upon those of the people of Ireland.

Lord HENRY supported the bill. Privileges had their duties as well as their rights. By the act of 1829, equality was conferred on the Roman Catholics, but not with the intention of placing Protestants in a state of subordinance; and in giving Roman Catholics the power of expansion, it was not the intention to enable them to place Protestants in a corner.

Mr. SIDNEY HERBERT remarked, that no attempt had been made to show the connexion which existed between the bill and the danger to be averted. All the reasons assigned for withdrawing the two clauses, demanded the withdrawal of the first clause. It was painful to think, that, after three or four months' anxious consideration, such a thing as that shadowed forth in the bill shou.d be the result. The principle of toleration he held to be this, that a man being an Englishman, had a right to hold by the truth, or to hold by error if he thought it to be truth. Synodical action in matters not spiritual was not confined to Roman Catholic prelates. They all knew that, during the Cornlaw agitation, the ministers of Dissenting congregations all over the kingdom assembled at Manchester, and devised measures for carrying the agitation into their several localities. The same thing occurred in the Established Church when any proposal was made for a system of education of which the clergy disapproved. To attempt to prevent synodical action, was to attempt to prevent free discussion. If the wrong and insult had been committed by a foreign Sovereign, why not legislate against that Sovereign? Why did the Government not proceed on the law of 1829? He believed that the present bill was an effort to please a feeling of the country, and, at the same time, to frown it down. Better would it have been had both Houses passed solemn declarations against the assumption of the Pope, than to have devised a measure such as that under consideration. He objected to the bill, on the ground that it was insufficient to satisfy public opinion, and he did not believe it could be amended.

Mr. SIDNEY HERBERT thought that the speech of Mr. Sidney Herbert was better adapted for the committee than for the question of the second reading. By that time Mr. Herbert would, perhaps, have made up his mind as to some points about which he appeared to be in much doubt. It would be desirable to know what Mr. Herbert would himself propose, objecting as he did to what was now proposed; also whether he considered the bill to be a nullity or a persecution. Lord Palmerston never remembered a discussion which had been more painful to the House at the present. He had hoped that when all religious disabilities were removed, and religious freedom established, that such odious questions would never have been raised. But whose fault was that? Was it the fault of the people of England, that an aggression of a political character had been committed upon the independent sovereignty of the country by the Pope, from a supposed conversation he had had with Lord Minto, imagined that the step he meant to take would not be objected to by the Government of England, why did he not satisfy himself upon that point? He had placed no confidence in Mr. Sidney Herbert's easy access to the Government. It was impossible for the Papal authorities, or for those who advocated their cause, to allege, that there was any pretext whatever for believing that what took place would not be deemed offensive by the Government and people of England. What was the authority by which that act was committed? It was an ecclesiastical authority, and as such has a double action upon the minds of men. The Papal church was not merely theological, but political. Portugal, Spain, Italy, and, he was sorry to add, Austria, afforded examples of the consequences which invariably flowed from the church of Rome being allowed to seize temporal authority. Lord Palmerston contended that some measure was necessary to satisfy the people of this country. Some persons had opposed a hostile demonstration, but that he did not approve. Papal bulls could not be wel. met by cannon-balls. Negotiation with the Court of Rome had also been suggested; but he did not think that that would have been the proper course. The bill was not ill-considered, for England to legislate for her own internal affairs. He would never consent to a penal enactment, and he utterly denied that the present bill could be so described It was merely the completion of the measure of 1829. That law maintained the supremacy of sovereign rights of the Crown of England against the aggression of a foreign power. An act of aggression had taken place, and the bill now under consideration dealt directly with that evil. Lord Palmerston had no objection to the bill being cooperative. If aggression was a characteristic of the Church of Rome, so was obedience to the law. Judging from general principles and from the experience of Ireland, he expected that the law, if enacted, would be enforced. It ought to satisfy the feeling of the nation; it met the case, and would not preclude the Legislature from taking further measures, should occasion require; but he sincere.y hoped that such a necessity would never arise.

On the motion of Mr. HENRY BERKELEY, the debate was again adjourned.

The House rose at 25 minutes past 12 o'clock.

HOUSE OF COMMONS.—WEDNESDAY.

The House sat from noon to six o'clock.

NOTICE OF MOTION.

Mr. S. CRAWFORD gave notice, that in the event of the Ecclesiastical Titles Assumption Bill being read a second time, he should in committee move an amendment to except Ireland from the operation of the bill.

THE DUTY ON HOPS

Mr. FREWEN moved the second reading of the Hop Duty Bill, which was designed to equal.se the differential duties now charged upon the various qua ities of hops, as well as to establish a lower tariff of import. The bill was supported his motion by referring to the origin of the duty, which was avowedly a war tax, and to its injurious operation in circumscribing the cultivation of the plant. A excise duties were bad, but the worst of all was the hop duty.

Mr. DENDES moved that the bill be read a second time that day six months.

Mr. H. DRUMMOND and Mr. BASS supported the amendment.

The CHANCELLOR of the EXCHEQUER admitted the case for total remission of the tax was fairly open to discussion, but decidedly objected to the bill in its present shape.

After some brief remarks from Mr. PLUMPTRE and Mr. CURTEIS, and a reply from Mr. FREWEN, the House divided, and the second reading of the bill was defeated by a majority of 131 to 9.

SUNDAY TRADING

The second reading of the Sunday Trading Prevention Bill was moved by Mr. WILLIAMS, who contended that it was necessary to protect the tradesmen who wished to keep the Sabbath strictly from the cruelty of their less scrupulous neighbours. He submitted that the principle was conceded on all sides, and offered to have the details referred to a select committee, when all the provisions could be thoroughly considered.

Mr. B WALL moved the usual formal negative to the second reading, which was afterwards withdrawn, and the bill read a second time, and ordered to be referred to a select committee.

The Expenses of Prosecutions Bill passed through committee.

The House then went into committee on the

APPRENTICES AND SERVANTS BILL

On clause 1 being proposed, which makes ill-usage a misdemeanour, punishable by imprisonment with or without hard labour for any term not exceeding three years,

Mr. MILES said he thought, as there were no other sentences of hard labour for more than two years, the term of three years appeared very severe. It would not apply merely to such cases as the Scanes', but to other cases much less aggravated

Mr. BARNES said the wording was, any term "not exceeding" three years; and he thought the penalty not too severe, as some of the offences to be provided against by the bill were little inferior to murder.

The clause was then agreed to, as were also the remaining clauses.

A clause was then added, requiring a register to be kept of young persons hired or taken as servants from any workhouse; and, instead of clause 3, a clause was substituted requiring young persons hired from a workhouse, or bound out as parish apprentices, to be visited periodically by the officer of the guardians or overseers.

Captain HARRIS inquired whether the bill would extend to young persons apprenticed or hired out to persons out of the union?

Mr. BARNES proposed to extend the operation of the bill to a circle of five miles beyond the union. In cases where young persons were hired out to a distant part, such as their being taken from a union in Sutherland to become domestic servants in Cornwall, for instance, it would be impossible to require the guardians to incur the expense of visiting the young persons periodically. The

la.ter already, to some extent, met the case of apprentices beyond the union; but the regard to servants, he thought it impracticable to trace them out and visit them at a distance.

Captain HARRIS thought some means ought to be devised to afford the protection of the bill to the cases which the honourable gentleman said it was impracticable to meet

Sir W. JOLIFFE concurred in the honourable and gallant member's recommendation

Mr. BARNES said he was anxious to render the measure as effective as possible, and, therefore, he should reconsider the suggestion of the honourable and gallant member (Captain Harris).

The House resumed.

APPOINTMENT OF A VICE-CHANCELLOR BILL.

The House having gone into committee on this bill,

The ATTORNEY-GENERAL appealed to the honourable member opposite (Sir H. Willoughby) not to bring forward his amendment in that stage of the bill. The case was pressing, and if he allowed the bi.l to pass through committee, he would take care that the hon. Baronet should have an opportunity of bringing forward his motion.

Sir H. WILLOUGHBY said that under the circumstances he should yield to the appeal. made to him. (Hear)

On clause 1,

The ATTORNEY-GENERAL said, in reply to Sir H. Willoughby, that he could give no reason why the salaries of the officers of the court were paid out of the suitors' fund, except that it had been the practice to do so. That fund now amounted to about £40,000. This bu.l would place things in the same situation as they were when Sir J. Wigram was Vice-Chancellor. The matter referred to by the hon. Baronet might be taken into consideration when the bills for regulating the Court of Chancery were brought under the notice of the House.

The clause was then agreed to, as were clauses from 2 to 5 inclusive.

On clause 6,

The ATTORNEY-GENERAL introduced words giving power to the Lord Chancellor to appoint court-keepers at salaries not exceeding £80 a year. At present they were paid but £40, which was considered inadequate.

The clause, with the amendment, was agreed to.

The House resumed, and the amendments were reported.

ENFRANCHISEMENT OF COPYHOLDS.

On the motion of Mr. AGLIONBY, leave was given to bring in a bill to effect the compulsory enfranchisement of lands of copyhold and customary tenure. The hon. gentleman said it was his intention to refer the bill to a select committee

The bill was subsequently read a first time.

COUNTY RATES AND EXPENDITURE.

The following gentlemen were nominated the select committee on the County Rates and Expenditure Bill:—Mr. Milner Gibson, Mr. Baines, Mr. Wilson Patten, Sir George Grey, Sir John Pakington, Mr. Kershaw, Sir James Graham, Mr. Locke King, Mr. Deedes, Sir John Duckworth, Mr Headlam, Mr. Peel, Mr. Shafto Adair, Mr. Bramston, and Mr. Robert Palmer.—Adjourned.

HOUSE OF LORDS.—THURSDAY.

The Earl of MALMESBURY postponed the presentation of the petition on the subject of tithes and poor-rates of which he had given notice. He postponed it at the request of a right rev. prelate who wished to be present at the discussion.

BRISTOL CHARITY TRUSTEES.

Lord STANLEY presented a petition from Bristol, complaining of the appointment of charity trustees in that city, and praying that the benefit of the charity might be extended to the out-parishes of the city.

The Lord CHANCELLOR said that the charity trustees had been proposed to the Master in Chancery, according to the usual course; that the Master was prepared to hear any objections that might have been urged against the appointment; and that the Master having reported that there was no objection to this appointment, that appointment had taken pace in the usual manner

PETITIONS.

Earl FITZWILLIAM presented several petitions against Papal aggression.

The Marquis of LANSDOWNE presented several petitions with a similar prayer.

The Earl of WINCHILSEA presented thirty-four petitions against Papal aggression. He learned it was of little avail to present petitions; but if the Protestants meant to fight the battle of Protestantism, they must fight it at the next dissolution. Petitions signed by 2,000,000 of people against Maynooth had been treated with many jokes, and the same was meeting with the Protestant fellow-subjects, that if they wished to fight the battle of Protestantism they must fight it themselves. The noble Earl, then presented a petition from Stealford, complaining of agricultural distress, and against the Pope. Free trade was a delusion and an experiment, and it had signally failed. He believed that under a system of protection the country would be provided with wheat at a cheaper rate, taking a period of twenty years, than under a system of free trade.

Lord WODEHOUSE said that there was no distress in the agricultural districts with which he was connected.

Lord SOMERS considered that the agriculturists were suffering distress.

Adjourned.

HOUSE OF COMMONS.—THURSDAY.

MERCANTILE MARINE.

In reply to a question, Mr. LABOUCHERE stated, that, with respect to the plans and mode of working of the Mercantile Marine Act, all the memorials were now in his possession, and he should shortly make a full statement to the House.

DENMARK AND THE DUCHIES

Mr. URQUHART wished to ask the noble Lord the Foreign Secretary when the papers connected with the affairs of the Duchies and Denmark would be laid on the table of the House.

Lord Palmerston said it was not his intention to send any further papers to the House on the subject. That law was the measure of reference to embraced a correspondence extending over a period of two or three years which had been carried on with almost every power north of the Alps. It occupied 600 folio pages of letter-press, and no hon. member would ever think of reading it; at all events, if he did, he would only waste his time, for the correspondence, although of importance when it first took place, had lost its interest by lapse of time. The treaty relating to the affairs of the Duchies and Denmark had already been laid before Parliament.

Mr. URQUHART said, perhaps the noble Lord would lay on the table those parts of it which related to the succession to the Throne of Denmark?

Lord PALMERSTON said, her Majesty's Government had altogether held aloof from that question, and had entirely devoted themselves to mediation to bring about peace between Denmark and the Duchies. It was true, the correspondence indirectly referred to the subject of the succession; but still it was not advisable to lay those points before the House.

THE KAFFIR WAR.

Mr ADDERLEY wished to ask the Under-Secretary for the Colonies, how soon the Cape despatches, relating both to the constitution and to the Kaffir disturbance, would be laid before the House; also, whether he would present, at the same time, copies of recent petitions to her Majesty on the subject of the promised constitution, and memorials from public meetings, which had been placed in his hands; and whether he would present to the House copies of New Zealand ordinances passed, year by year, since the last presentation of such copies of local ordinances to the House?

Mr. HAWES, in answer to the first question, stated that he held in his hand the papers referred to, and it was his intention to lay them on the table that night. The petitions and other documents should also be produced, but they could not all be completed for some time to come yet.

NEW BRUNSWICK

Mr. ROEBUCK had seen a statement in the newspapers to the effect that a legislative council had been conceded to New Brunswick; and he should be glad to know from the hon. gentleman the Under-Secretary for the Colonies, if the report was correct?

Mr. HAWES wished his hon. and learned friend had given him notice of the question, because then he should have been able to give him a more satisfactory answer. Undoubtedly the general principle of a legislative council had been granted to New Brunswick, and therefore there was a foundation for the report.

STEAM TO AUSTRALIA.

Lord NAAS wished to ask the Chancellor of the Exchequer, in reference to the statement made by him that the tenders received for establishing steam communication with Australia were unsatisfactory, whether the Government had before them now an offer from respectable persons to establish and maintain that service for the amount arising from the postage only, without any grant from the Exchequer?

The CHANCELLOR of the EXCHEQUER said the question was one that should be submitted to the Committee sitting on the subject, and therefore he must decline answering it.

PASSPORT SYSTEM

Lord MAHON moved an address to her Majesty, praying that she will be graciously pleased to cause an inquiry to be made, whether improvements might not be effected in the system of granting passports to her Majesty's subjects travelling in foreign states. The noble Lord suggested that, instead of passports costing, as at present, in London, at the Foreign-office, 7s. 6d. each, while they were free of charge at the English foreign missions abroad, the price of the former should be lowered to half-a-crown or three shillings, while a corresponding price should be charged abroad, so as to equalize the system, and prevent English subjects having recourse either to a foreign consulate in London, or to an English mission in a foreign country, for their passports. He also recommended that there should be a central office opened in London for the issue of passports alone; and that, to prevent travellers from the country being compelled to come to London for their passports, the authorities in all large towns should have blank forms of passports furnished, which they could supply on application

Lord PALMERSTON would take the noble Lord's suggestions into consideration. The present system, which he had lately established, and whereby the price was reduced from two and a half guineas to 7s. 6d. for a Foreign-office passport, was only an experiment, and if it worked well, he would carry out further improvements in it

Lord MAHON, under those circumstances, would withdraw his motion.

Motion withdrawn accordingly.

ECCLESIASTICAL TITLES BILL.—ADJOURNED DEBATE.

The adjourned debate on the Ecclesiastical Titles Assumption Bill was resumed by

Mr. NEWDEGATE, who stated his intention of supporting the second reading of the bill, and proceeded to quote various authorities to establish the fact, that no Cardinal or Legate from Rome had ever been allowed to exercise his functions in England without the leave of the Sovereign, and without having taken an oath, the effect of which was, that he would not exercise those functions injuriously to the liberties of the people. At the same time, he was a friend to the bill as inefficient for its professed purpose, and said that some system of visitation should be established with respect to monasteries and convents. The Jesuits had enormously increased in number since Dr. Wiseman became Vicar apostolic of London district, and he thought that against such a body it was necessary to take precautions; and he warned the noble Lord not to fall into the error of thinking that the present measure would meet the urgency of the case to deal with it.

Mr. KNOX, in support of the bill, said his constituents in Ulster were indignant at the Papal aggression, but were, like himself, disquieted that the proposed legislation of the noble Lord did not by any means come up to the tenor of his letter

Dr. POWER denounced the measure as one of persecution.

Mr. H. DRUMMOND said that the real question was, whether the Catholic religion was to be tolerated under the authority of the Queen, and the Queen a hereditary subject under the authority of the Pope. He did not think that the severance of the Popedom, as a political state, was a reason why we should be inapprehensive of aggression. In no period had the Pope possessed a large military force, and yet the Papacy had accomplished more mischief than the most tyrannical consuerors. The hon. gentleman then attacked the convents, which he condemned as either prisons or brothels; upon which

The Earl of ARUNDEL and SURREY, in a state of some excitement, remonstrated against the use of such language.

Mr. GRATTAN, also very much excited, implied that Mr. Drummond would bear further upon the subject.

Mr. H. DRUMMOND proceeded to enumerate and comment upon the practices pursued in the Roman Catholic religion in a strain which led to a scene of absolute uproar, several of the Irish members insisting that he should be called to order.

The SPEAKER in vain decided that the hon. member for Surrey was in order; and, after a regular scene, he was compelled to appeal to the House to support him in restoring order. At length

Mr. H. DRUMMOND was allowed to proceed, and contended that the bill did not go at all far enough. They should pass a law to prevent a Cardinal residing in this country, and to prevent, also, the introduction of the canon law. They should likewise pass laws with respect to monasteries and convents, similar to those in Bavaria, and preventing the taking of vows. They should, also, as regarded all sects, extend the Statute of Mortmain, and take care to.at advantage was not taken of dying men to obtain their property for the religion to which they belonged.

Sir J. GRAHAM did not think, until within the last half-hour, that anything could have roused the deep sorrow which he felt at the religious discussions which this bill forced upon the House. They had just witnessed the fact, that a gentleman, and a scholar, had been so far carried away by his feelings as to use language insulting to the female relatives of hon. gentlemen occupying a position in that House equal to his own. He hoped, for the sake of the freedom of debate, that they had seen the last of such scenes. The right hon. Baronet then proceeded to contend that the aggression of the Pope should not have been met by legislation at al., or, if not, that the bill was not the species of legislation which should have been resorted to. He trusted the noble Lord at the head of the Government had said that he second and third clauses would have an effect in Ireland which he did not contemplate, and which he could not discuss, and that he would, therefore, abandon them. Since then the opinion of the most eminent counsel in this country had been taken upon the first clause, and they had declared that it would have every effect which would be created by the second and third clause. If this were so, the Government would be bound to vote against their own bill. He contended that no new laws were necessary; for the statute of Richard II., which had been effectively enforced by our Catholic ancestors, was yet unrepealed, and capable of appealing to. Parliament, the Attorney-General should have appealed to a jury of the country. He also contended that the Pope had greater power in this country by means of Vicars-Apostolic than by an organized hierarchy; and this was so much felt to be the case, that, in 1813, the Government employed Sir John Cox Hippesley to negotiate with the Pope, then under the control of our illustrious enemy, Napoleon, to obtain for England an organised hierarchy, which the Pope at that time refused to accede to. The right hon. Baronet then referred to the autumnal visit of the Noble Lord the Member for the City of London, Lord John Russell, and the Attorney-General, to show that the Pope had a power, which they recognised, of appointing Archbishops and Bishops in England, and of dividing the country into dioceses; and if this were so, where, he asked, was the insult to the Queen, or the aggression upon the people of this country? He felt convinced, that, if this bill should pass, they would not cure them. The repeal of the Union would not follow. With regret, they would find themselves decrypting, not religious liberty only, but civil liberty also. He regretted to see on the back of such a bill the names of Russell, Grey, and Romilly; and it was to their credit that the bill was botched, for it proved that they were unaccustomed to frame measures of persecution. Away, then, he would have with a bill pregnant with inflammable materials; and he hoped and trusted the House would never suffer to pass into law. The right hon. Baronet was loudly cheered on resuming his seat.

Lord J. RUSSELL, in defending the bill, said that, since the restoration of Louis XVIII., the Pope had been making great efforts to regain his supremacy. For many years the progress made was so trifling that it might be safely disregarded; but of late years he had become more active, and in many European countries there were surrenders to the Papacy of safeguards which had been very wisely raised against its encroaching spirit. This gave a character to the aggression of his Court of Rome iff its country, which rendered legislation the more imperative. It was difficult to define where spiritual jurisdiction, according to the notions of the Pope, terminated, and where temporal jurisdiction began. In a controversy which had arisen between the Pope and the King of Naples, in which the Pope treated the refusal of the King to pay some arrears, and to give up some disputed lands, as a spiritual, and not a temporal matter. It became, therefore, necessary that this country should, of its own accord, declare what we or was not an invasion of its temporal right. It was said that they might pass resolutions of both Houses condemnatory of the aggression of the Pope, but he could not advise that course, because such resolutions would have no effect in a court of law, and would only expose the Parliament to ridicule. He believed, if they had prosecuted Dr. Wiseman under the ancient statute of Richard II., by which he would, if convicted, suffer the loss of goods and chattels, and be subjected to imprisonment during the Queen's pleasure, they would have become fairly open to the charge of reviving obsolete laws for the purpose of religious persecution. It was said that the bill upon the table did not come up to the promises contained in his letter to the Bishop of Durham; but he denied that the letter contained any promise that any bill would be introduced; it only promised that the whole matter should be taken into careful consideration. He did not regret a single vote he had ever given in favour of civil and religious liberty; but, nevertheless, having misgivings of the intentions of the Court of Rome, he was not ashamed to take additional securities to guard against such intentions, should they prove hostile to the liberties of this country.

Mr. H. GRATTAN moved the adjournment of the debate, which was at once agreed to.—The House rose at one o'clock.

POPULATION, EDUCATION, AND RELIGION.—CENSUS PAPERS.

In the approaching week, these papers will be delivered at every house, one schedule for each separate family; but it should not be filled up till Monday morning, the 31st instant; also with parties connected with schools and places of worship there will be left other papers.

1.—OF EDUCATIONAL RETURNS.

(A.)—This return applies to al. schools whatever in which daily tuition is carried on, whether public or private, whether intended for the higher, the middle, or the lower classes; including, therefore, all public collegiate schools, endowed grammar schools, private classical and commercial schools, schools in connexion with the national or other social society, dame or infant schools, ragged schools, workhouse schools, prison schools, &c., &c. The return is to be filled up by the master, mistress, or other principal teacher or head of the school. If difficulty should be found in answering any of the questions, application should be made to the trustees or managers (where the school is under the government of such officers), and the information procured from them. The following are some of the inquiries:—When established? If the school has any governors than the teacher? With what religious denomination is the school connected? Internal dimensions of each school-room? Number and age of the scholars? Course of instruction? Number and remuneration of teachers? Amount paid for tuition? Income of the school?

(B.)—Evening school for adults.

(C.)—Sunday schools.

2.—RETURNS RELATING TO PUBLIC WORSHIP.

The following are some of the questions:—*For Established Church*: When, and under what circumstances, consecrated or licensed? How or by whom erected? Cost? How endowed? Estimated number of attendants on March 30, 1851; and the average number? *Notice of the Established Church*: The reiterance examination,—whether a separate and entire building,—when erected and if exclusively a place of worship? Space available for public worship? Number of attendants, and the average number?

These returns are addressed—"To the officiating minister, churchwarden, chapel-warden, or other person with whom this schedule is left. You are requested to insert or cause to be inserted in the manner directed by the instructions, within contained, full and accurate information respecting each of the particulars in the said schedule mentioned or referred to, in compliance with the Act of 13 and 14 Vict., c. 53, for taking account of the population of Great Britain." This paper will be called for on Monday, March 31st, by the appointed officer; and it is particularly requested that, in order to save time and trouble, your answers may be written in the proper columns by that time, as the act requires. It will be the officer's duty to verify the facts as far as possible, and to record them at your residence on that day in case you should have previously omitted to do so. The return is required to enable the Secretary of State to complete the Census; but it is not intended that all the particulars contained in it should be separately published."

GREAT EXHIBITION OF THE INDUSTRY OF ALL NATIONS.
SPLENDID PRESENT TO SUBSCRIBERS
TO
THE ILLUSTRATED LONDON NEWS.
IN PREPARATION,
A MAGNIFICENT VIEW
OF
THE EXTERIOR OF THE VAST BUILDING
DESIGNED BY MR. PAXTON FOR
THE GREAT EXHIBITION IN 1851.

This View will be Engraved in a very superior style, and printed on a large sheet of fine paper: it will be published at the time of the opening of the Great Exhibition. The Print will be given to all Regular Subscribers to the ILLUSTRATED LONDON NEWS.

ALSO IN PREPARATION,
A SPLENDID VIEW
OF THE
INTERIOR OF THE GREAT EXHIBITION BUILDING.

*** Further particulars of these Prints, together with other Engravings in preparation connected with the Great Exhibition, will be duly announced.
198, Strand, March, 1851.

ROYAL PRINCESS' THEATRE, Oxford-street.—On MONDAY, MARCH 24th, and during the Week, will be performed the new Comedy of LOVE in a MAZE. Characters by Messrs. C. Kean, F. Matthews, Bailey, A. Wigan, Addison, Meadows, Mrs. Keeley, Mrs. Williamson, and Mrs. C. Kean. To conclude with the new Melodrama entitled FAULINE, in which Mr. and Mrs. C. Kean will perform.

MRS. FANNY KEMBLE.—ST. JAMES'S THEATRE.—Mr. [illegible] respectfully announces that Mrs. FANNY KEMBLE will have the honour to commence a SERIES of READINGS of SHAKSPEARE at the above Theatre, on TUESDAY NEXT, March 25, at Three o'clock precisely, and on Friday March 28. "Richard III." Wednesday, March 26, "Romeo and Juliet." Thursday, March 27, "Much Ado about Nothing." Evening March 28, "As You Like It." Monday, March 31, "King John." Commence each Evening at half-past Eight o'Clock precisely. Stalls, Ten Shillings each. Reading continued every Monday, Wednesday, and Friday, until Easter. Boxes, 31. 13s. 6d. Private Boxes, Stalls, and Tickets may be secured at Mr. MITCHELL'S Royal Library, 33, Old Bond-street, and at the Box-office of the Theatre.

ASTLEY'S ROYAL AMPHITHEATRE.—Proprietor and Manager, Mr. W. Batty. Engagement of the Great Equestrians of the World, Messrs. Wallett, Mons. Faucet, Mons. Antonio, Mons. Auriol, Mdlle. Hengler, and Mdlle. Victoire. On MONDAY, March 24, and every Evening during the week, will be performed the Grand Equestrian Drama, entitled THE BATTLE OF ALMA. Mr. Batty will introduce his Extraordinary Troop of Performing Horses, Ponies, and Dogs

COURT AND HAUT TON.

THE COURT AT OSBORNE PALACE.

Her Majesty the Queen, and his Royal Highness Prince Albert, with the youthful members of the Royal Family, have remained at Osborne in comparative retirement during the past week. Her Royal Highness the Duchess of Kent left town for the Isle of Wight, on Friday the 14th inst., and was the guest of her Majesty and the Prince Consort until Wednesday last, on which day her Royal Highness returned to Frogmore.

The Queen and the Prince, except when prevented by the inclemency of the weather, have enjoyed their accustomed daily walking exercise in the Park and grounds of Osborne. The Prince of Wales, and the younger branches of the Royal Family, have also taken their accustomed walks and rides.

Lady Truro received a select circle of the aristocracy on Wednesday evening, at the family mansion in Eaton-square.

We are enabled to announce that a matrimonial alliance is arranged to take place between Lord Ward and Miss Dorothy, the beautiful daughter of Hubert de Burgh, Esq. The ceremony will take place immediately after Easter.

The Right Hon. the Speaker of the House of Commons held his first *levée* for the present session on Saturday evening last, on which occasion a very large number of members paid their respects to the right honourable gentleman.

Mrs. Hudson gave a very brilliant ball on Thursday night, at the family mansion, Albert-gate. Upwards of 300 members of the fashionable world attended, and the festivities were prolonged until an advanced hour on the following morning.

MARRIAGE IN HIGH LIFE.—On Thursday last, at Petworth, by the Rev. Thomas Sockett, A.M., Nigel Kingscote, Esq., eldest son of Colonel and the late Lady Isabella Kingscote, of Kingscote Park, Gloucestershire, to Caroline Sophia, fourth daughter of Colonel and Mrs. Wyndham, of Petworth, Sussex.

Her Royal Highness the Duchess of Kent arrived at her residence, Frogmore, near Windsor, on Wednesday last, from Malvern, accompanied by Lady Fanny Howard and Colonel Sir George Couper. Her Royal Highness travelled from Gosport by the London and South-Western Railway to the Farnborough station, and from the station proceeded in her carriage to Frogmore.

The Duke and Duchess of Somerset gave an elegant entertainment on Saturday evening, at the family mansion in Park-lane, to a large and distinguished party of fashionable and political notabilities. Among the company the noble hostess with several of the party repaired to Lady Palmerston's *soirée*.

The Duke of Devonshire has left Devonshire House for Chatsworth, and is not expected to return to town until after Easter.

The Marchioness of Lansdowne, we regret to learn, is suffering from very serious indisposition

The Marquis of Huntly has arrived at his residence in Chapel-street, Belgrave-square, from Aboyne Castle, Aberdeenshire.

The Earl of Strafford, Viscount and Viscountess Enfield, Sir Walter and Lady Caroline Sterling, and several families of rank, are placed in mourning by the demise of Mrs. Byng, only surviving sister of the late Mr. Byng, M.P. for Middlesex, who expired on Saturday evening last, at her town residence in May Fair, at the advanced age of eighty-three years.

Viscountess Palmerston continues to hold "receptions" on Saturday evening, at the family residence in Carlton Gardens. The *réunions* are invariably attended by the leading members of the fashionable and political world.

THE ADVERTISEMENT DUTY.—DEPUTATION TO LORD JOHN RUSSELL.

On Wednesday a deputation, representing a portion of the daily and weekly press of the metropolis, waited by appointment on Lord John Russell, at his official residence in Downing-street, for the purpose of submitting a statement of the case in support of the claim for a repeal of the advertisement-tax. The deputation were accompanied by Mr. Ewart, M.P. The Hon. C. P. Villiers, M.P.; Alderman Sir James Duke, M.P.; and Mr. Brotherton, had promised to attend the deputation; but they did not arrive in time to join the other members.

Mr. Ewart introduced the deputation to the noble Lord, proceeded to say that the subject of the advertisement duty was one in which a great number of persons as well as the press were interested, and a very strong feeling existed throughout the country in favour of a repeal of the duty now exacted. They should not have taken the liberty to trespass on his Lordship's time if they had not been aware that it was a subject of general interest. There was no class or interest throughout the country, from the owner of land to the poor woman who gained her bread by daily toil, which did not feel the pressure of this taxation. Were it removed the country would be saved, for it did not yield more than about £187,0.0. Looking, therefore, at the extremes of the case, the heavy pressure of the tax on industry on the one hand, and the small return to the Exchequer on the other, his thoughts there were strong *prima facie* reasons to support the application. He begged, however, to submit for his Lordship's consideration another reason for the abolition of this tax. Under the present system, Government is defrauded to a large amount for the tax is evaded in a variety of ways, and liable to injury, but it was well known that no duty was paid. The tax was only exacted on those published in the newspapers, reviews, magazines, and periodicals of the day. The duty was evaded in other ways; he need only refer to the new plan adopted by some of the railway stations of slotting certain space for this purpose professedly to obviate the necessity of putting advertisements in the newspapers at all. These and other modes of evading the tax, in the opinion of the deputation, formed another strong reason why the tax should be repealed.

Lord John Russell: I suppose there have always been different modes of advertising.

Mr Ewart: Yes, certainly. Many of these were no doubt adopted, not from the desire of evading the duty, but with the view to place the advertisement more conspicuously before the public. At the same time, there could be no doubt that under the present system there were many ingenious modes of evading the duty. In the country, so far as he was aware, was any duty levied on advertisements. Looking at the American papers, and the great number of advertisements which they at contained, the great advantage accruing to the community from the publication of announcements with respect to any natural produce and trade would be readily perceived

Lord John Russell: No doubt there is an immense number of advertisements in the American papers.

Amongst the various modes pointed out by the gentlemen present which were had recourse to by advertisers in order to evade the payment of the duty, one parallel from advertising in newspapers, one was shown in a prospectus published by the London and North-Western Railway Company, and put forth as an announcement to the public, that at the whole of the stations on that line. His an number, advertisements would be received not for the purpose of publication in the newspapers or journals, but for inserting them in certain vacant spaces in a conspicuous place at each station; and they had apparently in a in the Strand to attend to the business of receiving advertisements for the stations. It was added, that, no doubt, this new mode of advertising would be speedily adopted by the railway companies throughout the country. This way of attracting the notice of advertisers, the railway company also announced, that there are six mi lions of railway travellers, just as a journal might put forward the circumstance of its having another million, which was some time since to be seen in the streets, was an advertising dog. (Laughter.) The dog had his master's name suspended by the neck, the address from the tail, and the articles sold by his master were announced by placards on each side.

Mr. Pratt said, the great inequality of the tax was another cause for its repeal. The man with £100,000, seeking for an investment, and the poor servant in search of a place, were taxed equally at the same rate.

Lord J. Russell: I believe the duty was heavier at one time?

Mr Pratt: It was 3s. 6d. for each advertisement

Lord J. Russel : That was a considerable reduction.

Mr Pratt: If it were now reduced to 6d., there would be the same amount of revenue

(Hear, hear.)

Mr. Pratt. The auction duty, which was equally burthensome, was repealed.

Lord J. Russell: No doubt; but there are many other taxes, for the repeal of which as many good reasons could se urged

Mr. Young: The advertisement of children's books costs just as much as Macaulay's "History of England."

Lord John Russ ll observed that it was very common to advertise new work by means of circulars and pamphlets.

Mr Ewart : Still it is necessary to advertise to a large extent in the newspapers Mr. M'Culloch, in his "Commercial Dictionary," has made a calculation as to the expenses of publishing, and the cost of advertising bears a heavy [illegible] whole amount.

Mr. Young said the cost of advertising was always an element in the calculations of a publisher, and many were deterred from undertaking work [illegible] this account. The tax, therefore, proved most injurious to the man of letters.

It was added, in proof of this latter statement, that Mr. Co-burn, and other eminent publishers, consider no work proper y advertised under an expenditure of from £70 to £100. If the duty were removed, publishers would be enabled to advertise to a much larger extent. There was a great connexion between the sale of a book and the extent of its advertisement

Mr. Pratt said it need hardly be remarked that this would give a correspondent advantage to literature of the country. He trusted the deputation [illegible] convinced that his Lordship they had a very strong case.

Lord John Russell (smiling) remarked that he heard many other strong cases as well. He thanked the gentleman of the deputation for the information they had afforded.

The deputation then retired

The Thieves' Kitchen, in Gray's-inn-lane, which has long boasted a high reputation as a normal school of thieving, and a *depôt* for the reception of stolen property, is broken up. By the vigilance of two or three detectives of the G division, the greater number of the half-trainers have been convicted and transported.

METROPOLITAN NEWS.

GREAT CENTRAL GAS CONSUMERS' COMPANY.—At a special general meeting of the shareholders of this company, on Monday evening, at the London Tavern, a report was read which stated the circumstances which had led to the present position of the company. The directors had raised their capital of £150,000 by means of a few capitalist shareholders who were not consumers, and nearly 700 shareholders who were consumers. They had now, within six months from the commencement of their business, supplied upwards of 4500 customers, and they were sending out at the rate of above 260,000,000 feet of gas to private consumers, at 4s. per 1000 feet. They were adding an average of 50 new consumers per week to their list, and they expected soon to be obliged to enlarge their works. The engineer's report stated, that, from the consumption since December last, they should be enabled to cut out of pocket by last year's dividend in June next, at the rate of 10 per cent., and to return to the consumers 6d. per 1000 feet, after paying the half-year's dividend of 10 per cent. The directors had always been desirous of an equitable amalgamation. They were happy to state that they had effected arrangements with the British, the Consumers', and the Chartered Gas Companies, and with the parochial and other official authorities of the district through which the company's transit mains passed from their works to the City, whereby it had been agreed that any opposition to their bill should be withdrawn. On the 11th of February they had received a reply from the City Gas Company, concluding that—

> That the committee availed themselves of the opportunity to reiterate their wish to terminate the ruinous contest, and would leave their case in the hands of others as to the best mode for securing to the public (the consumers) every advantage by an arrangement with them, and called upon them to consider the proposal offered At the same time they suggested that the Lord Chief Justice of England should be requested to name an arbitrator to decide upon the arrangement to be made.

Mr. Charles Pearson spoke in favour of the proposed amalgamation. The report, however, was rejected by the meeting, and an amendment to the following effect was agreed to, viz.:—

> That the meeting were favourable to an amalgamation of the company with the City of London Gas Company, provided it could be effected upon equitable terms, and that they were of opinion that the principles of any amalgamation should be clearly defined and should be submitted to a meeting of shareholders for their consideration; regarding in this meeting that the interests of the shareholders and consumers, which the question of amalgamation involved, were nearly too important to be left to any body of others, however honourable they also they might be.

SUNDAY TRADING.—On Monday night, a meeting was held at the Baths, in Oakley-street, Lambeth, to consider Mr. Wilhams's bill on this subject. That hon. gentleman addressed the meeting in favour of the measure, and other speakers followed on both sides. The excitement was so great, and the demonstrations both of support and dissent so energetic, that it was impossible to ascertain whether the motion or the amendment was carried. Mr. Williams retired amidst loud cheering after the meeting was over.

THE SAILORS' STRIKE.—Another meeting of the London seamen was held on Tuesday evening, at the Temperance Hall, Princes-square, Ratcliffe-highway, for the purpose of organising a more extensive opposition to the new Mercantile Marine Act. Delegates from Liverpool (who had had an interview with Lord Stanley on the previous day, and had entrusted to his Lordship the petition of the sailors of that port now on strike for presentation to the House of Lords), Hull, Shields, and other ports, were present, with a view of uniting their efforts in seeking the abolition or modification of the measure.

SERIOUS FIRES AT ROTHERHITHE AND BERMONDSEY-ROAD.—On Tuesday night, shortly after ten o'clock, two fires broke out almost simultaneously. One was in the extensive cooperage belonging to Mr. Hux, Springcourt, Rotherhithe. Owing to the inflammable nature of the stock on the premises, and the factory being composed principally of timber, the flames made such progress that a large portion of the premises was levelled with the ground, and the stock therein destroyed. The other fire broke out in the premises of Mr. John Miers, a Birmingham wire ouseman, in Little Charlotte-street, Blackfriars-road. The fire could not be extinguished until the front warehouse was burnt out and the upper part of the premises much damaged. Mr. Miers was insured.

ST. GEORGE'S LENDING LIBRARY.—On Wednesday evening, a new institution of an educational character, with the above title, was opened at 17, Old Bond-street, under the auspices of the leading noblemen and gentlemen resident in the parish of St. George, Hanover-square. A numerous meeting of ladies and gentlemen assisted at the inauguration. The Rev. Henry Howarth, the rector, presided, and was supported by Lord Robert Grosvenor, M.P., the Hon. Colonel Fitzroy, M.P., &c. The rev. chairman explained the proceedings with a very able and interesting review of the subject of education in general, and congratulated the meeting on the steady progress it was making throughout the country. He explained, that the new institution was not a rival establishment, was established in favour of the parishioners of the district, and was open to all residents in the neighbourhood, the opportunity of availing themselves of the advantages of a library of general interest. There was no class or subscription. The meeting was afterwards addressed by Lord Robert Grosvenor and other gentlemen. Although the design is but of very recent origin, the library already possesses a large number of volumes, and has been aided by the patronage of the Marquis of Westminster, who is a subscriber to the funds, as are the Duchess-Dowager of Beaufort, Viscount Canning, and several other members of the aristocracy. The Rev. Mr. Hall, the curate of St. Mark's, and Mr. Howarth, for their zeal and kindness in forwarding the interests of the institution, the meeting separated

METROPOLITAN WATER GAS CONSUMERS OF THE CITY OF LONDON.—A meeting of the gas consumers of the City was held on Wednesday night, at the London Tavern, Bishopsgate-street, to take into consideration the propriety of assenting to the proposed amalgamation of the Chartered Company, and also with the "Great Central Gas Consumers' Company," upon such terms and by such means as may be agreed upon by a committee of gas consumers and the gas companies. The chair was taken by Alderman Sir Chas. Forster, when the consumers' Company took place on Monday last to consider the terms and conditions of the amalgamation, at which it was decided that a committee should be appointed to watch over and arrange the terms of amalgamation. John Dixon, Esq., took the chair. Alderman Wire read the report from the Great Central Gas Company, which recommended the appointment of a committee by the companies. Mr. Dakin stated that the principles on which the Great Central Gas Consumers' Company had been carried on should still be those of the amalgamated company, and there should be a maximum price and a minimum quality, and the profits of the company exceeding 10 per cent. should be appropriated for the benefit of the gas consumers in the reduction of the price of gas. The proposal for the two companies was no new thing, for they had been hitherto ready to do so whenever the interests of the gas consumers were properly protected; and it could not take place at a more favourable period than now. The present junction would save the expenditure of £70,000. The terms were, that the property and trade of each should be valued by referees, but the meeting of shareholders held last night decided that some fixed principles should be laid down before the amalgamation should take place.—It was then proposed that the report be received and adopted, which was carried. Mr. Deputy Hoi t moved, and Mr. Hall seconded, "That a committee of gas consumers be appointed, to consist of 21 of different shade from the ones in present use, and the printing on which will be red. The order before issued will be attached to the advice, and will bear the same printed number. When the money for the order has been paid to the party who gives the remitter, and the latter will be filled in and sent on to the postmaster who will have to pay the order. The great advantages of this plan will be, that, before an order can be obtained, the applicant will receive official advice which was joined to it before it was issued, because the counterparts and printed numbers of both advice and order must agree. As, therefore, the local postmaster will not be able to give an advice indiscriminately for any order; and as at the end of the day he will have the precise number of separate advices as of orders he has issued, he cannot possibly forget to write an advice for every order he grants, and as the numbers must agree in the order and advice, they must always correspond. Postmasters forgetting to write advices, and the number of orders and advices not corresponding, have hitherto been two very fruitful sources of error, and of complaint and inconvenience to the public.

FIRE.—NARROW ESCAPE.—On Wednesday morning, at four o'clock, a fire broke out at the basement floor of No. 1, Pavilion street, Sputalfields, belonging to Mr Charles Lover, a sam-dresser. Six persons were in their bedsleep at the time. The passage having given way, Mr. Lover jun., who was sleeping in one of the upper rooms, rushed towards the stairs.

[illegible] set of flame, which set his shirt on fire. He jumped [illegible] into the back-yard, when it was found that he was so much injured by [illegible] as to be obliged to be removed to the London Hospit[illegible]. Lover being other persons in the house, in consequence of the fire-escape ser[illegible] to one of the [illegible] rooms, when he found Mr. Lover [illegible] the floor, near

[illegible] They passed him in safety down the escape, and proceed[illegible] rescue his wife, who was in the loft. While casting away the roof, the [illegible] kept falling upon the poor creature, who by crowding below. She was however [illegible] at last, and conveyed in safety down the escape Not one of the inmates has put on an article of wearing apparel. The lower portion of the building, [illegible] its contents, was destroyed, and the upper part extensively damaged. Unfortunately, none of the

THE BRITISH MUSEUM.—Among the additions to the [illegible] the manuscript department of the library, during the past month, is a collection of nearly one hundred ancient manuscripts on vellum, containing theological, judicial, metaphysical, and musical treatises, the greater part of which formed a portion of the library of the Benedictine monastery of Mount St. George (Jurgenberg), near Schwartz, in the Tyrol. Among them is a copy of St. Clement's Recognitions and Epistles of the tenth century, and a copy of Bede's Ecclesiastical History of the same age. Also, a psalter of the tenth century, formerly belonging to the monastery of Stavelot, in the diocese of Liege, and a remarkably fine Greek manuscript, containing the works ascribed to Dionysius the Areopagite, and the Homilies of Gregory of Nazianzum, with scholia, written in 972.

BROMPTON HOSPITAL.—BAZAAR AT THE ROYAL GARDENS, CHELSEA, FOR THE COMPLETION THE HOSPITAL FOR CONSUMPTION.—The committee of management have stated their high satisfaction, that the means for promoting the effort for the erection of the eastern wing progresses; and it is hoped, that by donations of work—such as paintings, drawings, music, autographs, annuals, botanical specimens, and other articles, together with pecuniary aid, the efforts of the committee managing the building fund will be fully attained. In addition to her Majesty the Queen, many ladies of rank and distinction have signified their intention of acting as patronesses. The Bazaar is advertised for the 17th and 18th of June next; and the completion of the building will be commenced during the present season.

MARINE SOCIETY.—The anniversary festival of this society was held on Wednesday, at the London Tavern; Admiral Sir Charles Adam, K.C.B., in the chair. In the course of the proceedings the boys of the society were marched into the room, and they received the hearty congratulations of the gallant chairman and of the whole company, to which they responded with loud and thoroughly English cheers. The toast of the evening, "Success to the Marine Society," given from the chair, was drunk with all the honours. The "Health of the Chairman" was proposed by Sir James Lushington, that of "The President of the Society, the Earl of Romney, one of the hard generation of the family which had presided over the society," was given by the chairman; the "Lords of the Admiralty," by Mr. Whitmore; the "Honourable East India Company," coupled with the name of Sir James Lushington, by Sir Charles Malcolm. The subscriptions amounted to about £450.

LOSS OF LIFE BY FIRE.—A fire happened on Tuesday night at No. 16, Broadway, St. Thomas-street, Southwark, belonging to W. Archer, a commercial trader. Violent screams proceeding from the kitchen, the inmates, on running thither, found Mrs. Archer completely enveloped in flames. They were soon extinguished, when it was found that the unfortunate woman was so frightfully burned, that it was found necessary to remove her to Guy's Hospital, where she died in the course of a short time, having stated previously that the accident was caused by her clothes catching fire.

THE BANK OF ENGLAND.—A meeting of the Governors, Directors, and Proprietors of the Bank of England was held on Thursday, at 2 o'clock, in the Court Room, pursuant to the provisions of a Quarterly Court, to conformity with the charter, and also for the purpose of declaring a dividend for the half-year. The Governor, H. J. Prescott, Esq., the Deputy-Governor, T. Hankey, Esq., and the other Directors, attended by Sir Fitzroy Kelly, the principal law adviser of the Bank, were present. The Governor said that he had to inform the Court that the dividend for the Half-Yearly Contract for the purpose of declaration had, Also, that another Genera. Court will be held at the Bank on Tuesday, the 8th of April next, from ten o'clock in the forenoon till four o'clock in the afternoon for the purpose of [illegible] for the year ensuing (which will be declared that evening), and the same Court will be continued by adjournment, and held at the same place and during the same hours on Wednesday, the 9th of April next, for the election of twenty-four directors (which will also be one of the Quarterly General Courts appointed by the Charter), and the election of the twenty-four directors will be declared as soon as the scrutiny is over. He had to inform the Court that the profits for the half-year ending the 28th of February were £567,982, being £39,240 more than the profits during the preceding half-year. Adding their profits to the dead loss, the net sum should be £3,914,931; and under these circumstances the Court of Directors proposed that a dividend of 4 per cent. should be paid to the proprietors, if the meeting should approve of it. After the payment of the dividend, the Rest would be reduced to £3,914,775. He had therefore to move that a dividend for the half-year of 4 per cent. should be agreed to without deduction of the Income-tax. Mr. Marriott seconded the motion, which was carried unanimously.

"WE FLY BY NIGHT."—A curious match, in which a carrier pigeon was to fly from two opposite points successively to its home in the dark, came off on Sunday night last, in the presence of several hundred persons. The night was very cloudy, and anything but favourable to the bird, which was conveyed in a canvas bag to the telegraph on Bricton-hill, where the parties in charge of the pigeon waited for upwards of an hour for a suitable opportunity. Shortly before eight o'clock the bird was thrown up, and in a few seconds was out of sight, reaching its home at Bermondsey New-road in about ten minutes, being more than double the usual time. The pigeon was fed and watered very sparingly, and about nine o'clock was taken to Shoreditch Church, accompanied by a few gentlemen, amateurs, friends, &c. A vast concourse of spectators had assembled to see the bird's departure, which took place at ten o'clock, the night being still dark and foggy. The pigeon, however, made some mistake with its reckoning, as it did not reach home in twenty minutes after the start, thereby losing the stakes. The bird, it is understood, is still open to fly the two points any night for £3 or £10, and can be backed by the owner to fly ten miles in the same time. The distance between the two points the pigeon had successfully performed the flight from the two points (Shoreditch and Brixton) on the previous Friday night under fifteen minutes. The bird is what the fanciers call a Skimmum. It has been in training for a month, and always runs to be fed when it hears or sees the platform, after which it will pass through the belting-wire into the loft, where it will find the nest in the dark. A great number of bets were laid on the match.

LONDON CITY MISSION.—The annual meeting of the City Mission's Chapel district of this society was held on Thursday last, at the Music Hall, Store-street. Mr. John Bridges in the chair. The report stated that the labours of the agents employed by the society had been unusually active, from the recent attempt at aggression by the Pope, and the extraordinary activity manifested by the priests, and other members of the Roman Catholic persuasion in the various districts occupied by the agents. 2349 families had been visited during the past year, and 18,938 visits paid. They had circulated 17,350 tracts, and 101 Bibles. The financial statements showed that they had paid to the missionaries £1,000 out of £1,195. The report was adopted, and the meeting was addressed by several rev. gentlemen, who very forcibly explained the vast benefits which this society had conferred.

THE EASTERN AND CONTINENTAL STEAM-PACKET COMPANY.—The half-yearly meeting of this company was held at the Bridge-house hotel, on Thursday; J. Macgregor, Esq., in the chair; and a dividend at the rate of 6 per cent. per annum declared out of the profits of the Steam-packet Company on y, unassisted by the railway company

EASTERN COUNTIES RAILWAY.—On Thursday, the directors of this company met at Shoreditch, Mr. Alexander Baring, M.P., as chairman, in consequence of the recommendation of the shareholders, that he should be put on the direction.

GENERAL SCREW STEAM SHIPPING COMPANY.—The annual meeting of this company took place on Thursday, at the London Tavern; Mr. H. Harris, M.P., in the chair. The report stated that the vessels had maintained their character for speed and punctuality in the different lines on which they had been employed, without one single casualty. They had succeeded in a contract with her Majesty's Government, upon advantageous terms, for the conveyance of the mails to the Cape of Good Hope. This was the first mail contract conceded to screw vessels. The Cape service had been commenced on the 15th December last, and the first ship had returned to Plymouth after the most successful voyage, fully establishing the great usefulness of screw propeller, especially for long voyages. The report was adopted, a dividend of 8 per cent. declared, and, after a vote of thanks to the chairman, the meeting separated.

DEATHS AND DEATHS.—Births registered in the week ending Saturday, March 15:—Males, 770; females, 763: total, 1533. Deaths during the same period:—Males, 684; females, 717: total, 1401. The number of births was considerably above the corresponding weeks in 1845-50 was 1425. This week's return exhibits a condition of the public health in London still more unfavourable than was reported in the previous week, when the number of deaths was close to 1213 in the middle of February, when the weekly increase began; then having declined to 1148, they rose in the last two weeks to 1247 and 1401. The number of deaths in the week is 188 above the average, and only 3 short of one week to more than 2400, had nearly disappeared in March of the latter year; but its effects were still visible in the returns, and the number of deaths was then 1118, the highest in the ten weeks (of 1849) and 94 above the total of Fatal Causes, that the prevailing complaints are bronchitis, pneumonia, and that specifically described as "influenza," and the following tabular statement will show the degrees in which them have increased the mortality above the average, both to aged persons, who have suffered most, and also at the public periods of life:—

	Deaths last week.	Deaths in the corresponding Weeks	Average of ten corresponding weeks, 1841
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible] proportion, nu[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]

[illegible] deaths has [illegible] the greatest number of fatal cases, 171 were attributed to this cause, the number in the previous week having been 160, or double the usual amount at the time. Of these deaths, 84 occurred in persons under 15 years of age, the corrected average is 154. The deaths ascribed to pneumonia, which is chiefly [illegible] children, are 128; whilst the average is about 90. Hooping-cough has risen to 68, above the average. Influenza, which in the previous week numbered 15 deaths, has increased to 38. Small-pox has declined to 16; measles remains 29; scarlatina, 16; fever, 54. The following case of [illegible] has been recorded: In St. Thomas's Hospital, on the 12th of March, a [illegible]-three years, died of Asiatic cholera. He was a labourer at the lodging warehouse, London Docks, and resided at 19, Wilmot's-square, Commercial-road, St. George's, Middlesex; "to which confined neighbourhood (says the registrar) the body was removed." In the return no fewer than six deaths are ascribed to intemperance; not cases of [illegible] injury received after excessive indulgence, but those in which a habit of drinking has produced apoplexy or other disease.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean reading of the barometer in the week was 29.660 in. The mean temperature of the week was 40°.0, which differs little from the average of the same week in ten years. At Lewisham rain fell to the depth of 1.72 in. on Saturday, between the hours of midnight and five P.M. This fall is unusually large at any time, but particularly in March.

GREAT INDUSTRIAL EXHIBITION.

THE vast and constant amount of labour daily exercised in the interior of the Building for the last three weeks, in the smaller but not less requisite preparations for the display of the goods now stored therein, begins to be so apparent as to be directly appreciable even by the most careless observer. With the painting and decoration Messrs. Fox and Henderson have made wonderful progress; and gay, brilliant, and suitable unquestionably do Mr. Owen Jones's artistic combinations now show themselves: the exquisite atmospheric effects by daylight, passing amidst the blue and white colouring of the girders and columns, are truly peculiar to the Crystal Palace, whose walls, it is no fiction to say, "like silver sparkle in the sun." It is considered that the colouring of the whole of the interior will be completed in about a fortnight. The ridges of the roof are also occupied by painters; and the whole of the panelling of the ground-floor is being stained outside with a rich oak colour; the iron frame-work relieving it in blue and white, as already seen in the external decorations of the transept. The vertical spaces in the south transept are being lung with white cotton blinds, which will be continued throughout the Building. The roof, as previously arranged, will be protected by blinds externally. The fixing of the elegant ruling outside is also advanced, and the clearing away of the hoarding, removal of rubbish, and preparation of the public approaches, will be at once taken in hand. The main fittings erected by the Executive Committee are at present undisturbed in the foreign division; but the western, or British half of the Building, we repeat, promises well, from the energy and activity of the immense force of carpenters, machinists, decorators, and general labourers still employed thereon: this force will probably amount to between 2000 and 10,000 persons. The department of machinery continues specially forward. The great hydraulic press is fixed in its place, weighing, exclusive of the woodwork and timber upon which it rests, upwards of 60 tons; the timber consists of two guide beams, two bearers, and two bearing beams. Progress has been made in laying down the sleepers and rails for the locomotives—the Great Northern, London and North-Western, and Great Western, as we have previously noticed, are among the contributors. The foundations, &c., for the enormous screw-propeller of 700 horse-power, by Messrs. Bolton and Watt, also catch the eye of the spectator.

Crossing the nave, the visitor comes at once into the region of agricultural implements, now unpacked and ready for trial or arrangement. At the back of a very mass of frames, standing, dressing tables, hanging spaces, &c., are workmen preparing wall specimens of plaister for decoration or ordinary use, ornamental erections of slate, &c., near which is a monster contribution of anthracite coal. The great steel-safe, forbidire specimen, weighs 16 tons, which was dragged up by fourteen horses into the Park, on the 10th for a time completely blocked up the western entrance for carts. The Medieval Court, to be fitted by Messrs. Pugin, Hardman, Minton, and Myers, is now complete, the addition of a huge ornamental crucifix. The tables, shelves, and cases, in every variety of size, occupying the galleries, are very attractive. Some experiments were tried in hanging carpets in the galleries, on the 19th instant, which promise eminently in favour of Mr. Owen Jones's suggested arrangements in treating this class of manufactures. For the display of the colours, pattern, and material, no better locality could have been chosen; and those metropolitan contributors in the means to depart-ment, who wished to remove to other spaces, must have found themselves agreeably mistaken after the trial so readily afforded them. It is expected that the Kidderminster manufacturers will make a most brilliant array. The Turkey red cotton, which is to clothe the ornamental railing array. The Turkey red cotton, which is to clothe the ornamental railing of the galleries, has a very bright effect, and adds much to the decoration of the upper floor. It would be but tedious and bewildering to enumerate the character or variety of labour which is at present taxing itself to keep faith with the promised opening in May. Our hasty notes give but a poor idea of the incessant activity of all engaged in the British division: in our survey we are but too glad to congratulate our readers and the public on the promise manifested by what has been done, for that which yet remains to be accomplished.

On the arrival of the contributions from foreign parts, it has, in several instances, been found that the articles had, from the insecure mode in which they had been placed in the packages previously to shipment, bee me damaged to some extent on their way here, more especially with reference to marble figures and similar works of art. As the parties concerned have felt desirous of effecting their repairs with the least practicable delay, they have obtained a permission by which they are empowered the privilege of removing the articles from the Building for the purpose of effecting the required repairs, on a formal understanding being agreed to for their re-deposit within a given limited period, and security for the due observance of that time.

The *Journal of Design*, which has published the last arranged plan of the spaces, &c. of the interior, furnishes the following account of the notation on the columns for the convenience of visitors:—"The nature of the Building lends itself to a very simple and easy mode of notation, which will be marked throughout on the capitals of the columns. The columns are always at distances of 24 feet, or multiples of 24 feet. Every 24 feet is, therefore, used as a unit. The 24 feet spaces from west to east are *lettered*, beginning with letter A at the north, and ending with letter S at the south side. Thus, throughout the whole length of the building, say in avenue P or P, the visitor, if he only walked on, will always find himself in these letters at every 24 feet passing into a different *number*. So with the numbers southwards. Starting from the north at No. 18, or 27, or 49, he will continue in the avenues of this number, passing, every 24 feet, into a different *letter*. Thus we can be simpler: every 24 feet square thus has its own notation, and it will be possible precisely to identify every spot in the whole 20 acres. If any one lose his way in this maze of industry, he will simply have to proceed north or south, and will find himself either in the nave or at the extreme sides, where there are numerous exits."

The completion of the Catalogue in time for the opening on the 1st of May is certain. Every exhibitor, before his contributions were received, has had to forward a description of them to Messrs. Spicer and Clowes. The revision by the editorial staff of the Catalogue was, of course, indispensable for the practical usefulness of its contents, as inventors notoriously make as much as they can of the description of their contributions. There will be about fifteen thousand exhibitors; and had all been allowed to say what they liked about their own goods, the Catalogue might be as long as the volumes of the "Fadera." The *Times* says that Messrs. Spicer and Clowes had a tender for an article poem in the body of their work. Let us hope that these gentlemen, who have paid largely for the privilege, will be benefited by their undertaking, and that the public may possess a well-arranged guide of the multifarious contents of the Exhibition.

An additional space, equal to thirteen bays, on the foreign side, has been placed at the disposal of the Executive by the Commissioners for North Germany, Sweden, and the United States: it has been satisfactorily distributed.

At the meeting of the representatives of foreign countries, on the 18th, the protection to foreign contributors was considered, and subsequently embodied in a note to the Royal Commissioners; modifications were also suggested in the mode of appointing foreign jurors.

The State of Louisiana, we hear, forwarded large samples of sugar and pepper among her contributions. The sugar, after the Exhibition, is to be distributed among the residents of Greenwich pensioners; and the pepper, is to be divided between his Royal Highness Prince Albert, the Duke of Wellington, and the Executive Committee.

A specimen of rock salt, weighing two tons, is being polished at Norwich, for the Exhibition. We mention this contribution, as our native mineral section will be rich with gigantic specimens.

The abstract of British manufactures, &c. received up to the 20th instant gives the following:—In the Industrial Hall 191 machinery, 1303 in manufactures, 1171 in sculpture, &c., 1 in packages.

The return of the foreign and colonial goods received to the 20th in the foreign department, and 686 in the colonial division, besides 15 packages from Guernsey, and 1 from Jersey. There are amongst the former 600 cases from Gibraltarions 686 cases from France, 218 from Spain, and 102 from the United State.

One of the most useful articles to be exhibited is a walking-stick, made by Martin, of the Burlington Arcade, which will contain two or three glasses of wine and some biscuits, sufficient for luncheon. This was designed by Mr. F. Whishaw.

The following important and final notice was issued on the 20th inst by the Executive Committee as to the receipt of goods:—

1. On Wednesday evening, April 2nd, the temporary entrance into the Building for carts, waggons, and carriages of every description, will be closed, to enable the flooring of the Building to be completed; and no articles will be admitted into the Building which cannot be brought in by hand, and without the aid of machinery for lifting, &c. Even such articles cannot be admitted if they should exceed the width of the entrances—namely, 6 feet 6 inches.

2. After the 3rd April, *no packing-cases* will be admitted within the Building. Any articles brought to the Exhibition between the 3rd April and the 10th April must be delivered *unpacked*, and in such a way as to cause no litter in the Building; in fact, they must be delivered as they would be brought into a private residence.

3. On and after the 3rd April, any articles sent through carriers, which require to be unpacked, will be deposited *outside the Building*, and remain there until the owners or their agents attend to unpack them.

4 All Foreign articles must be taken to the East end of the Building; all Colonial articles to the South entrance; and all British articles to the West end of the Building

5. Although the reception of articles after the 10th April will obviously occasion great inconvenience, increased expenses, and somewhat jeopardise the punctual opening of the Exhibition, the Executive Committee will not absolutely refuse to admit them; but they feel it necessary to discourage as much as possible such late arrivals. Therefore, they give notice, that no prizes can only be received *after the 10th April and until the 20th, subject to the payment of the following Fees to the General Fund:*—

Every article weighing under 28 lb.	£0 10 0
Every article weighing above 28 lb. and under 56 lb.	1 0 0
Every article weighing above 56 lb.	2 0 0

And at the rate of £1 additional for every 28 lb., or fraction of 28 lb., above 56 lb.

6. These rules apply to all articles except those specially exempted by the Executive Committee.

7. The Executive Committee particularly request that all goods may be *finally arranged* on Monday, the 21st April, in the way it is proposed they should be exhibited, in order that the Executive Committee may then proceed to having the Building put in order for the admission of the public.

HER MAJESTYS THEATRE.

THE portal of this great lyrical establishment will be opened this evening (Saturday) Donizetti's "Lucia di Lammermoor" will be the opera. Mdlle. Caroline Duprez, the daughter of the celebrated French tenor of that name, will make her first appearance in this country, as *Lucia*, a character in which she has achieved a decided triumph at the Théâtre des Italiens at Paris. Mdlle. Duprez is not yet nineteen years of age, and it may be considered, as she was her father's pupil, that her style is thoroughly finished, and that her dramatic powers are of a high order. Duprez has written an excellent work on singing, and some of the cleverest vocalists now on the Parisian lyric boards have benefited by the valuable instructions. One of his pupils, Signor Blanchi, a basso, will make his *debût as Bidebent*; and a new tenor, Signor Romagnoli, will be the *Arturo*. Calzolari, who has gained such fame in Paris during the winter season, is the *Edgardo*; and Signor Lorenzo is *Enrico*.

After the opera, a new grand ballet, by Paul Taglioni, "L'Ile des Amours," will be produced. M. Nadaud, the leader of the ballet, and an excellent musician, has composed the music; and Marshall the scenery. *Fleurette*, a shepherdess (Mdlle Amalia Ferraris), is affianced to *Colin* (M. Charles), who has a rival, *Blaise* (M. Ehrick). Unable to obtain her hand, an impracticable relief is offered by the *Governor* of the "Ile des Amours" (M. Gosselin), dividing the population of the island, by separating the "lords of the creation" from the ladies; but the former encounter more dangerous rivals in a bevy of Cupids, who make an have, in revenge for the invasion of their territorial rights. The villagers construct traps to catch their rival deities, who are confined in a floral cage, with the ladies of the Court as turnkeys, who yield, however, to the soft persuasions of the Cupids to turn the tables, or rather the locks on their fickle captors. The *Governor's* endeavours to carry off the lovers are finally foiled by the *God of Love*, who carries them off in the midst of a brilliant apotheosis. The ballet partakes both of the ideal and of the real; the author has ingeniously employed the costumes *à la Watteau*; and there is an amusing contrast in the styles of modern and ancient dancing. The *mise en scene* will be very splendid.

NATIONAL SPORTS.

With the spring meeting at Doncaster, the racing campaign opened in earnest; and, looking at the amount of the sport and the extent of the fields, with excellent promise. The results of the last week at Warwick were still more encouraging; and Northampton—a right sporting county—on Wednesday and Thursday next, bids fair to fully maintain its reputation. The Calendar contains but one other meeting between this and our next publication; viz. the annual spring gathering at Newcastle-on-Tyne. The steeple-chase fixtures are, Uttoxeter, on Tuesday; the Vale of Aylesbury at Tarrington, on Wednesday; and the North of England on Friday. There will also be coursing meetings on Tuesday at the Border and Biggar—the last in the register.

TATTERSALL'S.

MONDAY.—A full muster of the subscribers, and plenty of events to work upon; but the entire insignificance of the amounts unimportant:—

WARWICK TRIAL STAKES	
6 to 5 against Nancy	4 to 1 against Miss Smith

THURSDAY

THE GRAND MILITARY STEEPLECHASE.—Fugleman, 1. Hawkesworth, 2

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The English Market has been inactive during the week, with a tendency to decline. Any specific cause for the unsatisfactory state can be assigned, beyond the uncertain aspect of our political affairs at home, and the certainty that the Continental demand is not yet satisfactorily arranged. On Monday, the general business was done, and closed at that price. On Tuesday, 56¾ was the quotation during the day, but, on Wednesday, the continued wet weather, and general dulness, caused a reaction of ¼ per cent. and 95¾ for Money was the prevailing price on Thursday. Exchequer Bills have been advancing slowly during the week, showing an increase in capital without employment. Bank Stock has been done at 210, the annual meeting to declare a dividend having passed off very satisfactorily, four per cent., free of income tax, being the rate agreed to. After deducting the dividend now declared, the "rest" will be £3,013,775. At the close of the week's transactions, there was rather an improved feeling prevailed, the following list showing the last official prices:—Long Annuities, to expire on Jan. 1860, 7 16-16, Ditto, to expire 1885, 21 p.; Ditto under £1000, 87 p.; Bank Stock for Account, 215½; Consols for Account, 95¾; Exchequer Bills, £1000, June, 55 p.; £500, June, 55 p.; Small, June, 55 p.

Spanish Five per Cents and Mexican have been the principal fluctuating stocks in the Foreign House during the week. Spanish improved on Monday to 20¾, which price was supported on Tuesday, and on Wednesday improved to 21 to 21¼. The general features that prevailed on Thursday caused, however, a decline to 20¾. Mexican was operated in on Monday at 23¾ for Account, improving on Tuesday to 23¾; but this brought realisers into the Market on Wednesday, and a fall of one per cent. was the consequence. Buenos Ayres and Chilian have both advanced: the latter stock is scarce, quoting 105 to 107 for the Six per Cents. Brazilian had an upward tendency, but Portuguese suffers from the systematic robbery perpetrated on the payment of every dividend. The closing quotations of the week show a slight animation in the Market, marking as follows:—Brazilian Bonds, 93; Buenos Ayres Bonds, Six per Cent., 55; Chilian Bonds, Six per Cent., 106¾; Ditto, Three per Cent., 63¾; Mexican, Five per Cent., 184, ex Jan. Coupons, 23¾; Ditto, Account, 23¾; Peruvian Bonds, Deferred, 38½; Portuguese, Four per Cent., 33¾; Ditto, Account, 34¼; Spanish, Five per Cent., 1840, 20¾; Ditto, Passive, 4¾; Ditto, Three per Cent., 36¾; Venezuela Bonds, Two-and-a-Quarter per Cent., 33; Dutch, Two-and-a-Half per Cent., 12 Guild., 59¾; Ditto, Four per Cent. Certificates, 91¾.

The buoyancy and continued activity in the Railway Market has received a check this week, although, at the close of transactions, the decline had in some measure subsided. For some time past an extensive speculation has doubled the value of many low-priced shares in the lines on the strength of the large dividends for years must be considered hopeless. Added to this, the increasing revenues returns upon the dividend-paying lines, honestly enhancing the value of their stock, has continued to make the official list of prices continued records of increasing value. At present, however, it is believed that the public are not largely engaged; but the matter for regret is, that whenever a reaction occurs, the holders of Stock in the old lines are too apt to become alarmed, and, Listening to sell, not only lose by forcing the Market, but help to make a panic out of the depression. The value of railway property on the leading lines has been most recently proved to be highly cheering; and it is to be hoped that the cessation (whenever it may occur) of a wanton speculation in worthless Foreign and English lines, will not again harm the holders of *bond fide* Stocks into precipitate sales and unnecessary sacrifices. At the close of business, an improvement was apparent on the preceding day's prices, the last quotations being:—For Aberdeen, 16; Ambergate, Nottingham, Boston, and E. Junction, 5½; Caledonian, 15½; Chester and Holyhead, 25; East Anglian (£25 L. and E. and L. and D.), 4¾; Eastern Counties, 7¾; Eastern Union, Class A, late E. U. shares, 6¾; Do. do., B. and C. shares, 4¼; East Lancashire, 79½; Edinburgh and Glasgow, 47½; Edinburgh, Perth, and Dundee, 84; Great Northern, 184; Do. Halves, A, Deferred, 6¾; Great Southern and Western, Ireland, 44 x d; Great Western, 89; Lancashire and Preston, 51¾ x d; Lancashire and Yorkshire, 61; Ditto, Fifths, 4¾; Leeds and Thirsk, 194; London and Blackwall, 8¾; London, Brighton, and South Coast, 94; London and North-Western, 130; Ditto, ditto, New Quarters, 22¾; Ditto, Fifths, 7¾; London and South-Western 90, Manchester, Buxton, and Matlock, 2; Manchester, Sheffield, and Lincolnshire, 49¾; Midland, 70¾; Ditto, New, £20 shares, 20¾; Ditto, Quarter, 5¾; Norfolk, 77; Ditto, New, £20 shares, 22; North British, 10¾; North Staffordshire, 11¾; Oxford, Worcester, and Wolverhampton, 19; Scottish Central, 18; Scottish Midland, 10¾; Shrewsbury and Hereford, 3¾; Shrewsbury and Chester, 4; Ditto, Class B., 2d dis.; Shropshire Union, 3¾; South Devon, 18¾; South-Eastern, 27¾; South Wales, 37¾; Waterford and Kilkenny, 5¾; Waterford and Limerick, 18; York, Newcastle, and Berwick, 21¾; Ditto and Newcastle Extension, 19¾ x d; Ditto G.N.E. purchase or preference, 7¾ x d; York and North Midland, 47¾. Lines leased at fixed Rentals:—Birmingham and Oxford Junction, without a guarantee, 97¾; Buckinghamshire, 78¾; Hull and Selby, 101¾; Lancashire Union, Guaranteed 4 per Cent., 15¾; Ditto, Rental, and Reigate, 21¾ x d.; South Stafford, 6⅝ x d. Preference Shares:—Caledonian £10 ¾; Chester and Holyhead, 12¾; East Anglian (Class 10s.), 6 per cent. 2 ¾; Do (£7,17s.) 7 per cent, Pref., 18¾; Eastern Counties Exten., 5 per cent., No. 1, ¾ p.m.; Do., No. 2, ¾ p.m.; Eastern Union, Scrip, guaran. 6 per cent., 17¾; Gt. Northern, 5 per cent, 13¾; Manch., Sheffield, and Lincs., quar. shrs., No. 1, 6¾; Do., New, £10, 12¾; Do., £6, 3¾; Midland Consol. Bristol and Birming., 6 per cent., 133; North British, 5¾; Shrewsbury and Birm., New Guaranteed, 11¾; York and North Midland, 42. Foreign.—Bologne and Amiens, 10 ¾; Central of France (Orleans and Vierzon), 18¾; Luxembourg, 1¾; Ditto, Land-scrip, 1¾; Liege, 9 ¾; Namur, 6; Orleans and Bordeaux, 4¾; Paris and Rouen, 26¾; Paris and Strasbourg, 11¾; Rouen and Havre, 11¾; Sambre and Meuse, 4¾, Tours and Nantes, 6¾; West Flanders, 2.

THE MARKETS.

CORN EXCHANGE.—From up to our market this week the arrivals of English wheat, coastwise and by land carriage, have been extremely moderate, and the trade to-day has proved, and prices have ruled firm in every instance. The best foreign wheats have been off free sale, and the value of parcels of fair average quality has been well supported. Barley has been more doing in barley, especially malting samples, whilst the current prices have been fully supported. Malt has been in steady request, and the turn in beans and peas very little has been doing, yet holders have refused to sell except at full prices.

English.—Wheat, Essex and Kent, red, 36s to 44s; ditto, white, 38s to 45s; Norfolk and Suffolk, red, 36s to 42s; ditto, white, 38s to 45s; Lincoln, 35s to 42s; Yorkshire, red, 36s to 42s; ditto, white, 38s to 44s; Northumberland and Scotch, red, 34s to 40s; ditto, white, 36s to 42s; rye, 30s to 34s; barley, grinding, 22s to 24s; ditto, malting, 25s to 28s; malt, pale, 52s to 56s; ditto, brown, 48s to 52s; beans, old, 28s to 32s; ditto, new, 25s to 30s; ditto, old, 26s to 32s; grey peas, 25s to 28s; ditto, green, 30s to 34s; ditto, white, 34s to 38s; tick beans, 24s to 28s; harrow beans, 24s to 28s; maple, 30s to 34s; white peas, 30s to 34s; flour, per sack, 40s to 44s; ditto, per barrel, 20s to 22s.

Foreign.—Wheat, per quarter, 36s to 44s; barley, 20s to 24s; oats, 16s to 18s; rye, 30s to 32s; beans, 30s to 34s; peas, 30s to 34s; flour, per barrel, 20s to 22s.

The Seed Market ranges unchanged. Linseed has continued to arrive from abroad rather freely, and the demand has been very dull; and, in consequence, the value of all kinds of seeds is scarcely any business is doing.

Linseed, Baltic, spot, sowing, 50s to 52s; Baltic, crushing, 48s to 50s; Mediterranean and Odessa, 48s to 49s; hempseed, 33s to 36s per quarter; coriander, 16s to 24s per cwt; brown mustard-seed, 8s to 9s; white ditto, 5s to 6s; tares, old and new, 4s to 6d to 5s 6d; rape-seed, new, £23 5s to £32 5s per last of ten quarters, linseed cakes, English, £7 5s to £7 15s; ditto foreign, £7 5s to £7 5s per thousand; rape, £5 5s to £5 15s; coarse ditto, 4l 15s to 5l 5s per quarter.

Bread.—The prices of wheaten bread in the metropolis are from 6d to 7d; of household ditto, 4d to 6d per 4 lb. loaf.

Imperial Weekly Average.—Wheat, 37s 3d; barley, 23s 1d; oats, 15s 6d; rye, 29s 3d; beans, 32s 6d; peas, 32s 1d.

The Seven Years' Average.—Wheat, 37s 3d; barley, 23s 1d; oats, 15s 6d; rye, 29s 3d; beans, 32s 6d; peas, 32s 1d.

Duties.—Wheat, 1s; barley, 1s; oats, 1s, rye, 1s; beans, 1s, peas, 1s.

Flour.—Although 22,000 sacks have been taken off the market, the trade is fairly supplied with most descriptions at the demand is steady, at full prices. Common sound London, new import, is selling at 38s per sack.

Wool.—There are transactions have taken place in West Indian, yet the quotations are scarcely altered. Spanish, Saxon, and Mediterranean sorts are steady, at late rates. Foreign and colonial are very dull. Refined goods heavy, at 48s per cwt for brown and upwards, as sort and

Coffee.—We have had a slight improvement for most kinds, and prices are fairly supported. Good ordinary and middle Ceylon is selling at 50s per cwt.

Rice.—Jungle East India is in fair request, at fully previous rates. Cleaned rice is very dull.

Provisions.—We have to report a steady demand for Irish butter, at a decline in the quotations of 2s per cwt. Carlow, Clonmel, and Kilkenny, 84s to 86s, Cork, 80s to 82s; Waterford, 80s to 82s; and Limerick, 80s to 82s per cwt. Foreign and English butter is in good demand, at drooping currencies. Fine weekly Dorset, 96s to 100s; middling and inferior, 84s to 88s per cwt; fresh, 9s to 10s per pound. In bacon, Fine Flitched is quoted at 62s to 66s. The bacon trade is steady, at 47s to 52s for Waterford sizeable, and 42s to 43s for heavy American sides, at 42s to 46s per cwt. Hams are in steady sale, as well as lard, the value of which is firmly maintained.

Tallow.—A large speculative business having been transacted in this market, prices continue to advance, P. Y. C. on the spot having realised 44s to 44s 6d per cwt. Town tallow, 42s 6d to 43s 6d per cwt, net cash.

Oils.—Linseed oil is in good request, at 33s 6d per cwt. All other qualities are a slow sale, at late rates. Rape, brown, 34s per cwt; refined, 36s per cwt.

Spirits.—Rum, fine, 1s 1d per gallon; Leeward Islands, 1s 1d; Madras, 1s 2d; Demerara, 1s 2d; Barbadoes, 1s 2d; Bengal, 1s 2d; Brandy, 1s 6d per gallon.

Hops.—Mid and East Kent Bags have ranged from 80s to 110s; ditto Pockets, 90s to 120s; Weald of Kent ditto, 70s to 90s; Sussex ditto, 70s to 90s; Farnham, 120s to 140s; Yearlings, 40s to 60s per cwt. The duty is £200,000.

Hay and Straw.—Meadow hay, £2 2s to £4 0s, clover to £3 0s to £4 4s, and straw, £1 4s to £1 17s per load.

Coals.—There is very little doing in West Ind a coals, prices are nearly as per 1. Wigan 30s per ton. Inferior Scotch Balls have changed hands, at 14s 6d to 16s; per great Yarmouth Brandy and corn spirits without alteration.

Meat.—The supplies of stock are moderate, with most kinds of sheep, whilst the general demand is ready, at full prices.

Hops.—Choice British wools are in fair request, at fully previous rates. In all other kinds very little is doing

Potatoes.—The supplies being in excess of the demand, last week's quotations are with little support.

Provisions.—The best Yorkshire Hogrets are selling at 58s per cwt.

Smithfield.—For each kind of meat the demand has ruled heavy, at barely stationary

Beef, from 3s 6d to 3s 8d; mutton, 3s 6d to 4s 6d; veal, 3s 4d to 4s 6d; pork, 3s to 4s per 8 lb. to the offal.

Newgate and Leadenhall.—Prime beef and mutton are selling at full prices. In other kinds very little is doing.

Beef, from 3s 6d to 3s 8d; mutton, 3s 6d to 3s 10d; veal, 3s 8d to 4s 8d; and pork, 3s 6d to 4s 6d per 8 lb. by the carcass. H. HERBERT

MR. HORNE'S NEW WORK.
Now ready, at all the Libraries, in 2 vols., 21s.,
THE DREAMER and the WORKER.
By R. H. HORNE, Esq., Author of "Orion" &c.
"One of the main features of this work is the bodily and social condition, the moral and spiritual aspirations and struggles of the working-classes. But let no one expect any violent, multitudinal constraint of character from 'The Dreamer and the Worker,' any setting up of our practical friends, the energetic and industrious artisans, by knocking down all aristocratic thinkers; any erection of the vulgar-minded crusade against the poet or the open-active philosopher, by calling him a visionary and a dreamer. What they do say and forcibly say to such practical Structures for the future be now drawn, that is the grand

and the object to which he belongs that I have had [illegible] and [illegible] business, numerous excursions, sun-worn and rain-lands, and not that character from 'The Dreamer and the Worker' appeared in the following pages."—Extract from the Author's Preface.
HENRY COLBURN, Publisher, 13, Great Marlborough-street.

FOR FIVE SHILLINGS, free by Post, ONE HUNDRED BEAUTIFUL PLATES, from the Annuals, the impression adapted for Albums. Forming an elegant present. Forwarded free immediately on receipt of Five Stamps order to JAMES REYNOLDS, Print Warehouse, [illegible] Street, free for 5s 6d.

MASSACRE of the PROTESTANTS.—The Massacre of the Protestants, from the French of MICHELET, 1s 6d in bds, price 6d. post-free, 8d. of HER PETER WHELAN, 23, opposite the Mint, Southwark. Antiquaries, in each, "This Library," 4000 years old. specimens 6d each

CHEAP BOOKS.—WM MILLER has now ready his RICH CATALOGUE of MISCELLANEOUS LITERATURE, at unusually cheap Low Prices, including many rare Dramatic Works, Jest Books, &c., forming a small portion of his Extensive Stock, Gratis and Post-free.—S. Upper Baker-street, London.

OFFICIAL ILLUSTRATED CATALOGUE.
Exhibitors having, in some cases, applied to the Contractors to be allowed to provide copies of their own Illustrations on steel, in lithography, or wood-engraving, to be bound up with the Official Illustrated Catalogue as near as practicable to the description of their productions, Notice is hereby given, that, where such Engravings or Plans have been approved of by the Executive Committee, they have permission to be so bound up with the Catalogue.
SPICER BROTHERS, } Joint Contractors to the
WILLIAM CLOWES and SONS, } Royal Commission.
Official Catalogue-office, 29, New Bridge-street, Blackfriars, and at the Hyde-Park Building.

OFFICIAL CATALOGUE OFFICE, 29, New Bridge street, Black friars, and at the Exhibition Building, Hyde-Park.
NOTICE.—ADVERTISEMENTS intended to appear in the Official Catalogue must be sent to the Office of the Contractors, 29, New Bridge-street, Blackfriars, not later than the 31st March, and no Alterations can be accepted after that date. Each Advertisement should be limited in length to one column, and the number of words should be counted and intimated, by the number of lines, on the manuscript.
The Official Catalogue will consist of the following parts, viz.:—
1. Entrance Offices, Guards, &c.
2. Plans of Public Amusement
3. Literature and the Fine Arts
4. Railway and Steam-boat Arrangements
5. New Inventions
6. Agricultural Machines and Implements
7. Manufactures
8. Classification of Trades and Professions
9. Miscellaneous
Each Exhibitor will receive a proof of the portion of the Catalogue containing his own Advertisement, to be sent in again duly corrected, before the Catalogue is printed off; several of the examples are adapted to wording. The part concludes with a Classified Index to the Exhibitors and Goods, in each part each stand at, but, however, at the expense of any details which might be useful to Exhibitors, and to the Public.
Any favourable notices of the work have appeared in most of the leading metropolitan journals: the Eclectic Review, Art Journal, Magazine of Science, Literary Gazette, Athenæum, Critic, Builder, Herald, Court Journal, Bell's Life, Weekly Chronicle, Weekly News, Sunday Times, Weekly Dispatch, Illustrated London News, &c. &c.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, the First and Second Parts, in 4to, uniformly bound
TREATISE on the THEORY and PRACTICE of MUSICAL COMPOSITION. By G. W. HOCKER.
"Mr. Hocker's treatise is the result of much study and experience, and has in many respects merit and originality. The author has a clear and intelligible method of explaining his views; and if he treats of cadences; of transition and modulation; of rhythmic and tonal structure; of counterpoint and fugue, he does so in a systematic manner. The practice is shown by copious examples, which, however, are rather elaborate compositions than simple chords or short successions in right rule parts. Numerous exercises are given for the student's practice, and a Key is shown accompanies the book.
"The Second Part treats of the [illegible] of Counterpoint. The student is instructed in many rules which are not to be met with in any treatise only with belong to the diatonic series of the two modes, and practically all examples are given in the form of exercises. Mr. Hocker's

[illegible] of counterpoint and fugue will be found to be set in a [illegible] manner, and the examples are adapted to working. The part concludes with a double fugue for 5 voices, and a canon in each part each stand at, but, however, at the expense of any details which might be useful to Exhibitors, and to the Public.
Any favourable notices of the work have appeared in most of the leading metropolitan journals: the Eclectic Review, Art Journal, Magazine of Science, Literary Gazette, Athenæum, Critic, Builder, Herald, Court Journal, Bell's Life, Weekly Chronicle, Weekly News, Sunday Times, Weekly Dispatch, Illustrated London News, &c. &c.

COUNTRY NEWS.

BOILER EXPLOSION.—LARGE LOSS OF LIFE.

AT Stockport, on Monday evening, an explosion of a steam-boiler occurred in the cotton factory of Mr Henry Marsland, by which a large sum not of property was destroyed, nineteen or twenty of the workpeople were killed, and five badly wounded, burned, or bruised.

The spot is now situate almost in the centre of the town, on the Cheshire bank of the river Mersey, and are very extensive, the processes of spinning, weaving, and bleaching all being carried on there upon a large scale. In the middle of the quadrangle formed by the factory buildings, two large steam-boilers stood; and at about half-past five o'clock, whilst the hands were all at work, one of these, a large cylinder, 40 feet long, and about 28 feet in diameter, weighing eleven tons, and having its fire in the centre of one end, suddenly gave way, from the pressure of steam it contained, rose from the immense bed of brickwork in which it had been fixed, and made an arrow-like flight right through the large, a distance of from forty to forty-five yards—passing through the wall 12 feet in thickness of the mill, where it stopped, scattering death and destruction around, destroying a large portion of the front of the building, and bringing down portions of the floors and machinery. To add to the calamity, before many of persons of the floors and machinery. To add to the calamity, before many of the workpeople could be extricated, the boiler fire set the building in flames, and these spreading with great rapidity compelled the work of extrication. Some of the workpeople leaped through the windows into the waters of the Mersey. One man and a boy had the courage to leap from the windows of the sixth story, and escaped with only a few bruises; but another man was conveyed sixth story, and escaped with only a few bruises; but another man was conveyed to the ground, and died a few hours after. Others, more fortunate, went through the flames into the engine-house, and got out a number of men who were only breathless and overcome, but who were soon refreshed as to leave out their presence of mind. But when these efforts had been continued for six or eight minutes, a dense smoke arose from the fire-place, and it was of this part of the mill that was instantly enveloped in flames; many of those who had been striving to aid the sufferers escaped with very great difficulty, so rapidly did the flames extend. A boy was seen at a window on the fifth story, near one end of the mill to which the fire had not extended, but from which he could not escape by means of the staircase. Several ladders were got, fastened together, and placed against the building, but they only reached a little above the third storey. A rope was then procured, and a man having ascended nearly to the top of the latter, a piece of strong cord was thrown to him. The boy, however, could not catch it, but it afterwards succeeded, and he was drawn down in safety. Another man, who was standing by, caught it, but in the act of fastening it round his body, he was overcome by the smoke, and fell to the ground. Another man then ascended, and succeeded in fastening the rope round the boy, who was drawn down in safety. The man who had caught the rope was also rescued, but in a very exhausted state. Two men were seen at the windows of the fifth story, near the end of the mill, which was not burned, but suffocated. The scene was terrific

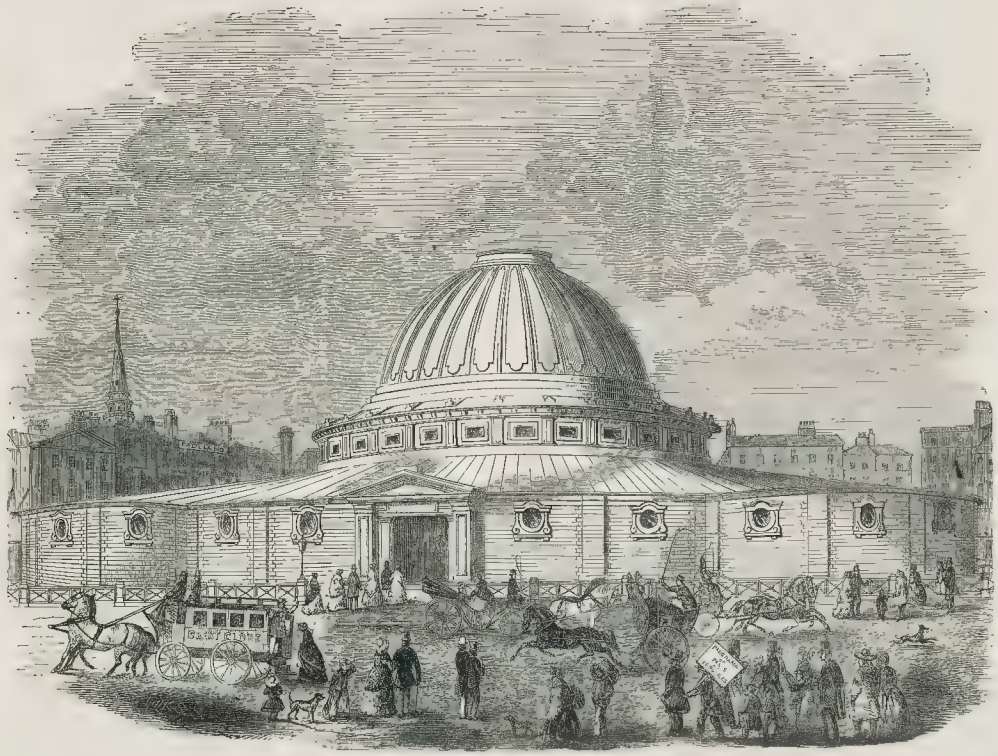
No. 476.—VOL. XVIII.] FOR THE WEEK ENDING SATURDAY, MARCH 29, 1851. [SIXPENCE.

TRADE MORALITY.

THERE are subjects of national importance and concern which never come under the notice of the Legislature, and which only at rare intervals excite from the press and the leaders of opinion the notice they deserve. Among these, the subject of "Trade Morality" is at the present time one of the most conspicuous as well as the most interesting. The character of the British nation in all the great affairs of commerce stands unrivalled. The word of British merchants is their bond. The commercial credit of our merchants generally, and of the nation of which they are the support and the ornament, is unimpeached and unimpeachable. But, unfortunately, this high character does not attach to the great bulk of retail traders; and some recent exposures go far to show that the morality of trade at the present time is not only lower than ever it was, but that it is in the highest degree disgraceful to a civilised and Christian country, and injurious in a thousand ways to the public.

The system of "slop" manufacture on the one hand, and of the adulteration of articles of food on the other, are the two great means by which dishonest traders make nefarious profits at the expense not only of the pockets, but of the very life of the community. By the manufacture of cheap articles, made for show and not for use, the public is daily robbed, to an enormous and increasing extent. People are obliged, in the present day, to live in slop houses, so thinly partitioned, that a sneeze or a cough is heard from one tenement to another. The furniture of the moderns is as sham rickety, and abominable as their dwellings. Chairs and tables, of an appearance equal to those that formerly did service for a lifetime, now fall to pieces in a twelvemonth; and even when new, will not bear the weight of an alderman or a dowager, and scarcely of a person of moderate bulk and weight. Everything is made upon the "slop" or show system, to cheat the purchaser into the idea that he has paid for a good article, when he has been shamefully defrauded with a bad one. The artificer and labourer, deprived of their fair rate of wages in the manufacture of such goods, "scamp" the workmanship in self-defence. Being cheated themselves, they take their revenge on their employers by cheating them in their turn. Articles of apparel fall within the reach of the same condemnation; and when it is not in the power of the dishonest trader to defraud in quality, he makes up for his lost chance by taking a percentage off the quantity. Where is the lady, who, having purchased silk, supposed to be sufficient for a dress, has not been twice robbed before it was made into a garment—first by the vendor, and secondly by the dressmaker, who has taken a yard or two for her own perquisite? There may be such fortunate fair ones in existence; but we suspect that their number is but few. Were the secrets of the internal management of the show-shops and the flaunting linen-drapers, and many other establishments, as fully exposed as they might be—a detail of ingenious, systematic, and pertinacious fraud and robbery would be laid bare, which would cause honest men to blush, and to ask themselves if the land were indeed as Christian as it is represented to be; and whether the hundreds of thousands of pounds per annum which are spent upon the open robbers that pick pockets and break into houses, are in reality spent upon the most dishonest portion of the British community.

But still worse than these are the attacks which are made upon our pockets through the medium of our unoffending stomachs. In great cities like London, and even in the rural districts, there is scarcely an article of food that is not adulterated, deteriorated, or poisoned. So keen is the struggle to live, so overhasty are poor traders to get rich, so onerous are the burdens upon shopkeepers, and so great is the certainty that a man contented with fair profits gained by fair means will be undersold, and finally ruined by his more unscrupulous competitors in business, that many a man, who thinks it wrong in a starving fellow-creature to steal a quartern loaf, thinks it all in the way of business, and at the worst a very venial offence, to sand the sugar, to water the milk, to flour the butter, or to "bob" the beer, which he retails to his customers. Upwards of a quarter of a century ago, the publication of a well-known chemist, entitled "Death in the Pot," exposed many of the mal-practices of the London shopkeepers in this respect, and created quite a sensation in the public mind. But the exposures then made by Mr. Accum are as nothing to those which have taken place within the last few months, and to which the public is indebted (if such miserable knowledge can be considered a benefit) to the industry and research of the editor of the *Lancet*. It appears that there is scarcely an article that we eat or drink that is not mixed up in some way with inferior substances, to the injury of our pockets, or with positive poison, to the ruin of our health. Butcher's meat



THE BUILDING IN LEICESTER-SQUARE, FOR MR. WYLD'S MODEL OF THE EARTH.—(SEE NEXT PAGE.)

which one would think offers some security against adulteration, is continually sold in a state unfit for food; and the daring wight who ventures upon the purchase and consumption of such articles as sausages or dried tongues, not only receives diseased flesh, highly spiced, to conceal the original iniquity of the bargain, but, in the matter of salted tongues, receives the lingual abominations of the knacker's yard. The number of horses' tongues annually cured, salted, and eaten in England is frightful. It may possibly be alleged that horses' tongues are not unwholesome; but, even in that case, the dishonesty and the injury remain. Bread, again, which ought to be the staff of life and health, is too often mixed up with ingredients both disgusting and unwholesome. A large percentage of bone dust and lime takes the place of wheaten flour in the loaves that are sold to rich and poor; and damaged wheat is compounded with a variety of substances that improve its colour and increase its weight, without depriving it of its unwholesomeness. The tea of the poor is known to all the world to be a vile mixture of British leaves, gathered from the hedges. Coffee is largely mixed with chicory—not at the low price of the inferior, but at the high price of the superior article—the vendors having the impudence to justify the fraud on the plea that chicory is wholesome, and that the public like it. Of fifty-six samples of coffee recently purchased at random in various shops in different parts of London, for the purposes of the exposure which is now going on in the pages of the *Lancet*, the microscope detected that only five were genuine. "The brown sugars of commerce," as we learn from the same publication, "are in general in a state wholly unfit for human consumption," and are largely adulterated with "blood, albumen, fragments of the sugarcane, starch granules, lime, lead, iron, and grit or sand," besides swarms of sugar acari, or mites, and the sugar fungi. Out of thirty-six samples of brown sugar, the acari, or sugar-lice, were found in thirty-five. The adulteration of milk is, if possible, even more disgusting. Were it confined to chalk and water, as in days of old, the robbery though gross would not be so very mischievous; but when the squeezings of horses' brains from the knackers' yards are known to be largely added to the article by the wretches who trade in this fiendish mixture, indignation is largely mingled with a feeling of nausea and abhorrence. The adulteration of malt liquor is perhaps still more notorious; and the poisons which are put into beer, before as well as after it leaves the premises of the brewers, give the medical men of the metropolis considerable extra practice, and add largely to the gains of the gravedigger and the undertaker. As for the port wines which are foisted upon the public as genuine, their parentage is log-wood; and more sherry is drunk in the United States alone than the vintages of Spain produce. In short, there is scarcely an article of food or drink, with the sole exception of fruits and vegetables, that retail traders do not adulterate, committing a double wrong and injury. Yet these very men who carry on these nefarious practices would prosecute a pickpocket or a burglar, if he stole their handkerchiefs or broke into their premises. These very men sit continually upon juries, to condemn to gaol or to the hulks their brothers in iniquity, between whom and themselves the greatest real difference is, that the one class pays rates and taxes for shops, and that the other does not. There is, to our shame, no country in the world where this system of adulteration is carried on to the same extent as in England; and there is no place in England where the villainy is so widely spread as in London. We are no advocates for the undue interference of the law, or for the unnecessary enactment of penal statutes; but when we consider the perilous dishonesty that seems to have been extending of late years among the retail dealers in all commodities, especially in articles of food and drink, and the mischievous results, not simply upon the morality, but upon the health of the people, we are tempted to wish that the Turkish practice could for awhile be enforced among us; and that it was in accordance with the general sentiment of propriety and justice, that a few score of such offenders should be nailed by the ears to their door-posts. The evil is widely spread; and the exposure promises to be so complete, that, if not promptly remedied by the guilty parties, the public will speedily take measures of self-defence. For this purpose the club system might well be tried. Provision clubs, with a command of capital, and purchasing through the agency of a small committee, or a paid steward, would, if extensively established and supported by the heads of families, bring the guilty parties to their senses by taking away their custom. The club system is yet in its infancy; but "flour clubs," for the supply of wholesome flour to the members at the wholesale price, are becoming common in the manufacturing districts. An extension of the system for the purchase of the principal articles of domestic use would be largely instrumental in purging us from this national disgrace. Let the retail poisoners look to it in time.

MR. WYLD'S GLOBE IN LEICESTER-SQUARE.

IN the ILLUSTRATED LONDON NEWS of last week we gave an Illustration showing the trusses to support Mr. Wyld's Model of the Earth, in Leicester-square, by moonlight. We have since had an opportunity of lastly inspecting the progress of the building, which, although only commenced about a fortnight ago, begins to assume, with regard to its exterior, a very finished appearance; and, at first sight, reminds one of the Colosseum in the Regent's-Park.

The building is of circular form, 88 feet in diameter, and the brickwork is 22½ inches, or two bricks and a half, in thickness. The main timbers within are the large trusses, thirty-two in number, to support the Globe itself, and the vertical timbers to support the four galleries. The level of the floor of the corridor, which is formed by the external wall and the lower portion of the exterior of the Globe, varies from 2 feet to 4 feet 6 inches above the ground forming the old garden of Leicester-square.

In designing the internal framing, the architect, Mr. H. R. Abraham, has had in view not only strength, but sufficient rigidity to prevent the possibility of cracks in the plaster modelling itself—a most important consideration, as the slightest vibration of the flooring or other timbers would rapidly destroy the beautiful work of the modeller, for the display of which the building has been specially erected. From our hasty view of the framing, we believe that Mr. Abraham has so framed and proportioned the timbers as entirely to prevent such a catastrophe.

All the foundations and walls are finely stained on concrete. The sills on the sleeper walls, to support the trusses, are 13 inches by 6 inches; and the main timbers of the trusses are also 12 inches by 6 inches; the collars being 8 inches by 6 inches and 6 inches by 6 inches respectively. The outer struts are 7 inches by 6 inches. The floor of the corridor consists of sills, 6 inches by 6 inches, resting on 32 intermediate piers. The joists are 7 inches and 2½ inches, and 14 inches from centre to centre. Supported by the thirty-two trusses is a circular curb, 12 inches wide by 6 inches thick, from which the semi-domed roof springs. The gallery uprights, 12 inches square, in two pieces, bolted together, are 42 feet 6 inches in height, and resting in cast-iron shoes, bedded on the sleeper walls.

The frame of the Globe, which is nearly completed, is formed of horizontal ribs, averaging in scantling 2½ inches by 3½ inches, and 2 feet from centre to centre, which will be faced up ready to receive the plaster modelling. The external diameter of the Globe, from batten to batten, is 60 feet 4 inches.

The walls of the corridor, which is 19 feet in width, will be adorned by maps from the establishment of Mr. Wyld.

Neither the galleries nor the staircases are as yet commenced: the former will be four in number. The height from the ground-floor to the first gallery will be 10 ft., and from one gallery to another the same height respectively, and which will be reached by 18 easy risers to each flight. The girders to support the staircases will be cast-iron. The equestrian statue of George II. still remains, but must be removed in a few days.

From 200 to 300 men have been engaged during the last seventeen days. In one more week we may expect to see the lantern at the top, nearly if not quite completed. The covering of the semi-dome, which is of lead, is already finished; and the progress made in the erection of the structure reminds us of that effected in the Great Industrial Palace.

FOREIGN AND COLONIAL NEWS.

FRANCE.

From Paris, we learn that the President of the Republic is very desirous of coming to an amicable understanding with the Legislative Assembly, by means of a Parliamentary Ministry; but that he finds great obstacles in forming a Cabinet to succeed the Transition Administration. Meanwhile the ministerial journals continued ardently for the prolongation of the President's time of office as the only way to escape a convulsion.

The recent drawings for the conscription have been made the opportunity for riotous manifestations in different parts of the country. At Chablis, Fleury, Chasey, St. Maurice, Larroche, and other communes, disturbances have taken place, but they were soon put down, and the ringleaders handed over to the police authorities. Riots have also broken out at Grenoble, arising from the suspension of the Mayor by the Prefect. Several persons were arrested.

The warehouse and workshop of M. Pleyel, the celebrated pianoforte manufacturer, in the Rue Rochechuart, Paris, were accidentally destroyed by fire on Tuesday morning. The loss of property was considerable, but it was covered by insurance. Unfortunately three men sustained much injury by this occurrence, and all the workmen's tools were consumed.

In the journals, the topics of interest discussed during the week were the projected expedition to Kabylie, for the protection of the frontier of Algeria, and the dissolution of the Strasbourg National Guards. The discussion in the Assembly on the latter topic was most violent and tumultuous.

The *Moniteur* contains a decree for regulating the nominations to the Legion of Honour, which are only to take place in proportion to the vacancies caused by death.

GERMAN STATES.

From the Dresden conferences we learn, under date the 21st inst., that the differences between Austria and Prussia on the question of Federal Constitution, are as remote from settlement as they were some months ago, and that a speedy and amicable arrangement is not to be expected.

UNITED STATES.

The accounts from New York this week are to the 11th inst., and from them we learn that serious apprehensions of an overflow of the Mississippi were entertained at New Orleans on the 6th inst. The height was within three feet of last year's.

The *New York Herald* states that the junction of the Atlantic with the Pacific by the Nicaragua route, will shortly be completed by the Nicaragua Canal Company.

Great progress has been made with the surveys; and up to the last date the engineers have fixed upon routes for a ship canal between the Lake of Nicaragua and the Pacific Ocean, and also for the passage of the Colorado from the extremity of the lake to the Bay of San Juan on the Pacific. Rio Lagos had been selected on the Atlantic side of the lake. Route, from New York to San Juan, by steam-ship; thence to the Castilian rapids at the San Juan river, by steam-boat; from this point to the river above the aforesaid rapids, a distance of one hundred yards or so, by land; thence by the river San Juan and the Lake of Nicaragua to Virgin Bay; thence to San Juan harbour on the Pacific, a distance of twelve miles; and thence to San Francisco by steam-ship. Making liberal allowances for delays, &c., this will bring San Francisco within twenty days of New York.

From California, we have interesting accounts to Feb. 1, confirming the reports from the Gold Bluffs, as to the auriferous character of the sands in that locality. The Bluffs were some thirty miles to the northward of Trinidad, presenting to the ocean a perpendicular front of from 100 to 400 feet in height, and extending to the extraordinary distance of six miles.

WEST INDIES

Advices from Jamaica to the 27th ult have been received.

The cholera was still very bad in all the sea-ports and on the north side of the island, but on the south side it had totally disappeared. Under the head of news the only matter in the letter is the publication of a document which had created considerable interest. It was addressed to his Excellency Sir Charles Grey, by Mr. Walter Knagge, who for many years filled the office of clerk in the Receiver-General's office. The document alleged that things was a defic-ency of about £5000 in the public chest. It appeared, however, from the accounts published in the Jamaica papers, that the council's auditor had called upon the Receiver-General, and had found the money correct, and left the same in his possession. The matter had been brought before the Assembly by Mr. Smith, and it was the opinion of the Receiver-General that the document was false and scandalous. Knagge was, therefore, dismissed his office.

In the island of Trinidad a day of thanksgiving and prayer had been appointed by the Governor, for their merciful preservation from the cholera, and beseeching Almighty God to still vouchsafe his protection.

The Trinidad (West Indies) journals to the 27th ult. are filled with accounts of the ceremonies attending the consecration and installation of the Rev. Dr. Smith as the new Roman Catholic Archbishop of Trinidad, which took place on the 12th. On the morning of the ceremony, the commissary of the Right Rev. Dr. Monagan as Bishop of Dominica took place; pontifical high mass was celebrated, and the Papal bull was read from the altar, appointing the Doctor to be Bishop of the diocese. The Governor caused a bishopric of the same Papal bull which constituted Port of Spain the metropolitan see of the British and Danish Islands. After reading the Papal bull, Dr. Monagan was invested by the Archbishop with the mitre, crozier, and other insignia of his office, and duly installed.

The new Vice-Chancellorship will be given to Mr. George Turner or to Mr. Kindersley; but it is said in Lincoln's-inn that the chances are in favour of Mr. Turner, who is at present member for Coventry.

BRITISH AND COLONIAL SPIRITS.—A Parliamentary paper just printed, at the instance of the Rt. Hon. C. Lewis, shows the total quantity of British and Colonial spirits on which duty was paid for home consumption, in the year 1850, was 26,164,791 gallons, viz. 23,862,385 gallons British, and 2,302,406 Colonial.

The Town Council of Perth have accepted an offer on the part of the Scottish Central, Scottish Midland, Dundee and Perth, and Edinburgh and Northern Railways, to give the sum of £500 per annum to be relieved from the town's customs and dues in future.

CHINESE MERCHANTS.—Two Chinese merchants, Ahung and Ry, have arrived at Berlin, on their way to England, to visit the Exhibition. They have preferred the overland journey through Russia to the sea voyage, which some of their associates are making in a junk.

The Hon. Charles Pomeroy Ponsonby has been elected M.P. for Dungarvan (Ireland), by a considerable majority over Mr. Maguire, the tenant-right candidate.

AN AMERICAN CLIPPER.—One of the most remarkable passages ever made across the Atlantic, under sail only, has just been accomplished by the new American ship *Typhoon*. She sailed from Portsmouth, Newhaven, United States, for Liverpool, on her first trip, coming over in ballast only, and entered the Mersey on Wednesday last, coming the passage in the extraordinary short time of fourteen days from port to port.

THE CHINA TRADE.—Mr. Ross, the vice-president of the Manchester Commercial Association, having addressed two letters to Lord Palmerston, calling attention to a proclamation issued by the Chinese Government, which, if acted upon, would lead to a revival of the old Co-Hong system, and would impose an additional charge, not sanctioned by the existing tariff, on tea, and also calling his attention to a system of smuggling prevailing at Shanghai; his Lordship replies that Sir S. Bonham has been instructed to require that the arrangements contemplated in the proclamation shall be put an end to, and that measures are in contemplation to put a stop to the smuggling complained of.

SCENE IN A CALIFORNIA REFECTORY.—One of the novelties of California is its Chinese eating-house; and, by the way, the celestials dish up ordinary "fodder" in a very good style. In our own market they keep a sharp look out for every choice article of food which offers from a grizzly bear to a partridge. It was a matter of curious inquiry with ourselves how they managed to understand the calls for different articles made by their customers, when apparently none of them understood or spoke our language. During one day at their table, the mystery was solved. One of the proprietors, who understood English and talked it tolerably well, posted himself, during meal time, in the kitchen, to superintend the cooking, and translate the calls of customers to the cooks; while the waiters, who were totally unacquainted with English, echoed the translation in the larger of our public rooms. One young gentleman called for a plate of "mutton chops," and the waiter, not exactly catching the sound, asked, as plain as a Chinaman could, for a repetition of the order. "Mutton chops, you chuckle-head!" said the young gentleman. "Mutton chops, you *chuckle-head!*" shouted the Chinaman to the kitchen. This caused a general laugh round the table, and considerable commotion in the kitchen. The proprietor's vocabulary of English embraced no epithets or names bearing the title of "chuckle head." This joke took among the customers at the table, and presently one of them called out, "A glass of pigeon milk, you long-tailed Asiatic." "A glass of pigeon milk, you long-tailed *satie*," echoed the waiter. "A barrel of homœopathic soup, old smooth head," shouted another. "Barrel of homopathy soup, old smooth head," echoed the waiter. "A hat full of brick!" shouted a third. "Flat of brick," repeated the waiter. By this time the kitchen was in a state of confusion, and the proprietor in a state of perplexity, perspiring with anxiety to please, and totally ignorant as regarded the character of the dishes called for; he presented himself before the hungry assembly for a description of the different things they wanted. "What do you mean by pigeon milk, homopathy soup, and de brick? How you cook him, gentlemen?" A roar burst from the table, and the shrewd Asiatic saw in a moment that they were laughing at his subordinates. "The gentlemen make you a — — fools!" said he, smiling again into the smoky recesses of his culinary department; but, whether he meant that the gentlemen were making fools of his waiters or themselves, remains one of the uncertainties consequent upon a Chinaman's incorrect knowledge of our language.—*Stockton (Cala.) Journal.*

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

COUNTY COURTS (FURTHER EXTENSION) BILL.

On the motion of Lord ECCLESIAM, this bill went through committee *pro formâ*, in order that some additional clauses might be added.

COMMONS INCLOSURE BILL

On the motion of the Earl of CARLISLE, this bill went through committee, and was reported to the House.

SALE OF ARSENIC REGULATION BILL.

The Earl of CARLISLE moved the third reading of this bill. He had received a great number of communications from all parts of the country on the subject of the bill, containing suggestions on the subject, one or two of which he had adopted. The bill, as it originally stood, made it imperative on the seller of arsenic to enter in a book, which was to be kept for the purpose, the name and residence of the person making the purchase, and the purpose for which he alleged that he wanted the poison. He now proposed to make it also imperative that the purchaser should sign his name, and, in certain cases, he should require the presence of a witness. This, he thought, would facilitate the means of detection if an improper use should be made of the arsenic. It had been represented to him that many deaths from arsenic took place by accident, and it was recommended that some foreign colour should be given to it. Arsenic was used extensively in the arts and manufactures, and also by agriculturists. In the former case colouring matter might interfere with the use made of the arsenic, but that objection would not apply to the purposes for which the agriculturist used it. He proposed that no person should sell less than 10 lb. of white arsenic, unless a purchaser applying for a less quantity stated that he wanted it for a purpose which the colouring matter would interfere with. He also intended to propose that it should be coloured with indigo, and, when that substance could not be obtained, with soot, which would be less expensive, and would not interfere with arsenic as used to preserve wheat from insects and for other agricultural purposes. He further intended to insert a clause to the effect that arsenic should only be sold to male adult persons, as many accidents had arisen from the carelessness of children and female servants. (Hear, hear.) In cases where any quantity less than 10 lb. should be sold, he proposed to require the signature of the purchaser, but also the presence of a witness who should know the purchaser. (Hear, hear.) From all the inquiries he had made, he was confirmed in his original opinion that it would not be desirable to extend the provisions of the bill to other poisons than those contained in the bill. He considered it better, in the first instance, to confine legislation to this common, and, at present, easily obtained poison. (Hear.)

The bill was then read a third time, and passed.

FOREIGN FLOUR.

The Earl of DESART moved for returns showing the importations of wheat and flour into the United Kingdom from foreign countries, during the years 1849 and 1850, and the first quarter of the current year. He observed that complaints were especially made respecting the importation of foreign flour, because this flour, not a raw product, but a manufactured article; and the evils which had been produced were of serious magnitude, since a number of mills had been obliged to stop work in Ireland. When the returns were delivered, he should perhaps take some future opportunity of directing their Lordships' attention to this subject.

Earl GREY admitted that the importation of foreign flour had been great, but believed it to arise from disadvantageous duties and not solely at large. It might be that our millers were suffering from French competition, but the French possessed no advantages which were not equally available to the British miller, while the British had advantages which the French miller did not possess

Lord STANLEY, in spite of the noble Earl's observations, thought the facts of the case, as exhibited in the sufferings of the millers, were entirely against him.

After some further discussion, in which Lord Brownlow and Lord Malmesbury took part, the motion of Lord Desart was agreed to.

The Earl of WINCHILSEA, in presenting a petition against Papal aggression, was about to enter upon the case of Sir Thomas Talbot, which he stigmatised as one of the greatest conspiracies ever heard of, when Lord CAMPBELL reminded the noble Earl of the impropriety of making remarks on cases which were *sub judice*.—Adjourned.

HOUSE OF COMMONS.—MONDAY.

COLLIERY EXPLOSIONS.

Mr. CAYLEY, referring to the recent accident in the Victoria coal-pit, near Glasgow, asked if any report had reached the Home-Office on the subject. He had also to ask whether the inspectors of mines had instructions for carrying out a proper system of ventilation?

Lord SEYMOUR had no report regarding the melancholy accident to which the hon. member referred, except a statement from the inspector that such an accident had occurred. The inspector had repaired to the scene of the accident as soon as he had heard of the occurrence, but a thorough examination had yet taken place with a view to discover the cause of the casualty. The inspector, however, was still on the spot in the discharge of his duty. The Inspectors of Mines had no power under the act to enforce any mode of ventilation, but were only required to inspect and recommend.

THE EXHIBITION BUILDING

Mr. KER SEYMER inquired of the noble Lord at the head of the department of the Woods and Forests whether any further steps had been taken for removing the obstructions to the view of the Exhibition Building in Hyde Park were to be removed?

Lord SEYMOUR said he had received a great many applications from the Commissioners of Exhibitors, wishing to remove certain obstructions, and also from exhibitors, who stated that their space was very much confined by these trees. He had inquired into the matter, and had answered these applications by stating that it was not his opinion some of the trees should be removed, and that he purposed communicating with the Treasury on the subject. (Hear, hear.)

THE EASTER RECESS.

In answer to Lord Robert Grosvenor, Lord JOHN RUSSELL said that he did not think, from the state of public business, that he could move the Easter adjournment until Tuesday or Wednesday in Passion week. He also announced his intention of moving, that, after Easter, orders of the day should, upon Thursdays, take precedence of notices of motion.

CASE OF MISS TALBOT.

Mr. REYNOLDS, alluding to the case of Miss Talbot, stated the evidence on which he had ravished the assertion that the lady was not a spectator in the convent where she resided, and reiterated his confident belief that this statement was well founded, admitting, at the same time, that Mr. Craven Berkeley had some grounds for making his counter assertion.

Sir B. HALL accepted with pleasure the agreeable solution, by which it appeared, that, if one statement was right, the opposite statement was not wrong.

ECCLESIASTICAL TITLES BILL.—ADJOURNED DEBATE

The adjourned debate upon the Ecclesiastical Titles Bill was resumed by Mr. FAGAN, who described the bill as the offspring of popular hatred of Catholicism; and, after urging the absolute necessity of complete episcopacy to the Catholics, defied the Protestants to restrain synodical action, or the introduction of the canon law, by this or any other bill.

Mr. SMYTHE opposed the bill, which he described as an effort to meet a sham aggression by the creation of sham pains and penalties. He argued that the policy which had dictated this law was opposed to our previous system, especially as regarded our colonial possessions. He complimented Earl Grey upon his large and statesmanlike views in reference to the religious government of those colonies, and for developing in each of them the law of property from which the colony originally emanated. He had, moreover, governed Catholic Malta in a spirit of justice, and had given to the Catholics of Ireland the same. And yet, with strange inconsistency, it was sought to prevent the English and Irish Catholics from living under Catholic law. It was, he said, impossible that this measure could be carried into execution, and it must end in a miserable fiasco. The fact, for the subject was one which legislation could not affect. It was purely a question of conscience. At the same time he admitted that the Pope's attempt had been a blunder, and that the process of producing a Christian unity in England by such a rescript was worthy of the mind which had endeavoured to produce a political union in Italy. The step had been a blunder "on the sudden," which would be repeated "on the slow." And yet he would give the Pope credit for understanding the signs of the times sufficiently to seek to erect a voluntary church side by side with a state church, and for sending over a Cardinal with a merchant's wallet under his robe. The Pope had never had more power than now—witness his being restored to his capital by bayonets furnished and paid for by universal suffrage in France, and the independent position of the Church at the present moment in Austria.

Mr. MOCKTON MILNES thought that an important act of aggression had been committed, and said he should support the bill, which he afterwards contended would place the Catholic Bishops in England in the same position as those in Ireland.

Mr. SADLEIR denied that the Catholics would allow their loyalty to be smirched by foreign influence, and maintained that the establishment of the proposed bishops was essential to their protection. He went at great length into argument in reply to various observations on the bill and assailants of the Catholics, and announced his opposition to the bill.

Mr. H. BERKELEY thought that Lord John Russell's conduct, in reference to this bill, had been very injudicious, and that he had created clear alarm of the Exeter-hall bigotry of Lord Ashley and the *dolce far niente* of Sir James Graham. He scoffed at the Puseyites, and asked the Government to bring in a stringent measure to prevent the English clergymen from introducing new doctrines or practices in the Church.

Sir J. YORKE feared, that, if put into practice, the measure would excite an antagonism which would render necessary further and stronger legislation. He doubted not the good faith of the Ministry in proposing the measure, but, considering the principles of toleration to be far more important than the effects looked for from the bill, he could not give his vote.

Mr. H. GRATTAN remarked upon the theological character of the debate, wherein the speakers had signalised their own religion by abusing that of their fathers. The bill had been confessed by Lord J. Russell to be the foundation of inferior measures, and was evidently the commencement of an anti-Irish legislation, although Ireland had shown itself perfectly quiescent and deserved no punishment. Referring at great length to the histories of the Union, and the administration of Irish affairs before and since that event, the hon. member drew from them materials for some vehement denunciation of the measure.

Mr. GRANTLEY BERKELEY rose only to repudiate, as an indignant Protestant, the accusations thrown out against the Catholics by Mr. Drummond, on whom

he resorted the charge of superstition; and, referring to Mr. Drummond's ridicule of Popish miracles, retorted by charging that gentleman with believing in a ghost which he supposed to haunt Albury Park. He announced his intention to support the bill.

Lord CASTLEREAGH said that the measure was unsatisfactory to everybody; Ireland loudly and almost unanimously declared against it. Considering it an irritating and annoying bill, he should vote against it.

Mr. A. HOPE remarked upon the difficulty the supporters of the bill had in reconciling their tremendous denunciations of Rome with any approbation of so inoperative a measure. We were trying to deal with a diplomatic and an international question, without reference to the ordinary rules which should govern our treatment of such matters. Even if we displayed an actual cowardice in fearing, with all our national and religious advantages, to face and cope with Catholic organisation in England. Having opposed the measure when a stronger one, he should now oppose it as petty in itself, and disgraceful to the nation from which it proceeded.

Mr. HORSMAN moved the adjournment of the debate.

Lord J. RUSSELL said that he thought the bill had been sufficiently discussed, twenty-six members having spoken against the bill, and twenty-two for it, and all the ablest arguments which could be adduced had been advanced upon the subject. He hoped the debate would now be concluded.

Mr. MOORE and Mr. SCULLY urged an adjournment, and declared that the Irish members had not been heard.

Sir GEORGE GREY said that fourteen Irish members had spoken on the matter for eleven hours and a half.

Mr. OSWALD wished to hear the Scottish supporters of the bill defend its introduction into Scotland.

Mr. MAURICE O'CONNELL wished to speak, but refused to do so before a jaded audience like that around him. Lord J. Russell should be met on a division or ten divisions for an adjournment

Lord ARUNDEL and SURREY said that only seven Catholic members out of thirty-seven had spoken, and many others were anxious to do so.

Mr. REYNOLDS enumerated a long list of members who, he considered, ought to speak upon the question. Another reason for delay was, that it had already caused Lord J. Russell out of a good part of his bill, and renewed delay might produce a further beneficial effect.

The House then divided on the question of adjournment, when the numbers were—

For proceeding	.. ..	414
For adjournment	.. ..	64
Majority for proceeding	.. ..	350

Mr. M. O'CONNELL then moved the adjournment of the debate.

Lord J. RUSSELL then said that the House having expressed its opinion upon the subject, he should not, for the sake of peace and quietness, but should assent to the adjournment.

Further discussion arose as to the time to which the debate should be adjourned, Government proposing that it should be adjourned until twelve next day (Tuesday), and the Irish members demanding that the hour should be the usual one, five o'clock.

The House again divided, when the numbers were

For adjournment until twelve	.. ..	306
For adjournment until five	.. ..	43
Majority for adjournment until twelve	.. ..	263

Mr. KNOX urged Lord J. Russell to assent to the five o'clock proposal; that in such haste, one would imagine the measure was a "coercion bill." (Hear, hear.)

Lord J. RUSSELL then agreed that the debate should be resumed at half-past four next day (Tuesday), the House rose at two o'clock in the morning.

HOUSE OF LORDS.—TUESDAY.

THE ESTABLISHED CHURCH IN THE COLONIES.

The Bishop of OXFORD called attention to the state of the Church in the Colonies, on which he considered something definite ought to be done by the Government.

Earl GREY confessed that some hypothetical difficulties existed, but no practical questions had yet arisen, and, before proceeding to legislate, recommended the completion of an inquiry then being instituted, was already commenced in some of the colonial dependencies.

Lord MALMESBURY presented several petitions remonstrating against the injustice of the present assessment for the maintenance of churches upon tithes and rent-charges. These petitions the noble Lord supported on behalf of the working clergy.

Earl GREY said that the Government had no intention of introducing a bill upon the subject.—Adjourned.

HOUSE OF COMMONS.—TUESDAY.

CHARITABLE TRUSTS.

In reply to Mr. Mullings, Sir G. GREY said that a bill on the subject of charitable trusts had been prepared by the Government, and would be brought into the other House immediately.

SALARY OF THE MASTER OF THE ROLLS.

Mr. WILLIAMS said, it had been stated that the office of Master of the Rolls was likely soon to become vacant; and he wished to ask the First Lord of the Treasury whether, in filling it up, it was intended to make any reduction in the present salary of £7000?

Lord JOHN RUSSELL was understood to say, that, when it was proposed to fill up the office, the salary should not be agreed to without the subject being brought under the consideration of Parliament.

In reply to Mr. Christopher, Mr. HAWES said that the presence of Sir Emerson Tennent in this country arose from circumstances of a purely domestic character. He had not seen him since his arrival, his presence here in any way connected with any inquiry at present going on.

ECCLESIASTICAL TITLES BILL.—ADJOURNED DEBATE

The adjourned debate was resumed by

Mr. HORSMAN, who argued that the Papal rescript inflicted no insult, and produced no aggression, and required legislative interference. He approbended much injury from the acrimonious debates which the subject had occasioned, fearing, especially, the handle that would be given to the scoffers and infidels.

Mr. FOXTAL, in a maiden speech, dwelt upon the infelicitous scope that was given to the bill, just enough to irritate, and not enough to resist, rendering it as a measure impotent for good, but all powerful for evil. Acknowledging that the Papal act was an aggression upon the Church, he thought that the Church should not rely on the State for protection; and, proceeding to examine the measure as a piece of legislation, contended that it could not be made to work effectively.

Mr. J. O'CONNELL maintained that the bill was unjust liable, and the debate had been a mine of exploded calumnies against the Catholics

Mr. C. LAWLESS accused the Prime Minister of inconsistency, having professed to govern Ireland on tolerant and liberal principles, while in reality he passed nothing but coercion bills and penal enactments, of which the present bill was the latest specimen

Mr. MILNES dwelt on the aspect of the Christian world, where every country owning the supremacy of the Pope was less advanced than the Protestant nations, the best reason for resisting every attempt at intrusion and aggression by the Pope. He owned that very cogent arguments had been urged against the bill by Sir James Graham, but had not found his determination to support it shaken thereby

Mr. SCULLY opposed the bill, controverting the assertion that the Pope had committed any act of aggression.

Mr. HENRY had watched with pleasure the progress of recent years, in which sectarian acerbities had become mollified and governments deprived of an excuse for persecution. He therefore noted with the greater sorrow the retrograde policy of the Ministry, who, in connection with the Pope, for years; although themselves had borne a chief share in building the edifice of toleration they now seemed determined to destroy. On first reading the letter of Lord John Russell, he had sympathised with the political necessities which, he presumed, had compelled him thus to prepare employment beforehand for unquiet spirits during the session. But he found no justification for the bill now before them or for the speech by which it had been introduced by the Prime Minister, and he saw no proof that the rescript was an aggression. The establishment of the Catholic episcopacy had been urgently demanded by the English members and their faith, was currently talked about years since, and was merely a copy of the system existing and recognised in Ireland. It was children folly to adopt penalised measures, at this time of day, against an untried an aggression. The bill would create many inconsistencies in Scotland, and many difficulties in Ireland.

Sir F. TRESIGER remarked upon the opposite points from which the subject had been argued, on one side by those who saw in the Papal act an exercise of indefeasible spiritual right, and on the other by those who viewed that act as an aggression upon the religious liberties of the country. Assuming, for argument's sake, the latter position, he contended that the present measure raised no barrier against the aggression, nor provided any preventive of further mischief. On the opposite side, again, he maintained that no explanation had been given of the alleged religious necessity which was said to have existed for the serious hierarchical changes effected by the Pope's rescript. He was forced to seek for other motives, and from the tone of the debate, and from various quarters, inferred that these motives partook of a political and intrusive character. which demanded the most vigorous measures of defence. Examining the state of the law in Ireland, from the date of the Revolution of 1688, he argued that the existence of Catholic bishops in that country was at first absolutely prohibited, and had never since received a statutory permission. The appointment of such prelates in Ireland by the Pope was, therefore, as clearly an act of aggression as it was in England. Adverting then to the laws restraining the introduction of Papal bulls, he regretted the inconsiderate kindness which, since 1829, had removed all the penalties from those laws, and, by dismantling the fortress of our nationality, allowed an access to take possession. But, by repairing all the long-established safeguards provided by law, the new act of the Minister had done a great injury to the very cause it was designed to serve. He found in the terms of the rescript the assertion of a principle whose natural development would speedily lead to an universal dominion. The new episcopacy, it was alleged, would constitute a fresh barrier between the English Catholics and the Pope; but what advantage was that, if the religion itself aggrandized its power in this country? Altogether, he concluded that the Minister, consistently with the maxims that induced him to prune away the second and third clauses, must vote against his own bill, unless he admitted into the retained clause a series of exceptions so wide as to swamp the whole of the purport of the measure. For his own part, he intended to vote for the second reading; partly because he thought legislation so necessary that he would accept even a minimum measure, but principally because he looked forward to the probability of getting it largely strengthened in committee.

Sir J. GRAHAM having corrected some dates which had been impugned,

Mr. GLADSTONE expressed his astonishment at the boldness with which Sir F Thesiger had repudiated the principle of coercion. Standing alone, as he (Mr. Gladstone) did, among the University members as an opponent to the bill, he could not, however, while consulting the highest interests of the Established Church, consent to be placed in the invidious position of a man who had vaunting large cases of the subjects and their religious liberty. The true interests of the Church of England and Ireland were not to be promoted by pretending to place them between our fellow-subjects and constitutional rights—equality. He conceived he had no fear for the freedom of the Queen, but he admitted that the position of the Church was one of difficulty—a difficulty, however, which could not be met by temporal legislation. He referred to the possibilities of Papal encroachment which had been shadowed forth by Lord J. Russell, and expressed his opinion that the duties of a Premier were confined to the existing necessities of a case. The language of a Pope and Cardinal had been unfortunate and vaunting—a doubt unintentionally offensive, but still open to complaint; but was that a reason for visiting it upon those who were no parties to it? As to a breach of the law of nations, Lord J. Russell would greatly have disgraced himself had he written his Durham letter while believing that such a breach had been committed. And had the Pope really committed that wrong, Government would have been perfectly justified in sending an envoy to Rome to demand redress. But the question was now one of the bill itself. None of the speakers for it had been very eager in its defence. He proceeded to examine some of the arguments adduced on the Ministerial side, and then asked whether anybody could state what would be the real effect of the measure. The Attorney-General had declared that it would not prevent synodical action, and (as he had understood) the Solicitor-General that it would. And the contradiction of opinion as to the effect of the existion of the second and third clauses, and whether the first would do their work, was still more remarkable. The public believed the bill to have been intended to maintain the rights of the Crown, alleged to have been violated by a foreign power. The bill contained no reference to this foreign power, but imposed penalties upon certain of her Majesty's subjects. And he argued that the bill was further incomplete, for we extended to certain Presbyterians and Wesleyans the right to what were virtually spiritual titles, while we proposed to refuse it to the Catholics, so that the territorial claims of the Crown were only partially defended. Denying that this measure was a necessary out of the Act of 1829, he proceeded to a refutation of other arguments previously advanced, and declared that the acknowledgment by Catholics of a foreign spiritual head gave us no claim to deprive them of the full exercise of those spiritual rights. Before interfering with the powers exercised by of the necessity of their ecclesiastical appointments. Was it the Catholics' duty to satisfy us upon this point? Surely not, if religious liberty meant anything at all. No proof had, he maintained, been furnished that the appointment of these bishops was a temporal act. He then asserted the utter impossibility of preventing Catholics from obeying the canon law—observed that they repudiated the protection which the promoters of the bill had sought to confer upon them—and insisted upon the unequal and unfair action of the supremacy principle, as they now sought to be asserted. Next adverting to what he described as a most important part of the case, he stated, and cited a long series of authorities to prove, that, ever since the Reformation, there had existed two distinct parties among the Catholics of England. The public believed the laity and the mass of the laity had always been struggling, with the sanction of the British Government, for the appointment of this diocesan hierarchy, while the regular clergy, in connexion with the Jesuits and Cardinals, had always resisted such appointment. The moderate party had always striven for diocesan episcopacy, and the extreme party had always adhered to the vicars apostolic. The course we were now taking, with a minister in the law, could not but help back the Catholics upon the Pope. The bill was a nullity as regarded the people of England, and a persecution of conscience as regarded the Catholics. He urged the House to attempt a different course with the Catholics of Ireland, and treat them kindly, as a far better mode of gaining them over. He refused to go one step backward in the enlightened course of legislation, not knowing how many retrograde steps he might, in consequence, be compelled to take. Demanding whether we were disposed, forgetting the function of England on the broad field of the earth, to spend the latter half of the nineteenth century in undoing what, with so much labour and pains, she had accomplished in the former, and urging upon Parliament to show the Pope and the Cardinals that England's principles, like those of Rome, were immutable, he concluded by declaring that the small minority to which he belonged was sustained in this struggle by the sense of the justice of its cause.

Mr. DISRAELI denied that the Pope was a Prince of no great power, inasmuch as he possessed an army of one million priests, officered by a thousand bishops, and with archbishops who could be counted only by the score. Was this the power to be compared with Wesleyans and Dissenters? But, he said, this was a mere colourable argument, used by the last speaker, who in reality meant much more. What Mr. Gladstone and his friends meant was, that Papal organisation and freedom without synodical action must be met by an order that the same liberty of synodical and other action might, upon the same grounds, be hereafter claimed for the Church of England. In other words, Mr. Gladstone was opposed to the second reading of the bill, because he did not like to examine the bill before the House, stating, that one of his objections to it was, that it admitted by implication that the conduct of Cardinal Wiseman was not illegal. He denied that the law against which the Cardinal had offended was obsolete, and said, that it was treason to the liberties of England to call a law obsolete because it was ancient. Another objection was, that the bill dealt with phrases, and not with facts; and, moreover, that it ought to have legislated, not only against the assumption of titles by Catholic bishops, but against the ascription of titles to them by her Majesty's subjects. But the bill did not assert ed no principle. He admitted that the relations which existed between himself and the noble Lord were not of that friendly character most favourable to candid criticism; but he said, that, if Lord John Russell had been a Catholic, he would certainly have spared neither his policy nor his feelings. Continuing his reference to Sir J. Graham, whom he described as a "white-robed candidate for Cardinalar honours," he accused him of threatening violent resistance whenever anything occurred distasteful to him menacing complaining farmers with the army, refractory constituencies with a new Reform Bill, and the enemies of Papal aggression with a civil war in Ireland. He announced that he should support the bill on the grounds assigned by Sir F. Thesiger, believing that the rights of the Crown, of the Protestant establishment, and of the liberties of the Catholics themselves were involved in the question.

Sir G. GREY replied. He could not regret the recent act of the Pope which had evoked such Protestant spirit, and would draw all denominations of Christians into closer and honourable union. He then reiterated the argument that the Pope had committed an aggression upon the rights of the Sovereign, and repeated the defence of the bill before the House, drawing various points in the addresses of preceding speakers, some of whom he sought to convict of inconsistency as regarded the course they had taken in reference to the measure. He dwelt on the great earnestness with which opposition to the Pope, and upon the necessity of repressing it at the outset, but denied that the proposed bill was in any way hostile to its principles of religious freedom. Insisting upon the unsuitableness of the bill with which he had asked leave to proceed, and (amid the loudly expressed impatience of the House for a division) by appealing to the House to preserve unimpaired the privileges handed down to us by our ancestors.

The Earl of ARUNDEL and SURREY rose to speak; but was informed by the Speaker that he had no right to do so, as he had already spoken in moving the amendment. (A scene of considerable uproar here ensued, and cries of "Hatchell" (the Attorney-General for Ireland) resounded from all parts of the House, accompanied by much laughter.)

Mr. P. HOWARD protested against the assumption that the Roman Catholics claimed any temporal power in the establishment of a hierarchy. He also protested against the attempt to penalise a large body of Queen's subjects.

Sir G. GREY explained that he had merely asked the House to place a brand of illegality on the recently assumed titles.

The House then divided, when the numbers were—

For the second reading	.. ..	436
For the amendment ..	.. ..	95
Majority for the bill	.. ..	341

The announcement of the numbers was hailed with loud cheers

The bill was then read a second time.

Lord J. RUSSELL said, on Monday he would fix a day for going into committee

Mr. ROCHE said it was important that there should be a full attendance of Irish members on the committee.

Lord J. RUSSELL said he would not appoint a day for the committee before a fortnight after the Easter recess (Hear.)

The committee was then appointed, *pro formâ*, for Monday next.

The House adjourned at a quarter past one o'clock on Wednesday morning

HOUSE OF LORDS.—THURSDAY.

FOREIGN REFUGEES

Lord LYNDHURST rose to draw the attention of their Lordships to what he called the reprehensible conduct of certain foreigners in this country. This country had always extended hospitality to foreign refugees; but it was the duty of those refugees to abstain from any hostile aggressions against foreign powers. There was in the city an association calling itself the Central National Italian Committee, composed of persons expelled from Rome after the insurrection. These persons had opened a loan in this country for the purpose of carrying into execution their pernicious designs of establishing a Republic in Italy, and they issued shares for this purpose, signed by Mazzini and other persons. It was quite obvious that this was a breach of the obligation they incurred when they came here to seek protection from our laws. There was another society, which, styling itself the Central Democratic European Committee, formed for the avowed purpose of exciting insurrection in Europe, had addressed a proclamation to its partisans, exciting them to insurrection: the parties to this proclamation were Mazzini, Ledru Rolin (who, as soon as he came to England, attacked the country which had afforded him hospitality in the most malignant terms), and also other persons well known in the Polish and German insurrections. There was also another committee to which he wished to draw attention: it was the Central Committee of Hungarian Refugees. At the head of this committee was an officer named Kinpka, who, at the conclusion of the Hungarian war, commanded at Comorn. This committee had addressed the Hungarian soldiers in Italy in the most shocking terms, endeavouring to induce those soldiers to rebel against Austria. He was sure the Government must be most anxious to put an end to these unwarrantable proceedings.

Earl GREY regretted that he had not been aware of the intention of the noble and learned Lord to bring this subject before the House. Had he been so, he would have planned himself in communication with an noble friend the Secretary for the Foreign Department, and his right honourable friend the Secretary for the Home Department, whose attention he knew had been directed to the subject, and who were anxiously watching their proceedings. He understood the noble Lord considered there was no remedy, save the renewal of the Act of 1848; but he would remind their Lordships that those powers were asked for and granted solely to ensure the safety of the country, and that for no other purpose should that power be exercised. As to whether those powers should be exercised for any other purpose, he would not now express an opinion; but he would say, that nothing but the most flagrant and urgent necessity would justify the Parliament in granting, or the Government in accepting, such additional powers.

The Earl of ABERDEEN thought the noble Earl ought to have expressed his disapprobation of their proceedings, because out of doors great doubts existed as to the subject. It would be satisfactory to the Governments of Europe to have a declaration of disapprobation from this Government.

Earl GREY felt humiliated in being called on in that manner by the noble Earl. (Loud cheers.) He thought, when he said the attention of his noble and right hon. friend had been directed to the subject, that their Lordships would understand that the Government distinctly disapproved of the proceedings to which the noble and learned Lord alluded.

THE CENSUS.

The Bishop of OXFORD presented a petition from some of the clergy, requesting that they might not be forced to answer certain questions put to them in relation to the census.

COUNTY COURTS EXTENSION BILL.

The report on the County Courts Extension Bill having been brought up,

Lord BROUGHAM suggested that the bill should be re-committed, as the amendment had been only that day put into his hands.

The Bill was then ordered to be re-committed, and their Lordships adjourned.

HOUSE OF COMMONS.—THURSDAY.

A new writ was ordered for the county of Somerset, in the room of Sir ALEXANDER ACLAND, deceased.

Mr. GRANTLEY BERKELEY gave notice of a motion for continuing the differential duties on foreign and colonial sugars for five years longer.

DISTURBANCES IN THE COUNTY DOWN.

In answer to Mr. ROEBUCK, Sir GEORGE GREY said he had received a report of an alleged attack by the people upon the sheriff and constabulary who were employed in levying a distress upon some defaulting tenants. He would, if the report justified it, lay a copy of it upon the table.

STEAM TO INDIA.

Viscount JOCELYN then rose, pursuant to notice, to move for a committee to inquire into the question of the existing steam communications between England and India; and to report whether any improvements may be made in the conduct of those communications, previous to the grant of a further contract to any company proposing to carry on that line. He considered the subject one subject of steam communication, having for its object a line or lines connecting England, India, and Australia; and to report the most fitting mode in which such communication may be effected with due care to economy and advantage to public interests. There were many considerations which induced him to bring this motion forward, but the principal one was that the contract now in the Peninsular and Oriental Company would expire in 1853, which would give the Government an opportunity of changing or selecting a better means of communication with our Indian empire. He made this motion entirely on public grounds; he had no hostility to any existing companies; on the contrary, he thought they were much indebted to them for the accommodation which their services had given to the public, and the spirit and energy with which they conducted their trade. The noble Lord having pointed out the various routes which it would be most advisable to consider, concluded by submitting the motion

Lord SANDON moved an amendment, for the purpose of directing the inquiries of the committee to a line of steam communication with Australia, in the first instance

Mr. GLADSTONE objected to fettering the discretion of the committee.

After some remarks from Mr. F. SCOTT, Mr. MACGREGOR, and Mr ANDERSON, The CHANCELLOR of the EXCHEQUER admitted the importance of the subject, and advocated the propriety of leaving the discretion of the committee unfettered.

Lord SANDON then withdrew his amendment, and the motion was agreed to.

COMMERCIAL RELATIONS WITH SPAIN

Mr ANDERSON called the attention of the House to the differential duties levied on British ships in the ports of Spain, and moved that such additional duties should be levied on all merchandise exported in Spanish ships as would serve to countervail these differential duties.

The SPEAKER pointed out an informality in the motion, and suggested an alteration in the terms, which led to the appointment of the committee for a future day. The having been assented to by Mr. Anderson,

Mr. MOFFATT seconded the motion, maintaining that it was no return to Protection principles, but was exceptional one, and intended only to meet the case of Spain, which had imposed duties upon British ships, and then was bound to adopt such measures as would compel Spain to deal liberally with Great Britain.

Mr. LOUCHERER admitted that Spain had, in an unfriendly manner, refused to enter into a fair commercial convention, but Lord Palmerston was at that moment engaged in making remonstrances upon the subject; and, if those were not sufficient, it might be requisite to come to the House of Commons for its sanction to a different course of action. He could assure the House the question would not be lost sight of by the Government, and hoped the motion would not be pressed

Mr. HUME deprecated retaliation, as never leading to the desired result; and Mr. MILNER GIBSON hoped the motion would not be pressed.

Lord PALMERSTON believed the Government of Spain was opening its eyes to the impolicy of its restrictions on commerce, and the British Government was urging the question as strongly as possible in its negotiations.

Mr. BANKES and Mr. WAWN supported the motion, and Mr. Ricardo and Mr. Cardwell opposed it, suggesting that the question should be left in the hands of Lord Palmerston

Mr. ANDERSON was contented to adopt that course; but the supporters of the motion would not consent to its withdrawal, and on division it was negatived by a majority of 98 to 53.

CHANCERY REFORM

Lord J. RUSSELL moved for leave to bring in a bill for the better Administration of Justice in the Court of Chancery. The noble Lord proceeded at some length to detail the amendments that had been made in the administration of justice in the Court of Chancery, since the appointment of the Vice-Chancellors, in 1813. He stated upon the great increase of business in the Court of Chancery of late years, which imperatively called for some improved arrangement. After referring to the propositions made by Lord Langdale and others, he observed, that he had, by the bill he proposed to introduce there would be more than one judge in the Court of Chancery to take some of the duties of the Lord Chancellor, and he had devote more attention to the higher portion of his office. He proposed to give him the assistance of the Master of the Rolls and one of the Common Law Judges, who, in the Chancellor's absence, might exercise his functions, under the Lord Keeper, Lunacy, or any other matter. He proposed, also, that the ecclesiastical patronage vested in the Lord Chancellor should be transferred to the Crown.

Mr. STUART DENMAN seconded the motion, and the amended purpose The Master of the Rolls would be obliged to shut up his own court in order to attend in the Court of Chancery. He also objected to the transference of the church patronage of the Lord Chancellor to the First Minister of the Crown.

Some discussion ensued, in which Mr. Roundell Palmer, Mr. J. S. Wortley, Mr. Headlam, Sir H. Willoughby, and the Attorney-General took part, after which the House agreed to bring in the bill; and the House, after disposing of the other business on the paper, adjourned.

RETIREMENT OF THE MASTER OF THE ROLLS.

On Tuesday, the Rolls Court was greatly crowded, as it was understood that Lord Langdale would take his leave of the Bar on that day.

At the close of the day's business, Mr. Turner, on the part of the Bar practising in the Rolls Court, addressed his Lordship, expressing the great regret of the Bar that the state of his Lordship's health made it necessary for him to resign the office which he had for so many years so ably filled, and their sincere hope, that, in the retirement which he was about to seek, his health might be restored, and that he might continue to enjoy many years of happiness. It was not his intention to enter into a long examination of the manner in which his Lordship had discharged the duties of his office for years. He should on the one hand be betrayed into flattery which would be offensive to his Lordship, or on the other should fail adequately to express himself in consideration of it. He would merely notice the constant endeavours of his Lordship to simplify and improve the practice of the Court, and to diminish the delay and expense of its proceedings. The public and the Bar generally owed him a deep debt of gratitude; and, on behalf of the Bar, he desired to express their heartfelt good wishes for his Lordship's health and happiness.

Lord Langdale (who was greatly moved) said—I confess I am overpowered—I am deeply sensible of the kind expressions which have been used, and I am truly grateful for them. If I could flatter myself that such expressions were appropriate or fully deserved, I should feel greatly satisfied; but I cannot claim to myself any merit, except only the having used my best endeavours to perform my duty. No one can be more sensible than I am of my own short-comings in the performance of my duty, and I can attribute the kindness which has been shewn me only to indulgence to me, and a disposition to put the most favorable construction upon all that was done. At prodder moments, there will be a stricter scrutiny of conduct, and I, as all other judges, will be tested by the reports and by history, which will show how we have done our duty. Much is owing to the learning and integrity of the Bar, and to those I, as all other judges, am deeply indebted. Honest and upright men, in whatever position they may be placed, are the best promoters of justice, and little can be done to promote the ends of justice without the learning and integrity of the Bar; and nobody has ever received greater assistance than I have done, and I am truly grateful for it, and for the kind expressions which have now been used towards me, and I shall ever hold them in my grateful recollection

Sir J. Romilly, the Attorney-General, is to succeed Lord Langdale.

SKETCHES IN KAFFRARIA.

FINGOE WOMAN.

THE southern portion of the great African continent which forms the Cape Colony and the adjacent territory of Kaffraria, has, of late, excited an unusual degree of interest in England, from the fact of the colonists having steadily and successfully resisted the attempts of the authorities of Downing-street to inflict upon them the curse of a criminal population; and, still more recently, by the outbreak of a fourth Kaffir war.

We this week present our readers with some additional Illustrations, all of them portraits, taken by an officer who was for several years quartered in the Cape Colony; and we now proceed to give a brief description of the Colony and its inhabitants.

The Cape Colony, properly so called, was originally settled by the Dutch, from whom it was taken by the English in 1806, since which time it might, under a more judicious system of management than that which the Colonial-Office has bestowed upon it, have become one of the most valuable acquisitions of the British Crown, instead of involving the mother country in an amount of expenditure more than commensurate with the advantages it has yielded.

The original extent of the colony was defined in 1778 by the Great Fish River; beyond which was the Kaffir territory, inhabited by Amakosa and Amatambu Kaffirs. In 1779 Lord Macartney defined the boundary lines as follows:—The Great Fish River, from its mouth to Exerhaysen's Fort; thence along the Kags mountains to the Tarka mountains; thence to Bamboo's Berger; thence to the Zurl Berger, and to the Beacon at Zeekoe River

In 1819, Lord Charles Somerset, then Governor, extended the boundary by the Keiskamma River, from the sea to the Chumi; along the Chumi to the Kat the Keiskamma River, from the sea to the Chumi; along the Chumi to the Kat Berg; thence to the Winterberg, along the Zwart Kei River; the streams running from the west into the Chumi to be considered Colonial, and all the eastern branches Kaffrarian.

In 1835, under the Governorship of Sir Benjamin d'Urban, a further extension of territory took place, that officer fixing the line of demarcation as follows:—From the Great Kei to the White Kei; along the White Kei to the Stormberger range of mountains. A portion of this territory was subsequently abandoned, and the boundary again altered, as follows:—Along the Fish River, from its mouth to the confluence of the Kat River; along the Kat to the Chumi River; from the Chumi to the Kat Berg; thence to the Winterberg range, along the Zwart Kei River to the confluence of the Stormberger Spruit; thence along the Stormberger to the Orange River, which forms the northern boundary of the colony, where the country is of that description as not to admit of military defence; the large tract of territory immediately beyond presenting little else than a succession of arid deserts, where but few inhabitants are met with, save a solitary hunter or an occasional band of Kaffirs, intent only on the plunder of the nearest colonial farms.

The immediate neighbourhood of Cape Town is peopled by a mixed population, consisting of the descendants of the original Dutch settlers and English, the aboriginal population being Hottentot, but numbers of Malays, Fingoes, and Negroes are also located here.

The *Hottentot Waggon-driver* is exhibited in our Sketch enjoying the luxury of a native pipe, without which he is seldom seen. One of the peculiar traits of this section of the colonial population is their intense desire to ape the soldier in dress; thus our subject is seen in the cast-off coatee of a bandman belonging to a regiment of the line. His felt hat is surrounded by a wreath of ostrich feathers, bound together by a coloured cotton handkerchief, serving the useful purpose of keeping his swarthy countenance free from the swarms of flies that would otherwise settle upon it. Thus equipped, with a bamboo whip-handle some eighteen feet in length, to which is attached a thong of rhinoceros hide twenty feet long, he drives his unwieldy bullock-waggon, sometimes running beside his oxen, at others resting upon the foot-board of his waggon. It requires no small dexterity to use the waggoner's whip, which is wielded by both hands, and the report of which may be heard a mile off. Sandy plains, rocky kloofs, and steep mountains seem alike indifferent to our Hottentot driver, who wends his way for days and nights together, taking care to outspan his oxen every three or four hours to give them rest and water. The average distance a bullock-waggon travels in a day is about twenty miles.

Another of our Illustrations represents the ordinary *Hottentot of the Cape*. They are a more diminutive race than the Kaffirs and Fingoes, their height averaging less than five feet. Their complexion is a deep copper-colour; they are peaceable and industrious, and make excellent herdsmen, servants, and waggon-drivers: their great failing is a love of drink, to obtain which they not infrequently commit theft; but, notwithstanding this blot upon their moral character, they constitute a most valuable element in the defence of the colony, being courageous and capable of enduring much fatigue, excellent horsemen, and entertaining a *mortal* aversion to the Kaffir race, the great enemies of the colonists.

The ranks of that efficient body of troops, the Cape Mounted Rifles, which has on many occasions in the present and former Kaffir wars distinguished itself, is entirely composed of Hottentots, who, under the able guidance of Major-General

TAMBOOKIE MAN.

Somerset, have been brought to a state of the highest discipline, that would reflect credit upon any cavalry corps in her Majesty's service. The duties of this corps are of a most arduous nature, being detailed over an immense extent of country, guarding the frontier against the depredations of the wily and licentious Kaffir. So strict is the discipline observed, that when on patrole duty neither officers nor men are permitted to indulge in smoking, not even during the cold nights, which, on the mountain portion of the frontier, are occasionally very severe; nor will a bivouac fire be permitted under any circumstance. During the day, the horses (excellent ones they are, capable of performing a journey of eighty miles per diem) are suffered to graze, under the care of a non-commissioned officer and guards and at sun-set, or immediately previous, they are driven to head-quarters, where they are fed and groomed for the night.

HOTTENTOT HOUSE-SERVANT.

The outposts are invariably established in a valley; but, as the Kaffirs do not possess artillery, this seeming error in a military point of view is of no importance, and a certain amount of shelter is thus obtained from the intense heat of the sun. Care is taken that all posts are established in the immediate neighbourhood of a *drift*, or ford, thus securing an essential advantage in an abundant supply of water, and affording facilities for intercepting any body of Kaffirs who might attempt to enter the colony. The uniform of this corps is similar to the Rifle Brigade. The men are armed with a double-barrelled carbine, sabre, and pistols, and, when on patrole duty, they wear, instead of the Oxford grey overalls, a more substantial material, composed of yellow buckskin, and their appearance is altogether highly picturesque and novel, their swarthy faces and black ips contrasting strongly with their otherwise martial appearance.

A Fingoe Woman deprived of her Children by the Kaffirs.—The history and condition of these people cannot but excite interest. It appears that "Fingoe" is not their natural appellation, but a term of reproach, signifying extreme poverty and misery—a being having no claim to justice, mercy, or even life

FINGOE HERDSWOMAN.

in fact, an utter outcast. They are the remains of eight powerful nations, who have been driven out of their country by the victorious Kaffirs. Five of these nations were destroyed by the cruel Matiwana, and the rest by the notorious Zoola chief Chaka, or some of the tribes tributary to him.

Fingoe Herdswoman.—This Portrait is illustrative of the general costume worn by the Fingoe women when engaged in herding the flock: a band of gay beads guards the head: a small wooden snuff-box is inserted through a perforture in the ear; and the sheep-skin, as usual, completes the dress. The Fingoe women are tall and robust, and, like the Kaffir women, capable of enduring great fatigue; they lift with apparent ease a weight which would puzzle a London dragman to raise, and at Algoa Bay they carry passengers ashore through the surf in most excellent style.

The Tambookie Kaffirs inhabit a large tract of country bordering on the eastern frontier, adjacent to that of the Amatola Kaffirs, and differ but slightly in their manners and customs from their neighbours. The same predatory habits, the same cunning, faithless, and cruel disposition, mark their character. The only difference in costume consists in the head-dress, composed of a coloured handkerchief, which some trader may have bartered with them in exchange for the staple produce of their country, i.e. wool, hides, or horns. This is a fine athletic race, residing in beehive-shaped huts, constructed of wattle and daub, having a small aperture at one side, which performs the threefold office of door for entrance, light, and ventilation; and in these rude habitations an entire family of eight or ten persons huddle together, with no other clothing than a coarse blanket or sheep-skin kaross. A Kaffir village consists of an accumulation of these beehive-like huts, arranged in concentric circles, that of the chief being larger than the others, and placed in the centre of the village.

Next is a *Hottentot Woman House-Servant*. The Hottentot women are strong and robust, hard-working and faithful servants, where kindly treated; they make good nurses, and perform with alacrity other domestic offices. The Sketch shows a servant of all work carrying a *monkey*, or earthen vessel, containing water to drink, which, in order to ensure its being cool, is wrapped in a damp cloth, and hung up in a draught of air. To any one who has felt the intense heat of an African sun, it is needless to dilate upon the luxury of a cool draught of water. The Hottentot female servants adopt the costume of the European of the same rank, with the exception of the head-dress, which invariably consists of a cotton handkerchief folded in the form of a turban, which seldom comes off until it falls to pieces through constant wear. Such is their aversion to the approach to cleanliness, they have an unconquerable aversion to sleeping in the house of their employer, and generally pig together in a hut of their own construction. Their great amusement appears to consist in squatting upon the ground tailor-fashion, smoking, or playing upon the *Jew's*-harp, an instrument upon which they excel.

HOTTENTOT WAGGONER.

HOTTENTOT FROM SOMERSET.

THE "ST. LAWRENCE," IN SOUTHAMPTON DOCK.—UNLOADING GOODS FOR THE GREAT EXHIBITION.—(SEE NEXT PAGE.

DEPARTURE OF THE "SINGAPORE," WITH TROOPS, [illegible] (SEE NEXT PAGE.)

THE "ST. LAWRENCE" AND THE "SINGAPORE."

THE pair of Engravings upon the preceding page, representing the unloading of goods from the *St. Lawrence*, and the troop embarkation on board the *Singapore* steamer, are striking pictures of the missions of Peace and War: one charged with contributions to the competitive industry of the whole world; the other bearing armed multitudes to repress provincial rebellion. The contrast is not with slight moral.

The American frigate *St. Lawrence*, 50, Commander Sands, was berthed in the tidal basin of the Southampton Docks on the 14th, and immediately commenced discharging her heavy cargo, preparatory to transmission to the Great Exhibition. The appearance of so large and fine a ship of war in the commercial docks of this town, while exhibiting in a most favourable point of view their capabilities for accommodating the largest ships, has excited very general interest, and crowds of people visiting the wharf against which the *St. Lawrence* is moored. The public were admitted on board the ship on Sunday. Three cheers were given by the crew when the first case (containing a carriage) was landed; and now the work is going on rapidly. Some of the packages being bulky, and others consisting of ponderous pieces of machinery, occupy a considerable time to lift out, from the inconvenience of getting them up the hatchways.

All the Customs regulations usually observed in reference to vessels bringing cargo were relaxed in favour of the *St. Lawrence*, and she was treated in every way as a ship of war, no tide-waiters or Customs officers being stationed on board.

The Peninsular and Oriental steam-ship *Singapore*, Captain Purchase, took her departure on the 17th for the East Indies, and the Cape of Good Hope. She conveys Government despatches and the detachment of troops to the Cape. The Peninsular and Oriental Company has spared no pains or expense in fitting up the *Singapore* for the reception of these troops; and, from the high steaming qualities of the vessel, it is expected she will make the run to the Cape in from twenty-five to twenty-eight days, according to the weather that may be encountered. The *Echo* steam-tug arrived in the docks with troops from Portsmouth, which were transferred to the *Singapore*. When the steamer left the dock for her final departure, she was loudly cheered by the crew of the *St Lawrence*

CALENDAR FOR THE WEEK.

HER MAJESTY'S THEATRE.—GRAND EXTRA NIGHT. As on the talents of Mdlle CAROLINE DUPREZ, Mdlle FIORENTINI, Sig CARLOTTI, M POULTIER, Mdlle CARLOTTA GRISI, and MDE AMALIA FERRARIS.—It is respectfully announced that a GRAND EXTRA NIGHT will take place on THURSDAY next, APRIL 3, 1851, when will be presented Auber's [illegible] in which Mdlle Carlotta Grisi, M. Poultier, and Mdlle. Amalia Mdme Fiorentini, Mr. Frazer and Oscar Comyn to the King Mr. Weiss as the Duke Mr. Lyall, Mr. Lefebvre, Mr. Laborie, Mr. Bracy, Mr. Fletcher and Mr. Howell. In the course of the evening Mdlle Carlotta Grisi will appear in a Grand Pas created by Mdlle Assandon de Denizot. With numerous Extraordinary Divertissements in the BALLET Department, in which will appear Mdlle Carlotta Grisi, Mdlle. Assandon, Tedesco, Dumilatre, Amalia Ferraris, and Mr. Howell, Mr. Lyall, Mr. Laborie, &c. &c.

ROYAL ITALIAN OPERA COVENT-GARDEN.—The Directors of the Royal Italian Opera have the honour to inform the Nobility, Gentry, Subscribers, and the Public, that the Season will commence on THURSDAY NEXT, APRIL 3, when a new work will be given in the form of the first Act of [illegible] in which the celebrated Mdlle. Grisi will appear as SEMIRAMIDE. The Directors have great gratification in presenting to their Subscribers a Programme for the remainder of the Season, in which Operas, well established, as they trust, to sustain the reputation of an Establishment, which, whether the talent of its individual members, or its general excellence and completeness as a whole be considered, is certainly unrivalled by any similar undertaking. During the Four past Seasons, the most strenuous exertions of the originators, the Directors, and the Artistes of the Royal Italian Opera, encouraged by a generous patronage, have been enlisted in the formation and perfection of this great undertaking, and the present Season will have not only the satisfaction of placing at the command of their Subscribers a most complete Lyrical Establishment, but, feeling confident of its undoubted superiority, anticipate the additional gratification during the ensuing Season of [illegible] of entertaining a company of Artistes assembled from all portions of the civilized World. To meet those circumstances, the Directors have made arrangements not only to produce such Operas entirely new to their Subscribers, but also, as the entertainments of the Strangers who may honour the Theatre with their presence, to give each of the grandest works of the Royal Italian Opera Repertoire at least once during the Season. This Repertoire now consists of THIRTY-THREE OPERAS, each of which is conspicuous in itself, with Music, Scenery, Decorations, and Dresses complete and appropriate to the Drama, at a few hours notice.

During the present Season, of the following Eight Operas, Five (at least) will be produced, viz.:—A NEW OPERA (Auber), founded on Auber's New Grand Opera "L'Enfant Prodigue," now performing with unbounded success at the Académie Royale de Musique, Paris. SAPPHO (Gounod), a Grand New Opera, composed expressly for Madame Viardot, and about to be produced at the Académie Royale, at Paris. IL PARIO MARCO (Pacini), for the First time at the Royal Italian Opera. Les MARTYRS (Donizetti), a Grand Opera, composed expressly for the Académie Royale de Musique, Paris; for the First time in England. LA VESTALE (Spontini), for the First Time at the Royal Italian Opera. FIDELIO (Beethoven) for the First Time in the Italian Language. FAUST (Spohr) for the First Time in England. The New Operas "L'Enfant Prodigue" and "Sappho" are the exclusive property of the Directors of the Royal Italian Opera, and will both be produced during the Season.

The Engagements for the present season are:—Soprani: Mdme Grisi, Mdme Castellan, Mdlle Cassoglieno Morra (her first appearance in England), and Mdme Bosio. Contralti: Mdme Alboni (her first appearances in England), and Mdlle Angri (her first appearance these Two years). Seconda Donne: Mdlle Corbi, Tempri, Sig Marchi, Sig Zucchini, Sig Lucchesi Mdl, Sig Soldi, and Sig Tamberlik. Bassi Baritoni: Sig Ronconi, Sig Ronconi, and Sig Salvatore (from the San Carlo at Naples, and the Grand Opera at Barcelona). Bassi Profondi: (first appearance in England) Bassi Profondi: Herr Formes, Sig Tagliafico, Sig Polonini, Sig Gregorio, Sig Ferrari, Sig Rocbe, and Sig Bianchi (from the Royal Italian Opera, at Berlin, his first appearance in England).

The Orchestra will be complete, Mr. Costa, Conductor, Mr. Costa. The Orchestra will, as heretofore, be complete in all its branches The Military Band will be under the superintendence of Mr Godfrey. The Chorus will exhibit the same efficiency and perfection as heretofore

The performance of Ballets will be limited to short Divertissements, and those inclusive to Operas as last season Maitre de Ballet, M Alexandre. Principal Dancers, Sig Monplaisir, Mdme Dussetour, Mdlle Louise Taglioni. Artistes Costumiers, Mrs R Bailey and Madame Marcia. Decorator, Mr. Blanchi. Machinist, Mr Allen. Scenic Artistes, Messrs Grieve and Telbin.

Boxes and Stalls may be engaged, and full particulars obtained, at the Box-office of the Theatre, which is open from Eleven until Five o'clock

THE ILLUSTRATED LONDON NEWS.

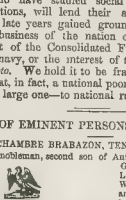
LONDON, SATURDAY, MARCH 29, 1851.

THE discussions on the Papal Aggression Bill have come to a momentary cessation, by the division on Tuesday evening in favour of the Government. The majority was even larger than was anticipated, but whether the numerical strength of the Anti-Papal auxiliaries, who flocked around the ministerial standard on this occasion, will not cause future embarrassments in dealing with the question, remains to be seen. It is evident, from the whole tenor of the Parliamentary discussions on this unlucky subject, that the Ministry receive neither the gratitude nor the confidence of a tithe of the members whose votes have swelled their majority; and that, while the Roman Catholics denounce them for doing too much, thefriends of the Church of England are as ready to denounce them for doing too little. In the interval that must elapse before the subject again occupies Parliament, we trust that the real business of the country will be allowed to make some progress. The petty Sovereign who nominally rules the Roman States by the favour and support of the not very religious majority in the French Legislative Assembly, may find himself suddenly left to his domestic impuissance and insecurity by the reflection that he and his advisers are, at all events, powerful for mischief in a foreign country. He cannot drive his own engine (if we may borrow a simile from the stokers), but he can place an obstruction on the rails of another line, and throw off the train and the passengers. Doctor Wiseman, if he has not done it, may be proud of what he has done. He has frightened one half of England, and disgusted the other; and has impeded by his pretensions, for the best part of the Parliamentary year, the most urgent business of the greatest nation on the face of the globe. To some trembled spirits such an achievement would seem a thing worth living for. We trust, however, that in this respect both Pope and Cardinal have done their worst; and that the Government and the Legislature of Great Britain will forget their mischief as fast as possible, and take to serious business. A little wholesome oblivion of the Roman Catholics, and of their claims to Bishoprics and Archbishoprics, would be at the present time of essential utility to the British nation.

ONE of the most important measures which the present Parliament would by this time have been engaged in discussing, if Pope and Cardinal had been humane enough to let us alone, and sensible enough to mind their own business, is the bill prepared, but not yet introduced into the House of Commons, by Mr. Baines, the President of the Poor-law Board. The details of his measure for the improvement of the law of settlement and removal are not yet known; but the evils which it is intended to remedy are great and notorious, and have, on countless occasions, been exposed and commented upon. The subject is one of which it is difficult to over-estimate the present and future importance to the well-being of the labouring classes, and to the interests of all the employers of labour, whether agricultural or manufacturing. The question has become still more delicate and dangerous than it might have been, by the wide-spread prevalence and growing popularity of a proposed remedy which is a thousand times worse than the disease. The evils that result in what are called "close" parishes, where, for fear of poor-rates, the proprietors of the land pull down cottages wherever they can, and will not allow new ones to be built, are many and urgent. The system not only operates injuriously upon the condition of the labourer, by forcing him to walk miles to his work, and upon the employer of labour, by creating an artificial scarcity of hands for the work to be done, but upon the adjoining parishes, which are called "open," by increasing the amounts of their rates by the whole pressure of the ejected pauperism of their neighbours. The open parishes very naturally complain; but when they insist that the only remedy is a national, instead of a local poor-rate, they rush from a great into a far greater evil. The question, which there can be no doubt Mr. Baines has duly and anxiously considered, and in legislating upon which he will require the aid of all the philosophy, common-sense, and statesmanship of both Houses of Parliament, is, how the law of settlement and removal may be remedied, so as to do justice to the aged and impotent pauper, to the willing and able-bodied labourer, to the occupier of property, to the owners and cultivators of the soil, and to the neighbours of all these in contiguous parishes? A national poor-rate, either with or without local supervision and management of the poor, might at first reduce the burdens of some highly rated parishes; but in the end it would, we firmly believe, raise all the rates in England to the present maximum of the most heavily burdened of them all, and swamp all property in one bottomless abyss of pauperism. The French Communists have never started a wilder scheme than this would be; and we trust that, on a question so important, the men who have studied social science in all its depths and ramifications, will lend their aid to dispel the delusion which has of late years gained ground, that the support of the poor is the business of the nation collectively, and to be provided for out of the Consolidated Fund, in the same way as the army or the navy, or the interest of the debt. We deny such a doctrine *in toto*. We hold it to be fraught with the most serious evils; and that, in fact, a national poor-rate would be the first step —and a very large one—to national ruin.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

JOHN CHAMBRE BRABAZON, TENTH EARL OF MEATH.



THE venerable nobleman, second son of Anthony, eighth Earl of Meath, by Grace his wife, daughter of John Leigh, Esq., of Rose Garland, county Wexford, representing the ancient and eminent Norman family of Brabazon, founded by Jaques Le Brabazon, called "the great warrior," whose name occurs on the roll of Battle Abbey

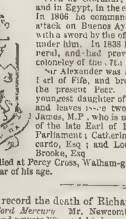
His Lordship was born April 9th, 1772; succeeded to the Irish earldom, at the decease of his brother William, in 1797; and was created a Peer of the United Kingdom, as Baron Chaworth, in 1831. He married 3rd July, 1800, Frances Anne, daughter of Medina Adelaide daughter of John, first Earl of Clanwilliam, and had issue a daughter, Adelaide, married in 1832 to Arel Ibald, Earl of Gosford, and four sons, of whom the eldest surviving, William Lord Brabazon, succeeds as fourth Earl of Meath: he is married to Harriet, daughter of Sir Richard Brooke, Bart., and has a son and heir, Reginald.

THOMAS BRAND, TWENTIETH LORD DACRE

THE decease of this Peer occurred on the 21st instant, at the Hoo, Herts. The

ancient barony he enjoyed was created by writ, and descended, consequently, to females. It originally belonged to the family of Vaux, of Gilleland, and was conveyed by Isabella, Maud de Vaux, to Thomas de Moulton, whose eventual representative, Margaret de Moulton, became the wife of the famous Ralph de Dacre, and that distinguished soldier was summoned to Parliament as Baron Dacre, of Gilsland. The title passed subsequently through the hands of Fiennes, Lennard, and Barrett, of the last-named, to heiress, the Hon. Gertrude Roper, wedded in 1771 Thomas Brand, Esq., of the Hoo, and was mother of the late and present Lord. His Lordship was born March 15, 1774; and married, December 4, 1819, Barbara, relict of Valentine Wilmot, Esq., of Farnborough, and daughter of Admiral Sir Isaac Coffin, Bart., but had no issue by her. His brother, the Hon. General Henry Otway Trevor, C.B., succeeds to the title of Dacre, as well as to a co-heirship of the Barony of Fiennes. He gained distinction in the Peninsular War, and is Colonel of the 31st Foot

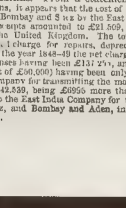
SIR STAFFORD HENRY NORTHCOTE, BART., OF HAYNE, CO DEVON.



SIR STAFFORD NORTHCOTE died on the 17th inst., at his seat, Pynes, near Exeter, aged eighty-eight. He was the only son of the late Sir Stafford, the sixth Baronet, by Catherine his wife, daughter of the Rev. George Bradford, and grandson of Sir Henry Northcote, Bart., M.P. for Exeter, by Bridget-Maria his wife, daughter and heir of Hugh Stafford, Esq., of Pynes. He was born 6th October, 1782; and married, 8th May, 1781, Augusta, daughter of Sir Henry Hoare, Esq., of Larkbear, by whom (who died 22nd January, 1841) he had three sons: the eldest, Henry Stafford Northcote, M.P., died 22nd February, 1845, leaving with other issue a son and heir, the present Sir Stafford Henry Northcote, Bart.

GENERAL THE HON. SIR ALEXANDER DUFF, G.C.H., OF DELGATY CASTLE, CO. ABERDEEN.

THE services of this gallant officer extended over a considerable period. He entered the army as Ensign, 66th Foot, in 1793, and served at Gibraltar, in Flanders, and in the East Indies, and in Egypt, in the expedition under Sir David Baird, in 1806 he commanded the centre column at the attack on Buenos Ayres, and in 1816 was presented with a sword by the officers of the 8th which he had formerly under him. In 1838 he attained the full rank of General, and died previously. In 1831, obtained the dignity of the 1st Regiment.



Sir Alexander was second son of Alexander, third Earl of Fife, and brother and heir presumptive of the present Peer. He married, in 1819, Anne, youngest daughter of James Stein, Esq., of Kilbagie, and leaves issue two sons and two daughters; viz., James, M.P., who is married to the second daughter of the late Earl of Erroll; George-Skene, also in Parliament; Catherine, married to John Lewis Ricardo, Esq.; and Louisa Tolemache, wife of Richard Brooke, Esq.

Sir Alexander died at Percy Cross, Walham-green, on the 21st instant, in the seventy-fourth year of his age.

We regret to record the death of Richard Newcomb, Esq., proprietor of the *Stamford Mercury*. Mr. Newcomb was deservedly held in high esteem in public and private life, and his loss will be universally lamented.

EAST INDIA MAILS.—A statement published by order of the House of Commons, it appears that the cost of transmitting the mails and despatches between Bombay and Suez by the East India Company, in 1847-48, was £7,278 2s 9d. The receipts amounted to £21,569, and £20,000 was granted out of the revenues of the United Kingdom. The total net charge to the Company, including £6,000 for repairs, depreciation, interest, and insurance, was £26,655. In the year 1848-49 the net charge to the Company amounted to £68 9s 8d, the expenses having been £13,729, and the receipts (exclusive of the Government grant of £20,000) having been only £13,920. The net charge to the East India Company for transmitting the mails between Bombay and Aden in 1848-49 was £42,839, being £6956 more than in the year preceding. The total net charge to the East India Company for transmitting the mails between Bombay and Suez, and Bombay and Aden, in 1847-48, was £33,238; and in 1848-49, £110,804.

THE PAPAL AGGRESSION.

A stormy meeting of the parishioners of the united parishes of ST ANDREW, HOLBORN, AND ST GEORGE THE MARTYR, took place on Monday evening, at the hall of the workhouse, Gray's-inn-lane, for the purpose of adopting measures resistive to the Ecclesiastical Titles Bill now pending in the House of Commons. Mr Ebenezer the chair. Mr Edmonds moved the first resolution, which was for an effective legislative measure, prohibitive under severe penalties of the assumption of any powers by the Pope in England, and authorising any person to be empowered by the Lord Chancellor to inspect. A special Hall convened for the purpose for recovery of such. Mr Clarke seconded the resolution. Mr Lahr moved, as an amendment, "That this meeting, steadfastly adhering to the great principles of civil and religious liberty, constitutionally deprecate any interference with the religious opinions of any class of Her Majesty's subjects." The amendment was lost, and the original resolution carried amidst loud cheering. Mr Cooke Evans then moved a resolution to the effect, "That from Lord John Russe's letter to the Bishop of Durham and her Majesty's gracious Speech from the throne on the opening of Parliament, her Majesty's subjects were led to think and to rely that last Parliament would have received a full and effective check." Several gentlemen addressed the meeting in favour of the resolution, which was carried amidst great uproar. It was finally agreed that the resolutions should be embodied in a petition to the House of Commons, and the meeting separated after a long and stormy discussion.

An Aberystwith (Cardiganshire) paper, a moderate and respectable meeting was held in the Corn Exchange to petition Parliament against the Papal assumption of territorial titles. A Welsh and native joined to the demonstration. The Mayor was in the chair. He opened the declaration of Dr Mellray, "that all who were not under the discipline and instruction of, and professing Roman Catholicism were something worse than brute beasts and heathens, and that at the time and to one when they must assert that they were neither pagans nor brutes." If there was one spot on the face of this earth that cleared itself Christianised, and was free, it was Rome, whence Dr Mellray hailed—and the Rev. J. Edwards (Baptist), moved. "That this meeting rejoices at no large a combination of Protestants of various denominations in this empire in resisting the recent Papal aggression." The Rev. D. Brooks, rector of St Mary's Church, seconded, and Mr Richard Meirley, a borough magistrate, supported the motion, which, on being put, was carried, only one hand being held up against it. After other resolutions had been passed, declaiming against, and expressing deep indignation at the conduct of the Pope, petitions to both Houses of Parliament in support of the Papal aggression were adopted.

At Aberdeen, on Wednesday week, an indignation meeting of the inhabitants was held in the City-hall, for the purpose of petitioning against the Papal aggression, and to withdraw all endowments, and every species of state encouragement, from Popery. The spacious City-hall, the largest place of assembly in Scotland, was crowded in every part by an eminently constituted Presbyterian assembly. Resolutions condemning the Papal aggression, and calling upon the Legislature to withdraw all endowments, and cease from encouraging Popery in any way, were unanimously adopted.

On Thursday week, Lord Ashley, accompanied by a deputation of noblemen and gentlemen, presented an ADDRESS TO HER MAJESTY, signed by 60 noblemen, 10 members of the House of Commons, and 321 other persons, praying her to remove from the Church of England the insult and injury done to her loyal subjects by the assumption of the Pope. It was not against the petition of the laymen, and, amongst other things after beseeching her Majesty to resist the aggression of the Pope it says—"But we cannot conceal from your Majesty that we have great cause for conviction, confirmed by the recent testimony of several bishops of our Church, that the Courtof Rome never would have attempted such an act of aggression had not encouragements been felt and relied upon which the answer of many of the clergy of our own Church, who have, for several years past, shown a desire to assimilate the doctrines and services of the Church of England to those of the Roman communion. While we would cheerfully acquiesce in the principles of every denomination of Christians, we have no alternative but to resist every encroachment, regarding the intelligence and the loyalty of the people, and calling for strong measures particularly not to encourage Popery in any way, were unanimously adopted.

The Liberals were

"THE LODGE," TAUNTON.

of England, from which they have separated more on account of its discipline than its creed. The Family profess to believe as the Church of England believes. They are Trinitarians; they adopt the Apostles' Creed. Those amongst them who believe that Mr. Prince is the immortal God, as one of them is said to have believed, are regarded as crazy. Mr. Prince does not exact from them such surpassing credulity. They do every thing, they say, for the glory of God, and consider that they glorify Him when they eat and drink. They make no difference between Sunday and other days. Connected, as several members of the Family have been, with the Church of England, the sect growing out of that, it is likely, just now, when a ward of Churches is raging, to excite some scandal, and the rival faith, which is accused in Parliament of having in its convents brothels or prisons, may possibly point to the Agapemone, and say in the language of Mrs. Nottidge, the mother of the three ladies, who, by God's command, married three of the brethren, that "these people live in the greatest sin and iniquity." While we must adopt the language of the Chief Baron, in his charge to the jury on the occasion of the trial already referred to, and admit religion contains so many strange doctrines, "that all who entertain with sincerity any peculiar doctrine, however absurd that doctrine may appear to others, ought to be allowed to enjoy that opinion without interference," yet Protestants will not be able to prevent those whom they revile for strange creeds, particularly for their reverence of the ancient Pontiff of Rome, from turning on them, and pointing to the Agapemone and the belief in Mr. Prince as something more strange and startling than anything to be found in Popery. As the brethren took three sisters and £18,000 out of one family, and persuaded a fourth sister to make over her property to Mr. Prince, it may seem doubtful whether the influence of other spiritual or pretended spiritual guides is not as great and as much exercised for merely mercenary ends as the spiritual influence of those gentlemen who say it is a virtue in ladies with large properties to renounce all the duties of a wife and a mother and bestow themselves and their fortunes on a convent or an infallible church

PARLIAMENTARY PORTRAITS.

SIR ROBERT PEEL, BART., M.P. FOR TAMWORTH.

THE subject of our memoir, eldest son of the late Sir Robert Peel, by Julia, youngest daughter of the late General Sir John Floyd, Bart., was born in London on the 4th May, 1822; and, in 1835, was sent to Harrow, which he left in 1840. Having spent a year in travelling on the Continent, he returned to England in 1841, entered Christchurch, Oxford, as a gentleman Commoner, took his degree in 1843, and, in the same year, was appointed by Lord Aberdeen (then Secretary for Foreign Affairs) *attaché* to the British Embassy at Madrid. Whilst holding this appointment, he accompanied Sir Henry Bulwer (now Minister at Washington) to Tangiers, and was present at its bombardment by the French fleet under Prince Joinville.

In 1846 he was deputed by Sir Henry Bulwer to Barcelona, and remained there during the entire period of the residence of the Queen of Spain. In February, 1846, he returned to England; in the May of the same year was appointed Secretary to the British Legation in Switzerland; and in December, *Chargé d'Affaires*, an appointment which he held during the whole period of the Swiss war. In February, 1849, Sir Edward Lyons, previously British Minister at Athens, was appointed to the Swiss Cantons; and in January, 1850, Mr. Peel removed to Geneva, where he was residing when the news of his father's accident reached him. He immediately set out for England, but did not arrive until after the late Sir Robert's death.

Previous to the issue of the new writ for Tamworth, Sir Robert was invited to allow himself to be put in nomination, to which he consented, but did not then present himself to the electors. The writ was issued in the July of 1850, he was returned without opposition, and took his seat in August, just before the prorogation of Parliament.

On the 29th of January he met his constituents at a public dinner at Tamworth, proposed the health of the Mayor, and afterwards, in returning thanks on his own account, mentioned, that, although attained to an age when many men were practised in the discussion of political affairs, his pursuits and aims had lain in so different a direction, that he had never before addressed any public assembly. He was now called upon for the first time to explain his opinions to a constituency who had, at that very time in the previous year, and often on former occasions, been charmed by the eloquence of his father, who was wont to explain to them the political views that were eagerly waited for throughout the country, and caught up in seasons of difficulty as sources of hope and strength. For himself, he felt that the responsibility conferred upon him by his seat in Parliament, his name and political connexions, called upon him to devote his utmost energies to the mastership of political questions. His convictions were of a Liberal tendency. He would conserve all that the wisdom of our ancestors and the prudence of modern statesmen had gathered for our guidance, but would model all in consistence with the progress of calm and well-taught public opinion. He was opposed to measures of sweeping financial change, but would consult such wise and prudent economy in every branch of the public expenditure as should give the opportunity of removing all taxes oppressive to industry, or standing in the way of the sanatory improvement of the people, but always with due consideration of the dignity of the empire and contingencies, which could not be foreseen, but for which we should always be prepared. As to the prevalent religious zeal and animosity excited by the establishment and organisation of the Roman Catholic hierarchy in England, he would not commit himself by the expression of

SIR ROBERT PEEL, BART., M.P. FOR TAMWORTH.—FROM A PHOTOGRAPH BY KILBURN.

views he might afterwards see reasons to change; but he certainly did not feel such serious grounds of alarm as were generally expressed though he did believe that the occasion should stir up the dignitaries of the Protestant Church to more earnest spiritual superintendence than they had hitherto exercised over the interests committed to their charge.

But Sir Robert did not long leave his constituents in any doubt as to his opinions on the Papal Aggression. He made his maiden speech in the House of Commons on Friday, the 14th instant, in support of the Government measure, although regretting that it had been shorn of some of its stringency. He held religious toleration a sacred principle. Perfect freedom should be extended to all sects and classes of religious thinkers without distinction. The bill did not interfere with the legitimate enjoyment of religious liberty. It was asserted that the noble Lord at the head of the Government was forgetful of his antecedents and his party; but to him it seemed that he was not only best consulting the interests of his party, but, what was of far greater moment, of the country at large. Apart from its political influence, there was really nothing in the Papal Aggression at which to take alarm. A priest had had his vanity satisfied. As by touch of a harlequin's wand, Cardinal Wiseman had jumped forth in scarlet hat and hose, the gaudy trappings of a spiritual prince of an imaginary see. Ireland, he thought, might have been omitted from the Bill, the fact that three-fourths of the people were Roman Catholics rendered its case different from England.

He found himself with deep regret opposed to Sir James Graham, to whom he bore a high political attachment, and to whom he looked up as called upon to occupy the place unhappily vacated, in the defence of those measures which had been gained by the country, but he could not view the question apart from its political intents. So far back as the reign of King John, he found Innocent III nominating an archbishop to the see of Canterbury, placing the country under an interdict, prohibiting the subjects from rendering due homage to their Sovereign, and finally most generously handing over England to the King of France, because John refused to recognise the bishop. The Farnese Pope Paul had promulgated a Bull asserting the Pope's authority, and excommunicating Henry in England. The same things could not be done now, but the same aggressive spirit was at work. Switzerland, the last retreat from the despotism of Europe, had been stirred to civil war, in which was spilled as gallant blood as ever warmed the hearts of patriots, by artful Jesuits and Papal political emissaries. It was with difficulty he could control his feelings in view of the iniquity and intolerance with which Rome fostered these dissensions, so as to preserve that rigid impartial observance which the noble Lord at the head of Foreign Affairs had absolutely imposed upon him. Rome, Naples, Florence were living proofs that with Catholic intolerance there can be no civil liberty. "Better," said Gregory VII "Spain should belong to the Saracen, than not render homage to the Sovereign Pontiff." The course of Rome still flowed unchanged through the same channels of intolerance. He believed the recent aggression was the first step of an organised attempt to enslave the consciences, shackle the liberties, and shake the allegiance of the people, and he would therefore entreat the noble Lord at the head of the Government and the House, by timely legislation, to prevent the abuse from taking root, the fruits of which would inevitably endanger the safety of the State.

Throughout, Sir Robert Peel was listened to with marked attention and, on resuming his seat, was loudly cheered, and surrounded by members to offer their congratulations.

Our Portrait is from a photograph by Kilburn.

"THE AGAPEMONE," AT CHARLINCH, NEAR TAUNTON.

SCENE FROM THE NEW WATTEAU BALLET OF "L'ILE DES AMOURS.

OPENING OF HER MAJESTY'S THEATRE.—(SEE NEXT PAGE.

OPENING OF HER MAJESTY'S THEATRE.

The interesting and attractive feature of the opening performance on the 22d inst., for the season 1851, was the first representation in this country of Mdlle Caroline Duprez. The character was *Lucia*. There were two strong inducements to hear the new aspirant for lyric glory: first, her extreme youthfulness—a *Lucia* of eighteen is rarely witnessed even by the most fervid opera-house frequenters; and, secondly, she is the daughter of one of the greatest tenors ever known on operatic boards. The house—which, by the way, has been thoroughly renovated, and looks again as bright and brilliant as when it was first decorated—was therefore crowded in excess; rank and fashion, art, science, and literature, were fully represented, and before the rising of the curtain no place was unoccupied. Except the reception awarded to Mr. Balfe, on his entrance to conduct the opera, the buzz of conversation was scarcely interrupted, until the harp solo was heard, which precedes the first entrance of the hapless heroine of Scott's powerful tale: as the symphony progressed, the excitement became intense, until the trembling girl, the "*prima donna*" of the night, faced an English audience, and then burst forth the habitual welcome extended to a *débutante*. Nothing could be more prepossessing than Mdlle. Caroline Duprez: rather under the middle height, her figure is symmetrical and elegant; and her face, with regular features, dark and full eyes, with even and arched eyebrows, and her luxuriant hair, dressed in the style of the period in which the novelist has fixed his mournful romance, were immediately pronounced to be undeniable claims for personal distinction and beauty. Her action was easy and graceful, and a few passages of recitative soon convinced the auditory that she was a vocalist of no ordinary stamp, to command their sympathies and ensure their suffrages. In the cavatina, it was felt at once that she was thoroughly capable of executing every cadence she undertook—that there were no elaborated passages beyond her reach. This is a great gift for the singer, and a rare treat for the hearer, whose nerves are unstrung too often by the fear of a break-down in the modern attempts at daring embellishments. The quality of Mdlle. Caroline Duprez's organ is sympathetic; her intonation is faultless. Her reading of the cavatina was simple, carrying out the artistic conception of *Lucia*—that of a subdued spirit in a doomed girl. This melancholy expression was observable in the subsequent duet with *Edgardo*—the plighting of her faith was depicted with a prophetic dread of a future fate. Although in this duet the act the artifice of art was apparent, there was ever and anon a flashing of the eye, indicative of intellectual appreciation of the attributes of the character. In the second act there was the same freedom from exaggeration: in the duo with the brother, the utter despondency of the heart-riven *Lucia* was portrayed without violence. In the marriage scene, the admission of her signature to the contract was made with the same tone-ing feeling—there was no contortion no hysterics—but *Lucia* was presented under Fate's influence, despairing and soul-subdued, but still a quiet victim amidst the raging elements of discord around her. In the mad scene of the last act the conception was still realised; the delirium was free from spasmodic convulsions and vaulting feats. The sweetness, delicacy, and pathos of the "Bride of Lammermoor" were beautifully developed, but Mdlle. Duprez had reserved her great display of vocalisation with great tact for the concluding scene. She then came out with a profusion of florid ornaments, striking distinct intervals, accomplishing elaborate and hazardous passages with astonishing ease. Her *fortiture* is remarkably neat, pointed, and sparkling. When it is added, that, like her father, her phrasing is perfectly finished, and her declamation is distinct, clear, and emphatic, it may be conceived that the night's triumph for the gifted *débutante* was genuine and decided. There are amateurs who can remember Mdlle. *Sidoli* of Macbean, and Mrs. Wrighton in these boards, but it may be questioned whether any one of these three *artistes* on the first night displayed more promise than Caroline Duprez. Genius on the stage is slow in expansion, however no limit in development. Mdlle. Duprez has rare natural gifts, she has youth, beauty, and a fine soprano voice, of extensive compass, with a magnificent style; she has evidently been carefully trained; and has the valuable qualification of self-possession, and it is only now a question of time for the advent of greater physical force. In the meanwhile, her appearance in every new character will be of the highest interest. Whether an artiste, every phase in whose career will be anxiously watched, so complete was the success.

The new ballet, "Life in Arcours," will be an especial favourite during the season. M. Paul Taglioni has been singularly happy in his "concetti;" his groupings are full of grace and animation. The spectator might, with no inordinate stretch of the imagination, imagine himself in the days of Louis Quatorze, when Molière wrote plots for ballet, Lulli composed the music, and the grand Monarch himself danced in them with irresistible grace, if we are to accept Voltaire's authority. Nadand, the leader of the ballet, has composed and arranged the music for this "love" of a ballet; and ingenious and charming it is, being a *mélange* of the solemn and dignified minuet school, with the modern galops and dances of action. Like Adolphe Adam, Nadand has written a light and graceful overture. Berrilla's directive of the ins and outs of the subject. To the stately *danse noble* of the Court lady is opposed the piquant *danse pastorale* of the peasant girl, depicted with archness, fascination, and spirit by the accomplished Mdlle. Berrilla. Cupids are of a large growth; but, with their quivers, bows and arrows, one of the most elegant choregraphic groupings was formed that has been seen for many a day. The pictorial departments of this ballet, in Mr. Planché's words, is entirely beautiful; witness his charming bower of flowers, in which the "Amours" are imprisoned in their golden cage. There is enough of contrast in the costumes of the villagers, the Court beauties and the fairies of "Love of the Island," and of stirring incident in the pantomime, to render the ballet a permanent source of attraction. The last scene is represented upon the preceding page.

On Tuesday night Mdlle. Duprez made her second appearance in *Lucia*, and was enthusiastically applauded throughout her performance.

The cast of "Gustavus," to be produced this evening (Saturday), is not only strong in singers, but will be strengthened by the first appearance this season of the poetic *danseuse*, Carlotta Grisi, who will have a grand *pas* in the ballet of the festival ball *masqué*, supported by Mr. Lumley in the character of "Anderson."

A version of "Gustavus" was given at Covent-Garden Theatre in 1833. The original plot was very considerably changed by Mr. Planché, and a great portion of the music was selected by him for the limited engagement of Mr. Bunn at the command of the management. It is now given in its entirety, and supported by the chief *artistes* of the theatre, both lyrical and choregraphic. There are few operas which may compare with the variety of effects contained in this opera. The music unites the mystical, the tragical, and the gay; the story is peculiarly striking, from its historical truth and romantic colouring, the scenes at the fortune-teller's, the conspiracy, and the masked ball, with the assassination, may account for its world-wide popularity.

ROYAL ITALIAN OPERA.

The opening performance at Covent Garden Theatre has been definitively fixed for Thursday next, with Rossini's "Semiramide." Mdme. Grisi will make her first appearance this season in her favourite character of the Queen, and Mdlle Angri's return to the establishment of which she is the idol will be signalised by her delineation of *Arsace*. Signor Luigi Mei will replace Lavia in the part of *Idreno*; and Signor Salvatore's foreign reputation will be first tested, in this country, in the arduous character of *Assur*, so long depicted by Tamburini. Tamberlik and Mdme Castellan have arrived in town—the former from Russia, and the latter from Prussia. Mario is expected in a few days from Moscow.

ADELPHI.

The transition of Mr. Webster to the Haymarket stage has rendered a new venture necessary for this theatre. "The Jew Boswned, or, Heien of the Hurst," is the name of an original drama, written on the usual plan of Adelphi pieces, with an intense domestic interest, built up on the basis of social crimes. The first two acts of the play were marvellously successful; but the length of the whole will render compression expedient, inasmuch as it excited disapprobation at the fall of the curtain. Mr. Hughes acted the principal part in a manner to command praise. *Haserny* is the victim of remorse for having shot, while sporting, the husband of a lady whom he passionately loved. By way of atonement, he becomes guardian to her daughter—the *Helen of the Burst* (Miss Wyndham). The scenes of tenderness and remorse between these performers were powerfully interpreted, particularly the scene of the confession. One, also, between the penitent criminal and *Colonel Wesley* (Mr. C. J. Smith), the father of the widowed lady above alluded to, was replete with great passion. This gentleman has a son, whom he disowns, *Leonard* (Mdme. Celeste), whose West Indian blood rebels against the supposed act of parental tyranny which he is always taunted, and whose morose feelings are stimulated by a false steward, *Ironstone* (Mr. Emery), who seeks revenge for a silenced daughter. To these sources of serious interest comic underplots are skilfully supported by Mr. Wright and Mr. Paul Bedford—as *The Lurcher*, a town scamp, who comes into the country fortune-hunting, and as *James*, a fisherman turned publican, whose courtship of *Mrs. Pedd* (Mrs. Lawrence) is broadly humorous. All these characters are caricatures, but were inimitably enacted.

The story was corroborated by much fine scenery, and elaborate grouping of villagers, dancers, peasants, and xylophellites, who crowd the stage on proper occasions. In all these respects the drama is admirable; and we doubt not, that, when brought within reasonable limits, it will have a run.

HAYMARKET.

On Tuesday Mr. Webster appeared here in the character of *Turnstyle*. Mullins's celebrated comedy has been somewhat altered by the English stage by Mr John Oxenford, and the Haymarket company have been called upon to show their skill in adapting themselves to the precision and ease of the French stage. The comedy itself has been most elegantly rendered, and the performers exerted themselves to the utmost to sustain their parts with the requisite propriety to this they made, indeed, a close approximation. Mr. Webster himself was altogether *Turnstyle*, and was characterised by Miss Reynolds, as *Elmire*, the coquette. Next to these we prefer Mr Davenport in *Dance* and tired to like Mr. Lambert in *Orgon*, but he must moderate his style before we can altogether approve of him in the part. The *Dorine* of Mrs. Fitzwilliam was all that could be desired, as was also Mr. Rogers's *Cleante*. The rest of the characters were respectably sustained. The obvious hits contained in the dialogue ought, in these times of Papal aggression, to give the comedy a run; they were not lost on the audience.

On Wednesday, Mr William Wallack appeared in the difficult character of *Hamlet*, and performed it with an impressiveness and originality which induces us to esteem it the best impersonation that we have yet witnessed of this new tragedian. We could, however, have desired that he had observed the poet's instructions, and pronounced many passages "trippingly on the tongue," to which an undue weight of intonation, as it appeared to us, was given. There was much novelty in the business of the scene introduced by Mr. Wallack, and more final feeling thrown into the part generally than is usual with actors. With less deliberation, and a more natural flow of the passion, Mr. Wallack's portrait of the princely Dane would prove attractive. His soliloquy on death was finely delivered, for the start, and all parties "make the best" of a temporary perplexity. Mr. Buckstone was very amusing.

LYCEUM.

"Cool as a Cucumber" is the name of a new farce produced on Monday. It is the production of Mr. M. W. Blanchard Jerrold. The cool hero is, of course, Mr. Charles Mathews (*Mr. Crumpet*), who adventures up the Rhine constitute the story. He gets involved in a love affair, between *Janie Hewlson* (Miss Fanny Baker) and *Frederick Barkins* (Mr. Bellingham), which interference prevents successful; he steps behind the curtain, to lament the obduracy of *Old Barkins* (Mr. Basil Baker), and to inform the audience that he had done all he could to bring the affair to a happy issue. Scarcely has he done this, when the curtain again rises, and shows the stern father in a melting mood, unexpectedly consenting to the match. This clever claptrap was effective; and the piece may be pronounced successful.

ST. JAMES'S.

Mrs. Fanny Kemble recommenced her Shakspearian readings at this theatre on Monday, in the tragedy of "Richard III." Mrs. Kemble's power of personating a great number of characters, and giving superior scenes with marvellous force, is undiminished. Her greatest effort was reserved for the tent scene. The declamatory and denunciatory pronounced by the ghosts of the slain and wronged on *Richard* and *Richmond* were delivered with remarkable discrimination and awful energy. The sentence "Despair, and die," was repeated with terrible effect by the audience. The audience was numerous and fashionable; and their attention was sustained to the end. A play, by such reading as Mrs. Kemble's, is given with more completeness than any acting could realise—all the parts being rendered with equal excellence

The "Romeo and Juliet," on Wednesday, was inexpressibly charming. Mrs. Kemble has so regained health, that her voice is fuller and clearer; and the variety of intonation with which she distinguished the *dramatis personæ*, showed her still unfailing power. The hushed attention and frequent applause of her accustomed audience, gave no mean discrimination—instinct to the repeated effusions of her genius. Her rendering of *Juliet* is as delicate and sweet as on the first night of her appearance on the English stage.

MUSIC.

PHILHARMONIC SOCIETY.

The symphonies at the second concert, last Monday, were Haydn's No. 11 of the "Salomon" set and Beethoven's "Eroica" in E flat, No. 3. The lovely and picturesque andante and the fiery *finale* in the former work were played to perfection. With the single hitch of the horns in the trio of the scherzo, the "Eroica" was splendidly rendered: it was never executed with greater delicacy and precision; the colouring in the pathetic funeral march left absolutely nothing to be desired. The overtures were Cherubini's "Anacreon" and a MS. overture by Schlesser, of Darmstadt. The last-mentioned composition was barren of novel ideas, although the forms are those of a skilful musician. The "Anacreon" went like wildfire; the rush of the violins at the close was a perfect tornado: Costa took it at a tremendous pace, but his forces were quite up to the mark, and nobody was distanced. The solo instrumentalists were Mr. W. H. Holmes, in Mendelssohn's introduction and rondo in B minor, for the pianoforte; and Mr. Lazarus, in a clarionet concertino, composed by Molique. The performance of Mr. Lazarus distinguished himself by a deliciously pure tone, just intonation, and by extraordinary passage playing. The pure intonation and slow enjoyment were full of expression, and the finale was long, trivial, and not intensely interesting, the orchestral accompaniments were skilful and elegant. Of the vocalisation at this concert, a single observation alone remains on the memory; the selection was unexceptionable, but the execution, save a quartet by Mendelssohn, was execrable. The want of a National Opera, to afford our concert vocalists some notion of dramatic effect every night or more apparent: with such excellent voices, our artists seem to be thoroughly incapable of intellectual and poetic expression.

Beethoven's Choral Symphony—the glorious No. 9—will be performed at the third concert, on the 7th of April; and there is a rumour of a new symphony by Cipriani Potter, and other novelties.

THE ROUND, CATCH, AND CANON CLUB.

This social and musical club held its final meeting for the present season on the 22nd inst., at Freemasons' Tavern, under the presidency of Mr. Pyne, in the absence of Chapel Royal, whose efficiency as leader in the excellent selection he had made for the entertainment of the members. Amongst the glees, which were all admirably executed, the interweaving of Horsley's "When daisies pied," with the sweet strains of Dr. Francis, Gear, Land, and Bradbury, must be specially commended; as also Bishop's "Give me a cup," by Francis, Land, and Bradbury; Callcott's "Hail, Amphitrite!" Knyvett's earnest address in "Modern Times is beautiful, Queen of the Valley," by Francis, Lockey, Bennett, Bradbury, and Machin; and the delicate quartet, "With sighs, sweet rose." The professional members present were Messrs. Francis, King, Lockey, Hatton, Bradbury, Land, Gray, Barnby, H. Gear, and Bennett; with Mr. J. L. Hatton, the composer, as a visitor.

After the various loyal and customary toasts, the health of the visitors was given, to which Professor Owen returned thanks, paying homage to the high professional attainments of the club, which is certainly the most flourishing of the vocal societies in the metropolis. Instituted in 1843, and the ten meetings take places from November to March; the professional members are limited to twelve, and non-professional to twenty; the chairman for each night is called "The Speaker," and is selected from the professors in rotation: the treasurer is entitled "The Chancellor of the Exchequer" (Mr. C. Bradbury), and the secretary "The Clerk of the Records" (Mr. Francis, of St. Paul's Cathedral). The club being entirely managed by the professors, there is much care exercised in the selection of the music to be performed, and in its careful execution by competent singers

MUSICAL EVENTS.

The first concert of the Lyric Club, established last year, and held at the Whittington Club, took place last Monday, Madrigals, by J. Benet, Festa, W. Beale, and Wilbye; and glees, by Stevens, Horsley, Webbe, and Callcott. A selection from the music in "Macbeth," and a National Ode, by Eliza Flower. "Now may we for our country," were included in the programme. Miss Dolby presided at the pianoforte. The professional singers were Messrs Hill, Holmes, Shoubridge (conductor), and Lawler, assisted by chorister boys and ladies.

Mr. H. Blagrove held the first concert last Tuesday, at St. Martin's Hall, assisted by Messrs. Dando, Watson, Clementi, Trust, Lucas, Hancock, C. Salaman, Miss Kearns, Misses Wells, and Mr. Lawler

Mr. Blagrove and his coadjutors announce musical entertainment at the Hanover-square Rooms, last Tuesday night.

Signor Montelli's series of operatic concerts are now in progress at the Princess' Rooms.

The Sacred Harmonic Society, on Wednesday night, at Exeter Hall, performed Handel's "Samson," for the second time, conducted by Costa. Miss Dolby, Messrs. Birch and Delby, Messrs Lockey, Whitworth, and Phillips, as principal vocalists.

M. Roussolot, on Thursday, gave his last classical performance at the Queen Anne street Rooms, aided by Mdlle. Rummell, Messrs. L. Sloper, Salmon, Cooper, Hill, Goffrie, and Baumann.

The London Sacred Harmonic Society revived, on Friday night, Handel's "Zephthah," which will be noticed in our next week's impression.

Mr. F. Chatterton will give a concert this evening (Saturday), at Sadler's Wells.

The fifth concert of the Amateur Musical Society will be next Monday, and M. Kiallmark's last performance of pianoforte music, classical and modern.

The first meeting of the Beethoven Quartet Society will take place next Wednesday

Mr. Lucas's fourth Musical Evening will be given next Thursday.

On Friday, MM. Ole Bessler and Verdavaine will commence their musical *soirees*.

Mr. Williams delivered a lecture on music, last Monday, at Benfield House, Stockwell, with pianoforte and vocal illustrations by Herr Meyer Lutz, Miss Poole, Herr Kuchler, &c.

M Silas has returned to London, from Edinburgh, for the season.

Frost and Hallé will perform at the first meeting of the Musical Union, with Deloffre, Hill, and Pratt

Mr. Ella's Belgravia Amateur Party closed the present series with a fine selection from Mozart's "Cosi fan tutte," Spohr's "Azor and Zemira," Rossini's "William Tell," and Meyerbeer's "Prophète." The amateur band was assisted by Deloffre, Mori, Goodban, Le Jeune, Mount, and Bricsiadli, with Messrs Swift and Whitworth: this combination of accomplished amateurs and experienced professors produced the best result in the general execution.

Mdlle. Elise Krukitz, the classical *pianiste* from France and Germany, has arrived in London for the season. A pianoforte Number, by a typographical error, in the arrival of this clever *pianiste* was stated to be at "Lisbon," instead of here.

The death of Mr. John Hutchins Callcott, eldest son of the glee composer, Dr. Callcott, on Thursday week, at the house of his brother, Mr. W. H. Callcott, has caused universal regret in the musical circles. Mr. J. Callcott was in his 50th year, and for some years was connected with Mr. Beale in his musical tours.

FOREIGN MUSICAL NEWS.

Madame Sontag sang on the 17th inst. at a concert given by the Amiens Philharmonic Society, for the benefit of the poor, and was most enthusiastically received. On the 22nd she played *Miranda*, in Halévy's "Tempesta," at the Italian Opera House in Paris, supported by Rosati's *Ariel*, Gardoni's *Fernando*, and Labiache's *Caliban*.

Mr. Ambrose Thomas, the composer of the "Caïd," "Midsummer Night's Dream," &c, has been elected as successor of Spontini in the Académie des Beaux Arts; he obtained thirty votes, M. Niedermeyer five, and M. Batton three.

M. de Beriot commenced last Monday a series of concerts with his three pupils, who play violin concertos in unison, at the Théâtre Italien. MM. Fetis, sen. and jun., are also in Paris.

Auber's "Enfant Prodigue" was produced at Ghent, on the 17th, with the greatest success

A M. Carré, who was playing *Edgardo* on the 18th, at Elbeuf (France), carried away by the excitement of the last scene, stabbed himself effectually; he was removed senseless from the stage; the wound, although serious, proved, however, not to be dangerous.

Madame Castellan took her leave of the Berlin audience, as *Rosina* in "Il Barbiére;" she was recalled at the end of every act, and had a special ovation at the close.

A great musical festival was to take place in Vienna, on the 26th instant, the anniversary of Beethoven's death, with 2000 executants, the "Eroica" symphony, and the "Egmont" music were included in the programme.

DIORAMA OF THE GANGES.

This diorama has been removed from Regent-street to Linwood's Gallery, Leicester-square, and many valuable additions have been made to it. The entire has been painted by Mr. T. C. Dibdin, from sketches made on the spot during his residence in India by Mr. J. Ferguson. The scenery extends from the city of Calcutta, and presents, in the first instance, the whole view from the summit of the Ochterlony Monument; after which we are introduced to a party of hog-hunters, reposing after the fatigues of the chase in pursuit of the wild boars of India. We next visit the Rock cut Temples of Khundagiri, the Black Pagoda, the Temple of Juggernaut, Benares, Chunar, and at last repose under the "shadow of the banyan tree." Other scenes should also be noticed, such as the White Marble Palace of Agra, and the Taj Mahal; and the whole exhibition will well repay a visit.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

WE must confess to have seen in the same rooms better Exhibitions as a whole than this, the twenty-eighth annual Exhibition of the recently incorporated Society of British Artists. We have seen, too, a greater number of pictures in the same apartments, and by a greater number of artists. Not but that the pictures exhibited on this occasion are quite enough in number for at least one visit, for we have 693 works in all, contributed by 315 different artists; we could have been content, indeed, with fewer and better: but we must take the Exhibition as we find it; and, viewed as a whole, as the gathering together of the works of at least 250 unknown men, it is really a creditable display of the rising condition of British art.

We had been led to expect, in a year of wonders like the present, when so many foreigners and so many of our American brethren will be attracted to the great metropolis by the novelties of the Great Exhibition, that at least the members of the Society of British Artists would have stripped for greater efforts than some of them have chosen, and have accumulated more than some of them have done. With the single exception of the President (Mr. Hurlstone), none of the members are up, altogether, to the expected mark. Mr. Hurlstone, with the tact of a skilful caterer for the public, and fully appreciating the public sense of novelty of subject, as well as of treatment, has gone to Spain in search of fresh subjects for his pencil; and in some six of his eleven contributions to the collection has shown how skilfully he can enter into the feeling of the Spanish school, and how true the streets of Seville and Madrid still are to the pictures of Velasquez and Murillo. The titles of his pictures explain what he has attempted. These are—(141) "Street Scene in Seville," (184) "A Spanish Girl of Alcala de Guadaira," (222) "A Spanish Girl-Seville," (271) "A Glimpse in a Spanish Patio," (480) "Andalusian Girl with a Water Jar," (494) "A Gitana of Alcala de Guadaira." Of these, the "Street Scene in Seville" is the most ambitious, representing as it does—and with spirit, too—three boys before the door of a cafe, with a quarrel between two of them, and the part taken in the fray by a dog belonging evidently to the weaker boy. The truth of character in this picture cannot be denied; and, if the execution had been at all equal to the idea, the picture in every way would have been very little to find fault with in the whole picture. The painting, however, that is, the manual work in it, is somewhat coarse and slovenly; for Mr. Hurlstone has not that master-touch which Velasquez never failed to convey to subjects of the same character with no more work upon them. Look at the "Water Seller" by Velasquez, at the Duke of Wellington's, and see how marvellously the master-hand is visible throughout; and yet, the "Water Seller" is a picture with a deadly very little more in it than a day's work. We commend this picture to the careful study of Mr. Hurlstone. From Velasquez it is quite clear that Mr. Hurlstone will at present learn a good deal more than he is likely to learn from a further devotion to nature.

Mr. Pyne, whose landscapes have for many years formed the staple attractions of these rooms, is this year the contributor of only one picture, but this picture is in his best manner. It is called "Landing Herrings on the Yorkshire Coast," and has been painted in successful emulation of Mr. Turner's treatment of subjects somewhat akin in character. But where Turner would deluge us with yellow and blue, Mr. Pyne is content with white, and it is wonderful what he accomplishes with white alone. We should certainly have quarrelled with Mr. Pyne for sending but one picture to the Exhibition, and for his apparent idleness during the past year, had we not seen an advertisement elsewhere that he has not been idle, that he has indeed been busier than usual, that in one of the provincial theatres of the season we are to be treated with an exhibition of pictures from his pencil

We shall continue our notice next week, with Illustrations.

NATIONAL SPORTS.

The spring meetings up to the Northampton have afforded more than the average amount of sport, and have, in every instance, produced large fields The season, in fact, has commenced more auspiciously, and, saving that speculation has shown a decided falling off, promises to be a most brilliant one. Next week we have three meetings in the calendar, viz. Croxton Park, on Tuesday and Wednesday, with an average list; Catterick, on Thursday and Friday—the stakes not so well filled as we could have wished; and Epsom, with a magnificent bill of fare, on Friday, the steeple-chases, which promise nothing wonderful, coming off the day before. Irrespective of the Epsom affair, the only steeple-chase fixtures are Ormskirk on Wednesday, and the Liverpool Hunt (Roylake), on Saturday. The coursing season has closed.

TATTERSALL'S.

MONDAY.—The room was thronged this afternoon, but not at all to the improvement of business. Still, there was a considerable amount of betting on events, was held chiefly on the two leading favourites for the great race at Northampton, and Newminster, Teddington, and Lightfoot for the Derby.

9 to 2 agst Mr. Merry's ch. c. Newminster (t)	6 to 1 agst Logerdemain
5 to 1 ——— The Dane	20 to 1 ——— The Cockle
	20 to 1 ——— Year (t)

ALTHORP PARK STAKES.

5 to 1 agst The Greek (t)	5 to 1 agst Mr. Merry's ch. c. Newminster (t)

NORTHAMPTON TRIAL STAKES.—Even on Peep-o'-day.

POST STAKES.—6 to 1 agst Beehunter (t)

DERBY 1851.—2000 to [illegible] agst Newminster (t)

THURSDAY.—No betting.

NORTHAMPTON RACES.—WEDNESDAY.

THE TRIAL STAKES of 10 sovs each, with 40 added.—Mr. Rogers's b g by Orlando, out of Insurance (Hesmus (c), 1. Major Martyn's The Swede (W. Abdale), 2

THE FIRST TRIENNIAL STAKES of 10 sovs each, with 50 added.—Mr. Greville's Frantic (Sebman), 1. Mr. Watson's France (W. Hobbs), 2

THE GREAT NORTHAMPTONSHIRE STAKES of 25 sovs each, with 100 added. Count Batthyany's Valentine (Lt. Sherwood), 1. Lord Eglinton's Pandemus (Abrahy), 2

The OPEN STAKES of 10 sovs each, with 25 added. Mr. Rogers's Harp (S. Rogers), 1. Lord Exeter's Nurmee (Norman), 2

The QUEEN'S PLATE of 100 sovereigns.—Mr. Arnold's Peep-o'-day Boy (A. Day), 1. Lord W. Powlett's Priestess (S. Rogers), 2

The MAIDEN PLATE (7 st 56 sovs.—Mr. Blomfield's Simplicity (Kendall), 1. Mr. Dawson's British Boy (T. Lye) 0

Letters from New York announce the departure of a barque from Cincinnati, on a voyage direct to Liverpool. She had been towed over the falls at Louisville, and had proceeded on her voyage to the Mersey. She is named the *John Sweeny*, and will be the first ship to make the passage from Cincinnati to Liverpool.

THE GREAT EXHIBITION.

THE wild and wet weather of the last three weeks has tested the weakest points of the great Building; leakage has considerably prevailed; but, as the external painting progresses, and as notice is taken of the smallest drip, and a remedy immediately supplied, by caulking, putty, or paint, we, for our part, do not entertain the alarm, which they, who, from the first, have "developed every fear" respecting the security, &c., of the Crystal Palace, have been raising in various quarters. It is part of the contract for Messrs. Fox and Henderson to be answerable for every necessary repair, and the waterproofing of the roof and walls may be considered under this head

During the intervals of fine weather, gangs of painters, carrying their planks and scaffolding about with them, were engaged in stopping up the chinks, cracks, and repair ng the fractured glass. It has been suggested that the external colonnades should be prepared so as to be impervious to rain—a project which will be doubtless, well considered; and we expect that we have little anxiety but that the edifice will thoroughly fulfil the object for which it has been erected. The painting of the whole of the eastern portion, internally, is completed, and there remains but little on the western side. All adverse opinions of the suitability of the decorations by Mr. Owen Jones have certainly passed away

The disputes with the Foreign Commissioners, respecting increased accommodation, are now nearly all settled; and at the last interview between Mr. Sal.ndrouze de Lamornaix and the French exhibi ors, at the Conservatoire des Arts, &c., at Paris, respecting the space, the progress of the works in designs and inventions, the period of the Exhibition, and other matters, satisfactory information was fully afforded and well received. Belgium, Austria, and the Zollverein have received additional accommodation. But here let us retrench that it is imperatively necessary to warn our foreign friends that their preparations appear to us tardy, and that, without the most incessant activity, they will not be ready for the 1st of May: indeed, the foreign articles must be packed to wear the air of large warehouse bays, so little advance has been made in the requisite fittings up.

Here is a large organ, which will be placed in the nave, from amongst the French collection; and, as the Crystal Palace may be made available for sound as well as sight, the Times judiciously observes, "Organists may expanse the sublime music of the 'Creation,' may be made to circulate; and while thousands of spectators assemble to admire the chief wonders of human industry, the swelling of these instruments, as they roll through the building, will remind them of that power by whom are all things." Nice selection will be specially exercised among the French contributions, and the display of porcelain, jewellery, and silks will contain only the most expensive productions. The contributions from Tunis reflect the highest credit on those who prepared them: we have previously given a list of these productions, but we may repeat that weapons, horse-trappings, blankets, and apparel are represented in every variety. Among the entries of articles which the Bey has sent over, is the "beauty's dress on leaving the bath." Of the American specimens, those illustrative of the mineral wealth and mechanical ingenuity of the country are very varied: one curiosity is an air-exhausted metal coffin, in which a human body could be preserved without decay for ages: it contains a bouquet of flowers as fresh as when it was first placed there. The contributions of gods, besides those brought by the *St. Lawrence*, are coming in. We have engraved in this week's Journal the unloading of the frigate as she lay in the Docks at Southampton. Some of the addresses on the packages are odd enough: one, containing a grain reaper from Illinois State, bore the inscription, in large characters, "For the London Fair."

The last importations from abroad have included the following arrivals:—The *City of Rotterdam*, from Dunkirk, has brought 191 packages; the *Venceslis*, from Havre, 1 package; the *Gemsack*, from Leghorn, 1 package of wax-work, and 18 other packages, contents unknown; the *Kaiser Karl*, from Trieste, a huge rock of marble; the *Antwerpen*, from Antwerp, 30 packages; the *Miranda*, from Teneriffe, 1 case; the *Rhine*, from Rotterdam, 19 packages; the *Jem*, from Nassau, New Providence, 6 packages; the *Triton*, from Ostend, 1 package; the *City of London*, from Dunkirk, 115 packages; the *John Bull*, from Hamburgh, 50 packages; the *Magnet*, from Rotterdam, 1 package; and the *Columbine*, from Antwerp, 57 packages, consigned to the foreign consuls, agents, and other authorized persons in this country; and the ship *True Briton*, from Calcutta, has brought 239 packages of sundry articles consigned to the East India Company.

Our returns next week will give a summary of all the contributions received in the Building.

On our own side of the Building the preparations are as urgently advanced as we have previously remarked. The rails are laid for occupation by the locomotives, and the department of machinery has received fresh specimens of every variety and purpose: models to show the uses of mineral productions are also apparent. In the shape of cottage walls, chimneys, roofs, and pavements, tiles of brick, tile, &c. Part of a bay in the south side frontage is remarkable for the advanced arrangements to fitly display Mr. Jobson Smith's hardware collection: in two or three of the ground compartments specimens of machinery have been completed; walls and chimney-pieces, &c., in varieties are also beginning to be apparent. The Local Committee of Sheffield have from the first manifested a desire to interfere with the decisions and regulations of the Executive Committee. The proposal to select the principal firm in their own town (says the *Times*) truly enough awakened all the fires of local jealousy, and their last residence appeared in the shape of a plan for the arrangement of their productions, which could not be conceded to. A choice collection of drugs and chemical preparations will be arranged by the Pharmaceutical Society, but our most remarkable display, after our mechanical inventions, will be in the eight classes of textile manufactures, which are to occupy not less than 103,744 square feet. The whole of the cotton manufactures from the metropolis, Glasgow, Manchester, Bolton, &c., are very forward. In the woollen and worsted manufactures, the Galashiel tartans are very conspicuous The Spitalfields silk will form a splendid trophy of manufactures; and a trophy, connecting the silk and shawl specimens, will be arranged in the central avenue. The damasks and linens, in the flax and hemp departments, from Belfast, Leeds, Barnsley, and London, are in full operation, and the Dundee fittings are very complete. Irish poplins will be splendidly represented The hosiery trade, the glove trade, and the products of the Highlands of Scotland, will form a trophy for the *Gemsack*, from Leghorn, a package principally purchased from the printed fabrics, the fittings for which are nearly completed. The packages from Jersey contain fine specimens of cereals, local granites, and every stone of importance in the island. Some splendid specimens of oak, elaborately carved, representing the signing of Magna Charta, may be greatly commended: a gun, inlaid with gold and silver, is also remarkable, the barrels are fitted in the stock so as to serve for either gun, pistol, or rifle.

Exhibitors sending in their Catalogue forms must invariably forward the prices of production of their articles, where cost is to form an element for the consideration of the Jurors. Those who have not done so, must forward these particulars at any period up to the 25th of next month, addressed to Mr Digby Wyatt, the Building Superintendent, outside "For the Jury" with the number of the class to which the productions belong. Catalogue forms have been received from more than 10,000 exhibitors; returns from above 9000 have got to classes principally from Foreigners. The Executive Committee, in a special notice, especially recommend exhibitors not to delay forwarding their goods by wagons and carts until the closing day, namely, the 22nd of April, but to send them immediately Agriculture, and horticultural machines were to be deposited in the Building by the 20th. The selection for trial will be made by the Jury on the 1st of April, and the actual trial will commence on the 2nd

Advices from St. Domingo announce a collection of articles from Hayti, prepared by Sir R. Schomburgk: specimens of native woods, starch, grain, &c., are among the productions

Our lady readers will be glad to hear that the Executive Committee are arranging for floral decorations in several parts of the Building, to be provided by our most eminent horticultural houses. The Committee have, in respecting this very judicious addition to the sights of the Exhibition will shortly appear by advertisement.

Amongst the gossip outside, we see, by the Birmingham trade advices, that the orders for brass bedsteads are at the present time extremely numerous. The lodging-houses of London are anticipated to be prepared with great energy appropriate sleeping accommodation for foreign visitors; and it must be admitted that metallic bedsteads will be the most suitable which can be provided. In relation to the depressed silk button trade, it may be stated that deputation, who were disappointed of an interview with Prince Albert last week, have received an intimation that his Royal Highness will be happy to see them at Buckingham Palace, on the return of the Court to London. The trade are not without hopes, that, under the patronage of the Prince, visitors to Hyde park, during the Exhibition, will be decorated with "the Brummagem gilt button."

The following list of Foreign Commissioners and Agents, &c., which is officially correct, will be doubtless appreciated by many of our readers:—

Country	Name	Address
Austria	{ Baron Buol-Schauenstein, Chevalier de Buschek, Secretary	Chandos House
Bavaria	Professor Dr Neigebaur	21, Hyde-Park
Belgium	Charles Davies	20, Strand
Brunswick	Regier Werkmeister	27, Wimpole-street
France	{ Salomon de Rothschild, Labarraque, Commissioners	3, Piccadilly, Hanover-square
Greece	K. Ralli	37, Kensington-gore, Hyde-Pk
Hamburg	M. J. Schau	4, Tokenhouse-yard
Hanover		
Hesse Cassel	Chevalier Calpisbeau	3, Stratford-place
Hesse Darmstadt	M. Schaaf	
Holland	{ H. C. Camp, Amerongen, Secretary	29, Finsbury-square
Portugal	{ Antonio Valdez, Secretary	Sablonière Hotel
Rome	{ A. Jacovacci, Secretary	5, Jeffry's place
Russia	Sir Charles Trebbil	31, Newman-street, Oxford-street
Tuscany	Gabriel Kennaway	34, Russell-square, Bedford-hill
Sardinia	Chevalier Lascelles	5, Berkeley-street, Berkeley-square
Saxony	Gustavus Duffeuring	8, Charlotte-street
Spain	{ Manuel de Vassel, Commissioner, J. Williamson, Secretary	5, Water-lane, Tower-street 4, Tokenhouse-yard

CHESS.

TO CORRESPONDENTS.

A PLAYER OF THREE MONTHS' STANDING is wrong in both cases

PAWN.—Neither the rules of Chess nor of courtesy require that you should cry "Check" on giving a move of discovery.

R H.—There is no apprehension of such players engaging in the Tournament

CAISSA.—Your move to Enigma No 668 is—1 B to K B 8th

J. L.—Every are both too easy, we are sorry to say.

P. P.—Look at it again, and you will find the game impracticable

J. J.—An obvious mate in three moves by first playing Q to her 4th (ch), or R takes B (ch)

SOLUTIONS OF PROBLEM No. 672, by Little Neil, Sirius, Scandinli, C B S, Boldonia, Milo, Pench Irwin. Plate are correct

SOLUTION OF PROBLEM No. 673, by T J, of Hanworth: R S L, of Hertford, Capo Town, Ildebrando, T E F, jun; Farnwood, Margot, B B, Ernest, Solitaire, Rustic, Jerry, Alfyn, and others.

HERMES, SIGMA, R D F—The *Chess-Player's Chronicle* for April will contain, we are told, the whole of the correspondence between the Umpires and Secretaries of the Tournament and the Committee of the London Club, with an appropriate commentary

S. S.—St James's-square. In Problem 674 K Black for his 3d moves take the Q. White makes a K, giving mate. If he take the Bishop, White plays P to B 8th—Mate: and if anything else, B takes K B P. Mate

GEORGE REX.—A Pawn cannot take a Pawn in passing fin the position you give; but if White's Pawn were at his Q 5th, and Black's Pawn at K 2d, and the latter attempted to play it to K 4th, White might, if he chose, take it in passing

CLYTIE. Thou shalt be duly examined

MAY FLOWER. I learnedly have written a work called the "Chess Preceptor." His work, which you should read in the original and not through any garbled tran lation, is entitled Analyse Nouvelle des Echecs, par Jos. des Legues. 2 Tl e price is 9s. Messrs. Kling and Horwitz is published at the office of the *Chess-Player's Chronicle*. We have no room to give you the extracts you require

S T R.—The Committee of the Paris Chess Club have gallantly instituted a subscription among the amateurs of France in furtherance of our Grand Tournament See *La Régence* of this month

DERBYON in Enigma No 667. White's Q Bishop must be at K 6th; and in No. 668 White has a Pawn at his *King's* 3rd, instead of his Kt's 3d

W B—Try 1. R to K 8 3d

HERALD.—1. The prospectus of the CHESS CONGRESS may be procured of Mechi, Leadenhall-street; Leuchars, Piccadilly; the office of the *Chess-Player's Chronicle*, and of the porter at the St. George's Club, in Cavendish-square. 2. The earlier our Correspondents send in their memorandums, the more likelihood they have of being answered the same week

SOLUTIONS OF PROBLEM No 674, by Judy, J P H H, Sir Edmund, T D G M E R (R M C), Dr. Field, Jack of Worcester, F G R, J E Rice, of Stuttgardt; C F, of Torquay; Alfred and Conway, are correct.

SOLUTIONS OF ENIGMAS, by J Allies, Cape Town, Dunsforisaline, Bellary, C E B, Boldonia, T E F, jun, J P H H, Sir Edmund, Merrow, Alfred of Worcester, F G R, J E Rice, of Stuttgardt; C F, of Torquay, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 674.

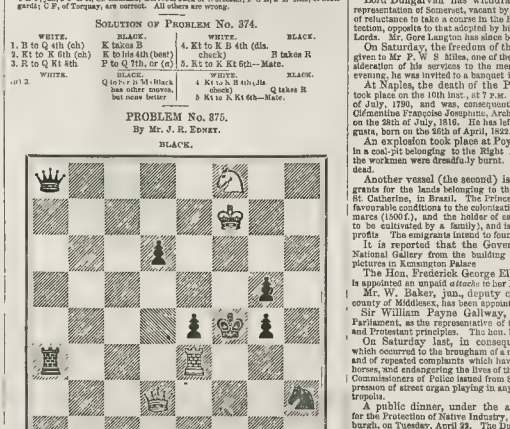
WHITE.	BLACK.	WHITE.	BLACK.
1. R to Q 4th (ch)	K takes B	4. Kt to K 5 4th (dis.	
2. Kt to K 6th (ch)	K to his 4th (best)	check)	B takes R
3. R to Q Kt 4th	P to Q 7th, or (a)	5. Kt to K 3d th—	Mate.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to B 3d	(a) Black has other moves, but none better	4. Kt to B 4th, (dis check)	Q takes R
2. Q to K 3d (ch)		5. Kt to K 6th—Mate.	
3.			

PROBLEM No. 675.

By Mr. J. R. EDNEY.

BLACK.



WHITE.

White, playing first, mates in four moves.

CHESS IN THE PROVINCES.

MR. STAUNTON gives the Queen's Knight to the Hon. SECRETARY of the READING CHESS CLUB

(Remove White's Queen's Kt from the board.)

(Sicilian Opening.)

WHITE (Mr. S.)	BLACK (Mr. H.)	WHITE (Mr. S.)	BLACK (Mr. H.)
1. P to K 4th	P to Q B 4th	28. Kt to K 3d	B to Q B 4th (*f*)
2. Kt to K 2d	P to K 4th	29. K B to Q 3d	B takes Q R P (*g*)
3. Kt to Kt 3d	P to Q 4th	30. P takes B (h)	Kt to Q B 4th
4. P to Q B 3d	Kt to K B 3d	31. R takes Q P	R takes R
5. B to Q Kt 5th (ch)	P to Q 3d	32. Kt takes B	R to Q sq
6. B takes B (ch)	Q takes B	33. Kt to Q B 6th	R to Q 8th (ch)
7. P takes P	K Kt takes P	34. K to Kt 2d	P to Q R 3d
8. Castles	B to Q 3d	35. Kt to K 8th	P to Q Kt 4th
9. P to Q 4th	Q B P takes P	36. Kt to Q 6th	Kt to Q 6th (*i*)
10. Q to K B 3d	K Kt to K 2d	37. R to K 2d	P to Q Kt 4th
11. P takes P	P takes P	38. R to K 8th (ch)	K to K 3d
12. Kt to K 4th	Q Kt to Q B 3d	39. Kt to K 3d	R to Q B 4th
13. K R to K sq	Castles on Q side	40. R to Q B 8th	R to Q B 3d
14. Q B to K Kt 5th	Q Kt to K 4th	41. R to Q R 7th	K to K 3d
15. Q to K Kt 3d (*a*)	K Kt to his 3d (*b*)	42. P to K B 4th (*k*)	P to K B 3d
16. B to K B 4th	Q Kt to K B 6th (ch) (*c*)	43. P to K R 4th	Kt to K 8th (ch)
17. Q takes Q Kt	Kt takes B	44. K to R 3d	R to Q 3d (*l*)
18. K to R sq (*d*)	K to R sq	45. P to K R 5th (ch)	K to R 3d
19. P to K Kt 3d	Kt to K 3d	46 Kt to K B 5th	R to Q 4th
20. Q to K B 5th	Q R to Q sq	47. K to Kt 4th	Kt to Q B 7th
21. Q R to Q B sq	P to Q Kt 3d (*e*)	48. R takes P (ch)	K to R sq
22. Q to K B 3d	Kt to Q B 4th	49. K to Kt 5th	R to Q 5th
23. Kt to K Kt 5th	Q to her Kt 2d	50. R takes R P (ch)	K to Kt sq
24. Q takes Q	Kt takes Q	51. R takes K B P	R takes Q R P
25. P to Q R 3d	Kt to Q B 4th	52. K to Kt 6th	P to Q Kt 5th
26. K R to Q sq	Kt to Q Kt 6th	53. K to Kt 6th	
27. Q R to Q B 2d	P to K E 3d	And Black surrenders.	

(*a*) Threatening to gain at least a piece.

(*b*) His best move, we believe

(*c*) It is quite evident, that, by taking the Bishop, he must have lost his Queen.

(*d*) With an eye to playing Q to K Kt 3d, which the dangerous check prevented at the instant.

(*e*) Well played

(*f*) This was not sufficiently considered, and leads Black a place.

(*g*) Probably his best play under the circumstances

(*h*) Better, we believe, to take the Kt; although that looks well, too

(*i*) All this is cleverly played by Black

(*k*) The game is extremely difficult for both parties just now

(*l*) The object of this move, we presume, was to get the Rook on the adversary's second rank, and threaten a mate presently; but there was not time for it. Black ought rather to have played P to K R 4th, and have prevented his King being driven back.

CHESS ENIGMAS.

No. 670 —By JUDY.

White: K at Q Kt 4th, R at K 2d, B at K R 7th, Kt at K R 2d.
Black: K at Q 6th, P at Q 3d.

White to play, and mate in four moves.

No. 671. By W. GILBY, Esq.

White: K at K P 2d, Q at Q 2 6th, Rs at K B 7th and Q B 6th, Bs at Q Kt 8th and Q R 8th, Kt at Q B 3d; Pa at K R 2d and 5th, K Kt 2d, and Q R 5th.
Black: K at his B 4th, Q at K B 3d, Rs at K 3d and Q B 4th, Kts at Q Kt 4th and Q 7th; Pa at K Kt 4th, K B 5th, and Q 3d.

White to play, and mate in four moves.

OXYGEN FROM THE ATMOSPHERIC AIR.—M. Boussingault, says the *Journal de l'Institut*, has been some time occupied in resolving the following problem:—"To extract in a state of purity, and in a considerable quantity, the oxygen gas from the azote in the atmosphere, for this purpose M. Boussingault has given the preference to baryta, founded on its well-known property of remaining in oxygen of a moderate temperature, and abandoning it under the influence of a heat sufficiently intense. From the process which M. Boussingault employed, he has remarked that 10 kilos. of baryta, on being completely oxydized, is able to take and to return afterwards 730 litres of gas. This is the number indicated by theory; but for celerity of operation, as far at least as can be judged up to the present, more than 600 litres can be counted on In fact here, and in operating on 100 kilos. of matter, 6000 litres of oxygen gas might be disengaged at each disoxydization; four or five operations might be performed in 24 hours, which would thus furnish from 24,000 to 30,000 litres of gas."

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

His Royal Highness Prince Albert, with a true appreciation of what is really benevolent and humane, has condescended to become one of the patrons of that old and valuable society, the Royal National Institution for the Preservation of Life from Shipwreck.

All the bodies of the unfortunate miners who perished in the Nitshall Colliery explosion last week have been recovered. It is uncertain when the pit will again be in working condition, but immediate measures are about to be adopted for the attainment of that end. From the extent of the pit, and the nature of the explosion, however, it will probably be a considerable time before it is put in the same state as it was before the catastrophe.

A requisition has been presented to the Marquis of Blandford, requesting him to allow himself to be put in nomination for the county of Oxford, in the event of a dissolution of Parliament.

An adjourned General Court of Proprietors of the Bank of England was held in the Court-room on Tuesday, to decide by ballot the amount of dividend that shall be payable for the half-year. The increase to 4 per cent. was carried.

The public debt of Prussia which bears interest amounts to 155½ millions of thalers, to which must be added a 333,000 thalers of provincial debt. The debt of the State has increased 26,909,000 thalers since 1820

The Clothworkers' company of London, of which the Lord Mayor is a member, has liberally offered to give fifteen acres of building land, near the town of Coleraine (Ireland), as a site for the erection of the proposed "Wages College;" and also the munificent donation of £3000 in aid of the fund for building and endowment

The unhappy criminals, Thomas Drory and Sarah Chesham, who at the late Chelmsford assizes were sentenced to death—the former for the murder of the girl Ann Denny, by strangulation; the latter for the murder of her husband, by poisoning him with arsenic—were executed in that town on Tuesday morning at nine o'clock, in the presence of a vast concourse of persons of both sexes. Drory admitted his guilt, but Chesham persisted in asserting her innocence, having been convicted on the merest evidence, which also proved she was well known in her neighbourhood as a professed poisoner. According to the chaplain, neither of them evinced a satisfactory spirit of repentance.

Lord Dungarvan has withdrawn himself as a candidate for the representation of Somerset, vacant by the death of Sir A. Hood, on the ground of reluctance to take a course in the House of Commons, on the subject of Protection, such as that adopted by his grandfather, Lord Cork, in the House of Lords. Mr. Gore Langton has since been requested to become a candidate.

On Saturday, the freedom of the society of Merchant Venturers was given to Mr J. W. S Miles, one of the members for the city of Bristol, in consideration of his services to the mercantile body in Parliament; and, in the evening, he was invited to a banquet in the society's magnificent hall.

An Act, the effect of which is to enable Prince Adolphus Frederick, the King's uncle, took place on the 10th inst., at 7 P.M. The Prince of Salerno was born on the 2nd of July, 1790, and was, consequently, in his 61st year. He married Maria Clementine Francisca Josephina, Archduchess of Austria, daughter of Francis I., on the 28th of July, 1816. He has left a daughter, Princess Marie Caroline Augusta, born on the 26th of April, 1822.

An execution took place at Poynton, in Cheshire, on Saturday last, in a coal-pit belonging to the Right Hon. Lord Vernon, by which a number of the workmen were dreadfully burnt. One collier was taken out of the pit quite dead.

Another vessel (the second) is about to leave Hamburg with emigrants for the lands belonging to the Princess de Joinville, in the province of St. Catherine, in Brazil. The Prince has made a concession of land on very favourable conditions to the colonization society, which has issued shares of 1000 marcs (1500 f.), and the holder of each share is to receive fifty acres (sufficient to be cultivated by a family), and is, moreover, to have a share of the general profits The emigrants intend to found a town called Joinville.

It is reported that the Government, with a view to moving the National Gallery from the building in Trafalgar-square, propose to place the pictures in Kensington Palace

The Hon. Frederick George Ellis, son of Lord Howard de Walden, is appointed *attaché* to her Majesty's Mission at Brussels.

Mr. W. Baker, jun., deputy coroner for the eastern division of the county of Middlesex, has been appointed the coroner for the Tower liberty.

Sir William Payne Gallway, Bart., has been elected to serve in Parliament, as the representative of the borough of Frome, upon Protection and Protestant principles. The hon. baronet was returned without opposition.

On Saturday last, in consequence of the recent serious accident which occurred to the brougham of a medical gentleman in North Audley-street, and of repeated complaints which have been made with respect to frightening horses, and endangering the lives of the public by the street organ nuisance, the Commissioners of Police issued from Scotland-yard a general order for the suppression of street organ playing in any of the public thoroughfares of the metropolis.

A public dinner, under the auspices of the Scottish Association for the Protection of Native Industry, is to take place in the Music Hall, Edinburgh, on Tuesday, April 22. The Duke of Montrose or the Earl of Eglinton is expected to preside.

An auctioneer in South Durham announced for sale, last week, an eel-spear, which he grandiloquently described as "a match for the trident with which Neptune pursues the dolphin across the ocean, or guides his speed through the labyrinths of his ocean!" He also had a miscellaneous lot of "books, boards, bottles, posts, props, pump handles, and a pretty paradigm of pots, pans, and pantry pipkins!" A pretty paradigm! This beats George Robins.

The Harwich election petition against the return of the sitting members argues that he was not at the time of his seizure of an amount of the clear yearly value of £300 over and above all incumbrances, the qualification registered under 1 and 2 Vic., c. 48; that many persons voted who had no right to vote; and that bribery and bribery were practised.

The sailors on strike in Liverpool still continue to perambulate the streets in procession. On Saturday night there was a performance for their benefit at the Amphitheatre. The house was well filled.

We are happy to announce the arrival at his house, in Lowndes-square, of Lieutenant General Sir Willoughby Cotton, with his health unimpaired, after his repeated and long services both in the East and West Indies. This gallant and justly popular officer was entertained by the Hon. Court of Directors on Saturday last.

A correspondent of a morning contemporary says:—"During the past week, Dr. Pusey, one of the patrons of St. Saviour's Church, Leeds, has been on a visit to that town, with the object of preventing the secession of the clergy of St. Saviour's to Rome. In this, however, he has been unsuccessful, and some of the clergy, and at least twenty of the laymen of the church, are about immediately to go over to the Popish church."

Lord Stanley is to be entertained at dinner at Merchant Tailors' Hall on the 2nd of April.

We learn by the intelligence brought by the steam-ship *Europa*, that the packet-ship *Infanta*, which sailed from Liverpool for New York a few weeks ago, had been compelled to put into Halifax, being short of provisions, and that fourteen on board had died. She had a full complement of emigrants on board when she left Liverpool.

The King of Bavaria is said to be seriously indisposed.

An accident happened to the carriage of his Majesty the King of Prussia, on the 20th instant, as he was entering Berlin from Charlottenburgh: it had been driven at a rapid pace through the Brandenburg Gate, and into the Pariser Plats one of the hind wheels came off, the axle having broken. The carriage was dragged for some distance in an awkward position before it could be stopped. His Majesty alighted, and waited in the house of General Wrangel till another carriage arrived.

It is intended to bring forward Mr. Torrens M'Cullagh, at present M.P. for Dundalk, as a candidate for the county of Dublin, at the next election. He will succeed Dr. Power, who has entirely lost the confidence of his constituents by his vote against Mr. Disraeli's motion.

A new Asylum for Infant Orphans has received information from A. W. Penrose, Esq., one of the executors, of a legacy of £300 by Mrs. Mary Petch, late of St. John-street-road

The good understanding that has hitherto existed between the Sultan and Abbas Pacha is not likely to be impaired, though some fears of a rupture were at one time entertained, owing to the injunctions of the Sultan to introduce certain alterations in the administration of affairs in Egypt, which would have inevitably led to the debasement of the Pashalick, and of the position of the Viceroy. The last accounts from Constantinople, however, state that the Sultan has rescinded much of his order, and that there will be no material change in the country—an object much desired by those who understand the interests of Egypt

We are authorised to state, that the announcement in the *Builder* of the death of Mr. Henderson, of the firm of Fox, Henderson, and Co., is incorrect, no such event having taken place.

The Bey of Tunis is making state, and its trade is developing itself more largely every year, the wealth of the natives increasing, the transit in a most efficient and improving condition, the security to travellers most complete; and, moreover, the Sultan of Turkey having formally recognised as hereditary in the close of the Syrian war in 1841, so long as the Viceroy governs the country properly, pays his tribute, and does not seek to extend his rule, the Sultan no ground for disturbance.

On Monday, a notice was issued by the City Commissioners of Sewers, that on and after Monday next, all further notice, in consequence of the delay in attaining a thoroughfare at London-bridge, no vehicles of any description will be allowed to pass by this bridge. The cost of repaving is estimated at about £2600

A patriarch of Lannois (Seine-et-Marne), named Gentilly, recently requested the curé of his parish to give him and his partner the nuptial benediction, as they had been married in an II of the Republic, when the municipal authorities alone took part in the celebration of marriages. The curé consented, and the aged couple (the husband being 86 years old, and the wife 83) presented themselves at the altar, attended by their son, aged 62; grandson, aged 38; and great-grandson, aged 16, the latter leading his great-grandmother to the altar.—*Galignani.*

PARIS FASHIONS FOR APRIL.

THE ball season at Paris has terminated with the Pensioners' Ball of the old Civil List of Charles X. The principal novelties are the splendid preparations for the London season. Head-dress is particularly rich, by no means lacking lively colours, and ornamented with gold, silver, and beads We only speak here of fancy head-dress; for diamonds are always very much admired for a rare and *recherché parure*. Never have they been so well set as at the present day, both as regards elegance, lightness, and convenience. Thus, each night a lady may change the disposition of her brilliants: to-day she may form them into a band, like a diadem; to-morrow, a row of pins for the body of her dress; another time she can place them on a velvet necklace, and so forth.

PARIS FASHIONS FOR APRIL.

Fancy Head-dresses are made of lace, blond, silk, gold, or silver. Flowers of all kinds are also worn, and above all foliage of velvet and satin, deep shaded, enriched with white or gold beads, and gold or silver fruit. We have also seen a *coiffure* of gold blond, forming a small point at the top of the head, and ornamented on each side with a branch of green foliage and golden fruit in little flexible bunches.

Ball Dresses have nearly all two skirts, which are ornamented with a profusion of flounces, trimmed with ribbons or flowers, which follow the shade of the first or upper skirt; or they are used to raise it at the sides, or on one side only. We have also seen a dress of white net with two skirts, the first (the underneath) trimmed with two net flounces at the extremity with two gathers through the middle, and satin ribbon No. 4. On each of these flounces was a trimming of Brussels application lace, with a gather of ribbon at the top, of the same width as those of the extremity. The second skirt was trimmed at the bottom with two gathers of ribbon, and one lace flounce with a ribbon gathering at the top; the body, *à la* Louis XV., was an intermixture of gathered ribbons and lace flounces

PARIS FASHIONS FOR APRIL.

Spring fashions are already setting in, though the shops do not yet fully exhibit their novelties. Capotes will be more in vogue than bonnets, their style allowing spangling, for which bonnets are not suited. We have seen capotes of taffeta, and ribbon applied like flounces as ornaments to the crown; these ribbons are cut into teeth or plain, but with a narrow border of much brighter shade. We have also seen very pretty capotes covered with net, made of very lively coloured taffeta. The tops of all these bonnets are widened more than they are high; however, they are drawn near the bottom, and are quite closed.

Dresses, it is certain will be open in front and heart-shaped to the bottom of the waist. Low square-fronted chemisettes suit this kind of boddice, with breast-plates of embroidery and lace. At concerts, many dresses are seen either with flounces or apron-shaped fronts; that is to say, the front breadth has a much richer pattern, and different from the other breadths of the skirt. This pattern is generally an immense bouquet, whose branches entwine to the top, diminishing in

PARIS FASHIONS FOR APRIL.

size; or there are two large columns of stripes, which form undulating wreaths.

Dresses of white or other ground of taffeta warped will be the fashion this spring for walking; however, we must wait for Longchamps, at the latter end of April, to decide the question.

THE ILLUSTRATIONS.

Lace cap, trimmed with flowers without foliage. African velvet dress; body with Spanish basks or skirts cut out into teeth, trimmed with a small white lace, having at the top a small gathering of ribbon No. 4; the body trimmed with lace fading, edged with a gathering of ribbon: black velvet ribbon round the neck, fastened with a diamond buckle; bracelets the same. Bonnet of pink taffeta, very plain; and plain dress of Valenciae, with festooned teeth, small felt

EXPOSITION OF PAINTING AND SCULPTURE, IN THE PALAIS NATIONAL AT PARIS—(SEE NEXT PAGE)

bonnet, with bunch of ribbons; Nacarat velvet dress; trousers of cambric muslin, with English embroideries; gaiters of black cloth; and mousquetaire pardessus of black cloth, trimmed with gimp or lace put en flat.

EXPOSITION OF PAINTING AND SCULPTURE, AT PARIS.

THE Exposition usually takes place annually in the Louvre; but, owing to the repairs at that palace not being completed, the locality has been changed; and this year the novelties of French art have been exhibited in a temporary building provided for the purpose in the court-yard of that scene of so many vicissitudes—the Palais Cardinal, Royal, and at present National.

The collection contains specimens of the best works of the French modern school; and we are informed that during the present season we shall have the opportunity of seeing the more remarkable of these pictures in London; a Committee being now in course of formation in the metropolis with the object of giving to French and other Continental artists the same hospitable reception which has been so liberally accorded to the industrial world in the Crystal Palace in Hyde Park.

The accompanying Illustration shows one of the ground-floor saloons of the Paris Exhibition; in which, for the first time, is presented the happy combination of pictures and statues, reciprocally setting off their merits.

This portion of the Exhibition is admirably arranged, and may serve as a model for that neglected class of building, our galleries of art. The temporary barrack-like house was built in two months. The room contains but a small portion of the contributions of the French artists; for we find the catalogue to contain no fewer than 1664 names, whose productions amount to 3962, and fill 34 rooms and galleries contained in the immense building. The contributors are—painters, 1306; sculptors, 204; architects, 44; engravers, 78; lithographers, 32.

MADEMOISELLE CAROLINE DUPREZ.

MDLLE. CAROLINE DUPREZ.

IN the autumn of 1838, Donizetti's "Lucia di Lammermoor" was first produced at the San Carlo, at Naples, *Edgardo* being sustained by the famed French tenor Duprez, for whom the part had been expressly composed, and *Lucy* by Mdlle. Tacchinardi (now known as Madame Persiani); Signori Cosselli and Porti being *Enrico* and *Bidebent*. Soon after the production of this work, Duprez gave a dinner, at which Malibran (who was in the same company at San Carlo), Mdlle. Ungher, Signor Cosselli, and other artists were present. In the midst of the dinner, a little girl some three years of age, without being asked, began to sing the well-known air from "Tancredi," "Di tanti palpiti." The guests were thunderstruck at the excellent quality of her voice and at her precision. They asked of Duprez—for it was his eldest daughter Caroline who had thus sung in presence of such distinguished vocalists—how it was that she thus "came out" in the middle of a dinner; when he explained that it was her invariable custom to sing "Di tanti palpiti" when there was any particular dish she fancied on the table. And so it was. Caroline Duprez was born at Florence in 1823, during the period of Duprez's second visit to Italy, where he married a vocalist of that country, from her earliest infancy was passionately fond of music, and when Duprez, after his brilliant career in Italy, returned to Paris in 1837, to make his *début* at the Académie Royale, as *Arnoldo* in "William Tell," he took especial pains with the musical education of his gifted child. She was always delighted to be present at the Grand Opera, and it was in vain that her desires were checked by her parents. Whilst Duprez took charge of her tuition in singing, she studied harmony and accompaniment under M. A. Lecarpentier, and the piano under Mdlle Marten. It was principally for his daughter that Duprez wrote his work "The Art of Singing." At the age of fourteen years she was enabled to conquer every vocal difficulty, and she was left to her own juvenile inspirations.

After Duprez had quitted the Académie Royale, the great scene of his triumphs in "William Tell," "La Favorita," "Les Huguenots," "Robert le Diable," "Otello," &c., for twelve years, he determined to establish a dramatic singing-school, in order to promulgate the principles of that art of which he had been such an eloquent exponent. For this purpose he selected a certain number of pupils from the "Conservatoire," at which he was professor of singing; and, after he had trained the most intelligent in his class, he gave them the advantage of dramatic experience, having erected a private theatre at his residence. When the time arrived that he had perfected a company for opera, he left Paris for a tour in the provinces. He was at Nantes, thus occupied with these pupils, when he was joined by his wife and children, who were witnesses of the success of his experiment. Here Mdlle. Caroline's irresistible desire to sing on the stage induced her father to cultivate her talents, with the promise that she should make her *début* in due course. Last year he began a fresh tour with his pupils, six of whom now occupy prominent positions in Paris and London on lyric boards—namely, Mdlle. Masson, Mdlle. Poinsot, and M. Oswald, at the Grand Opera; Mdlle. Felix Miolan, at the Opéra Comique; Mdlle. Duprez and M. Balanche, at Her Majesty's Theatre. Mdlle Caroline Duprez sang for the first time in public at L'Ile-Adam, where her father gave a concert for some inhabitants of a village near his country house, who had been burnt out. Her first appearance on a stage was at Geneva, about four months since, in the character of the *Princess Eudoxie*, in Halévy's "Juive." Her preparations for the stage were concluded at Stutgard (Wurtemberg), Nancy, &c.; and on the 9th of January last, she made her *début* in Paris, at the Théâtre des Italiens, having been engaged by Mr. Lumley, the director of that establishment as well as of Her Majesty's Theatre. Her father was the *Edgardo*, and her success was prodigious. In the same month she appeared as *Adina*, in Donizetti's "Elisir d'Amore," with the inimitable Lablache, Signori Ferranti and Calzolari, in the cast. She took her farewell of the Parisian *dilettanti* on the 10th inst., as *Desdemona*, in the third act of Rossini's "Otello," her father sustaining the Moor. On the 22d inst. she appeared at Her Majesty's Theatre: a notice of her triumphal *début* will be found elsewhere. This night she is announced for the part of *Oscar* the *Page*, in Scribe and Auber's "Gustavus," an Italian adaptation of which will be heard for the first time in this country. It only remains to be recorded, leaving our Artist to afford some notion of the personal attractions of this young *débutante*, that she is highly accomplished, and that in private life, apart from the illusion of the stage she shines as an amiable and intellectual member of a most gifted family, adding intrinsic worth of heart to lyric excellence.

ORIGIN OF ST. ANDREW'S CROSS IN CONNEXION WITH SCOTLAND.—John Lesley, Bishop of Ross, reports, that in the night before the battle between Athelstan, King of England, and Hungus, King of the Picts, a bright cross like that whereon St. Andrew suffered, appeared to Hungus, who, having obtained the victory, ever after bore that figure. This happened in 819.—*From "Notes and Queries."*

The *Lancet* continues its exposures of the adulterations practised in articles of food. Of 42 samples of mustard procured from various wholesale and retail dealers in the metropolis, and submitted to examination, the whole were found to be adulterated, and in every case the adulteration was the same in kind, varying only in degree, and consisted in the admixture of genuine mustard with immense quantities of wheaten flour, highly coloured with turmeric.

FINE ARTS.

"SAINT ANTHONY'S DAY IN ROME." PAINTED BY G. H. THOMAS.

THE subject of this clever picture is thus told in the Catalogue:—

On this day the Romans take their horses, oxen, &c. to the Church of St Antonio (the patron Saint of animals), to have them blessed. The priest comes to the door of the church, and, after reading a prayer, sprinkles them with holy water. They give in return a few coppers, a candle, or some ornament for the altar of the Saint.

In the picture, the owner of the horse is just about to start for the church, his family are bidding him speed, and are in dancing spirits. The scene is altogether a very pleasing one, and spiritedly painted whilst it is full of reality.

"SAINT ANTHONY'S DAY IN ROME."—PAINTED BY G. H. THOMAS.—EXHIBITION OF THE BRITISH INSTITUTION.

THE CENSUS DAY.

THE following extracts are taken from the instructions furnished to the enumerators, showing the manner in which the Schedules should be filled up—prepared under the direction of one of her Majesty's Principal Secretaries of State :—

It is desirable not only that the return of the rank, profession, or occupation of every person in Great Britain should be completeand accurate, but also that the particulars should be entered on a uniform plan. The officer appointed to collect the return is requested to see in every case, before leaving the house, that the column for rank and occupation, as well as the rest of the householder's schedule, is correctly filled in conformity with the instructions he has received.

RANK, PROFESSION, OR OCCUPATION

Persons of title or rank are to insert after their title, any high office they hold, or their profession, as :—

Duke of —— Lord-Lieutenant of ——	Stipendiary Magistrate
Baron of the Exchequer	Alderman, Grocer (master, employing 10 men)

Officers of the Army, Navy, Marines, Artillery, and Militia—Half-pay; and Retired Civil Officers on the Superannuation List, are to be distinguished from those on full pay and in active service, as :—

General (Half-pay)	Lieutenant (R.N.)
Major (Marines)	Private Soldier (on Furlough)
Captain (Army)	Clerk, Audit-Office (on Superannuation List)

Clergymen and Ministers who return themselves "Clerk," "Clergyman," "Priest," will have to correct their Schedules to a full description, as :—

Rector of Christchurch	Wesleyan Minister of Hands-street Chapel
Curate of St. Andrew	Presbyterian Minister, Scotch Chapel
Chaplain to Prison and Union Workhouse, Stafford	Roman Catholic Priest, St. Mary, Moorfields

Legal Profession, thus :—

Barrister	Attorney
Barrister (not practising)	Solicitor's Managing Clerk
Barrister, Conveyancer, and Equity Draftsman	Solicitor's Writing Clerk
Barrister, Common Serjeant	Solicitor's Articled Clerk
Solicitor	

Medical men should return their titles in the usual way :—

M.R.C.S., Lond ; Coroner; M.P.	M.D., Edin., M.R.C.S., Edin. (in general practice)
M.D., Castab (Consulting Physician)	L.S.A., Lond. (Practising Apothecary)
M.D., Oxon (not practising)	
F.R.C.S., Lond. (Consulting Surgeon)	

Graduates or others having diplomas, but not practising, should write "not practising" after their titles ; those practising in medicine, surgery, midwifery and pharmacy, may write either "in general practice, or "practising as surgeon, apothecary, and accoucheur ;" consulting surgeons, or consulting physicians who do not supply their patients with medicines, should write after their professional titles, "consulting surgeon," or "consulting physician." The same rule will apply to accoucheurs, dentists, oculists, and aurists. Surgeons and apothecaries who have open shops for the sale of drugs, should, after their titles, write "practising in medicine, and as chemists and druggists."

Professors, Teachers, Public Writers, Authors, and Scientific men should state the particular branch of Science or Literature which they teach or pursue. Thus :—

M.D., Professor of Chemistry, University College, London	Historian
M.A., Private Tutor, —— College, Oxford	Geologist
Teacher of the French Language	Mineralogist
Teacher of Music and Singing	Painter
Teacher of Riding	Copper-plate Engraver
Editor of the ——	Poet
	Musician, Mus. D

Where the cultivators of Science, Literature, and the Arts are also in Professions or Trades, the names of the latter should be added

Merchants and Brokers.—The following vague and general terms are objectionable :—" Merchant," " Broker." " Agent," " Clerk," " Commercial Traveller." They should state the particular kind of business in which they are engaged, or the staple in which they deal, thus :—

Silk Merchant	Tea Broker's Clerk
Sugar Broker	Draper's Clerk
Stock Jobber	Commercial Traveller (in Drug trade)
Stock Broker	Drug Broker
Banker (Joint Stock)	Drug Merchant
Banker (private firm)	Coal Merchant
Manager of a Joint Stock Bank	Coal Factor
Brewer's Agent	Flax Merchant
Banker's Clerk	Flax Stapler

Farmers.—The *acres* occupied by the farmer are to be stated, exclusive of heath, mountain, moor, marsh, or common land—the extent of which used by the farmer should be *separately* stated. The *number of labourers* returned should include waggoners, shepherds, and all kinds of workmen employed on the farm, whether they sleep in the house or not; and when *boys* or women are employed, their number should be separately given. As—

Farmer of 320 acres, employing 11 labourers	Freeholder, Farmer of 10 acres (employing no labourers)
Bart.; Landed Proprietor, farming 610 acres (employing 20 agricultural labourers)	Farmer's Son (employed on the farm)
Farmer of 41 acres (employing 1 in and 1 out-door labourer, with a boy)	Farmer's Daughter (employed at home)

The male and female farm servants who sleep in the house will be entered in the Household Schedule, and their particular employments, as waggoner, dairymaid, &c., inserted in the column headed "Occupation."

In Trades where women or boys and girls are employed, the number of each class should be separately given. Where the master is one of a manufacturing or mercantile firm, the entry should be after this form: ." Cotton manufacturer, firm of 3, employ 512 men, 273 women, 35 boys, and 273 girls."

Baker (master, employing 4 men, 2 women)	Shoemaker (master, employing 10 men, 3 women)
Bookmaker (journeyman)	
Ironmonger's Apprentice	

Workers in Mines or Manufactories to be returned as—

Copper Miner	Engine-maker: Machine-maker
Copper Refiner	Cotton-silverer
Augre-maker	Wool-piecer
Hammer maker	Wool-comber
Fire-clay [illegible]	Wheelwright
Rag sorter: Engine-worker	Watchmaker
	Watch-finisher

" Miner," " Thrower," " Rover," " Silverer," and other entries of the sort are indefinite, and should be entered with the proper addition, as " *Iron*-miner," " *Wool*-rover," &c.

Messengers, Porters, Labourers, and Servants. to be described according to the place and nature of their employment, as :—

Queen's Messenger	Cook
Messenger (Civil Service)	Housemaid
Coal Porter	Charwoman
Ticket Porter	Cleanlying
Fellowship Porter	Footman
Dock Labourer	Gamekeeper
Railway Labourer	Gate-keeper
Agricultural Labourer	Park-keeper

Merely " Messenger," " Porter," " Labourer," are imperfect returns

Persons following no profession, but living on their property; and also persons of advanced age, who have retired from business, to be entered " Retired silk-merchant," " Retired Watchmaker " :—

Landed Proprietor	Fund-holder
Proprietor of Houses	Annuitant
Proprietor of Houses	Retired Physician

Persons of this class often return themselves " Esquire," " Gentleman," " Independent." These titles are, in most cases, quite correctly taken ; but the additional particulars here asked for are required to make the return of professions complete.

Annapeople to be returned as :—

Pauper (Agricultural Labourer)	Pauper (left to be a Tailor)
Pauper (Boot-black Street Orphan)	Pauper Lunatic

" Hawkers," " Pedlars," " Costermongers," should be returned under these names ; with the addition of the particular branch of business which they follow.

Women and Children :—

Countess of ——, Peeress; Landed Proprietor	Milliner
	Made-up
Gentlewoman, Annuitant	Nurse
Lodging-house Keeper	Errand Boy
Seamstress	Scholar
Dressmaker (Apprentice)	Scholar (at home)

The rules which have been laid down for the return of the rank and profession of men, apply generally to all women in business, or following specific occupations. The occupations of the mistresses of families and ladies engaged in domestic duties are not expressed, as they are well understood. But the information under this head should be made as full and exact as possible.

All persons resident in Great Britain up to 12 o'clock at night of Sunday the 30th inst.—including those away from their homes on pleasure or business, but who return in the morning—should be entered in the Householder's Schedule filled up by the head of the family. An individual lodger may be returned in a separate Schedule.

In the final instructions, the enumerators are desired to treat the whole of the Returns as of a confidential character, and not to allow them to be examined by unauthorized persons for any purpose whatever.

A letter dated 17th inst. from the Registrar-General, addressed to each of the registrars, says, that :—" In accordance with directions conveyed to me by the Secretary of State for the Home Department, I have to request that you will instruct each enumerator in your district to inform all persons with whom the *church* and *school forms* are left, that they are not *compelled* by the Act for taking the Census to fill up the particulars in those forms, and that they will not be liable to penalties for refusing to do so. It will be the duty of the enumerators to collect those forms on the 31st of March, and, merely to record the facts voluntarily furnished, if the returns are not already filled in by the parties with whom they are left. It must, however, be distinctly understood, that all the penalties of the Act apply to persons who refuse to give correct information respecting the particulars in the Householder's Schedule."

THE ILLUSTRATED LONDON NEWS.

METROPOLITAN NEWS.

GENERAL POST-OFFICE, MARCH, 1851.—Many newspapers addressed to Australia, New Zealand, and the United States of America, having been recently detained at this office, in consequence of the postage due for their conveyance not having been paid, it has become necessary to call attention to the regulation under which a postage of one penny, either in money or by stamp, must be paid in advance upon each newspaper sent to those countries, and to point out that, unless such postage be paid, the newspapers cannot be forwarded

CAMBRIDGE MILITARY ASYLUM.—It is understood that the executive committee appointed to carry out this design in memory of the late illustrious Prince, are about erecting an asylum for 40 widows of British soldiers at Kew, and with the intention of purchasing, or making accommodation for one widow, at least, of each of the regiments in her Majesty's service. A number of regiments and staff departments have marked their approval of this institution by handsome subscriptions ; the sum is very little doubt that every regiment at home and abroad will come forward with contributions in aid of the asylum.

BANK OF ENGLAND LIBRARY AND LITERARY ASSOCIATION.—On Friday, the 21st, a highly interesting lecture on auriferous deposits was delivered, gratuitously, by Mr. Bewley, jun., M.R.I., in the lecture-room of the above institution. Henry James Prescott, Esq., the governor, presided, supported by various partners of the Bank. The room was crowded by the members, and the presence of ladies added to the interest of the meeting. The great success of this association should stimulate other establishments to afford like advantages to the numerous body who would gladly avail themselves of such opportunities of relaxation and intellectual advancement.

LAMBETH REFORM ASSOCIATION.—A crowded demonstration by the members of this association took place, on Wednesday evening, at the Horns Tavern, Kennington, for the purpose of advocating the principles of Mr. Locke King's recent motion, and forwarding, as far as possible, the efforts of the friends of parliamentary reform. Sir Joshua Walmsley, M.P., took the chair. Resolutions in favour of an extension of the suffrage and the principles of free trade were passed unanimously

REPEAL OF THE WINDOW-TAX.—A meeting of metropolitan delegates, for obtaining the repeal of the tax on Inhabited Window-tax, was held on Wednesday evening at the Marylebone Court-house, "to take the most efficient measures in order to secure the above object." There was a large attendance of delegates, including representatives from the parishes of Lambeth, St. Pancras, St. Anne's, Soho ; St. James's, Westminster ; St. Giles's, St. Luke's, G.d-street ; and St. Mary, Islington. There were also present Sir B. Hall, M.P., and Mr. Mowatt, M.P.

ST. PANCRAS PARISH.—A meeting of the members of the Central Parochial Association of this parish took place on Tuesday evening, at the Hawardden Castle, Gray's-inn-lane, Kentish-town, to consider the nomination of vestrymen for the next election, previous to holding public meetings on the subject. There are forty-five vacancies to be filled up, of which five are occasioned by deaths or non-qualification, and forty in place of those who go out by rotation

FOUNDLING HOSPITAL.—The quarterly meeting of the governors of this institution was held on Wednesday, in the board-room of the hospital. The business transacted was chiefly of a routine character. The number of children now in the hospital is about 500, and their general condition is in all respects satisfactory. The financial statement for the quarter ending the 25th inst. showed a balance of £14,469 2s. 11d., including the sale of £1000 stock ; and disbursements, £11,742 8s. 6d. The annual dinner of the governors of the hospital takes place in May

THE CITY OF LONDON PENSION SOCIETY.—The anniversary festival in aid of the funds of this society, established for the purpose of providing a permanent relief in monthly pensions to decayed artisans, mechanics, manufacturers, tradesmen, and the widows of such persons, above sixty years of age, took place on Wednesday evening at the London Tavern, Bishopsgate-street, Mr. B. B. Cabbell, M.P., in the chair. The chair having been vacated at the conclusion of an excellent dinner, the chairman proposed the usual loyal toasts, and after them, "Prosperity to the Society." He commented on the utility of the charity, noticing the number of applications for its relief, and especially urged the economy of its administration, and the almost entire appropriation of its funds to the direct purpose of its supporters. Since its institution in 1818 it has been the means of annually pensioning from 40 to no less than 70 poor pensioners, and the amount distributed in monthly pensions up to the audit of 1850 has been £96,514 15s. Subscriptions to a large amount, upwards of £500, were received before the commencement of the musical singing interval between the speeches, and ladies in large numbers attended

MERCHANT SEAMEN'S SOCIETY.—A general meeting of the corporation of this society took place on Tuesday, at the office, 26, Birchin-lane, Cornhill ; Mr. George Lindsay in the chair It appeared, from the report, that the receipts during the past year, including a balance of £2313 15s. 10d., amounted to £24,490 17s. 4d., and the expenditure to £22,176 5s. 8d., leaving a balance of £934 11s. 7d Receivers for the out-ports of Carnarvon, Ballina, and Coleraine were appointed

GENERAL COMMISSION, SHIP LOAN, AND INSURANCE COMPANY.—On Wednesday, the first meeting to settle the list of contributories brought in by Mr. Hinton, the official manager, was held before his Honor Sir William Horne. Mr. Sergt. Maples and Mr. Starkie appeared for the manager, and stated that the company was established in 1846, for the general purposes of marine assurance, and was originally carried on in Hull. Mr. Petteson, solicitor to the company, on being called on to produce the deed, declined to do so, several children he alleged he had on it was first paid. His Honor said he could not compel him, but directed the manager to proceed to frame an issue upon the question. Several alleged shareholders, on being called, deposed that the signatures of their names to the deed were forgeries, and the attesting witnesses to the deed failed to prove that they were directed to sign it. The counsel for Mr. Richmond, one of the attesting witnesses and a director, was placed on the list for 250 shares. The case of Mr. Dunn, the barrister, a transferee of 30 shares, was adjourned.

THE LONDON SEAMEN AND THE MERCANTILE MARINE ACT.—The seamen of the port of London held a crowded meeting on Tuesday night, at the Temperance Hall, Princes-street, Waterloo-bridge-road, for the purpose of agitating against the new Mercantile Marine Act, at which there were present delegates from Liverpool, Hull, Shields, and other ports. The seamen were urged by the speakers on the occasion to deposit their register tickets (without which they could not be shipped) in a box, which would be placed in the hall under proper care, as a guarantee that they would all aid in redressing their grievances. Other ports were ready to do likewise, and it was stated that in London they could be collected in two hours. It was also suggested that delegates should be sent to Southampton to solicit the co-operation of the mariners of that port, more especially those employed in the mail service. Mr. Neale, who had forwarded a letter to Lord John Russell, detailing the grievances of the English sailor, communicated his Lordship's reply, which briefly acknowledged the receipt of the letter of complaint. Three cheers were then given for the Queen, and arrangements being made for holding meetings at Poplar and Rotherhithe, and the forming of a procession through the streets in order to bring their complaints more fully before the public, the meeting broke up.

EARLY CLOSING ASSOCIATION.—A public meeting of the supporters of this movement took place on Thursday evening, at the Freemasons' Tavern, Great Queen-street ; Mr. Monckton Milnes, Esq., M.P., in the chair. The report stated that it was now two years since the central board had met their constituents. The various meetings of the society during the past year were then referred to, as also the numerous meetings held by the employers, which had been productive of the greatest benefit to their cause. The appeals of the society had been eminently successful, and many converts to the movement had sent in their adhesion. The report was adopted, and resolutions were moved by the chairman and several other gentlemen, on the various evils arising from long and tedious system of late hours. A vote of thanks to the chairman concluded the business of the meeting.

THE QUEEN OF PORTUGAL AND THE JOINT-STOCK BANK.—On Wednesday, in the Lord Mayor's court, two cases of attachment were decided, commenced at the suit of Baron Haber against Mr. Grinn, the Portuguese financial agent, as the representative of the Queen of Portugal, and the London Joint-Stock Bank, for divers sums of money, amounting, with interest, to about £19,000, alleged to have been appropriated by the Government to his use since as the year 1834. The verdict of the Jury in each instance was against the claim of the plaintiff. In the case of Mr. de Brito being held by him, not on account of the Portuguese Government, but as specially due to the bondholders.

PAPER DUTIES.—A numerous deputation of members of Parliament, consisting chiefly of Irish representatives, waited on the Chancellor of the Exchequer, at his official residence in Downing-street, on Saturday, for the purpose of presenting a memorial in favour of the repeal of the duty of abolishing the present duties on paper. Amongst the members in attendance were Lord Dereard, Lord Sasa, Messrs. Reynolds, Grogan, Burke, Roche, Ouseley Higgins, Keogh, M'Cullagh, Lucas, Fagan, Bellew, Barry, Lindsay, Sadleir, Fagan, Ward, Cowan, Magan, O'Go man Mahon, &c. Several paper manufacturers were also present. Mr. Reynolds, Lord Bernard, Mr. Cowan, Mr. Cameron, and others addressed the right hon. gentleman and Sir Charles Wood, and the memorial to pay every attention to the subject, but he could not at present pledge himself to any particular course

Mr. Wyatt, jun., has completed an equestrian statue of his Royal Highness Prince Albert, which forms a companion statue to that of her Majesty lately executed by him The Prince is seated on a horse, not of large size, but of very athletic character. The likeness is said to be excellent, and the work is in most respects of high character, and particularly careful and accurate in the delineation of the details. Both these equestrian statues are intended for exhibition in the Great Exhibition

REDUCTION OF FEES IN CHANCERY.—An order has just appeared, signed by Lord Truro, abolishing certain fees he.efore payable in Chancery, and reducing others

FIRES AND LOSS OF LIFE.—A fire broke out early on Wednesday morning in the first floor of No. 31, John-street, New Kent-road, occupied by a Mr. and Mrs. Potts. When the firemen forced open the room they discovered the lifeless bodies of the before-named inmates, almost as black as coals; and every article of furniture in the place consumed. The fire had evidently been burning for some time before it was discovered ——Another fire broke out in the dock-yard of the Grand Junction Canal Company, City-road. The flames spread rapidly, and committed sad havoc before they were extinguished.

SOCIETY FOR PROMOTING THE AMENDMENT OF THE LAW.—This society held a meeting on Monday evening, at their rooms, 21, Regent-street, to consider the report of the committee on the law of patents, and to receive suggestions on the subject. Mr. J. D. Hill, Esq., Q.C., in the chair. Frederic Hill, Esq., on the consideration of the report of the special committee on patent law amendment, stated that the committee had sent a copy of the report to all the societies connected with inventions and patents, and to the various Chambers of Commerce. From Liverpool they had received an answer, stating that they were not then prepared to pass an opinion on the subject ; from some places they had received no answers ; but from several of those bodies the answer received was that they were not then prepared to discuss the details, but agreed as to the necessity of some amendment of the patent laws Letters had been received from the Chamber of Commerce at Cork, to the effect that they heartily concurred in the suggestion of the society, especially that part which they considered the master grievance of the law, the expense of obtaining a patent, but they wished to draw attention to the subject. The society proposed that patentees should have the power of assigning a patent without limitation of the assignee ; to this the Manchester chamber objected. Mr Hill proposed that the report be referred to a committee for consideration. Mr Ayrton suggested that investigation should precede the grant of a patent, which should afterwards be indefensible. Minor matters could be decided by a county court. On the amount which ought to be charged for a patent more information was necessary Several gentlemen present as visitors next addressed the meeting, and the consideration of the question was adjourned to April 14.

DISTRESSED NEEDLEWOMEN'S SOCIETY.—On Monday, the committee of this society assembled at No. 75, Newman-street, Oxford-street, to receive a report of the proceedings of the past year, and to open the house as a House of Industry for distressed unemployed needlewomen, a lady having taken the house, and made herself personally responsible for the rent. The chair was taken by Mr. Sheriff Moon. The report stated, that during the last twelve months the committee had met with great success in the practical object of the society. Upwards of 800 sempstresses had been registered, and the numerous applications from houses of business had rendered it necessary to advertise repeatedly for more hands. 150 of the leading houses in the metropolis had, in writing, declared their readiness to co-operate with the association. 35 females had been engaged as domestics in private families, and in all cases, except one, most satisfactory accounts had been received. The society regretted that the system of becoming security for work placed in the hands of deserving females had been discontinued. The committee did not make any reduction in the earnings of the sempstress, who took home her own work, made out her own bill, and received the full pay for her labour. Owing to the want of funds, the desirable object of opening premises for the reception of poor orphans had been very limited ; but one gentleman had undertaken to arrange for the instruction of fifty, and a lady for twenty, and it was hoped that this would stimulate others to like conduct. In consequence of a vote from a deputation, soliciting the discontinuance of prix is labour at unfair prices, the House Secretary had given instructions to that end The principals of prisons, unions, and workhouses had adopted the views of the committee, and a large amount of capital was consequently placed in the labour market. This must raise the price of labour. The object of this institution was to administer justice rather than charity, thereby encouraging sempstresses to live by their own industry. The report was unanimously adopted, and a vote of thanks awarded to the lady who had undertaken the responsibility of the new establishment

MR. BENNETT'S FAREWELL SERMON.—On Sunday the church of St. Barnabas was crowded to excess, for the purpose of hearing the sermon in which the congregation understood, the Rev. Mr. Bennett intended to take a final leave of his parishioners. The rev gentleman took his text from St. John vii. 53.—" And every man went into his own house." In the course of the sermon he alluded to the differing views to the divided condition of the Church, and to the perils with which she was beset, and lamented that the great work in which they had been engaged was now destroyed. He urged perseverance in the truth, and a strict adherence to the teaching of the Church. In the evening the church was again open, and Mr. Bennett preached another sermon to an equally crowded audience, but addressed himself more to the loss the parish would sustain in the alteration of the services and the cessation of her church. These daily services, constant preachings, sacramental offering of the Lord's body in one of the churches weekly and in the other daily. There had been full intercourse between priests and people in spiritual things, and good done and carried out, some of which they knew, and some they never had heard of, and never would hear of their successors would supply what it would be unbecoming in him to add. The rev. gentleman was greatly affected during the delivery of his sermon, which was listened to throughout with the most earnest attention by the anxious congregation, many of whom manifested deep sympathy with their retiring pastor, and lingered behind to bid him an affectionate farewell. It is said that great alterations are to be made forthwith in the chancel of St. Barnabas.

ST. PETER'S, STEPNEY.—On Thursday evening, the 20th inst., was presented, from the congregation of the Rev. St. Peter's, the Rev Thomas James Rowsell, M.A., the worthy incumbent of St. Peter's, a splendid testimonial of respect, consisting of a silver tea-urn elaborately wrought after the Etruscan style, weighing 225 ozs., splendidly bound in morocco, and gilt, containing the following address :—" We, the undersigned parishioners of the above parish, desire to express our sincere and grateful sense of your unwearied exertions for the spiritual welfare of this district, which have been crowned very judiciously to the advantages of employing land for the purpose, and which have received clear light in the form of the surplus labouring population might reap benefits, from which the mere routine of parochial agriculture could not hold out hopes.

SALE OF THE COPYRIGHTS OF THE WAVERLEY NOVELS.—On Wednesday the entire copyrights of the works of Sir Walter Scott, with the steel plates, woodcuts, and stereotype plates attached to them, were put up to auction by Mr. Christie, at Garraway's Coffee-house, Ludgate-hill. The property was in the possession of the trustees of the late Robert Cadell, publisher, and comprised the novels, poetry, and prose writings of Sir Walter, with the "Life" by Lockhart, and the whole published in the various editions of those works, from June, 1829, to the present time. The whole of the copyrights, &c., were offered for sale in one lot, the purchaser to be compelled to take the entire of the printed stock now on hand, amounting to the number of 1,000,000 volumes, but if the property should not be disposed of in one lot, on what the trustees might consider advantageous terms, it was to be divided into various lots. Amongst the bidders were the Messrs. Longman, Mr Virtue, and Mr Virtue, jun., of Oliver and Boyd, Edinburgh), and the largest amount offered was £14,500. These terms not being accepted, the whole of the property was bought in for £15,000 by Mr. James Nisbet, the agent of the "vendors," and there was no division into lots as was originally intended.

MR. Holford, whose mansion, at the Regent's Park, was broken into some months ago, when a quantity of valuable plate took place, has recently returned from America, and has given £20 to the police and others employed in connexion with the burglary, in addition to what they had before received. He has also rewarded Mr Pirie, the solicitor, and the rest of the servants who so bravely conducted themselves upon the occasion alluded to.

BIRTHS AND DEATHS.—Births registered in the week ending March 22 :—Males, 624 ; females, 595 ; total, 1219. Deaths during the same week :—Males, 669 ; females, 743 : total, 1412. The official report says.—" The aggravated rate of mortality in London, which marked the first two weeks of the current month, has prevailed throughout the present week, as appears by the present return. The deaths, which increased to 1247 in the beginning of March, and subsequently rose to 1401, amounted in the week ending last Saturday to 1412. Taking for comparison the corresponding weeks of 1841-50, it appears that the highest number was 1197, and occurred in 1845 (in a week when the mean temperature had fallen about ten degrees lower than usual), and that the average mortality was 979. The deaths referred according to the supposed rate of increase in the population, amounts to 1088, and the increase above this average, in the last week's return is 324. In the last week the deaths attributed to influenza, simply, or in connexion with bronchitis, inflammation of the lungs, disease of the heart, or other malady, are 65: in the previous week they were 39 ; whilst the average of corresponding weeks does not exceed 12. The cases classed under bronchitis have increased from 171 to 156, and are still at least double the average ; those from pneumonia or inflammation of the lungs remain about 125, while the average does not exceed 87. The cases ascribed in the table to asthma are 39, which is also more than usual ; phthisis or consumption numbers 166 in both weeks, while the average, though corrected for increased population, is less than 200 weekly.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer decreased to 28 842 in. on Saturday. The mean of the week was 29 384. The mean daily temperature was general y above the average, and on Thursday and Friday exceeded it by about 6 degrees. The mean of the week was 44·9 deg. The wind was generally in the south-west. Rain fell in the week to the depth of 1.13 inch.

A lecture was delivered on Wednesday evening last, by G J. Guthrie, Esq., F.R.S., the eminent surgeon, before the Fellows of the Medical Society of London, descriptive of many points of interest connected with, and explained, and illustrated by the lecturer, was the announcement of the important discovery of a new set of organic muscles, made very recent.y by Mr. Hancock and Mr. Jabez Hogg, of Charing-cross Hospital

EASTERN COUNTIES AND NORFOLK RAILWAY COMPANIES.—At the adjourned half yearly meeting of the Norfolk Railway Company, on Thursday, it was resolved that the directors should act upon the Eastern Counties Company at once to take steps for carrying out the amalgamation of the two companies, under the agreement of 1845 ; and in the event of their declining to act so, the directors of the company should take such steps as they might deem advisable for putting an end to the agreement at the earliest possible period. It was stated at the meeting that the Great Northern Company were willing to enter into an arrangement with the Norfolk Company for receiving their traffic at Dereham

THE GREAT WESTERN, THE LONDON AND NORTH-WESTERN, AND THE SHREWSBURY AND BIRMINGHAM RAILWAYS.—The directors of the last-mentioned company have issued a reply to the report of the committee of shareholders, maintaining (supported by counsel's opinion) that the agreement proposed to be entered into with the London and North-Western Company is legal ; and recommending that the agreement with the Great Western and Shrewsbury and C. ster Companies should be adhered to. Mr. W. Ormsby Gore, the chairman of the Shrewsbury Companies, has also issued a letter to the shareholders counteracting similar opinions.

THE SEARCH FOR THE FRANKLIN EXPEDITION.

We have been favoured with the following extracts from a Letter from Lieutenant Hooper, R.N., to his father, dated July 16, 1850 :—

In my letter of the 8th ultimo, I told you of our intended second trip to the sea, and that we were just returning from Great Slave Lake to Fort Simpson, to prepare for the voyage from that place. A quarter of an hour after that letter was sealed, we were on our road. We reached Fort Simpson on the 3rd inst.; and until the 11th were busily engaged getting our boats and all materials readymade, which, with few hands and small resources, took up much time. On that day we quitted Fort Simpson, and descended the river to Fort Norman, which we reached on the 13th; starting the next morning for the last post on the river; as also the last place from which I can communicate with you until our return, which will probably be about the end of September. Our boats are now the *Logan* (we brought from the *Plover*), the other a river boat of the Hudson's Bay Company, the *Try Again*, in reference to our attempt this time. We are seventeen in all—Captain Pullen, second in command of the old sands, three new ones of the Company, and two Indians for hunters. We may expect to reach the sea about the 23rd of the present month; and, if we meet with no obstruction, might get to Cape Bathurst in a few days' time, and on to Woollaston, or Banks's Land, as opportunity may best serve. It is not impossible we may winter on one of those lands should provision be plentiful, in order to extend our search for as much as we can; therefore, if you do not receive an announcement of our return, which I shall not fail to give if we return this year, you must not be alarmed at our absence, nor fancy a thousand horrible contingencies; but, on the contrary, *rejoice* that we have fallen upon a never before trodden land, and are prosecuting with ardour a prolonged search, instead of confining our operations to one brief summer. We are as safe, you know, my dear father, in the greatest danger, as in a feather bed in the security of our native land; and be assured, not many of our party are easily daunted with truths. We are not sanguine of success; but we look forward with great hope, as the region we propose visiting is one which has not before been explored, and in a direction which the most experienced Arctic voyagers imagine to be the most probable situation for the missing ships. Should we find them, what delight would be ours in restoring the distressed and gallant party to their anxiously sorrowing friends. Sir J. Ross left at Fort Leopold, on the land of North Somerset, provisions sufficient for sixty men for twelve months; also a steam-launch. Now, should we reach Banks's Land, which is about 300 miles from Cape Bathurst, and find the sea to the eastward clear of ice, with a fine westerly breeze, we might, perhaps, make for that place, where the provisions would support our party for nearly four years, and enable us to search awa properly; but this is only a remote chance, and it is impossible to say what we shall do, depending, as we must, on the weather, which in these hyperborean regions can never be determinedly calculated upon. However, we take energy and determination to the task, and hope to the onset.

Enclosed is a likeness of an Indian woman of the Slave tribe, taken at Fort Simpson. The costume consists of smoked moose-skin, her belt of porcupine

quills: her knife hangs in a sheath from her neck, and she holds in her hand a canoe paddle. Her name is Clo-ill-bet-ah-see, or the Little Rabbit. These Indians have very odd names. One is called Pass-under-the-ground; another, Thirty-six Tongues—I suppose from his talkativeness, he being super-eminently loquacious.

This is a noble occupation, endeavouring to save life—far more so than destroying it; and I trust I may never be forced to that necessity, or at any rate but in a just cause. (Signed) W. H. HOOPER.

Letters have been received at the Admiralty from Commander Pullen, the officer in charge of the boat party from Mackenzie River, in search of Sir John Franklin, dated Fort Good Hope, Mackenzie River, July 17, 1850, in which, after stating the arrangements of the party for the further prosecution of their search, the writer says :—

We are just on the point of starting, and I hope to reach the sea about the 23rd instant. We have taken every remarkable headland or point, either on this coast or elsewhere, I shall take care to leave conspicuous notices of our visit, and perhaps a deposit of provisions. Our single, on leaving Point Separation, will consist of 2300 lb. of lead, meat, and 1000 lb. of pemmican; also half-a-dozen cases of preserved meat, which will remain so to the last.

Agreeably with the opinion expressed in the latter part of my journal, I do not think Captain Collinson's ships will be able to get along the coast from Point Barrow, if in a season so far unless the ice be further removed from the shore than at the time of our last voyage. The steam-launch will have a good chance, as drifwood is plentiful along the coast east of Cape Halkett; and, of course, boats may do amidst what boats have done before.

The season has been extraordinarily fine, and our steamers, (an intelligent man), who was on the coast in both expeditions of Sir John Richardson and Mr. Rae, is confident of an open sea. Others also, natives of the country, are of the same opinion.

Should I find provision and fuel plentiful on Banks' Land, it is possible that I may winter there, for the further prosecution of my search.

In conclusion, I beg to assure their Lordships that no efforts (as I before said) will be spared to carry out their wishes to the utmost; and hope that the determination of that season may, by God's blessing throw some light upon the whereabouts of the missing ships.

I have the honour to be, sir, yours, &c., W. J. S. PULLEN, Commander R.N.,

To the Secretary of the Admiralty. Commanding boat expedition in the Arctic Seas.

NAVAL AND MILITARY INTELLIGENCE.

PEMBROKE DOCKYARD.—In consequence of certain alterations proposed in the Ordnance department here, and about to be carried into effect by that board, a saving of about £2000 a year will be accomplished. The present fearful powder magazine is about to be abolished, and the proper quantity of powder necessary for the demands of the fortifications is to be lodged in the bomb-proof magazines belonging to those fortresses—its legitimate store. At present, though the guns, with all their concomitants of rammers, sponges, &c., are in those forts, the powder is on board the *Mulgrave* floating powder magazine, some six or eight miles down the haven, and consequently nearer its entrance, so that any enemy's ship entering the port would be in possession of it long before it could be sent for by the fortifications.

DEPOT BATTALION, ISLE OF WIGHT.—This establishment is to be abolished on the 31st inst., and the following depôts, stationed at Parkhurst Barracks, are to be removed to Chatham on that day:—*Depôts* 9th, 44th, 56th, and 76th; but these barracks are still to be occupied by troops, and, for the present, the following depôts will remain there—*depôts* 97th, 30th, 32nd, 67th, 69th, and 97th. The abolition of this establishment will effect a saving to the public of £2208 a year.

THE PROOFS AT HOME KONG.—It is gratifying to find by the last accounts from this place that sickness has much abated among the troops

STAFF OFFICERS OF PENSIONERS.—A circular letter has lately been issued by the War-Office authorities to staff officers of pensioners, to the effect that, as these officers have facilities for obtaining information respecting residents in their districts desirous of becoming emigrants, the Secretary of State for the Colonies has requested that their services may be made available for that purpose, and that the same allowance will be granted for this duty as that given to the agents usually employed, viz. 20s. for each married couple, 10s. for each single female, and 7s. for each single male, finally approved and enmarked for a colony.

EXPERIMENTS WITH MUSKETS.—Captain William Henry March, of the Woolwich division of Royal Marines, has been nominated one of the committee for testing the small-arms at the butt in the Royal Arsenal. One sergeant and two privates of the Rifles have joined the firing-party of the Foot Guards. Mr. Sears's patent needle-gun, for loading at the breech, is to be tried again this season by the firing-party at the proof-butt in the Royal Arsenal. The trial last year with that gun was made in the marshes, and it then answered very efficiently. It will be seen how it answers when used by soldiers of her Majesty's service.

THE NAVIGATION OF THE THAMES.—The opinion is very prevalent that the intricacy of the navigation at the mouth of the Thames renders it perfectly secure against the approach of any foreign ships unprovided with pilots. For the purpose of undeceiving those persons who entertain this opinion, it may be mentioned that the *Spuyrouke* (Sardinian man-of-war steamer of 400 tons, and mounting twelve long 68-pounders, lately arrived at Woolwich) found her way from Spithead, through the Downs and up the river to Woolwich, without a pilot, though not a man or officer on board had ever been up the river before.

THE PRUSSIAN GOVERNMENT'S NEW WAR STEAMER "NIX," eight guns, having on board the Chevalier Bunsen and several distinguished officers of our own navy, made an experimental trip in the Downs on Monday and gave the greatest satisfaction both in the working of her guns and her steaming capabilities; her speed, with everything on board, being nearly sixteen miles an hour. She has been built by Messrs. Robinsons and Russell, of Mill Wall. We shall engrave the vessel in our next.

COUNTRY NEWS.

THE SAILORS' STRIKE.—One of the chief sources of complaint among the seamen of the northern ports had reference to the fees payable upon each voyage by the crew. It was argued that these fees were unequal in their bearing, for while the seamen were made out of their pockets, the owners have to pay their shillings on each engagement and discharge, those who proceeded on longer and more profitable voyages were exempted from paying more, perhaps, than once in the course of the year. The Lords of the Committee of Privy Council for Trade have taken this point into consideration, and the following notice issued by them has come into operation at Hull and the northern ports :—

"On the present is a black period of the year, many men are out of employ, and engagement by owners is not at all accelerated by the obstructions placed in the way by the mariners' committee, which is still sitting. The fees now in force are ignore, as far as least as they are payable by the crew, on the shipping office. They stipulate upon engagement that the fees, which would be in following owing the seamen, should be discharged by the master or owner; they refuse to sign articles at the shipping office, and the consequence is that the Seamen's Friendly Society is generally in attendance when the agreement between the master and crew is come to, in order to see that nothing is inserted in the articles which is at variance with the regulations of the Board of Trade, and the committee carry matters to such an extent as to refuse contributions from the inhabitants. The seamen have even made excursions to the neighbouring towns, and have adopted the same system there with some success.

PEACE PROGRESS.—(*From a Correspondent.*)—The first lecture that has ever been delivered on any subject in the ancient and secluded town of Lydd, situated in Romney Marsh, Kent, was given on Monday evening by Mr. Edmund Fry, upon the Peace operations and the League of Brotherhood. On this following evening the same gentleman addressed the labouring classes on their present and prospective condition; and, at the close, some musical friends present sang Charles Mackay's admirable song, "The Festival of Labour," which was published in the ILLUSTRATED LONDON NEWS on the previous Saturday. It was executed in highly creditable style, and elicited great applause. Mr. Prescott, a public-spirited farmer in the town, had fitted up one of the granaries as a lecture-hall, and the building was crowded to excess by a very respectable and attentive audience.

RAILWAY RATING.—An important rating case connected with railways has just been decided. The North Staffordshire Railway Company appealed against the rating of that part of their canal which is in the parish of Stone-upon-Trent, comprising about seven miles of the line. The appeal was referred to Mr. Whitmore, the barrister, as arbitrator, and after a protracted inquiry he has given in his award in favour of the company, the rateable value by about £400. This is an important award to the company, as it will operate as a precedent in the parishes along the line, in most of which the company have lodged appeals. The canal in question is the Trent and Mersey, which the North Staffordshire Railway Company purchased when they obtained their act of incorporation.

FATAL EXPLOSION.—On Tuesday afternoon, a boiler burst in Rigastreet, Manchester, causing considerable loss of life. The building was a factory belonging to Mr. Harrison, and rented by Mr. G. Walmsley, who carried on there a steam-power supplied by a 30-horse power boiler working a 25-horse power engine. The boiler burst about three o'clock in the afternoon, entirely destroying the building. The neighbourhood was a scene of the greatest confusion. Many persons were injured by the falling of the brick-work, and several severely wounded. The engineer is in custody, having been intoxicated at the time of the accident, but it is not known that any evidence will be obtained criminating him as having caused the explosion by any neglect, or by any improper act connected with the management of the boiler.

RELIGIOUS HOUSES.—The bill brought in by Mr. Lacy and Mr. Spooner to prevent the forcible detention of females in houses wherein persons bound by religious or monastic vows are resident, and to provide for the visitation of such houses shall be registered by the clerk of the peace of the county in which it is situate; that the justices for every county in which any religious house shall be registered shall appoint six or more justices, ten inteligent much, who was one, Others also, natives of the country, are of the same opinion.

Should I find provision and fuel plentiful on Banks' Land, it is possible that I may winter there, for the further prosecution of my search.

In conclusion, I beg to assure their Lordships that no efforts (as I before said) will be spared to carry out their wishes to the utmost; and hope that the determination of that season may, by God's blessing throw some light upon the whereabouts of the missing ships.

I have the honour to be, sir, yours, &c., W. J. S. PULLEN, Commander R.N.,

To the Secretary of the Admiralty. Commanding boat expedition in the Arctic Seas.

NAVAL AND MILITARY INTELLIGENCE.

PEMBROKE DOCKYARD.—In consequence of certain alterations proposed in the Ordnance department here, and about to be carried into effect by that board, a saving of about £2000 a year will be accomplished. The present fearful powder magazine is about to be abolished, and the proper quantity of powder necessary for the demands of the fortifications is to be lodged in the bomb-proof magazines belonging to those fortresses—its legitimate store. At present, though the guns, with all their concomitants of rammers, sponges, &c., are in those forts, the powder is on board the *Mulgrave* floating powder magazine, some six or eight miles down the haven, and consequently nearer its entrance, so that any enemy's ship entering the port would be in possession of it long before it could be sent for by the fortifications.

DEPOT BATTALION, ISLE OF WIGHT.—This establishment is to be abolished on the 31st inst., and the following depôts, stationed at Parkhurst Barracks, are to be removed to Chatham on that day:—*Depôts* 9th, 44th, 56th, and 76th; but these barracks are still to be occupied by troops, and, for the present, the following depôts will remain there—*depôts* 97th, 30th, 32nd, 67th, 69th, and 97th. The abolition of this establishment will effect a saving to the public of £2208 a year.

THE PROOFS AT HOME KONG.—It is gratifying to find by the last accounts from this place that sickness has much abated among the troops

STAFF OFFICERS OF PENSIONERS.—A circular letter has lately been issued by the War-Office authorities to staff officers of pensioners, to the effect that, as these officers have facilities for obtaining information respecting residents in their districts desirous of becoming emigrants, the Secretary of State for the Colonies has requested that their services may be made available for that purpose, and that the same allowance will be granted for this duty as that given to the agents usually employed, viz. 20s. for each married couple, 10s. for each single female, and 7s. for each single male, finally approved and enmarked for a colony.

EXPERIMENTS WITH MUSKETS.—Captain William Henry March, of the Woolwich division of Royal Marines, has been nominated one of the committee for testing the small-arms at the butt in the Royal Arsenal. One sergeant and two privates of the Rifles have joined the firing-party of the Foot Guards. Mr. Sears's patent needle-gun, for loading at the breech, is to be tried again this season by the firing-party at the proof-butt in the Royal Arsenal. The trial last year with that gun was made in the marshes, and it then answered very efficiently. It will be seen how it answers when used by soldiers of her Majesty's service.

COUNTRY NEWS.

THE SAILORS' STRIKE.—One of the chief sources of complaint among the seamen of the northern ports had reference to the fees payable upon each voyage by the crew. It was argued that these fees were unequal in their bearing, for while the seamen were made out of their pockets, the owners have to pay their shillings on each engagement and discharge, those who proceeded on longer and more profitable voyages were exempted from paying more, perhaps, than once in the course of the year. The Lords of the Committee of Privy Council for Trade have taken this point into consideration, and the following notice issued by them has come into operation at Hull and the northern ports :—

"On the present is a black period of the year, many men are out of employ, and engagement by owners is not at all accelerated by the obstructions placed in the way by the mariners' committee, which is still sitting. The fees now in force are ignore, as far as least as they are payable by the crew, on the shipping office. They stipulate upon engagement that the fees, which would be in following owing the seamen, should be discharged by the master or owner; they refuse to sign articles at the shipping office, and the consequence is that the Seamen's Friendly Society is generally in attendance when the agreement between the master and crew is come to, in order to see that nothing is inserted in the articles which is at variance with the regulations of the Board of Trade, and the committee carry matters to such an extent as to refuse contributions from the inhabitants. The seamen have even made excursions to the neighbouring towns, and have adopted the same system there with some success.

PEACE PROGRESS.—(*From a Correspondent.*)—The first lecture that has ever been delivered on any subject in the ancient and secluded town of Lydd, situated in Romney Marsh, Kent, was given on Monday evening by Mr. Edmund Fry, upon the Peace operations and the League of Brotherhood. On this following evening the same gentleman addressed the labouring classes on their present and prospective condition; and, at the close, some musical friends present sang Charles Mackay's admirable song, "The Festival of Labour," which was published in the ILLUSTRATED LONDON NEWS on the previous Saturday. It was executed in highly creditable style, and elicited great applause. Mr. Prescott, a public-spirited farmer in the town, had fitted up one of the granaries as a lecture-hall, and the building was crowded to excess by a very respectable and attentive audience.

RAILWAY RATING.—An important rating case connected with railways has just been decided. The North Staffordshire Railway Company appealed against the rating of that part of their canal which is in the parish of Stone-upon-Trent, comprising about seven miles of the line. The appeal was referred to Mr. Whitmore, the barrister, as arbitrator, and after a protracted inquiry he has given in his award in favour of the company, the rateable value by about £400. This is an important award to the company, as it will operate as a precedent in the parishes along the line, in most of which the company have lodged appeals. The canal in question is the Trent and Mersey, which the North Staffordshire Railway Company purchased when they obtained their act of incorporation.

FATAL EXPLOSION.—On Tuesday afternoon, a boiler burst in Rigastreet, Manchester, causing considerable loss of life. The building was a factory belonging to Mr. Harrison, and rented by Mr. G. Walmsley, who carried on there a steam-power supplied by a 30-horse power boiler working a 25-horse power engine. The boiler burst about three o'clock in the afternoon, entirely destroying the building. The neighbourhood was a scene of the greatest confusion. Many persons were injured by the falling of the brick-work, and several severely wounded. The engineer is in custody, having been intoxicated at the time of the accident, but it is not known that any evidence will be obtained criminating him as having caused the explosion by any neglect, or by any improper act connected with the management of the boiler.

RELIGIOUS HOUSES.—The bill brought in by Mr. Lacy and Mr. Spooner to prevent the forcible detention of females in houses wherein persons bound by religious or monastic vows are resident, and to provide for the visitation of such houses shall be registered by the clerk of the peace of the county in which it is situate; that the justices for every county in which any religious house shall be registered shall appoint six or more justices, ten inteligent much, who was one, Others also, natives of the country, are of the same opinion.

Should I find provision and fuel plentiful on Banks' Land, it is possible that I may winter there, for the further prosecution of my search.

In conclusion, I beg to assure their Lordships that no efforts (as I before said) will be spared to carry out their wishes to the utmost; and hope that the determination of that season may, by God's blessing throw some light upon the whereabouts of the missing ships.

I have the honour to be, sir, yours, &c., W. J. S. PULLEN, Commander R.N.,

To the Secretary of the Admiralty. Commanding boat expedition in the Arctic Seas.

NAVAL AND MILITARY INTELLIGENCE.

PEMBROKE DOCKYARD.—In consequence of certain alterations proposed in the Ordnance department here, and about to be carried into effect by that board, a saving of about £2000 a year will be accomplished. The present fearful powder magazine is about to be abolished, and the proper quantity of powder necessary for the demands of the fortifications is to be lodged in the bomb-proof magazines belonging to those fortresses—its legitimate store. At present, though the guns, with all their concomitants of rammers, sponges, &c., are in those forts, the powder is on board the *Mulgrave* floating powder magazine, some six or eight miles down the haven, and consequently nearer its entrance, so that any enemy's ship entering the port would be in possession of it long before it could be sent for by the fortifications.

The trial last year with that gun was made in the marshes, and it then answered very efficiently. It will be seen how it answers when used by soldiers of her Majesty's service.

THE NAVIGATION OF THE THAMES.—The opinion is very prevalent that the intricacy of the navigation at the mouth of the Thames renders it perfectly secure against the approach of any foreign ships unprovided with pilots. For the purpose of undeceiving those persons who entertain this opinion, it may be mentioned that the *Spuyrouke* (Sardinian man-of-war steamer of 400 tons, and mounting twelve long 68-pounders, lately arrived at Woolwich) found her way from Spithead, through the Downs and up the river to Woolwich, without a pilot, though not a man or officer on board had ever been up the river before.

THE PRUSSIAN GOVERNMENT'S NEW WAR STEAMER "NIX," eight guns, having on board the Chevalier Bunsen and several distinguished officers of our own navy, made an experimental trip in the Downs on Monday and gave the greatest satisfaction both in the working of her guns and her steaming capabilities; her speed, with everything on board, being nearly sixteen miles an hour. She has been built by Messrs. Robinsons and Russell, of Mill Wall. We shall engrave the vessel in our next.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

The English Market has been languid and inactive during the week; and, notwithstanding the purchases of the Government broker, prices tended to a decline in the close of transactions approached. On Tuesday Consols touched 96⅞ for Money, which was the highest quotation for the ruling figure for the week. 96⅜ to ⅝. A decline to 96¼ to ⅜ on Thursday was the result of a strong demand for money in the Share Market, to assist in closing the present Account. Neither Exchequer Bi ls nor India Bonds have varied beyond a shilling or two in price, and the annexed list will show the last quotations of the Stocks at present quoted, which have been the ruling figures since. Purchases are rarely made at lower than last week. Money fetched high prices on Wednesday and Thursday, and numerous bargains were carried over till the next Account (April 16) at costly rates. The last prices of the week are, for Equator Bonds, 3½ ; Grenada Bonds, ex Dec., 1840, Coupons, 17; Mexican, Five per Cent., 1845, ex Jan Coupons, 33⅜ ; Ditto, Account, 33⅛ ; Peruvian Bonds, Four-and-a-Half per Cent., 85½ ; Ditto, Account, 85 ; Ditto, Deferred, 32¾ ; Portuguese, Converted, 1841, 39⅜ ; Ditto, Four per Cents., 34½ ; Spanish, New per Cent., 1840, 21½ ; Ditto, Passives, 5 ; Ditto, Three per Cent., 36¾ ; Spanish, Three per Cent., 57¾ 25c. ; Exchange, 25f. 5c., Dutch, Two-and-a-Half per Cent., 54 Guild., 58½.

The Railway Market has been rather inactive during the week, in consequence of the dread of the coming settlement. On Thursday, the arrangement of the Account being in progress, most excessive rates were demanded and given for money and continuations.* A transaction in Dover shares was arranged at about 90 per cent. cost; and for Great Western, South-Westerns, and North-Westerns, very heavy rates were given. The speculation in Foreign Shares has not yet exhibited its late results, in consequence of the public having been rather large buyers. At present, notwithstanding this state of affairs, the feeling is for the rise, particularly in the dividend-paying and pleasure lines around the metropolis. The state of the Market at the close of business will be best understood by referring to the following list:—Ambergate, Nottingham, Boston, and E. Junction, 5½ ; Caledonian, 14½ ; Chester and Holyhead, 24½ ; Dublin and Belfast Junction, 6½ ; East Anglian (£20 L. and D. and L. and D.), 5½ ; Eastern Counties, 7⅞ ; East Lancashire, 17½ ; Edinburgh and Glasgow, 36½ ; Edinburgh, Perth, and Dundee, 8 ; Great Northern, 16½ ; Do. Halves, A, Deferred, 6⅞ ; Great Western, 87 ; Lancashire and Yorkshire, 62½ ; Ditto, West Riding Union, 6⅛ ; London and Blackwall, 8⅞ ; London, Brighton, and S. Coast, 86 ; London and N.-western, 128½ ; London and S.-Western, 88⅛ ; Manchester, Sheffield, and Lincolnshire, 35 ; Midland, 63½ ; Do., £50 Shares, 22½ ; Do., Birmingham and Derby, 36 ; Newmarket, 9⅜ ; Newport, Abergavenny, and Hereford, 1⅜ ; North British, 10½ ; North Staffordshire, 11¼ ; Scottish Midland, 10⅜ ; Shrewsbury and Birmingham, Class A, 8¾ dis. ; Ditto, Class B, 9⅜ dis. ; South Devon, 18½ ; South-Eastern, 28 ; South Wales, 36⅜ ; York, Newcastle, and Berwick, 21½ ; Do. and Newcastle Ext., 10⅜ ; York and North Midland, 27⅜. Lines leased at Fixed Rents:—Birmingham and Oxford Junction, 7½ ; Hull and Selby, 9⅜ Shares, 23⅜ ; South Staffordshire, 6⅝. Preference Shares.—Caledonian, £10, 6⅜ ; East Anglian (£3 10s.), Six per Cents., 2½ ; Ditto (£7 17s.), Seven per Cent., Pref., 1⅛ ; Eastern Counties Extension, Five per Cent., No. 2, 4 pm. ; Eastern Union, Scrip, Guar Six per Cent., 18 ; Great Northern, Five per Cent., 138 ; Lancashire and Yorkshire, Six per Cent., Stock, 139½ ; Manchester, Sheffield, and Linc., Quarter Shares, New, £10, 12 ; Norfolk Extension, Guaranteed Five-and-a-Half per Cent., 4¼ ; North British, 5½ per Cent. Guar. (Scr. W. Hen.), Eight per Cent., 8½ ; South Devon, 14½. Boulogne and Amiens, 10⅜ ; Central of France (Orleans and Vierzon), 18⅜ ; Dutch Rhenish, 3⅛ ; East Indian, 15⅛ ; Namur and Liege, 8⅛ ; Orleans and Bordeaux, 4⅛ ; Paris and Rouen, 30⅛ ; Rouen and Havre, 11⅜ ; Sambre and Meuse, 6⅜ ; Tours and Nantes, 6⅛.

THE MARKETS.

CORN EXCHANGE.—The quantity of English wheat received up to our market this week has been small, and of very middling quality, owing to the continued wet weather. Selected samples of fine dry qualities have, however, been readily sold at an advance in the quotations of 1s per quarter; whilst good clearances of the middling and inferior kinds have been effected, at late prices. There has been more doing in foreign wheats, at extreme rates. We have had a free sale for both barley and malt; but we have no change to notice in their value. The best oats have improved in price 6d per qr.; but peas next to nothing doing, but Indian corn and flour, notwithstanding that the imports of the latter are large from France, are still very extensive, have commanded rather more attention.

English Wheat.—Essex and Kent, red, 38s to 41s; ditto, white, 38s to 42s; Norfolk and Suffolk, red, 36s to 38s; ditto, white, 38s to 43s; rye, 30s to 32s; grinding barley, 18s to 22s, distilling ditto, 22s to 24s; malting ditto, 32s to 34s; Norfolk and Lincoln, 28s to 30s; brown ditto, 25s to 26s; Kingston and Ware, 30s to 36s; Chevalier, 36s to 38s; Yorkshire and Lincolnshire potato oats, 18s to 19s; potato ditto, 17s to 18s; Scotch and Irish ditto, 15s to 16s; ditto, white, 16s to 18s; thick beans, new, 32s to 34s, ditto, old, 28s to 29s; grey peas, 30s to 32s; maple, 29s to 32s; white, 34s to 36s; boilers, 36s to 38s per quarter. Town made flour, 34s to 40s; Suffolk, 28s to 32s; Stockton and Yorkshire, 32s to 35s per sack.—*Foreign.*—Barley, red wheat, —s to —s; white, —s to —s; barley, —s to —s; malt, —s to —s; beans, —s to —s; peas, —s to —s per quarter. Flour, American, 18s to 19s per barrel; Canada, —s to —s per barrel; French, 28s to 30s per sack.

The Seed Market.—The imports of foreign cloves seed being very extensive, there is less enquiry for that article; nevertheless, prices are fully maintained. Canary is held at full currency. Hempseed rules rather lower. Linseed is quiet, and in moderate request, but the supply is ample. Coriander, 16s to 20s per cwt. Brown mustard-seed, 6s to 10s; white ditto, 5s 6d to 7s 6d. Tares, 4s 6d to 6s per bushel. Linseed, English, —s to —s 42s per last of ten quarters. Linseed cakes, English, £7 0s to £7 10s; ditto, foreign, £6 to £7 5s per 1000. Rapeseed cakes, £4 0s to £4

NEW CORN EXCHANGE, NORTHAMPTON.

OPENING OF THE NEW CORN EXCHANGE, NORTHAMPTON.

THE farmers and dealers attending Northampton have hitherto met in the open square to transact business; which being found extremely inconvenient, a new Corn Exchange has been erected for their better accommodation, at a cost of about £8000, raised by subscription. It is arranged that farmers, dealers, visitors, and others entering the Exchange during the time of business shall pay a small entrance fee or annual sum. The front elevation is shown in the accompanying Engraving. It contains a hall, 140 feet long by 65 feet wide, and 80 feet high, lighted by side windows, and skylights in the covered roof. It is approached from the Market-place by an arcade of shops and offices. There is also in the building a room for a Mechanics' Institute, Athenæum, &c. The architects are Mr. G. Alexander, of London, and Mr. Hall, of Northampton.

The Great Hall is intended to be used, not only for the market, but also for concerts, balls, public meetings, &c. Wednesday being the first day of Northampton races, the town was very full; and the Hall was opened with a concert, conducted by Jullien, ably assisted by Mdlle. Jetty Treffz, Koenig, &c; the splendid band of the 42th Regiment, from Weedon; the French drummers, &c. The performances comprised selections from Rossini, Beethoven, Meyerbeer, Mendelssohn, Koenig, Listz, and Jullien. The races were well attended, notwithstanding the unfavourable state of the weather.

Next week we shall engrave the Hall.

COTTON AND COTTON WASTE.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

Sussex-terrace, Hyde-park Gardens, March 22nd, 1851.

In connexion with the interesting subject of your leading article of to-day, on Cotton and Cotton Waste, I am induced to mention to you a circumstance which seems to deserve notice.

On paying for two half-reams of the same kind of paper a few weeks ago, to an eminent wholesale stationer in London, I observed that they were charged at a different price. A fortnight only had elapsed between the receipt of them, and I had the curiosity to inquire the cause of the later-sent half-ream being higher priced than the other, though they were of precisely the same quality and manufacture. The answer was, that during the interval paper had risen in price; and the reason assigned was, that cotton rags had become very considerably dearer in consequence of their being now purchased in England on a very large scale for the American paper manufacturers. On further enquiry, I found that this explanation was perfectly true.

Is not this a little too bad, that so valuable and so beautiful a manufacture, and in which England, with her enormous cotton trade, has every right and power to excel, should be *driven across the Atlantic* by the mischievous pressure of a stupid tax, productive of no great amount to the revenue, and which costs nearly twenty per cent in the collection? Is it not rather absurd that an article which has made one journey across the Atlantic in the raw state to be converted into calico here, should be compelled to make the voyage back again to be converted into paper?

For the sake of this paltry revenue, is it just or reasonable that a manufacture, obviously *supplementary in its nature to that of cotton*, and in which we ought to supply the world, should be taken out of the hands of our skilful artisans, and an almost incalculable source of increasing employment be dried up, and probably lost to us, as by the decreasing returns from that article of excise there is too much reason to apprehend?

I am, &c.,

C. WREN HOSKYNS.

THE LATE GERMAN COMPOSER, LORTZING.

IN our Journal of Feb. 1 we announced the death of Lortzing, the composer of "The Czar and the Carpenter," and other works of less note. He was director of the orchestra of the Vienna, Dresden, Munich, and Leipsic theatres; and for the last year and a half he held a similar situation in the Frederic-Wilhelmstadt Theatre, at Berlin. Lortzing's passing from life was attended by circumstances by no means uncommon in the fortunes of men of genius; he died poor, and left his family a public subscription. His funeral was attended by Meyerbeer and Kirstner, Dorn and Taubert, and all the artists of the Berlin theatres, who followed the funeral car. On the head of the deceased was a laurel wreath, and before the coffin was borne on a velvet cushion the laurel crown and massive silver conductor's baton presented to him by the city of Leipsic. The only beneficial effect of such honours to the dead is that they may awaken sympathy with the living, in being the means of raising some provision for the composer's family.

THE LATE GERMAN COMPOSER, M. LORTZING.

Lortzing was born at Berlin, in 1803; and he made his *début* as a tenor singer.

THE EXPLOSION AND FIRE AT STOCKPORT.

IN our Journal of last week we recorded and illustrated the lamentable catastrophe at Mr. Marsland's "Park Mills," at Stockport. We now engrave a more circumstantial view of the factory, taken from the bridge over the Mersey, by Ralph Stennett, with details furnished by other spectators. In the Sketch, two men and a boy are seen falling from the upper story of the building: the boy and one of the men on falling into the river were saved; the other individual struck against a projecting stage near an arch, and was killed.

FIRE AND EXPLOSION AT MARSLAND'S PARK MILLS, STOCKPORT.

LONDON: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, MARCH 29, 1851.

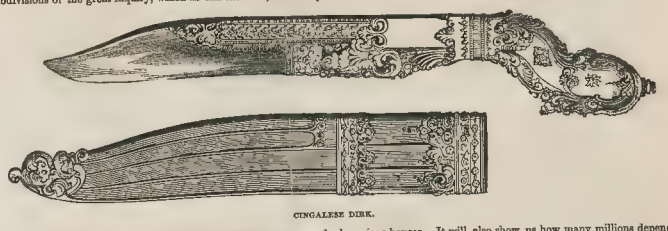
THE ILLUSTRATED LONDON NEWS

No. 477.—VOL. XVIII.] FOR THE WEEK ENDING SATURDAY, APRIL 5, 1851. [SIXPENCE.

THE CENSUS.

THE scene which was enacted on Monday morning last, throughout the length and breadth of the United Kingdom, was an event of the highest interest in itself, and, in its future results, will be not only interesting but important. The numbering of the people, at regular intervals, is a duty which the people owe to themselves, and to the generations that are to follow them. If this duty had been performed by our forefathers, even during a period comparatively so short as that which has elapsed since the Reformation, the science of social economy, as yet in its infancy amongst us, would have ranked amongst the positive, rather than among the empyrical sciences, and the world would have been both the wiser and the better. The decennial Census of 1841, the fifth ever taken in England, is a vast storehouse of social knowledge. It and its predecessors of 1801, 1811, 1821, and 1831, supply authentic data for the philosopher, the historian, the politician, and the legislator. That of 1851, which, in several important particulars, will be more copious, careful, and complete than either, will throw a flood of light on the real condition and progress of the British people in the intervals between them. The figures will tell tales more eloquent than words, and statistics in their most imposing array will preach philosophy in its most valuable departments.

In its first intention—the mere numbering of the people in the gross and bulk—the taking of the Census is an important act. It is instructive to know how large a family or nation we are—whether we are more numerous than we were ten years ago—whether any districts have remained stationary since the last scrutiny—whether any are even less populous than formerly—and what are the districts in which the largest increase has taken place. When the facts are known, the causes will be investigated. But the minor subdivisions of the great inquiry, which in this instance, as already stated, have been far more scientifically and carefully placed before the people for their co-operation than ever they were before, are of more practical value. The Census, when the voluminous returns collected by its army of 30,000 enumerators shall be placed in the hands of another army of penmen and arithmeticians, to classify and arrange, will show, not only how many men, women, and children we are in great Britain, but in what manner we are all enabled to live. It will tell us the number and increase of our habitations; it will inform us how many live in towns and cities, and in rural districts; how many in huts or hovels not much better than the wigwams of savages, and how many in comfortable or luxurious houses. It will also show us how many millions depend upon agriculture for subsistence; how many are engaged in those great staple manufactures of cotton, woollen and hardware which carry our name, and fame, and usefulness to the remotest regions of the globe; how many not engaged in the production of wealth, are solely occupied in distributing it, in the various capacities of



CINGALESE DIRK.

INTERVIEW OF THE NEW GOVERNOR OF CEYLON WITH THE NATIVE CHIEFS, AT KANDY.—(SEE NEXT PAGE.)

wholesale and retail traders and their servants; how many administer to the luxuries, and how many to the necessities, of the world; how many are neither producers nor distributors, but live on the proceeds of realised property—upon the accumulated labour of the past—upon rent, upon stocks, and upon the interest of money generally; how many subsist idly on the compulsory dole of the nation, as paupers—how many of these are able and willing to work, if work could be provided for them, and how many are impotent and deserving of all help and commiseration. It will also show us how many criminals we nurture among us, and the extent of the feud carried on by the "have-nots" against the "haves"—that old and fierce war to which Civilisation, amid all its triumphs, has hitherto been unable to put an end. It will show, at the same time, the amount of the forces retained by the "haves" to fight against the "have-nots"—the soldiers, the policemen, all the legions of law and justice, who, were it not for this feud, would have but little or nothing with which to occupy themselves, and who might be forthwith disbanded. But all this information, important and interesting as it is, will form but a portion of the multitude of facts which will be elicited by the great inquiry of this week. It is not simply to the physical, but to the moral and the intellectual condition of the people to which those who framed the rules for the taking of the Census of 1851 have devoted their attention; and we shall see in due time the statistics which shall prove our poverty as well as our wealth, our social vices and crimes as well as our virtues, and our ignorance as well as our knowledge. If it shall be proved by these figures, that, notwithstanding our increasing wealth and our matchless industry, notwithstanding the hardworking character of our people, and the variety and prosperity of our manufactures, there is more pauperism amongst us than is consistent with sound economy and justice to all classes, it will be the duty both of our theoretical and practical statesmen, to ask themselves the reason why, and to set immediately about the remedy. If it shall be proved that there is more crime among the population than is creditable to look after, agreeable to confess, or Christian-like to permit, another duty equally, if not more important, will devolve upon the nation. We must know the reason of that also, and without any delay see what is to be done to lessen, and finally to remove it. If it shall be proved, moreover, that amid the millions of our young children—the growing generation of Englishmen—there is a greater amount of positive ignorance in consequence of the want of school instruction, than there is among the children of other nations which do not rank so high as we do among the powers and states of the world, it will also behove us earnestly to ask ourselves if we cannot remove the disgrace and the evil.

By the Census of 1831, the population of Great Britain and Ireland was found to be 24,410,429. In 1841 it had increased to 27,019,558. Neither of these inquiries embraced the important subjects of education and religion, and in these respects the Census of the present year will afford data, the want of which has long been felt as a serious drawback in all the discussions which have taken place on those subjects. Upon the whole, there can be little doubt that the results of the Census will afford reason for national gratitude and for some national reproach, and give our statesmen something to think of, far more useful and urgent than the recent no Popery squabbles in which they have been so unprofitably engaged.

One interesting fact will for the first time be made known. It has been surmised that the population of Ireland, which in 1841 amounted to 8,175,124 souls, will be found to be considerably under that number in 1851. The awful ravages of famine and pestilence, and the subsequent immense emigration of a panic-stricken peasantry to swell the side of population in the United States of America, have greatly chinned the Celtic race in Ireland. The Census returns will enable us to compare with tolerable accuracy what that portion of the population has lost by the great calamities of 1847-48, and the popular panic which followed them, and which has not even yet subsided.

Another great country, sprung from ourselves, with a boundless territory for its growing population, with immense undeveloped resources, and in the vigour of its youthful prime, is also engaged at the present moment in a similar task. The Census of the United States of America has been taken within the last month, and we shall, in due time, be enabled to compare their material and moral progress with our own, and to take warning, should we on any great point find them wiser or more fortunate than ourselves.

THE NEW GOVERNOR OF CEYLON.

On the 1st February, his Excellency Sir George Anderson, the newly-appointed Governor of Ceylon, held a Levee at Kandy, for the reception of the native chiefs and head-men of the surrounding province. The attendance on the occasion was very numerous; and the distinguishing dresses and curious costumes made it a very interesting spectacle, such as is not often witnessed

At twelve o'clock the reception-hall of the Pavilion was thrown open, and shortly afterwards became filled with a large assemblage, who were arranged in such a manner as to separate the different classes. On the right stood the Dessaves, whose costume consisted of a large four-cornered cocked-hat, richly embroidered with gold-lace, and having a curious top-knot of jewellery; a large bundle of white cotton and muslin cloths, worn in such a manner as to project very much in front, and supported by a richly-worked girdle, completed the lower garments altogether making a very strange-looking figure. At their head stood Lord Banda, being the eldest of the highest caste family in the country, and son of the late King's chief minister. The Mahomedans, or Moorish priests, who are a numerous and important class in the colony, took up their position on the left, having the High Priest at their head, holding the writhingpoha, or fan, in his left hand, used as a badge of office, as well as a sun-screen, and attended by a couple of his pupils (their dress consisted in the usual yellow robe); whilst the Raty mahotneys, or headmen, with their strange-looking head-dress, the upper part of their bodies bare, and their white cotton neither garments, were arranged in one of the side corridors, the hall being too small to accommodate all.

A guard of honour, formed by the 13th Regiment, was in attendance, and presented arms, &c., in due form on the appearance of his Excellency. As it would have been too tedious to receive all the persons individually, as is usual in all European levees, a modification of the Durbar was adopted, and a space being left vacant through the middle of the hall, allowed his Excellency and suite to pass up and down, when the most distinguished persons were introduced separately.

After the reception, his Excellency took the opportunity of addressing a few words, congratulating them on the present very peaceful state of the colony; and thanking them for such a marked expression of their loyalty: all of which was conveyed to them through the medium of the interpreter, and, judging from the appearance of the assembly, was listened to with much attention: one of the Dessaves, who appeared to be the oldest, making an offhand speech in Cingalese in reply. His Excellency then withdrew, and the company retired.

The accompanying illustration shows the scene of the reception. Beneath is represented a richly ornamented and most elaborately worked Dirk, which is a very fair example of the great ingenuity displayed by the Ceylonese in working the precious metals, and the facility they have of designing ornamental work The handle is made of silver, with gold embellishments; the blade is made of fine native iron, and the sheath is formed by two pieces of carved ivory, fastened together by a large ornamented gold ferule. This Dirk is worn at the left side of the waist, among the vast folds of their dress

The little town of Andelys, in Normandy, which all travellers will easily recollect as that in which the very loftiest feminine head-gear is reared, has at length determined to erect a statue to the man to whom this little town is indebted for lasting celebri.; Nicolas Poussin. The 15th of June is announced as the day of inauguration by the French Journals; and a Mr. Brian as the sculptor of the statue.

THE ILLUSTRATED LONDON NEWS.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Two separate attempts have been made this week by Louis Napoleon to construct a Cabinet. The first was a complete failure, in consequence of the mutual jealousies and divisions which have broken up the so-called "party of Order" into numberless fractions—the leader of each being at variance with all the other leaders upon several political questions of importance, and each refusing to "bate one jot" of his peculiar views for the purpose of conciliation and the general public weal. The result of the President's second attempt to come to an understanding with the heads of parties has not yet become known. The difficulties in the way of a satisfactory adjustment of rival claims will be understood from the following graphic sketch by the Paris Correspondent of the *Morning Chronicle*:

Louis Napoleon will not hear of a Cabinet into which M Dufaure or any of the members of the *tiers parti* are admitted, because they express their determination to respect the Constitution. The Legitimist have quarrelled with M. Léon Faucher and declare war against any Cabinet of which he is a member The Orleanists disappointed at the rejection of M Duvergier de Hauranne for the result of the Bourbonne, repudiate the Legitimist leader, M Berryer was the prime opponent of that proposition The partisans of the law of the 31st of May have some repugnance to M. O Barrot, because he was at the moment of some months ago in that minister. The partisans of Parliamentary supremacy are equally determined in their opposition to M Baroche, who openly expects a coup for a month, reckoning from the 15th in the dissolution of the Barochc Cabinet, showed that he had no great respect for Parliamentary privileges, and that any one who would induce him to join in pleading that respectable body out of the window And to this the mutual hatred and distrust felt by Orleanists, Legitimists, and Bonapartists against each other, and the fact that the ultra-Republicans systematically oppose every Ministry, and the extent of the difficulty may be conceived Indeed, it appears almost impossible for any leader of a Cabinet which will not fall in places the moment that any of the delicate questions about to be discussed shall be brought forward.

The *Débats* believes that a strong Ministry can only be found in a coalition of all the sections of the majority

The Socialists in various districts continue their indefatigable efforts to excite an insurrectionary outbreak among the working classes, but hitherto without effect. The plan proposed is by the means the funds first in motion in the departments, and not in the capital. The authorities, however, are well aware of the movements of these conspirators, and watch them narrowly: so that they are fully prepared to combat the rebels whenever the latter shall commence the struggle

In the Legislative Assembly on Monday, General Bedeau, who presided, announced to the Assembly that he had received the following letter from M. Dupin, the President of the assembly.

PARIS, March 31, 1851

Gentlemen and dear Colleagues.—The incessant continuity of our labours, and the efforts which the exercise of the honourable but painful functions intrusted to me sometimes produce, have affected my health, and oblige me to take a little repose. I have therefore to request you to have the goodness to grant me a congé for a month, reckoning from the 5th of April. But at the same time, as the service and the right of the Assembly must not suffer from a circumstance which proceeds from myself, I consider it my duty to resign the functions of President

I shall resume before the end of May to take a part in our common labours, especially as regards the questions which interest to the highest degree the future prospects of the country and which assuredly deserve mature reflection.

I have the honour, &c.,

DUPIN.

M. de Vatimesnil expressed a hope that the Assembly would not accept the resignation tendered by M. Dupin. This suggestion was received with great applause, and a vote having been taken on it by *assis et levé*, it was carried by an immense majority, the Mountain alone standing up against it.

A very serious conflagration broke out at Lyons on S. nday last, when the offices of the Receiver-General were destroyed. The registrar of the public creditors was consumed by the flames, but happily a duplicate copy exists in Paris. Silver, amounting to 230,000f., enclosed in an iron safe, was buried among the ruins

An occurrence took place this week in Paris, which shows in a clear light the ideas the French authorities have on the "freedom of the press." A second edition of the *Républicain* having been printed without making the additional deposits as for another and separate publication, the editor of that journal has been tried, found guilty, and sentenced to six months' imprisonment and a fine of 200f.

HOLLAND

From the Hague, this week, we learn that the Minister of Finance has just submitted to the Lower House of Parliament the eight following important projects of law; viz —

1. A tax upon Netherland subjects of 1 per cent. upon all property shares, funds, &c., to yield Five Million florins.
2. Abolition of the tax on turf and coals from which the loss to the revenue is estimated at 2,30,,650 florins. On the other hand an import duty of 5 per cent. per 1000 on foreign coals, which will bring the revenue to 100,000 florins.
3. Reduction of the tonnage from 45 to 20 per cent This will involve a loss of 2,000,000 to the revenue
4. Increase of the duty on salt, from which the Government expects 100,000 florins.
5. Increase of the duty on sugar From this project a law, which has not yet been laid before the Chambers, the Government expects a revenue of 5,500,000 florins
6. Abolition of immunity from duty by the inland distilleries, which will probably yield the revenue 12,000 florins
7. Modification of the stamp duty reduction to one-half of the duty on bills of exchange This is to enable to yield the revenue of 100 000 florins.
8. Modification of patents This project is not yet fully drawn up, so that it is not possible to give an exact estimate of the sum which the Government expects to derive from the new project of law; nor can the sum total of the financial reform be given with any degree of accuracy

TURKEY.

In the northern European provinces of the Ottoman empire, particularly those adjoining the Russian and Austrian frontier, symptoms of popular discontent have been manifested for a long time past, and they have at length ripened into insurrection of a very sanguinary character in Bosnia. The latest advices which have been received are to the 15th of March, from Banjaluka, Pridor, and Kozarac, and are favourable to the Ottoman troops, commanded by Omer Pacha. Numbers of wounded insurgents had arrived at Banjaluka, which had been re-captured by the Ottoman troops. The Christians are reported to have suffered considerably from the presence of the insurgents at Banjaluka. Their church has been destroyed, and they have sought refuge across the Austrian frontier.

The question of the Hungarian and Polish refugees, without leading to any great complications still causes some embarrassment to the Porte. The Austrian Government insists on a continuance of the leaders being still detained at Kutaya The Porte, moved by a sentiment of humanity, as well as by a sense of its dignity and independence, refuses to admit any difference being made amongst the refugees, and declares that it cannot keep Lc leaders in the interior of the Empire while the others are allowed to go free. In addition, the Constantinople journals declare that the Porte will decline to keep the refugees in the interior of the country during the space of one year; after that period it considers itself at liberty to act as it pleases. General Dembinski was to leave Constantinople on the 6th ult., for France

UNITED STATES.

The accounts received from New York this week are to the 19th ult. The political news since the close of the session of Congress, which were noticed last week, is not of much importance, but the miscellaneous intelligence is of considerable interest.

The question of the Tariff protection to native manufactures, and the success or defeat of the various Whig or Democratic candidates at the State elections in progress, formed the principal topics of discussion in the journals. The opponents of the Tariff are gaining the majority in the new elections.

President Fillmore had removed from his office one of the postmasters in a western state for advocating abolition principles as paramount to the federal union. This decisive act is looked upon as an indication of the President's future leanings on the slavery question.

Several accidents and occurrences of a disastrous character are noticed in the present advices. On the 14th ult., the large edifice known as the Assembly Buildings, Chesnut-street, Philadelphia, was entirely destroyed by fire: loss, 30,000 dollars. While the conflagration was raging, a new and spacious church (the Rev. Dr. M'Clintock's) was opened for public worship in the same city. The crash Fortunately, no lives were lost. The loss by this fall is estimated at 15,000 dollars. It is a sad oversight, in the American cities, that building inspectors were not appointed, as many severe persons have fallen to the ground in New York and Philadelphia within the past year

The steamer *George W. Kendall* exploded on the 15th ult., on the Ohio river. Twenty one lives were lost, and eleven persons severely scalded.

New York, on the 19th ult., was visited by a severe gale, which continued, accompanied by hail, rain, and snow, until the 18th ult. without intermission, causing the Hudson river to a higher level than for seven years past. Several disast rs occurred amongst the shipping; and the packet ship *Guy Mannering* broke from her moorings, carrying away the piles of which it was formed. Fortunately, she suffered no damage. Numerous other boats, &c., were injured All the outward-bound vessels were detained in port, not being able to make headway against the wind.

Captain Long, of the United States navy, has been appointed to command the national ship which is to convey Kossuth and his companions to America.

The anniversary of the battle of Bunker's Hill was celebrated in New York by brilliant and crowded festivals in various parts of the city. The severe storm, however, marred the customary out-door pageantry. At the Apollo there were at least 300 of the "Sons of Washington," among whom the names of many of the political refugees of 1848 are given.

Bad accounts have been received from the upper Mississippi country. The Indians were in many instances starving to death by hundreds.

The papers announce the death of George M'Duffie, a distinguished politician, and Governor of South Carolina.

A new constitution for Texas was framed for the State of Ohio, by a convention chosen for the purpose. It provides for the maintenance of religious freedom, equality of political rights, liberty of speech and of the press, and no imprisonment for debt. Every free white male adult citizen is a voter, and elections in all cases are to be by ballot.

General Quitman, Colonel Henderson, and other Cuban invaders, or protectors of invasion, have been discharged from all responsibility in relation to the expedition of June last, a *nolle prosequi* having been entered by the United States Court at New Orleans in each case

INDIA.

We have accounts this week from Calcutta of Feb 20th, and Bombay, March 3rd Peace reigned throughout India. The Nepaulese Ambassador, who attracted so much notice last season in London, had arrived thence, where he was received by his countrymen with profound respect and the warmest enthusiasm. He seems to have profited by his visit to England, for, upon his return to his native land, one of the first acts he performed was to plan a grand public road from the capital to the frontier, which was to be commenced forthwith It has been found impossible to obtain permission for Dr. Hooker to travel in Nepaul: when once English merchants or travellers are found in an Indian country, English troops very speedily follow

The general news received by this arrival is of little interest No discovery had been made of the £10,000 taken from the Oriental Bank, nor of the delinquents concerned in that robbery. A fraud to the extent of between £3000 and £4000 had been discovered in the collection of the assessed-tax

In the Punjab earthquakes had been felt, but they inflicted no great damage The people, however, lived in dread, last another shock should prove more disastrous. The general sett ement of the country has proceeded so far, that the Board of Administration has found time to turn its thoughts to the education of the people, and it has made a beginning in the establishment of a school at Umbair. The Sutlej and Jumna had been visited with immense floods

The construction of railways, in various localities of India, was proceeding satisfactorily. Great efforts were also being made to provide Bombay with a regular supply of water, that on the spot abundant as it is for a tropical island, falling greatly short of the wants of the population, now verging on half a million. The report of Captain Crawford had been most favourably received by the Court of Directors: he proposed a large dam across the mouth of a valley amongst the hills at Salsette, and creating an artificial lake. This would afford one hundred thousand gallons an hour in Bombay, with a minimum head of water of seventy feet. It was proposed to be brought in a 4-feet iron pipe by the line of the railway. The lake would be twelve miles from the point of delivery, and the cost was estimated at £150,000 One gentleman has offered to subscribe £40,000 of tons.

A new steamer of 80 tons, for the Surat trade, had just been launched This is the twelfth private steamer which rises from Bombay with the parts adjusting, mostly the property of natives; the oldest of which, the *Sir James Rivett Carnac*, was launched in 1843

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Consolidated Fund Bill was read a third time and passed

CHANCERY REFORM

Lord LYNDHURST, referring to the measure proposed by the Government for the reform of the Court of Chancery, observed that the bill would have been more properly introduced in that House, where lawyers of so high experience were to be found. He for one, he could assure Prime Minister was himself ashamed of his inefficient measure, and therefore selected the Commons for its *début*. The whole commission viewed the bill with contempt. His Lordship proceeded to condemn, in particular, the proposition of removing the ecclesiastical patronage from the Lord Chancellor to the Crown

Lord BROUGHAM upheld the right of the House of Commons to originate a measure of this character, if it was thought expedient, but declined to enter upon the discussion of a bill which had not yet been brought forward in either House of Parliament.

Lord BROUGHAM concurred in some of the censures passed upon the bill, but remonstrated against opening an incidental discussion before the measure was brought before their Lordships.

Earl GREY de cided the proposed measure, and thought it more advisable that it should be introduced into the House of Commons than into the House of Lords, which was better adapted for revising than originating bills.

After a few words from Lord REDESDALE, the subject dropped, and their Lordships adjourned.

HOUSE OF COMMONS.—MONDAY.

EXPENSES OF ANTI-PAPAL MEETINGS.

Mr. REYNOLDS presented a petition from ratepayers in the parish of St. Luke, Middlesex, stating that a meeting had been held in the parish church against Papal aggression, in the month of November last, from which all ratepayers under £30 had been excluded: that a sum of £16 17s. of expenses had been incurred by the holding of that meeting, and that that sum had been paid out of the poor-rates of the parish. The petition further stated that of the £16 17s. £5 had been paid to the *Times*, £3 10s. to the *Morning Chronicle*, £3 10s to the *Daily News*, and £4 17s. for placards and posting. The petitioners prayed the House to inquire into the facts, and declare whether this sum could be legally deducted from the poor rates.

NEW WRIT.

On the motion of Mr. FORBES MACKENZIE, a new writ was ordered for the borough of Ennisk illen, vacant by the resignation of the Hon. H. A. Cole.

THE BALLOT.

Mr. H. BERKELEY gave notice that he would, on an early day after Easter, ask the permission of the House to bring in a bill to give protection to the voter by the adoption of the Ballot.

WINDOW TAX

Viscount DUNCAN postponed his motion for the repeal of the window-tax to Tuesday, the 8th of April.

PRECEDENCE GIVEN TO ROMAN CATHOLIC ARCHBISHOPS.

Lord J. MANNERS had a question to ask the noble Lord at the head of the Government. In the year 1847, Earl Grey and the Lord-Lieutenant of Ireland had issued certain instructions to the Archbishops, and certain instructions were still in force, and if so, whether there was any intention on the part of the noble Lord to recal or modify them?

Lord J. RUSSELL: The instructions referred to by the noble Lord (Lord J. Manners) are still in force, and there does not at present exist any intention of altering them. (Hear, hear)

LORD JOHN RUSSELL'S NEW REFORM BILL.

Mr. H. BERKELEY begged to ask the noble Lord the member for the city of London (Lord John Russell), whether, in his (the noble Lord's) new plan of electoral reform, he intended to introduce the ballot. (Laughter.)

Lord J. RUSSELL: That the hon. member must excuse me from answering the question now. (Renewed laughter.)

THE INCOME-TAX (IRELAND).

Mr. CORBALLY wished to know if the hon. member for Marylebone (Sir B. Hall.) intended to persist in his motion for extending the Income-tax to Ireland, and when it would be brought on?

Sir B HALL replied that if the income-tax were renewed as regards Great Britain, it was his (Sir B Hall's) intention to move that the tax should be extended to Ireland. The time of bringing on the motion must, of course, depend on the proceedings of the Chancellor of the Exchequer, and on whether the House decided that the tax on income should be renewed.

THE DEANERY OF MANCHESTER.

Mr. M. GIBSON wished to ask whether, when Dr. Bowers was appointed Dean of Manchester, there had been an understanding of the duties which might be imposed on future holders of the office? The Manchester Parish Division Act had been passed last session, and the imposed duties on future holders of the Deanery of Manchester, with the proviso that they should not be imposed on the present Dean, without his consent in writing. He (Mr. Gibson) begged to ask whether there existed any understanding on the part of the Government that the new arrangements?

Lord J. RUSSELL said that when the present Dean of Manchester had been appointed, he (Lord J. Russell) had informed him that he would be expected to conform to whatever new arrangements might be made; and he (Lord J. Russell) could say that he had heard that the Dean had expressed not objection to any conciliatory arrangement. He (Lord John Russell) had not, however, at the time, made any arrangement which would be binding on Dr. Bower.

THE STAMP DUTY ON MONTHLY PUBLICATIONS.

Mr. SCHOLEFIELD asked the Chancellor of the Exchequer whether, in the practice of the Board of Inland Revenue, all monthly publications containing news are held liable to the payment of the stamp duty; also, what is the cause of the delay in the prosecution of the proceedings against the publication of an unstamped newspaper, edited by Mr. Charles Dickens, and called the *Household Narrative of Current Events*?

The CHANCELLOR of the EXCHEQUER, who was not distinctly heard, was understood to reply, that the question as to whether any publications were liable to stamp duty was a matter of law, and one on which he declined to give an opinion. The delay in prosecuting the publication called the *Household Narrative of Current Events* had arisen, he believed, in consequence of some disagreement between the solicitor and the authorities of the Inland Revenue Office upon certain points

Mr. SCHOLEFIELD thought the right hon. member (the Chancellor of the Exchequer) had misapprehended the nature of his question. He (Mr. Scholefield) did not wish the right hon. gentleman to decide the point of law as to what constituted a newspaper. His question had been, whether a monthly publication containing news was a newspaper?

The CHANCELLOR of the EXCHEQUER said, the point was one of law, and he must decline giving an opinion on it.

SAVINGS-BANKS

Mr. H. HERBERT asked the Chancel or of the Exchequer whether the Registrar of Friendly Societies was authorised by the Government, or by the Commissioners for the Reduction of the National Debt, to state at a public meeting, held at St. Helen's, in April, 1850, that a bill would, or would not, be immediately passed by the Legislature, giving to depositors in savings-banks Government security for their investments, and whether it was under the sanction of either the Government or the Commissioners for the Reduction of the National Debt that the said Registrar of Friendly Societies recommended at St. Helen's the formation of a new institution (the old one having failed), and advised parties to deposit their savings, on the grounds that future frauds would be impossible, and whether the Government will be responsible for any losses that may accrue to depositors either at St Helen's or elsewhere, who may have been induced, by the advice of this public officer, to invest their moneyin a savings-bank?

The CHANCELLOR of the EXCHEQUER said that the Government were not responsible for any statements made under the circumstances referred to. He could not, of course, then state what views the Government might hold on the various questions relating to savings banks; but this he might say, that, although the registrar spoken of had in his private capacity made statements at a public meeting, the Government were not to be bound by them.

THE ARMY IN INDIA.

Colonel DUNNE begged to ask the Secretary-at-War (Mr. F. Maule) whether

the Government intended to carry out the system of relieving the regiments in India.

Mr. F. MAULE said that, as far as practicable, the Government intended to carry out the practice, so that the regiments might not remain more than fifteen years. Of course there would be exceptions made where the public service required them

SUPPLY—THE ARMY ESTIMATES

On the motion for resuming the committee of supply on the army estimates,

Mr. HUME said very much the same kind of thing as he had done on a former occasion by the select committee on military expenditure, and remonstrated against the summary way in which the votes for the civil services were passed, before the committee had proceeded to consider, and settle the country, was still kept in uncertainty respecting the Budget. He moved, as an amendment, that no further supply on be granted until the financial statement was made.

The CHANCELLOR of the EXCHEQUER repeated the assurance given on a former evening, that should no unforeseen obstacle arise, the financial statement would be made on Friday. No good whatever—on the contrary, much inconvenience would arise from obstructing the business of the evening.

Mr. E ELLICE, as a member of the Committee on the Army and Ordnance expenditure, advised Mr Hume to waive his objection, and wait for a more favourable opportunity for enforcing the economical views of the committee, especially as regarded the consolidation of public offices.

Mr. W. Williams, Mr. Mowatt, Mr. S. Crawford, and Mr. Wakley supported Mr Hume's proposal

A division was about to be taken, but Mr. Hume withdrew his motion,

And the House went into a Committee of Supply.

On the motion that £3,921,070 be voted to defray the charge of maintaining the land forces,

Mr HUME moved, as an amendment, that £2 000,000 be voted "on account."

In the course of the discussion which followed, Mr. HUME protested against the favouritism displayed in the case of the Life Guards. Last year he opposed the purchase of certain furs from the King of Denmark, on the Gold Coast, and warned the country gentlemen against the probable consequences of that act. His warning was not heeded; but if the estimates were now looked at, it would be seen that there was a charge of £11,870 for the expense of troops necessary to garrison these forts

Mr FOX MAULE defended the construction of the Life Guards. The officers had no higher pay, and they found their own lodgings, and were subjected to other expenses from which the officers of the line were exempt. The Guards had been found exceedingly useful when troops were required to proceed at a moment's notice to foreign parts.

Sir DE LACY EVANS remarked, that, as regarded the chance of rising in rank, twenty years' service in the Guards on the backs of the Thames was as effections as twenty years' service in a regiment of the line on the banks of the Sutlej, or in Kaffir-land.

Colonel REID, Colonel DUNNE, Sir DE LACY EVANS, and other gallant officers, having spoken, the Committee divided:—

For Mr Hume's amendment	.. .. ..	33
Against it	.. .. ..	137
Majority	.. .. ..	—104

Mr. W WILLIAMS then moved that the vote be reduced by £81,152, being allowances to the Guards which were denied to the line.

For the amendment	.. .. ..	15
Against it	.. .. ..	84
Majority	.. .. ..	—69

The vote was then agreed to.

The following votes were also agreed to, viz. £15,939 for the Staff, and £92,747 for the public departments.

On the next vote, viz. £16 501 for the Royal Military College, Colonel REID complained of the unnecessary trouble and annoyance to which the officers were subjected by the compulsion of passing an examination. The course of study was the best education for the military officer

Mr FOX MAULE cited the opinion of the Commander-in-Chief to support the new regulations, which were necessary to secure an amount of intelligence among the officers, which would give them a proper superiority over their men, who were themselves advancing so fast in education.

After further conversation the vote was agreed to, as were the remaining votes for the "effective" services.

ORDNANCE ESTIMATES

Colonel ANSON then moved the first of a series of votes for the Ordnance service. After some preliminary remarks touching the distinction between wise economy and indiscriminate retrenchment, he stated that the gross total of the votes he intended to ask for presented but a trifling diminution of £239,790 on the amount required last year. As compared with 1848, however, the saving that had been effected was considerable, being £280,000. Passing in review the various items of expenditure upon the *personnel* of the ordnance force, barrack supplies, commissariat, officers, artillery, small arms, buildings, surveys, &c., Colonel Anson explained the alterations which were exhibited in the balance-sheet of the present year. The charge for works and buildings presented the only formidable increase, namely, £30,000, arising from an occasional expenditure, amounting to £64,000, for new erections at different barrack establishments, upon which half of which was counterbalanced by retrenchments accomplished elsewhere. Upon the non-effective services a trifling saving had also been realised; and the total result differed materially from the estimate laid before the House last session.

The first vote of 14,873 men for the ordnance military corps being put,

Mr. HUME objected, not to the details of management, but to the system in general, which had led to the constant expansion of costs, and in a wasteful accumulation of unnecessary stores. In the years 1834-38, the average Ordnance expenditure was below £1,000,000, while in the years 1844-48 it afterwards, until in 1847 it had risen more than £3,000,000, and even now, after the stringent enforcement of economy, remained at £2,400,000. As the only satisfactory change in this system, he saw the proposition to have consolidated the Ordnance Department with the War Office, and the placing of the whole under the responsible authority of the Commander-in-Chief.

Mr. WILLIAMS called upon the House to sanction the extraordinary cost of certain corps belonging to the artillery service, but proposed no amendment, and the vote was passed

The remaining votes were afterwards agreed to, and the House resumed.

THE MARINE MUTINY BILL AND THE MUTINY BILL

Were then severally read a second time.

STEAM NAVIGATION BILL

Mr LABOUCHERE, in moving the second reading of the above bill, said that the provisions had been generally approved, and the objections were confined to matters of detail which might be considered in committee. He had already stated the objects of the bill, and need not repeat them; when it had been in the hands of hon. members for some time, he hoped the House would allow it to be read a second time now, and he should not propose the consideration of it in committee until after Easter. (Hear.)

In answer to Mr Hume, Mr. LABOUCHERE said, if he found there was a general wish on the part of those taking an interest in the bill that it should be considered in a committee of the whole House, he would give due time for its consideration.

The bill was then read a second time, and ordered to be committed on the 2nd of May.

APPRENTICES AND SERVANTS BILL.

The bill was read a third time and passed

PROPERTY AND INCOME TAX

Mr BOOKER moved for a tabular and classed return of the amounts levied under the several income-tax schedules, declaring that the request was prompted only by a principle of justice, and was irrespective of the political faith professed by the occupants of the treasury bench. He wished to ascertain the proportions contributed by real property and different descriptions of commercial and industrial incomes, and to discover how those incomes had fluctuated under the influence of our recent policy

The motion was seconded by Mr. SPOONER, and supported by Colonel SIBTHORP

The CHANCELLOR of the EXCHEQUER could not consent to assist in furnishing the desired information, wishing to act in consistency with the principles that had always guided the House in respect to the Income-tax, in which the most jealous precaution had been taken to avoid any inquisitorial research, or any impertinent disclosures of private business

Mr HENLEY complained that no relief was afforded to the landed interest from the burdens of the tax, even where rates and profits had disappeared

After a few words from Mr SPOONER, Mr BOOKER withdrew his motion.

PROCESS AND PRACTICE (IRELAND) BILL.

On the motion of Mr. HATCHELL, leave was given to bring in this bill.

The House rose at 1 o'clock.

HOUSE OF LORDS.—TUESDAY.

CEYLON.

Lord TORRINGTON entered upon the defence of his conduct as Governor of Ceylon, according to the notice which he gave subsequent to the postponement of Mr Baillie's motion in the House of Commons. The first point to which he directed his attention was the financial condition of the colony, which he claimed credit for having so far improved as to have converted a deficiency upon the accounts of 1846 of £91,000, into a very satisfactory surplus; while, at the same time, there had been an increase in the imports and exports of the island. With respect to the rebellion, he reminded the House that the usual principles of government were not easily applicable to an Oriental population, the character of which called for an incessant watchfulness against treachery, and often rendered the extension of leniency extremely dangerous. The change which had been made in the taxation of the country formed, in his opinion, no excuse for the rebellion which had broken out; for in point of fact it was the result of political agitation, propagated by mischievous spirits supporting the ambitious schemes of the Pretender. The crimes perpetrated by those parties were great The value of the property at stake, and the peril to the British possessions, all called for the proclamation of martial law to put an end to the atrocities of the insurgents That system was not, he contended, continued too long, nor was it made use of as an instrument of tyranny on the part of the Executive Government. He relied upon the high character of his subordinates, that they would not engage in any acts of cruelty; and he referred to the addresses from the merchants, planters, &c., of Ceylon, after the crisis had passed away, as a proof of the necessity and prudence of the course he had adopted. He denied that he had ever issued a sanguinary proclamation, but admitted that he had been guilty of impropriety, in respect to certain communications having reference to Sir E. Tennent and Mr. Wodehouse With this admission, he threw himself upon the judgment of their Lordships with respect to all the other charges against him

Earl GREY complained of the unfair way in which the accusation had been got up, both in and out of Parliament, and contended that the whole case against Lord Torrington was a base and unprecedented instance of persecution

The Duke of WELLINGTON thought there were no materials whatever before the House to enable them to form an opinion of the conduct of the noble Lord. With respect to martial law, he would say, from his own experience, that it was nothing but military despotism, which it was the duty of Parliament hereafter to limit and define

After a few observations from Lord TORRINGTON, the matter dropped, and Their Lordships immediately adjourned.

HOUSE OF COMMONS.—TUESDAY.

FOREIGN REFUGEES.

Mr. J. S. WORTLEY asked the Secretary of State for the Home Department whether his attention had been called to the mass of calumny, and proceedings of certain persons, not being subjects of her Majesty, but at present resident in this country, and claiming its hospitality; and whether her Majesty's Government are prepared to take any measures for further securing this country from any danger from the disturbance of its peace, or the embarrassment of its relations with friendly foreign powers, by the abuse of that hospitality?

Sir G. GREY said that the intention of the Government had been for some time directed to the subject, and he believed there was no reason to apprehend any disturbance of the tranquility of this country. Should any insane attempt, however, be made to do so, it would be immediately crushed. With respect to the second part of the question, he would say that he could not too strongly condemn as a breach of hospitality the conduct of foreigners resident in this country who should seek to form conspiracies to disturb the peace of foreign states. Such parties, however, were by the laws of the country, as they at present stood, liable to fine and imprisonment for any such proceedings.

EXPLOSION OF STEAM-BOILERS.

Lord ASHLEY asked whether the subject of the frequency of boiler explosions had engaged the attention of Government, and whether any resolution had been come to for the purpose of preventing the machinery of factories to the care of inspectors, so that life and limb might be preserved?

Sir G. GREY said the attention of the Government had been turned to the subject of the several melancholy accidents which had lately occurred in factories from the explosion of boilers. It would not, however, be an easy matter to subject boilers to the inspection of factory inspectors. Boilers stood on the same footing with machinery, and owners were bound to have their machinery properly fenced to prevent accident. In a recent case very heavy damages had been obtained on account of the machinery not being properly guarded. The state of a boiler, however, was one which no inspector could well determine.

Mr. HUME asked if there would be any objection to lay on the table certain reports on accidents in mines?

Sir G. GREY said it was unexpedient that the reports should one by one be laid on the table, but there was no objection to their production at stated times

PRIVATE LOANS FOR DRAINAGE.

Mr. B. COCHRANE obtained leave to bring in a bill to amend the provisions of the Private Money Drainage Act of 1849, to the advance of private money for the erection and repair of farm buildings on lands in Great Britain and Ireland. The object of the bill was to enable proprietors of land to obtain money for its improvement by a rent-charge on the estate. In Scotland there were no means of obtaining money for such purposes unless on the security of a life insurance: it was to extend the provisions of the act of 1849 to that country that he desired to introduce this measure. He proposed to limit the amount advanced to one and a half year's rental.

COAL-WHIPPERS.

Mr LABOUCHERE obtained leave to bring in a bill to continue and amend an act for establishing an office for the benefit of the coal-whippers of the port of London.

EXPENSE OF PATENTS.

Colonel SIBTHORP moved for returns of the expenses incurred in taking out a patent in England, Scotland, and Ireland respectively

Mr. C. LEWIS said, the information was already before the House, and he therefore objected to incurring fresh expense. If hon. and gallant member (after examining some returns to which he referred him for inquiry) should find that all the information he required was not to be found in them, he would not object to the production of the additional information moved for.

After a short conversation, the House divided, and the motion of Colonel Sibthorp was negatived by a majority of 70 to 39.

The report of the committee of supply was brought up and agreed to.

The Mutiny Bill and the Marine Mutiny Bill were severally passed through committee

On the motion of Sir W. SOMERVILLE,

The Medical Charities (Ireland) Bill was read a second time.

The Acts of Parliament Abbreviation Bill was, on the motion of Mr. J. STUART, read a second time, and ordered to be committed.—Adjourned.

HOUSE OF COMMONS.—WEDNESDAY.

The House sat from noon till six o'clock.

EXPENSE OF PAPAL AGGRESSION MEETINGS.

Mr. REYNOLDS asked the Chief Commissioner of Poor-Laws under what authority a sum of £16 17s was paid (out of the rate for the relief of the destitute poor of St. Luke's, Middlesex) towards defraying the expenses of a meeting held in the parish church on the 14th November, 1850, to protest against Papal aggression?

Mr. BAINES did not know anything of the particulars of the meeting alluded to, but, as regarded the money paid, he was informed by the guardians that they were sanctioned in paying it by a local act. It was open, however, for any ratepayer to object to it before the district auditor, and then to bring the case before the Queen's Bench or the Poor-Law Board.

PROCLAMATION OF THE COUNTY DOWN.

In reply to a question from Mr. S Crawford, Sir W. SOMERVILLE said that a portion of the county of Down had been proclaimed as in a disturbed state, and he had no objection to lay over the information on the table of the House.

In reply to Mr. Scully, Sir W. SOMERVILLE said it was his intention to introduces a bill for the regulation of petty sessions in Ireland; not, however, the same bill as last session.

NEW WRIT.

Mr. HATTER moved a new writ for the borough of Coventry, in lieu of George Turner, Esq., who had accepted the office of Vice-Chancellor. (Cheers.)

The Compound Householders Bill passed through committee with some amendments.

EXTENSION OF THE COUNTY FRANCHISE.

Mr LOCKE KING moved the second reading of the County Franchise Bill, on which the Minister suffered a defeat some weeks since of nearly two to one.

Mr. THOMPSON, he declared, was not designed as a mere flash-in-the-pan, but as a real *bond fide* measure for extending the franchise, and he was glad that his having mooted the question had drawn admissions from Lord J. Russell and Sir J. Graham, that some alteration of the franchise was necessary. With these admissions he thought they were bound to legislate at once, and not wait, as was suggested by the noble Lord, until next year.

Mr. HOWARD seconded the motion, and Mr. P. HOWARD supported it.

Mr. F. MAULE found no objection to the principle of the measure, but contended that it was insufficient in details, and that the present moment was inopportune for its introduction, since the Ecclesiastical Titles Bill, Finance, the Jewish Disabilities, and other important subjects pre-occupied the time of Parliament, and afforded no chance of its being passed during the current session. He might be a advocate of reform, but he would by no means the reform party in the House at a juncture that especially demanded energy and union among them.

Sir B. HALL and Sir DE LACY EVANS also recommended the withdrawal of the bill

Mr. BRIGHT, though hopeless of succeeding, wished to go on with it. He wanted to have it discussed on the merits, and to obtain a pledge from the Ministry as to the extension of the £10 household franchise to the county constituencies

Colonel SIBTHORP rejoiced at every symptom of disagreement upon the opposite benches, but would not vote for either side.

Mr. HUME laid the responsibility of all divisions upon the Government, who had so long delayed every proposition for electoral reform.

Mr. HADDAN and Mr. RICE thought any further persistence with the measure injudicious

Mr. THOMAS DUNCOMBE supported the second reading, having no confidence in the promises of the Ministry for future reforms

Mr. CLAY refused to embarrass the Government, who stood pledged to bring in an enlarged measure on the subject next year.

Alderman SIDNEY supported the bill

Colonel THOMPSON feared to risk the stability of Free-trade by endangering the existence of the present Administration. He would vote against the second reading

Mr. G. CRAWFORD promised his vote for the second reading.

Colonel ROMILLY could not consent to lessen the chance of a better bill next session by voting against the Government in this

Mr. B. OSBORNE believed that the present measure would, under the circumstances, be an ill-timed meat in the way of reform

Mr. MCCULLAGH observed upon the inconsistency among the liberal members, who intended to vote against the fundamental principle of their faith.

Lord J. RUSSELL submitted that it was better to wait for a comprehensive measure in the next session, than snatch impatiently now at a partial one. He reiterated his pledge to bring forward a bill for extending the franchise at the very commencement of the session next year, but declined from prudential reasons, to specify any details.

Mr. DISRAELI denied that the Protectionists were anti-reformers. He was a decided opponent of finality, but objected also to nominal reforms, designed in reality to promote party interests

Mr. W. O. STANLEY opposed the second reading.

After a few words from Mr. LOCKE KING, who left the matter with the House, a division was called for, when there appeared

For the second reading	.. .. ..	83
Against it	.. .. ..	299
Majority against the second reading	.. ..	216

The bill was accordingly lost

The Audit of Railway Accounts Bill was read a second time, on the motion of Mr Locke

The Expenses of Prosecutions Bill was committed, *pro formâ*, on the motion of Sir G. GREY.

The reports on the Mutiny and Marine Mutiny Bills were brought up and agreed to.—Adjourned.

HOUSE OF LORDS.—THURSDAY.

REFUSAL OF THE BURIAL SERVICE TO A DISSENTER.

The DUKE of RICHMOND presented a petition from the town-council of the city of Chichester, complaining of the conduct of the Rev Mr. Kenrick, the vicar and incumbent of the parish of St. Peter the Great, otherwise called the Peas, in that city, for having refused to read the burial service over the body of Mr. Pare ne, on the ground of his having been a Separatist from the Church, and especially a teacher among Separatists: and also, with having declined to read the burial service over the remains of a woman who had destroyed herself, notwithstanding that the coroner's inquest had found that she did so when insane and distracted. The reason assigned by Mr. Kenrick for his conduct in the former case was, that he could not conscientiously perform the service over a teacher of Separatists, though he had no objection to do so over the body of a Dissenter who had not been a teacher or preacher of dissent. The reason he gave in the latter case was, that he was convinced the woman was not insane when she drowned herself. The noble Duke strongly censured the conduct of Mr. Kenrick in the matter.

The Bishop of CANTERBURY, while admitting the benevolent character of Mr. Kenrick, deeply regretted the conduct which this reverend gentleman had pursued in the matter. He had no sympathy with the reasons which he had adduced; on the contrary, he had always felt that it was a most fortunate circumstance that the Dissenters had contented themselves with erecting their own places of worship and had buried their dead in our churchyard, thus keeping up as it were a connexion with the Church, and facilitating a return from the principles of dissent to those of the Church, and he thought that no consideration should induce clergymen of the Church to throw obstructions in the way of this usage. He had repeated this to Mr. Kenrick, and also that he was guilty of a breach of duty in violating the laws of his country. Unfortunately those representations had been disregarded. The right rev. Prelate also considered Mr. Kenrick to blame in the second case, in not having accepted the verdict of the coroner's jury as the fittest judgment of the woman's sanity at the time of her death.

The Bishop of LONDON took that opportunity of stating, in reference to this subject, that it was not his intention to re-introduce the Church Discipline Bill during the present session, but next session he intended to introduce a measure to facilitate the institution of proceedings for the correction of criminal and contumacious clerks, and also for the institution of a tribunal of appeal to decide ecclesiastical causes

The subject dropped, and the petition was ordered to lie on the table.

COUNTY COURTS.

Lord BROUGHAM moved the re-committal of the County Courts Further Extension Bill.

The Lord CHANCELLOR opposed the bill; but ultimately the bill was committed pro forma, for the purpose of inserting the amendments proposed by Lord Brougham, with a view to their consideration at a future day.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

INQUIRY INTO THE MANAGEMENT AND TERRITORIES OF THE EAST INDIA COMPANY

Mr. ANSTEY rose to move the following resolution:—"An address to her Majesty, representing that it is now necessary that the true condition of the territories under the government and management of the East India Company, and the conduct, feelings and wishes of our fellow-subjects inhabiting those territories, as to such government or management, should be fully ascertained; and for that purpose, praying her Majesty to take measures for the appointment of a Commission of Inquiry, with full powers to take evidence in India as to the operation and results of the laws now in force, touching the government and management of the said territories, and to report such evidence, together with the opinions of the Commissioners thereon, to her Majesty in Parliament." He contended, that it was most important that some preliminary inquiry of this kind should be made, and that such an inquiry would be altogether different from the inquiry which he now sought. He complained that the opium and salt monopolies were continued, notwithstanding that, under the act of 1833, which renewed the Company's charter, a power was given to the Governor-General and Executive Council to reduce these monopolies; but of which power they had never availed themselves, although a promise had been held out to the people of India that those monopolies should be reduced—a measure which would confer the greatest benefit upon a population numbering 100 millions of souls

Lord J. RUSSELL was opposed to entering at that moment upon so wide a domain of discussion as the motion opened. Besides, it was by no means desirable or likely to be attended with profit, that the inquiry should be conducted in India. The Company's charter, a power was given to the Governor-General and Council to reduce those monopolies; but of which power they had never availed themselves, although a promise had been held out to the people of India that those monopolies should be reduced—a measure which would confer the greatest benefit upon a population numbering 100 millions of souls

Lord J. RUSSELL was opposed to entering at that moment upon so wide a domain of discussion as the motion opened. Besides, it was by no means desirable or likely to be attended with profit, that the inquiry should be conducted in India. The Company's charter, a power was given to the Governor-General and Council to reduce those monopolies; but of which power they had never availed themselves, although a promise had been held out to the people of India that those monopolies should be reduced—a measure which would confer the greatest benefit upon a population numbering 100 millions of souls

Lord J. RUSSELL was opposed to entering at that moment upon so wide a domain of discussion as the motion opened. Besides, it was by no means desirable or likely to be attended with profit, that the inquiry should be conducted in India. The Company's charter, a power was given to the Governor-General and Council to reduce those monopolies; but of which power they had never availed themselves, although a promise had been held out to the people of India that those monopolies should be reduced—a measure which would confer the greatest benefit upon a population numbering 100 millions of souls

After a short discussion, in which Mr. HUME, Sir. J. W. HOGG, Mr. BRIGHT, and other hon. members took part,

The hon. member withdrew his motion.

ADMISSION OF JEWS TO PARLIAMENT.

Lord J RUSSELL moved that the House resolve itself into a committee of the whole House on the bill now under consideration for consolidating the oath of abjuration to persons professing the Jewish religion. The question has been so much discussed that he should not enter into it at any length. On the report of the select committee showed that the words, "on the true faith of a Christian," were not in the oath in the time of Elizabeth, and that they were inserted in the time of James I., solely for the purpose of adding solemnity to the oath. The exceptions made in the time of George I and George II. in favour of the Jews, also proved that without those exceptions the words could not be dispensed with, and therefore he proposed to leave it in a bill, for he could not regard the objections on religious grounds to the admission of Jews in Parliament as of any weight.

Sir R. INGLIS, Mr. Plumptre, and Mr. Newdegate opposed the motion.

The House divided—

For the motion	.. .. ..	166
Against it	.. .. ..	98
Majority	.. .. ..	—68

The House then went into committee, and a resolution on which to found a bill was agreed to, after which the House resumed.

In reply to Sir R Inglis, Lord J. RUSSELL said he hoped to be able to bring in the bill on Friday week.

The Dissenters Act Extension Bill passed through committee.

Adjourned.

NATIONAL SPORTS.

The Newmarket season commences on Monday, with the Craven Meeting, to which the calendar of that racing for the week is confined. There appears every prospect of an average amount of sport, but of nothing particularly exciting. The steeple-chase appointments embrace the Newton (South Lancashire) on Monday, the Grand French on the same day, the Carlisle on Tuesday, Cheltenham on Wednesday, and West Cumberland on Friday. The coursing season has terminated.

TATTERSALL'S

THURSDAY.—In consequence of the Epsom steeple-chases being on, the business this afternoon was on a limited scale, admitting only of the following brief summary:—

METROPOLITAN HANDICAP

9 to 2 agst Conrus	10 to 1 agst Naby
7 to 1 — Sweetmeat	12 to 1 — Kathleen

50 to 1 agst Skewsworm

Valentine and Rose Hamburg Gentlemen.

TWO THOUSAND GUINEAS STAKES.

7 to 4 agst Grecian

DERBY

6 to 1 agst Prince Minister	14 to 1 agst Newmeister
7 to 1 — Grecian	14 to 1 — Marlborough Bush
	16 to 1 agst Teddington
	25 to 1 — Theseus

65 to 1 agst Nosebang

CROXTON PARK RACES.—THURSDAY.

The FARMERS' PLATE of 50 Sovs. -Mr. G. March, jun.'s, g by The Sea (Green), 1, Mr. G. Parr's Cropwell (Vincent), 2.

The BEVOIR CASTLE STAKES of 15 Sovs each, with 80 added.—Mr. G. Higgins's Theseus (Rogers), 1. Mr. A. Stebbings's Knook Knoll (Bumby), 2.

The SCURRY STAKES of 10 Sovs each, with 20 added. Mr. C. L. Thorpe's Forest Flower (Count Batthyany), 1.

A HANDICAP SWEEPSTAKES of 15 Sovs each, with 50 added. -Lord Chesterfield's Humphrey (Wells), 1. Mr. T. Dawson's Tightwad (Arnold), 2.

The GELSTHORPE HANDICAP of 20 Sovs each.—Mr. H. D Bromley ns Melford (Lord Cardross), 1. Mr. Parr's Clothworker (W. Scobell), 2

The BILLESDEN COPLOW STAKES.—Oscar, 1. Lysmachus, 2

WEDNESDAY.

FARMERS' HANDICAP of 50 sovs.—Mr. Pindar's Minx.

The GOLD CUP.—Mr. Parr's Clothworker, 1. Mr. Chaney's Baroness, 2.

The FORCED HANDICAP of 8 sovs each was won by Warwick

EPSOM RACES.—THURSDAY.

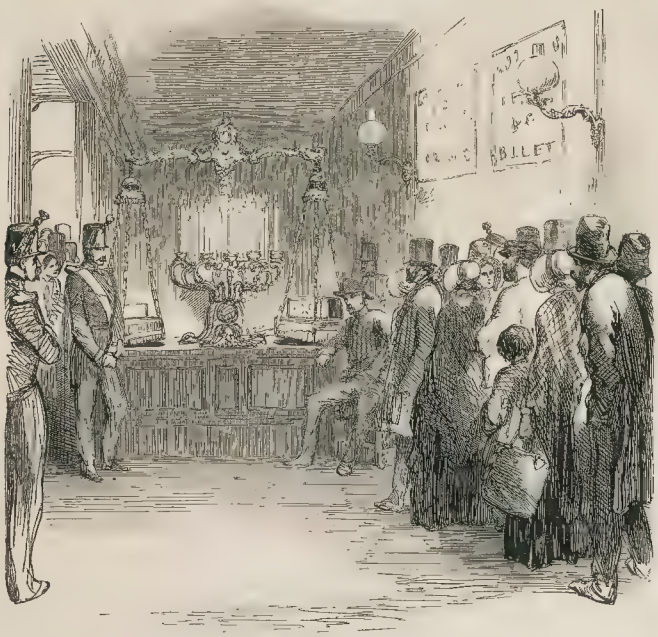
The BEDDINGTON FREE HANDICAP.—The General, 1. Trust-me-not, 2.

The FREE HANDICAP HURDLE RACE. Lord George, 1. Vesta, 2.

The SCRAMBLE STEEPLE-CHASE.—Victress, 1. Gulnare, 2.

The METROPOLITAN STEEPLE CHASE.—Lord George, 1. British Yeoman, 2.

PATENT LAW AMENDMENT.—Lord Brougham's bill, to amend the law touching letters-patent for inventions, has just been printed. It contains twenty-two clauses. By the preamble it is declared to be expedient to make certain additions and alterations in the present law touching letters-patent for inventions. It is proposed to constitute the Lord Chancellor, Master of the Rolls, and others, commissioners of patents for inventions, of whom three may act. They are to make rules, &c. After petition and report, the commissioners to cause a warrant for sign manual to be made, on which the Lord Chancellor is to issue letters-patent The specifications are to be printed. There is a list of fees in the intended act, showing that letters-patent may be obtained for about £20. Compensation is to be provided for persons affected by the provisions. This act, which is to be called the Patent Law Amendment Act, 1851, it is proposed shall take effect one month from the passing thereof.



THE "GOLD LOTTERY," AT PARIS.

"GOLD LOTTERY," IN PARIS.

Although in France State Lotteries have for some years been abolished, the French Government have lately lent themselves to "a little go," which is amusingly characteristic.

It appears that the Gardes Mobiles, who so bravely defended the cause of order in the streets of Paris during the Three Days' Insurrection of June, have been disbanded without having their services rewarded in any tangible form. This ingratitude induced M. Clary, one of their elected officers, one of the representatives, and a distant relative of Louis Napoleon, to submit to the House a motion for a Lottery to reward the poor patriots. The measure was, at first, warmly opposed, on account of its illegality; and the stimulant it was likely to administer to the gambling crowd. At length, however, the opponents were silenced, and the measure sanctioned.

The scheme was a tempting one: the price of each ticket was but one franc, the holder of which had a chance of winning several prizes, the first of which was 400,000 francs, or £16,000. Nor were the prizes flimsy paper, but veritable gold, with the display of which the crowd were baited from morning till night. At the office, in the Passage Jouffroy, the daily display took place in the form shown in the Illustration: upon the counter was the balance, containing, in one plate, the golden prize, in shape somewhat resembling a bar of soap, and impressed with the words

Lingot d'Or,
valeur
400,000 fr.

Around the upright supporting the beam was a grove of wax-lights, in handsome branches, to set off the rich lure.

The public were admitted to witness this strange scene, and filed off before the altar of chance, which, by the way, had for its guardians a staff of *sergents de ville*, and soldiers of the Garde Républicaine, or the municipal force. Thither flocked the *roue*, bankrupt in heart and fortune; the grisette, with her faded charms; the poor housewife—nay, even the *gamin* and the street vagabond—to enjoy a glimpse of the glittering prize, and luxuriate in the distant prospect.

THE NITHSHILL COLLIERY EXPLOSION.

In our Journal of the 22nd ult. we detailed this frightful catastrophe and we are now enabled to add four Sketches of the localities of the sad event.

If anything could tend to mitigate the deplorable consequences of the coal-pit explosion at Nithshill, or reconcile the bereft relatives to their sudden and unprovided for calamity, it would be the generous and unbounded sympathy which the casualty has excited in the breast of every individual in the country, and the ready assistance which all classes in the immediate vicinity have hastened to afford in the decent interment of the dead, and solacing the almost inconsolable distresses of the living. Amongst the multitude of persons of all conditions who have been thus employed in the mission of benevolence, none have been more distinguished for their active humanity than Lord Glasgow, the Lord-Lieutenant of the county, who has been hardly ever absent since the accident, by day or night, from the pit-mouth, exerting himself in producing a feeling of tranquil resigna-

THE EXPLOSION.

tion to this painful and afflicting dispensation of Divine Providence. In addition to this, his Lordship has come forward with a libera donation of £300 for the temporal relief of those who have been deprived of

THE FREE-THADDERS' PIT.

PITMEN'S DWELLINGS.

their fathers, brothers, husbands, or sons; and also £50 for the compensation of those who have assisted in the recovery of the sufferers from the bottom of the pit. The Messrs. Coates, the owners of the property, who feel as Christians and men the consequences of this deplorable event, and which, it is acknowledged, they had adopted, without regard to expense, every known precaution to prevent, have headed the subscription list with £500 for the relief of the families, and £100 for rewarding those who assisted in exploring the recesses of the pit. This is certainly beginning in a laudable spirit of benevolence, and we hope it will be extensively followed by the affluent and humane in England, Ireland, and Scotland.

Such was the admirable construction of the machinery in this pit, that it was considered worthy of being modelled and sent to the Great Exhibition in Hyde Park. The Messrs. Coates, however, now decline forwarding it, as they imagine—and, we think, very rightly—that it would only tend to excite the morbid curiosity of the public.

Our Correspondent has been conversing with several miners who work in the Victoria Pit, and they all declare, that, for plenty of air and other conveniences, it was one of the best and safest pits in the country. The Messrs. Coates spared no expense in adopting every precaution for the preservation of human life. The cause of the accident is not yet made public, nor can it be until Mr. Dunn, the Government Inspector, has sent in his report to Sir George Grey. This gentleman has made a most searching examination of the pit since the accident, and explored its recesses even at the risk of his life, but he very wisely abstains from gratifying public curiosity on the subject. The Procurator Fiscal, with competent assistants, has also been employed in collecting evidence, but there appears to be not the slightest blame attached to the proprietors, whose practical humanity and unostentatious kindness to the labouring poor has long endeared them to all classes of the community

One of the Illustrations shows the scene of the Explosion, which is thus described:—David Colville, one of the two men whose lives have been saved, states that at the moment of the catastrophe he was working with three others in a stone cutting at the extremity of the west level. The explosion was indicated by a tremendous rush of air, which was driven in advance of the fire-blast; and looking forward they heard and saw an immense mass of flame roaring and advancing towards them. It fortunately took, however, the first "open" which it met in the direction of the Victoria shaft, which was a distance of fifty or sixty yards short of where the men were stationed. The flame and vapour rushed up this shaft with incredible fury; but it still partially rushed on, and met the men, who were also striving for the shaft, fairly in the face. Maxwell and Mahan, after going half the distance, were fairly overpowered, and fell down dead; but Colville and Cochrane, while in a staggering state, happily got a puff of "fresh air," as they termed it, which revived them, and they were able to reach the bottom of the shaft. At this spot, after the fiery blast had ascended upwards, a full current of air rushed constantly downwards. They suffered, however, from the excessive cold, but vastly more from the agonizing suspense endured by them for forty-five hours, while they were imprisoned in the bowels of the earth. Hope was excited by the operations which they heard going on in the shaft above them; but of course their fears suggested that they might perish before the spot could be reached in which they held their sad and lonely vigils.

Since the searchers have had an opportunity of exploring with some attention the recesses of the pit, they have had their wonder excited in an unusual degree by the phenomena of the explosion, which appears to be without a parallel in the history of coal-pit catastrophes. Amongst other extraordinary circumstances, it may be mentioned that the stable in which the horses were at the time was blown to atoms, whilst the manger was found at the bottom of the pit, whole and entire, and almost uninjured. The bodies of the poor brutes were blown upwards of fifty yards away, the one being about ten yards distant from the other. Some of the human bodies were found sticking up against the coal pillars, and on being forced away, their clothes, in some instances, adhered to the surface of the column.

On Saturday and Sunday, the 22d and 23d ult., the whole of the bodies found were interred, except two, which were buried on Monday, in the graveyard adjoining Mr Sheedy's church, at Barrhead, where a pit, containing a great majority of the bodies, was dug. One of our Illustrations shows the mournful scene of the interment.

"In concluding our notice of this lamentable affair" (says the *Glasgow Herald*), "we beg to express an earnest hope that the public will not forget that these poor men—summoned to their account without a moment's warning—have left widows and children in a state of total destitution. All the pains of poverty are added to the distress of having lost the bread-winner and head of the family by a sudden and violent death. Mr. Coates, we learn, will head this list with a very handsome subscription; and we trust that the sum realised will be a liberal one. It is to be hoped, also, that the miners who explored the pit with so much heroism, will meet with a due reward for their exertions. We are assured that they performed acts of devotedness at the most imminent risk of their lives, to which all perils of the field of battle offer no parallel. Foremost amongst these were Sir John Maxwell's colliers at Cowglen, and those of Mr. Dixon, of Govan-hill, headed by the gentlemen already named." To these should be added the Messrs. Wilson and Sons, of Hurlet.

Novel Application in Mechanics.—Mr. Alfred Smee announces that he has contrived a piece of mechanism by which he can show the relation of any number of facts or principles inductively and deductively, and thus perform mechanically what has hitherto been thought to be the province of the mind alone. For the action of the machine, he so arranges the words that every word forms a half of the meaning of the word above it, and comprises the meaning of two words below it. By these means he obtains an arrangement of words having the properties of a geometrical series. When the words are expressed in their proper relations upon the machine, which is constructed upon the same geometrical plan, with the logical readings of all, some, none, the bearings of any number of actions on the machine is indicated, and the conclusion can be read by inspection.—*Morning Post.*

Taunton Lodge (engraved in the Illustrated London News of last week) is thus described by its supporters:—"The convent commonly called Taunton Lodge is a branch of the order of the first Francis, which took its rise early in the 13th century; the religious exercising every work of mercy and charity, and in many places took the charge of hospitals. This English branch of the institution settled in Belgium 230 years ago, and, as it was entirely composed of British Catholic ladies who did not know the language of the country sufficiently to take charge of an hospital, they confined themselves to the education of the English young ladies. By the first French Revolution these ladies were forced to quit Belgium, in 1794. They resided at Winchester till 1807, when they settled at Taunton, where they continue to educate a select number of young ladies, and have likewise a day-school, where a certain number of poor children are taught gratis."

The Schoolmaster Abroad.—On Saturday last, at the Bloomsbury County Court, an action was brought by a modeller, named Wild, against Joseph Wyld, Esq., M.P. for Bodmin, to recover a sum of £9 9s. 4d. alleged to be due to him for one week's wages, £4, and £1 9s. 4d. money paid on the defendant's behalf. It appeared that the plaintiff was engaged in August last as foreman of the works for erecting the great globe in Leicester-square, and to receive for his services £4 per week. In November, however, he was discharged without notice, and he now claimed a week's wages. The defence was, that the plaintiff was unable to execute the work he had contracted for; and in proof of this assertion it was stated that he had placed California in England, and Panama in Egypt. His Honor observed that this decided the case, and he thought that the defendant was justified in acting as he had done. The defendant had paid £3 into Court, which was quite sufficient to cover the plaintiff's outlay on the defendant's behalf.

FUNERAL AT THE CATHOLIC CHURCH OF BARRHEAD.

CALENDAR FOR THE WEEK.

SUNDAY, April 6.—Fifth Sunday in Lent. Old Lady Day.
MONDAY, 7.—Don Pedro, Emperor of Brazil, abdicated, 1831.
TUESDAY, 8.—Fire Insurance, &c.
WEDNESDAY, 9.—Lord Clive died, 1825. Royal executed, 1747.
THURSDAY, 10.—Catholic Emancipation Bill passed, 1829.
FRIDAY, 11.—Cambridge Term ends. Napoleon abdicated, 1814.
SATURDAY, 12.—Oxford Term ends. America discovered, 1492.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING APRIL 12, 1851.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 5, 1851.

THE friends and supporters of Lord Stanley in Parliament entertained the noble Lord at a public banquet in Merchant Tailors' Hall on Wednesday. There assembled the flower of the Protectionist nobility, and the leading members of the party in the House of Commons, to do honour to the noble Lord, and avow their allegiance to his leadership. If the public could have forgotten the similar banquet given to the late Sir Robert Peel, in the same Hall, by the same party and many of the same persons, and for a similar purpose, thirteen years ago, the noble Lord would not have allowed them. He referred to it very emphatically in the opening of his speech, and stated the progress by which the Conservatives, then a minority, in three years became, under the leadership of Sir Robert, a majority, and, in 1841, came into power with a commanding majority. A similar career is marked out for Lord Stanley. Nor did he forget, that, in 1845-46, he could follow Sir Robert Peel no further, and that then the great champion of Protection, casting overboard all his friends—sacrificing office and power to the convictions of duty—"shattered and destroyed with his own hands" the system he had built up. Lord Stanley and Lord Stanley's friends imply that he will never be seduced into such suicidal tergiversation. He is to remain constant for ever to the principles he now professes. He believes so himself, and his followers believe it, though the noble Lord has already pursued a very devious course, and is now much less in principle and acts like the Mr. Stanley of 1824, who then entered the House of Commons as a Reformer, and took office under Lord Grey as a Reformer, than Sir Robert Peel in 1846 was like Sir Robert Peel in 1838. That Lord Stanley is one of the clearest and most forcible speakers of the day, is universally admitted; and his Lordship detracted nothing from his great reputation by his masterly oration on Wednesday. The chairman of the great festival, Mr. Thomas Baring, complimented the noble Lord on his "never having sacrificed principle to power;" and all the assembled guests confirmed the truth of the compliment, by loud and vehement cheering. But, admitting the noble Lord's great talents, and admitting his strong desire to adhere to his principles, something more is required to make a great statesman, and enable him to preserve consistency of conduct. He sees, as the noble Lord has himself, not for himself, not for his community, and can only act consistently by the possession of great knowledge of what the public now requires, and great foresight of what it will hereafter require. On these two points Sir Robert Peel, with as firm a will as Lord Stanley, was deficient; and where he failed, and was obliged to be inconsistent, the noble Lord is not likely to succeed. He co-operated with Sir Robert Peel for four years, and supported those relaxations of our commercial code which did away with prohibition, but maintained the principle of fair protection. He introduced, too, the Canada corn-law, which on one point completely put an end to Protection; and then as if there were no logic in human thought and human action, as if the whole were a chaos which some gentlemen at their pleasure can create and re-model—he stopped short, and refused to follow his leader in his inevitable course. Lord Stanley is under a fatal delusion, if he think that, by interposing his will, he can arrest the march of society, and make a policy suitable today impracticable to-morrow. That he and his friends may command, as Sir Robert Peel commanded, a majority in the House of Commons, is, we fear, very probable; but it is childish to base a national policy on the success of an election. We have no fear of the ultimate consequences. We have witnessed far greater statesmen, and more powerful Ministers, than Lord Stanley, supported by larger majorities than he is ever likely to have, obliged to yield to a principle they had taken office to oppose. Where the Duke of Wellington and Sir Robert Peel have been beaten, Lord Stanley and the Duke of Richmond are not likely to be victorious. They may by a fatal success obtain office, and try to give effect to the policy of crying "Halt" to further progress; they may pass through Parliament an act to impose a moderate duty on foreign corn: but the spirit of resistance they will arouse will fill the land, we are afraid, with serious contentions. If they look back at the steady and almost invariable progress of the principles of democratic freedom since the commencement of the first French Revolution, they will now be convinced that the present triumph they are expecting will only in the end expose them to more disastrous defeats. The next time the Anti-Corn Law League be awoke into existence, it will not limit its attacks on monopoly to the monopoly of food.

COURT AND HAUT TON.

THE QUEEN'S DRAWINGROOM.

The Queen held a Drawingroom on Thursday afternoon, in St. James's Palace, when, it being the first public reception for ladies this season, it was brilliantly and numerously attended.

Her Majesty and Prince Albert arrived from Buckingham Palace shortly before two o'clock, attended by the ladies and gentlemen of the Royal suite. Before the Drawingroom, her Majesty received a deputation, according to annual custom, from Christ's Hospital, in the throne-room. The Queen condescended to inspect the charts and drawings of the boys, and was pleased to express her high admiration of the appearance of them, and especially of some drawings representing the ships, harbour and fortifications of Portsmouth.

Her Majesty wore a white gros de Naples train, trimmed with white crape and white bugles, and ornamented with diamonds. The petticoat was of white gros de Naples, trimmed with white crape and white bugles. The head-dress was composed of white feathers and diamonds.

Her Majesty and Prince Albert were attended by the Mistress of the Robes (the Duchess of Norfolk), the Countess of Desart, the Marchioness of Douro, the Viscountess Canning, the Lord Steward, the Lord Chamberlain, and a brilliant Court.

The diplomatic circle was attended by the whole of the Foreign Ambassadors and Ministers, and several presentations took place.

His Serene Highness Prince Edward of Saxe Weimar was present at the Drawingroom.

The general circle included all the leading members of the nobility at present in town, and the presentations were unusually numerous.

The Queen and Prince Albert returned to Buckingham Palace after the Drawingroom.

The Court is expected to leave Buckingham Palace for Windsor Castle on Wednesday, the 16th inst., for a fortnight's sojourn.

CHURCH, UNIVERSITIES, &c.

OXFORD

In convocation, on Tuesday, it was agreed to grant out of the University chest, to the Professor of Botany, a sum not exceeding £400, towards the cost of erecting the new conservatory for the cultivation of tropical, aquatic, and orchidaceous plants, with the incidental expenses, the sum to be paid when the work shall have been completed and approved of by the garden committee.

CAMBRIDGE.

CHANCELLOR'S MEDALISTS.—The two gold medals given annually by the Chancellor of the University to the two commencing Bachelors of Arts, who, having obtained senior optimes at least, show themselves the best proficients in classical learning, have been adjudged as follows:—1. Ds. Lightfoot, Trinity College. 2. Ds. Burn, Trinity College.

THE ADAMS PRIZE.—The University having accepted a fund raised by several members of St. John's College, for the purpose of founding a prize to be called the Adams Prize, for the best essay on some subject of pure mathematics, astronomy, or other branch of natural philosophy, the prize to be given once in two years, and to be open to the competition of all persons who have at any time been admitted to a degree in this University, the following is the subject for the prize in 1852:—"An Investigation of the Perturbations of the Moon in Latitude produced by the Action of Venus, and particularly of the Secular Movement, and the Inequalities of long Period in the Movement of the Moon's Node." The essays must be sent in to the Vice-Chancellor on or before July 1, 1852, privately; each is to have some motto prefixed, and to be accompanied by a paper sealed up, with the same motto on the outside, which paper is to enclose another, folded up, having the candidate's name and college written within. The successful candidate will receive about £130. He is required to print the essay at his own expense, and to present copies to the University Libraries.

DISNEY PROFESSORSHIP OF ARCHÆOLOGY.—John Disney, Esq., to whose munificence the University is indebted for the collection of ancient marbles lately deposited in the Fitzwilliam Museum, and known by the name of "The Museum Disneianum," offers to transfer to the Councellor, Masters, and Scholars of the University of Cambridge, £1000 Three per Cent. per annum Consolidated Bank Annuities, for the purpose of founding and endowing a Professorship of Classical Antiquities, to be called the "The Disney Professorship of Archæology," subject to certain specified conditions.

ST. PAUL'S AND ST. BARNABAS, PIMLICO.—The Hon. and Rev. Robert Liddell entered upon his ministry in St. Paul's on Tuesday by preaching the morning sermon. The service was conducted at both churches exactly according to the Rubric, except that the black academic gown was worn in preaching instead of the surplice. Mr. Liddell is a younger brother of Lord Ravensworth, and was formerly Fellow of All Souls' College, Oxford, by the statutes and fellows of which society he was presented, in 1836, to the rectory of Barking, Essex, which he resigned in 1847.

PREFERMENTS AND APPOINTMENTS.—*Archdeaconries*: The Rev. John Sandford, D.D., Vicar of Dunchurch, and Honorary Canon of Worcester, to be Archdeacon of Coventry, patron, Lord Leigh. The Rev. Thomas Law Dames, to Melbourne, South Australia. *Precendary*: The Rev. Ignatius George Abell-Senior, to St. Bennet's, Gracechurch-street, and Central Church of St. Patrick, Dublin. *Rectories*: The Rev. C. Carr, to Fenton, and Stoke-upon-Trent. The Rev. Baldwyn Owen Jones, to Flathin-Ward, with Llanymudd, Denbighshire. *Vicarages*: The Rev. Alfred Rhodes-Bayly, to Wolverhampton, Staffordshire. The Rev. Thomas Hughes, to William Cooke Denny, to Norton-Subcourse, Norfolk: the Rev. Henry William Hodgson, to Ashwell, Herts; the Rev. A. G. Newbold, to Thornton, Lincolnshire; the Rev. Henry Bircher, to Godmanchester, Huntingdonshire. The Rev. Thomas Jones, vicar of Great Bentley, Essex, to be a Surrogate

VACANCIES.—Ashton Gold Rectory, county and diocese of Gloucester; value £262; patron, W. Partridge, Esq. The Rev. R. W. Baddeley, promoted. Colchester, St. Runwald Rectory, Essex, diocese Rochester; value, £160; patron, C. Round, Esq.; Rev. J. I. Round, promoted. Ballyshalloe Rectory, county and diocese Down; patron, the Bishop of Derry; Rev. T. L. Coghlan, seceded. Longhope Vicarage, county and diocese Gloucester; value, £384 with residence; patrons, Archdeacon of Llandaff and Bishop of Gloucester; Rev. R. N. Kay-Shuttleworth, Bishop's Chapel, Bath, from the congregation; the Rev. William Lees, of St. Peter's, Oldham, Lancashire, from his congregation; the Rev. William Hodson Cosens, junior curate of Oldham, Lancashire, from the monitors of the Bible class; and the Rev. H. C. Casswell, clasp-pin to the Royal Scots Greys while at Canterbury, from the non-commissioned officers and privates of that regiment. The Rev. Charles Henry Hoskyn, late curate of Sherbourne, Dorset, from the parishioners; the Rev. William Lonsdale, M.D., of St. John's College, Cambridge, from his pupils at the Commercial School, Duke-street, Manchester.

ORDINATIONS TO BE HOLDEN, 1851.—June 15: By the Archbishop of York, at York; by the Bishop of London, by the Bishop of Bath and Wells, at Wells; by the Bishop of Winchester, at Chester; by the Bishop of Chichester, at Chichester; by the Bishop of Exeter; by the Bishop of Lichfield; by the Bishop of Lincoln, at Lincoln; by the Bishop of Llandaff, at Llandaff; by the Bishop of Manchester, at Manchester; by the Bishop of Ripon, at Newark; by the Bishop of Oxford; by the Bishop of Peterborough; by the Bishop of Rochester, in London; by the Bishop of Salisbury, at Salisbury; by the Bishop of Worcester, at Worcester. September 21: By the Bishop of Carlisle; by the Bishop of Lichfield. December 21: By the Bishop of Bath and Wells, at Wells; by the Bishop of Lichfield.

NAVAL AND MILITARY INTELLIGENCE.

PORTLAND BREAKWATER.—There are at present engaged on the Breakwater works at Portland about 300 men, exclusive of convicts, of whom there are some hundreds. The contractor has yet to construct upwards of 1000 feet of the stupendous undertaking. Some of the workmen are suspended on a small scaf only a few feet from the water, which foams beneath them. Although but from 1500 to 1700 feet is constructed, the work is felt by the shipping in stormy weather to carry the sea off considerably

NEW PACKET STATION.—Lowestoft has been selected as a royal mail packet station, under special contract with the Danish Government. The *Fraser* and other steamers are to leave that harbour every Saturday for Hjerring and Salum, as this is the nearest route to Copenhagen, Stockholm, and the northern parts of Denmark and Sweden. The *Fraser* is quite a new vessel, of 446 tons, and of 200 horse power. She ran from the Nore to Lowestoft in 8½ hours.

THE VACANT COLONELCY.—It is understood that Major-Gen. Smelt will be removed from the 63d Regiment to the 37th, and that Major-Gen. Lightfoot will be appointed Colonel of the 63d.

ARMY MEDICAL DEPARTMENT.—Doctor Spence, Medical Staff, Cork, has been appointed assistant to the Superintendent of the Army Medical Department, and is to be stationed in London with a salary of £300 per annum.

METROPOLITAN NEWS.

Taxes on Knowledge.—On Tuesday evening, a public meeting, convened by the committee of the Literary Institution, John-street, Fitzroy square, was held, at the large hall there, to promote the objects of the Association for obtaining the Repeal of the Taxes on Knowledge, and in particular the penny stamp on newspapers. The chair was taken by John Epps, Esq., M.D., who, in alluding to the repeal of the Corn-laws, with the necessary results of cheap food, impressed on the minds of his hearers the necessity of their seeking an onward progress in securing the comparative cheap food for minds. He hoped, that, at the next election, no man would be returned who was not pledged to demand the repeal of the duties on paper and knowledge. As the best way to put down error was to put up truth, so the best way of dispelling ignorance was to put up knowledge (Cheers.) Then let the people have a perfect free trade in knowledge, and this would be the most efficient mode of putting down the miserable trash and bosh which were daily issued. (Hear.) He h ped, that, in two or three years, a mighty change would ac ieved. The secretary read letters of apology for their absence from Mr. W. J. Fox, M.P., Sir B. Hall, Bart., M.P., and Lord Dudley Coutts stuart, M.P. Mr. Moore moved the first resolution, viz —

That, whereas all taxes which impede the spread of knowledge are highly obstructive to the popular culture and to the intellectual and moral improvement of the people this meeting is of opinion that the duties on paper and advertisements, and the penny stamp on newspapers, ought to be immediately repealed.

At the present time the question of education was one which agitated various sects; but leave the matter to an unfettered press, and the best would be the result. He believed that that meeting was more anxious for the repeal of the duty on newspapers than for the abolition of the other taxes on knowledge. He believed that, as had been said by a member of the House of Commons, there was an unworthy jealousy of the people obtaining too much political information.—Mr. Hurtley, the Chartist lecturer, warmly supported the resolution, which was carried unanimously. It was also resolved—

That the members of the Board of Inland Revenue, in permitting a number of registered newspapers to stamp only their country edition, while denying that privilege to others, and on suppressing some un-stamped newspapers while sanctioning others, before the Board has assented a censorship of the press unknown to the laws of the land, and which this meeting judges itself to be every exertion to abolish.

Master Mariners' Benevolent Society.—The annual meeting of this society took place on Thursday evening, at the Bridge-house Hotel, Southwark, George Scovell, Esq., in the chair. The report stated, that the claims on this society for shipwreck and death during the past year had amounted to £1361, being £214 less than the preceding year. The total number of cases at the present time was 1626, and the actual number of subscribing members, 930. The receipts during the past year amounted to £1724, and the payments to £1361, leaving a balance of £3683. They now invested to set aside £100 as an annuity fund for decayed persons during the next twelve months. The report was adopted; and, after a vote of thanks to the chairman, the meeting separated.

Asylum for Female Orphans.—The annual meeting of the friends and patrons of this society took place on Thursday, at the asylum, Morden Forest in the chair. It appeared, from the statement, that since the commencement of the institution, in 1726, there had been 2600 children admitted, of which number 2138 had been apprenticed or placed out. There were now in the asylum 160. The letters and testimonials which had been received from the parties who had taken children had been placed were uniformly satisfactory and gratifying. During the year the committee had made a special appeal to the public, which had been liberally responded to by an amount of upwards of £2,000, which had enabled them to maintain their average number of children. The report was adopted and a committee elected, and a vote of thanks to the chairman terminated the proceedings.

Printers' Pension Society.—The twenty-fourth anniversary of this society was held on Wednesday, at the London Tavern; Mr. William Ewart, M.P., in the chair. The chairman, in proposing the toast of the evening, "Success to the Printers' Pension Society," expressed his regret that these convivial meetings were not quite so well attended as they formerly were. Whether this arose from an alteration in men's habits, he could not say; but of this he was sure, that charity would find the place of habit, and supply the place of those who did not feel it compatible with their feelings to attend them. He considered the printer as a man to whom society was peculiarly indebted. (Cheers.) He knew that no body of men acted so much as the medium to enlighten mankind. The hon. gentleman concluded an eloquent speech by a warm appeal on behalf of the charity. The toast of "The Army, Navy, and Militia" having been duly responded to by Mr Thompson, who expressed his unfeigned regret that he could not be the only member present who was a subscriber. The subscriptions announced to nearly £300

Metropolitan Free Hospital.—The anniversary festival of this truly useful charity was held at the London Tavern Bishopsgate-street, on Wednesday evening, the chair being filled by Mr. Alderman Salomons, in the absence, from indisposition, of Lord Dudley Stuart, M.P. The objects of the institution are to obtain gratuitous medical and surgical advice, and appropriate medicines and treatment, for poor sick persons, of all creeds and countries; and an important feature in the management—and one which is peculiar to and peculiar to the metropolis; and also, as the directors congratulated the company, capable of being worked in a more economical manner. They were expected to be elected three months, reckoning from the 1st of May, and the directors proposed at once to light about 25 miles, and had every reason to believe that that would be effected on or before the 1st of September.

Rector of Islington Election.—The Rev. R. Sibthorp, a minor canon of St. Paul's, has recently been elected evening lecturer at the church of St Bartholomew the Great. The ring took place by ballot, and a large majority—three-fourths—of the parishioners gave their support to the new, gentlemanly, and well known as a beneficed clergyman in the City. The rector, Mr Jobbs, however, has virtually set aside this appointment by refusing to allow his reverend brother to name the night, and engaging another gentleman to preach the evening sermon in the meantime. Mr. Shutte declines opposition to the rector, and has issued an address to the parishioners to that effect. The parish have taken offence at civilians upon the subject, and find that they have no part in the matter except paying the salary of the lecturer. Calvinistic doctrines and a haut of extempore preaching are said to be the cardinal objections of the rector to Mr. Sibthorp.

Destruction of a Work of Art for the Exhibition.—One of those unfortunate accidents that sometimes frustrate labour at the point of success, occurred on Saturday to one of the standing exhibitors in Hyde park Mr. M'Lachlan, the decorator, in St James's-street, had just finished a fine specimen of his art in gold, arabesque colours, chiefly on glass, in the style that with which painted glass might be used for the purpose of interior decorat on, and had placed it on a van to convey it to Hyde-park; but before any cord could now, at the end of the quarter, appear for the first time in the register-books be put upon it, a strong gust of wind, sweeping along Jermyn-street, lifted the decorated specimen quite off the van, though it was of a weight to require the strength of four men, and dashed it on the pavement, face uppermost. The consequence was, that one of the large glass panels was smashed into a hundred pieces, and a very beautiful composition, which had occupied the exhibitor's attention and labour for the past nine months almost hopelessly destroyed. The broken panel will be restored as far as possible, and the composition will be placed in the Crystal Palace.

Census of the Population.—On Monday, the schedules of the population in Great Britain were collected by the registrars and their 2190 registrars and 624 superintending registrars. In Ireland the collection extended over two or three days The registrars are to verify the accounts, and, after correction and amendment, to deliver such abstracts to the superintendent registrars, and before the 1st June those accounts are to be delivered to the Secretary of State. Abstracts of the returns are to be printed, and laid before Parliament within twelve months after the taking of the census. A table of allowances to enumerators in England is by the act required to be laid before Parliament in the month which has just expired. In Ireland the accounts are to be delivered to the chief secretary, and to be printed and produced into order" they are to be laid before Parliament. In Scotland the accounts collected by schoolmasters are to be transmitted to the Secretary of State Parishes, &c., are to be reimbursed the expenses by moneys to be provided by Parliament

Customs Regulations.—The following important new regulations have just been issued by the commissioners of customs, on a new arrangement of the business in the Long Room department of the Custom-house. Deposit of money is to be required in future on bills of sight, and such monies are to be forwarded direct to the cashier at the station where the goods are to be landed, instead of passing through the office of receipt in the Long Room as at present; and the Customs solicitor has been directed to prepare a clause for amending the law in this respect. The practice in force under the 8 and 9 Vict., cap 86, sec. 99, of restricting the claims for drawback on wine to three years from the date of the payment of duty, is to be discontinued, and the solicitor to prepare a clause for amending the law accordingly. The new regulations proposed in the arrangement are to take effect, as far as practicable, from and after the 5th day of April.

British Association.—The Marquis of Breadalbane and Sir Roderick Murchison had an interview with Lord John Russell, at his official residence in Downing-street, on Monday, and presented an appeal from the British Association for the Advancement of Science, in favour of a sufficient Parliamentary grant to ensure, within a reasonable time, the completion of a map of Scotland. The British Association made a similar appeal in 1834, when that body first visited Scotland, and yet a sixteenth part only of that kingdom has been mapped in the intervening sixteen years. The other members of the committee, the Duke of Argyl, Sir David Brewster, and Professor James Forbes, are in Scotland. The memorial was backed by the cordial approval of the Dukes of Richmond, Buccleuch, and Roxburghe, and by Lords Eglinton, Cawdor, Bute, and many proprietors in Scotland.

The British Museum.—On Saturday last, at the suggestion of Mr. Panizzi, the trustees ordered, that, from the beginning of May to the end of August, during the present year, the rooms containing the collection of the printed books shall be kept open for the first five days of the week for the public to walk through, like the gallery of antiquities or natural history. On Saturday and Sunday admission will be refused to all persons having tickets, although this arrangement is only temporary, and the former rule will be resumed on the 1st of September.

General Post-Office, March, 1851.—A mail for St. Helena will, in future, be forwarded by the *Contract*, screw steam-packet, leaving Plymouth for the Cape of Good Hope on the 15th of each month, to be conveyed from the Cape, as opportunity may offer, by ships proceeding to Bengal. The mail will contain such letters and newspapers only as may be specially addressed to be forwarded "By packet, viâ the Cape of Good Hope." Letters for St Helena sent by this route will be liable to the packet rate of 1s. the half-ounce, and newspapers will be transmitted free of charge.

Malicious Obstructions on Railways.—In reply to a letter addressed to the Home Secretary from Mr. Kirk Lendall, of Mount-street, Grosvenor-square, pointing out the defective state of the law for preventing wilful obstructions on railways, by which all the lives in a long passenger-train may be endangered, Mr. H. Waddington, writing from the Home Office, by order of Sir George Grey, states that the amendment of the law for the punishment of persons convicted of wilfully endangering the safety of trains on railways will be considered.

The Marble Arch.—On Saturday, the re-erection of the marble arch, at Cumberland-gate, was completed, and in the course of the week the carriage drives will be opened to the public. The blocks of marble, of which the arch is composed, have all been fresh polished, and the structure has altogether a very chaste appearance. The upper part of the arch has been constructed as a police-station, and will contain a reserve of men.

Procession of Seamen on Strike.—On Monday morning the seamen now on strike in the port of London assembled in Princes-square, Ratcliffe-highway, and, having formed into procession, marched in regular order through Whitechapel and the City, carrying banners inscribed "Repeal of the Mercantile Marine Act." The procession moved over London-bridge, and paraded Southwark, Bermondsey, and Lambeth, ultimately returning back to Tower-hill, where they gave three groans for the Mercantile Marine Act, and dispersed.

South-Eastern "Exhibition" Engines.—The first of the new engines built by Messrs. Robert Stephenson and Co., for the South-Eastern Railway, to work their Great Exhibition traffic, made an experimental trip on Monday, from London to Ashford. The engine, which is named the *Bee*, left the terminus at Cannon-street station, conveying Mr Robert Stephenson, M.P.; Mr. James Macgregor, chairman of the South-Eastern Railway; Mr. Peter W. Barlow, engineer-in-chief; and Mr. James Cudworth, locomotive superintendent. The train made a long and rapid run, and had come to the resolution not to support the movement against the income-tax for the present, he would withdraw the petition rather than divide the agricultural ranks. Mr. Cardwell considered that the meeting of Society were of opinion, that, if a petition against the income-tax were sent up, the Government would believe that this was the only grievance which the agriculturist cared about, whereas they were unanimous in concert with all other counties, to demand and recover the general system of protection, which would go for no small relief. A discussion took place, in which Mr. Parry advised the farmers to turn their attention to the question of reform in the system of rents, as the only legitimate ground of hope.—The meeting separated without adopting any resolution.

The Bishop of Brunswick made a second attempt to cross the Channel in the Victoria balloon on Monday, at Rastrons. An immense number of spectators congregated on the ocean on. The wind prevailed from the north and north north-west, having a westward tendency, and becoming somewhat light and variable at mid-day, the weather being favourable. At one o'clock Mr Charles Green proceeded to fit up his car. He had provided an apparatus for enabling him to throw the water at a fixed rate, and to regulate the ascension of rents, as the only legitimate ground of hope.—The meeting separated without adopting any resolution.

The wind prevailed from the north and north north-west, having a westward tendency, and becoming somewhat light and variable at mid-day, the weather being favourable. At one o'clock Mr Charles Green proceeded to fit up his car. He had provided an apparatus for enabling him to throw the water at a fixed rate, and to regulate the ascension of rents, as the only legitimate ground of hope.—The meeting separated without adopting any resolution.

The Income-Tax.—A meeting of agriculturists was held on Saturday evening at the Crown Hotel, Worcester, T. G. Currier, Esq., in the chair, for the purpose of petitioning Parliament against the unjust operation of income-tax upon the agricultural body. The chairman made a long speech in opposing the continuance of that odious tax, and read a petition which he had prepared for the occasion, but said that as he had been just informed that the Worcestershire Protectionist Society had had a private meeting that morning, and had come to the resolution not to support the movement against the income-tax for the present, he would withdraw the petition rather than divide the agricultural ranks. Mr. Cardwell considered that the meeting of Society were of opinion, that, if a petition against the income-tax were sent up, the Government would believe that this was the only grievance which the agriculturist cared about, whereas they were unanimous in concert with all other counties, to demand and recover the general system of protection, which would go for no small relief. A discussion took place, in which Mr. Parry advised the farmers to turn their attention to the question of reform in the system of rents, as the only legitimate ground of hope.—The meeting separated without adopting any resolution.

A discussion took place, in which Mr. Parry advised the farmers to turn their attention to the question of reform in the system of rents, as the only legitimate ground of hope.—The meeting separated without adopting any resolution.

COUNTRY NEWS.

THE FATAL RAIL BURGLARY AT FRIMLEY.

On Monday, Levi Harwood, Samuel Harwood, and James Jones were placed before Baron Parke, at the Kingston assizes, charged with burglary, and the murder of the Rev. Mr Hollest, at Frimley, on the night of the 27th of September. The trial was not concluded until Tuesday evening, by the prisoners' admission.

Hiram Smith, their accomplice, who, in the opinion of Mrs Hollest, is the man that shot her late husband, was admitted approver.

The case was noticed so fully at the time of the occurrence, and public attention was so long fixed upon it, that it is unnecessary to detail the circumstances again as given in evidence.

The jury gave a verdict of guilty age at Levi Harwood and James Jones, and declared Samuel Harwood not guilty. The foreman at the same time said that it was the unanimous opinion of the jury that neither Levi Harwood or Jones fired the fatal shot at the deceased, but that it was fired by Hiram Smith.

The convicts were sentenced to death.

After they had been removed, Samuel Harwood was arraigned upon the charge of burglariously breaking and entering the dwelling-house of the decea sed gentleman, but no evidence being offered on behalf of the prosecution, the learned Judge directed the jury to return a verdict of not guilty

He was taken into custody upon his leaving the court by Mr. Morton, the superintendent of police at Tunbridge Wells, upon a charge of being concerned in another burglary in that town.

The approver, Hiram Smith, was ordered to be detained in custody until her Majesty's pleasure should be made known respecting him.

STEAM COMMUNICATION WITH THE NORTH OF EUROPE.

—On Saturday afternoon a party of gentlemen left Lowestoft on board of the new steamer, *Prince*, of 600 tons burden, and 200 horse power, on an experimental trip to Hjorring, in Denmark, prior to the new Harwich Steam-packet Company commencing active operations. The steamer, which is commanded by Captain Hart, was built by Messrs. Willim, of London, on the plan laid down by Captain Andrews, the harbour-master at Harwich, and managing director of the new company. She is arranged for the carriage of both cattle and passengers—a large traffic in both being expected to be developed by means of the new steam-boats and the Scottish and Eastern Counties Railway between the north of Europe, London, Norwich, Manchester, Birmingham, and other parts of Great Britain. The passage between Lowestoft and Hjorring and ballum, the nearest shipping place to the cattle districts of Denmark and Jutland, will, it is anticipated, be performed in from 24 to 26 hours. Upon the cattle being landed at Lowestoft they will be received into sheds or stables prepared for them, immediately adjacent to the harbour, and there, being properly refreshed after their voyage, conveyed to the London or provincial markets, as may be deemed most advisable. The greatest interest will be felt by the Danish and other northern governments in the success of the undertaking, as it will open to them a direct and certain communication with England, total y independent of Germany. A regular service between Lowestoft and Copenhagen, where it will arrive on Tuesday. The vessel will leave Hjorring with the return bag on Wednesday, reach Lowestoft on Thursday night, and the letters be delivered in London on Friday. Irrespective of the saving of time and the improved state in which the Danish cattle will be brought to the market by means of the new company, it offers many other advantages, not the least of which, to a large portion of the British public, will be the opening up to the tourist an almost untrodden district, and offering to the sportsman ample opportunity of indulging in his taste. How much this route is likely to be patronised by our northern brethren, is shown by the fact that Ready, one of the vessel had started from the public office on Tuesday 50 or 60 Danes, Swedes, and Norwegians have expressed their intention of availing themselves of it on their intended visit to the approaching Exhibition.

The Manchester Educational Scheme.—The Manchester and Salford Municipal Education Association—the promoters of the plan ushered into the world by the Rev. C. Richson—has met with its first most serious check by the unanimous opinion of the Roman Catholics as a body. A declaration has been issued in the form of a circular, signed by the whole of the Roman Catholic priesthood of Manchester and Salford, in which they object that the scheme, "instead of proceeding on principles common to all, has admitted an element by which some of the provisions of the proposed measure are so qualified, that, in the first place, Catholics are not preserved into the union on terms of equality with other Protestant denominations; and, in the second place, the rights of conscience are violated in their regard. This objection consist is the adoption of a purely and essential Protestant criterion of religious education or instruction—namely, the reading of the holy Scriptures in the authorised version. Catholics are not allowed to use the Protestant version of the holy Scriptures; nor do they consider the simple reading of any book by children a proper, becoming, or legitimate foundation of religious instruction."

Dulwich College.—On Tuesday, the interesting ceremony of electing a scholar to this establishment took place. By the statutes of the founder, the warden must be a single person and unmarried, of his blood and surname, or of his blood only, or of his surname only; and the election is vested in the master and the other members of the college. The assistants are the two churchwardens of St. Botolph's, Bishopsgate; two churchwardens of St. Luke's; and the two senior churchwardens of St. Saviour's, Southwark. John Hensleigh Allen was the candidate selected. The children were called to the front of the altar, and the master having put into a box three rolls of papers tied with red tape, on one of which was written the words "God's gift," and having shaken them thrice, called upon Mr. Richard William Allen, who was by a few months the senior, to select one. This he did, and Mr. Allen took the other. The papers were then opened and unrolled, amid much excitement, and the important words "God's gift" were found on the paper taken by Mr. Richard William Allen, the nominee of the assistants. Mr. John Hensleigh Allen bore his disappointment manfully. The ceremony was concluded by the college authorities, the warden and assistants, the unsuccessful candidate, and a few visitors dining together. Mr. Allen will land in, the warden elect, is a near relative of Mr. John Allen, of the firm of Allen and Anderson.

Representation of South Essex.—A large party of the Conservative and Protectionist electors of South Essex, resident in the neighbourhood of Grays, dined at the King's Arms Hotel, on Tuesday, when Sir William Bowyer Smijth, to whom a requisition is now in course of signature to become a candidate for the representation of South Essex in the next Parliament, was the guest of the evening. The Rev. Charles Day, Rector of Mucking, occupied the chair. At the usual prior proceedings a resolution was agreed to, pledging the assembly to support Sir W. Bowyer Smijth free of expense to himself at the next election.

York Assizes.—The Spring assizes for this county terminated on Saturday evening last. The following is a summary of the sentences passed upon the prisoners who were convicted, including the number tried and acquitted by the jury, as well as those tried and found by the grand jury. As compared with previous assizes, a somewhat remarkable feature presents itself as respects the different degrees of punishment, namely, the fact that the most severe sentence is transportation for 15 years' and that only in the case of a single prisoner:—Transported—For 15 years, 1; 10 years, 19; 7 years, 5; imprisoned—For 2 years, 2; 18 months, 3; 12 months, 10; 6 months, 9; 3 months, 10; 7 days, 1. Acquitted, 21. No bill, 8. Total, 82.

MDLLE. ANGRI.

Elena Angri, the celebrated contralto, whose Portrait is presented by our Artist, is a British subject, having been born at Corfu on the 14th of May, 1824. Reverses of fortune of her father induced Mdlle. Angri to cultivate her musical talents, which were recognised by an uncle, a great amateur, who took his niece from Corfu to Naples, for first-rate instruction. Signor Taglioni, in that capital, was her master for a year; and then the uncle and niece removed to Florence, where she had lessons of Maestro Doglia for nineteen months. She was scarcely eighteen years of age, when the well-known Signor Ronconi, a man, according to the beauty of her voice and her astonishing execution, engaged her for the Opera-house at Lucca, where the young and energetic Angri soon became a formidable rival to Madame Frezzolini, then in her glory in Italy. Mdlle. Angri, from the extraordinary compass of her rich voice, was enabled to sustain the principal parts in the soprano as well as contralto registres. From Lucca she went to the Scala at Milan, where for three years she was the admiration and delight of the Milanese and Austrian *dilettanti*. From Milan to Verona, as the Italian theatres were under the same management, was her next trip; and she received in the Austrian capital the most flattering testimonials of her popularity, being especially noticed by the Imperial family. She was named by the Emperor Ferdinand contralto to the Court. Her succeeding engagement was at St. Petersburgh where she was so prized that her stay would have been protracted for a lengthened period, but for an attack of the cholera, from which she found a very narrow escape of her life. In 1849 she was engaged for the Royal Italian Opera, Covent-Garden, as the successor of Alboni; and in that season performed *Arsace* in "Semiramide," *Rosina* in "Il Barbiere," *Malcolm* in "La Donna del Lago," *Orsini* in "Lucrezia Borgia," *Filidoro* in the "Matrimonio segreto," *Cherubini* in the "Nozze di Figaro," and the *Page* in the "Huguenots"—in each delineation achieving a signal success. In the season 1848-50 she was the *prima donna* of the Italian Opera-house in Paris, under Ronconi's direction: *Romeo*, *Tancredi*, *Cenerentola*, and *Romeo* were her great parts in the French capital. In the autumn of 1850 she was the principal vocalist of the National Concerts, at her Majesty's Theatre: in Macfarren's serenata, the "Sleeper Awakened" she had great success. In January last she made a tour with Ernst, the violinist, in Ireland, Scotland, and the principal towns in England, and was everywhere received with the greatest enthusiasm. Mdlle. Angri has been an especial favourite with the three composers, Donizetti, Meyerbeer, and the late Spontini, the last-mentioned musician

MDLLE ADELE GIULIA VALTESI AS CLOTILDA, IN LUCREZIA BORGIA.

MADAME FIORENTINI AT HER MAJESTY'S THEATRE.

having dedicated to her an elegant sonnet to watch the efforts of her youthful and ambitious rival, Madame Angrisani, who is now the leading favourite at the Stage, and has many friends, and great influence. The Italian audience of Vienna, however, is proverbially fickle, and very ready to change its favourites; and Madame Angrisani, who has a brilliant voice, and considerable dramatic power, is said to find her supremacy disputed by the young Valtesi. She is engaged for the season at the Royal Italian Opera, and made her first appearance on the opening night, on Thursday, as Anna, a notice of which will be found elsewhere.

MADAME FIORENTINI.

MADAME CLOTILDA FIORENTINI is a young and talented prima donna at Her Majesty's Theatre, who has been [illegible] Mr. Bunn's concerts at Berlin. Her first appearance on the stage was at the Grand Opera at Berlin in 1846, as Norma; her success was [illegible] and she was engaged at the Royal Theatre of Berlin, where she remained for [illegible] years. She then went to Vienna, and [illegible] Meyerbeer's opera, L'Etoile du Nord, and where she was [illegible] to appear at Buckingham Palace, at which time she was stamped here as a singer capable of very high dramatic as well as of great musical attainments.

Her last season at Vienna Madame Fiorentini is entitled to the [illegible] Signor Lanza, who may be rather proud of his [illegible] pupil. Notwithstanding her youth, her voice is [illegible] rich, full, and [illegible] of great compass, and her style is [illegible] and [illegible] She is also [illegible] and [illegible] in her acting, and [illegible] her singing is [illegible] are [illegible] from any exaggeration and mere mannerism. In the part of Donizetti's [illegible] in Anna's opera she [illegible] parts of [illegible] her [illegible] and acting marked with intensity of passion and force and [illegible] of true talent.

HER MAJESTY'S SHIP "WELLESLEY."

A BALL on board any of her Majesty's ships, although its appointments may not be of such fashionable splendour as in our crowded cities, has many of the accompaniments that are necessary before the curtain rises on the [illegible] scene. The [illegible] must be [illegible] to receive the company, and [illegible] to [illegible] the [illegible] of the [illegible] [illegible] [illegible]

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

(*Continued from page 256.*)

Mr. Anthony, who for the last two years was such a generous contributor of very yellow landscapes to the walls of this Exhibition, has, it seems, got tired of yellow, and has fallen just as passionately fond of bright green. Among his ten contributions we may instance, as very violent in this way, an ivy-wreathed church-tower, covered with the green mantle from a stagnant pool, as if the artist, indeed, had mixed a salad with his oil. Yet, in all this provoking oddity and untruth to nature, there is no denying that he is a painter. His two "Welsh Interiors" show how much he has studied nature, Rembrandt, and De Hooghe; while his 'John of Padua Gate at Caius' College, Cambridge" —to our thinking, his best work in the Exhibition — reveals a knowledge of the way in which pictures of this kind should be treated—how the details of architecture may be pictorial, and yet true, and what way a building may be represented by an artist who feels the truth and beauty of what he sees before him. Mr Ruskin has well explained this subtility of pencil in what he says of Mr. Prout, in his recent work the "Stones of Venice"

One of the mainstays of the Society of British Artists is Mr. Baxter, always a careful artist—careful in conception, careful in execution. His circle of three female heads, occupying the centre of the great room, and called, somewhat fancifully, the "Rose, Shamrock, and Thistle," is a charming arrangement, most sweetly and delicately painted. Another circular picture by the same artist, (228) "At the doubtful breeze alarmed," is in the same style, and hardly inferior, while the head of Mr. Topham, the celebrated artist in water-colours, is a good example of Mr. Baxter's skill in drawing the portraiture of men.

Mr. Salter, who loves to dream of classic lands and heathen ceremonies, and to paint, thinking of Titian and Poussin all the while, is this year happier than we remember to have seen him for some time. No. 170, "The Marriage Festival of Bacchus and Ariadne," by this artist, is a carefully considered picture, and in a less slovenly style of execution than has of late been too observable in his works. Mr. Frost would show more poetry, and give more delicacy to such a subject; but he would hardly give more of the ancient spirit than Mr. Salter has succeeded in supplying. A small female figure to the knee (oval-shaped), by the same artist, in another room, is graceful and delicate.

We are glad to observe that Mr. J. J. Hill still supplies us with shepherd-boys of the true Allan Ramsay and Bloomfield school. There is a small full-length, by this artist, of a shepherd-boy and his dog (No. 388), suggestive of pastorals such as Spenser wrote, and Pope ought to have written. But Mr. Hill should not confine his pencil too much to pastoral life. His "Master W. Ingram" (No. 5), a small full-length portrait boy in white, seated, shows what he can accomplish in another walk of art, and in how superior a way the looks of children may be preserved to their parents than by the too popular process of the Daguerréotype.

Mr Woolmer has been to Versailles, and renewing his acquaintance with Watteau; but, while he has much of Watteau's grace and delicacy, he wants the spirit and resources of the master, and, above all, he wants his skill and beauty of pencil in all his details. The "Sleeping Beauty" (100), by the same artist, is an imitation of Maclise.

Two small pictures, by a Mr. G. Smith, in Mr. Hunt's manner, and called "Labour" and "Enjoyment" (257 and 265), are perfect in their way. One is a boy at his lessons; the other is the same boy asleep over his lessons. Both are marked "sold." Indeed, there is scarcely a picture in the whole Exhibition at all above the common mark that has not found a purchaser, *without* the assistance of the Art-Union.

Mr. Cluter, in his "Saturday Night," has done something beyond his usual level of success in similar subjects. Mr. Herring has not lost one particle of his skill in rendering horses and ducks. While, in the landscape line, Mr. Allen, Mr. Hasell, Mr. Boddington, Mr. Tennant, and the two Wilsons add, as before, to the attractions of the Exhibition. No. 320, by the younger Wilson, a small circular picture, "Beech Trees in Knowle Park, Kent," is perfect in its way.

Among the contributions of artists but little known, we may here mention a clever (No. 329) "View from Richmond Hill," by J. P. Pettitt; (No. 480) "Venus and Adonis," by F. Cowle (much in Etty's manner) (No. 539) "The Seventh Plague," by J. Dobbin (a large water-colour drawing in the style of Martin); and (No. 469) "Fields, near Streatham, Surrey," a small oblong drawing in water-colours, by J. W. Whymper.

There is not, let us add a solitary specimen of sculpture in the whole Exhibition. Is not this an unusual feature?

PORTRAIT OF MASTER W. INGRAM.—PAINTED BY J. J. HILL.—EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

"POOR MARINERS."

PAINTED BY T. DANBY.

In our notice of the opening of the Exhibition of the British Institution, we thus described this contribution by Mr. T. Danby —

"A gale has just broken on the sea, tips with fire the crests of the still tumbling waves; and, shining on the sea-weed clustered ledges of a desolate reef, illuminates a group of shipwrecked mariners." The wrecked vessel is almost hidden, and some of the "poor mariners" cast at her a wistful look, whilst others crouch about the rock in despair; and their suffering is made more appalling by the red sunlight. Their sad story is fearfully told in the picture, which is full of pathos and poetic feeling.

A School of Industry has just been established at Madras, under the auspices of Dr. Hunter.

"POOR MARINERS."—PAINTED BY T. DANBY.—EXHIBITION OF THE BRITISH INSTITUTION

THE THEATRES, &c.

HER MAJESTY'S.

GUSTAVUS III.; OR, THE MASKED BALL. GRAND OPERA, IN FIVE ACTS [illegible] MUSIC BY [illegible]

The [illegible] overture to "Gustavus," with its solemn opening movement, [illegible] for the oboe, and sparkling allegro, is known to every amateur. It narrowly escaped an encore, on the first representation of the opera, last Saturday night, failed as it was with spirit and precision by the orchestra. The curtain rose, and discovered a saloon in the palace of the [illegible] Sweden, at Stockholm, in 1784, with courtiers, citizens, artists, all passing to and fro, which [illegible] Monsieur [illegible] Count [illegible] [illegible] and Ribbing (M. Bouché), with a [illegible] exposed their contempt at the frivolous pursuits and democratic tendencies of *Gustavus* the artist Rouen is styled the marvel of the noble crazy, because he combined the qualities of a warrior, a legislator, and a patriot poet *Oscar*, the page (Mdlle Caroline Duprez) announces Monsieur's entrance. *Gustavus* (Sabatini), after divers compliments to the painter [illegible] weighty spell, the Swedish Cavour, intimates in an impassioned [illegible] seeks in fine arts consolation for his passion for *Amelia* (the *Countess Ankastroem*). *Oscar*, in calling the attention of the *King* to the Masked Ball of the [illegible] Count [illegible] and [illegible] [illegible] Count [illegible] Ankastroem, and a concerted piece follows, with a solo interrupted of *Gustavus* which is succeeded by the entrance of [illegible] [illegible] the fortune-teller, *Oscar* sings the charming couplets defending the wife. Mdlle. Duprez sang the verses delightfully, and cloth-trained herself also in the florid divisions in the *finale* of the act, in which the Swedish Cavour is [illegible] to the sybil's habitation, disguised as a sailor, despite of the warning of *Ankastroem*, but to the joy of *Jaborn* and the other conspirators.

The second act passes in the [illegible] [illegible] *Arvedson* (Miss Dolby) is at a table, with groups of the people and some sailors waiting for her [illegible] [illegible] solo and concerted [illegible] [illegible] a remarkable composition; the accompaniments are characteristic and curious, the credulous [illegible] of the populace being interwoven with diabolic orchestral [illegible] [illegible] [illegible]

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

On Wednesday, Sir Alexander Cockburn, the new Attorney-General, was re-elected, without opposition, M.P. for Southampton, and on the same day, Sir J. Romilly who has been recently promoted to the Mastership of the Rolls, was re-elected, also without opposition, M.P. for Devonport.

On Saturday, the 29th of March, a general assembly of the academicians of the Royal Academy of Arts was held at their apartments, in Trafalgar-square, when Charles Landseer, Esq., R.A., was duly elected keeper, in the room of George Jones, Esq., R.A., resigned.

As was anticipated, Mr. Turner, M.P. for Coventry, has been appointed the new Vice-Chancellor. The hon. and learned gentleman has therefore accepted the Chiltern Hundreds, and a writ was moved for on Wednesday to fill up the vacant seat in the House of Commons.

On Tuesday the Government until for confirming certain provisional orders of the General Board of Health was printed. These orders relate to the appointment of local boards at Market Harborough, Wolborough, Gateshead, Doncaster, West Cowes, Hartlepool, and Great Yarmouth, at which places elections are to take place on the 1st of August next.

Dr. Crofts, of Coventry, intends, at the coming Exhibition, to set the Thames on fire in reality. It appears that he has invented a composition to make water blaze on the application of flame, and will experimentalize on a portion of the Thames, and at the same time explain his invention for the benefit or amusement of the public.

The electors of Bury borough are taking steps to secure the services of a gentleman to represent them in Parliament at the general election, which it is believed is fast approaching. Mr. Walker, the present member, has never yet taken his seat. The Conservatives are desirous to bring forward Mr. Henry Hardman, a gentleman of some local influence: the Liberals have not yet made a selection, though the Reform Association is actively moving in the matter.

The Rev. Robert Montgomery, M.A., Minister of Percy Chapel, preached a sermon at the church of St. Mary Woolnoth, Lombard-street, on Sunday morning last, before the Right Hon. the Lord Mayor, the Sheriffs, and a highly respectable and crowded congregation, when a liberal amount was collected on behalf of the Langbourn Ward charity schools.

The *Bahama Gazette* says that the death of Stefano Pelloni, the noted chief of the band of robbers, and called "I. Passatore," is confirmed. His band was pursued by the Pontifical *gendarmes*, and after an obstinate resistance the whole of them were killed or wounded, the chief being amongst the former.

Recent Hamburg advices mention, that a new Swedish loan had been brought out for 3,000,000 marks (£230,000). The anticipation of its influence on the money markets had caused foreign bills to be much offered.

The total amount of freight money received by the treasurer of Greenwich Hospital between the 31st of February, 1850, and the 4th of March, 1851, was £322 .5s on public account, and £5584 1s. 4d. on private account.

The case of Metairie *v.* Wiseman, which has occupied the attention of Vice-Chancellor Cranworth for some days past, is fixed to be brought before the Lord Chancellor at Westminster Hall, on the first day of next November Term.

The Liverpool ship *De Witt Clinton*, recently arrived out at New York, lost thirty of her passengers on the voyage: forty were ill of fever

Upwards of twenty miles additional of the United States Atlantic and St. Lawrence Railway have just been opened, making a total of seventy miles in operation.

Cholera has reappeared at New Orleans.

We have received the Rio Janeiro papers to the 2nd of February. At that time the difficulties with Buenos Ayres were still unsettled, but it was hoped that an adjustment would take place without war.

There were in the port of New York, on the 15th ult., 420 seagoing and coasting vessels, besides innumerable river steamers, sloops, and small craft. This will enable some estimate to be formed of the amount of commerce possessed by the "Empire City."

The ship *Suffolk*, Captain Snow, arrived at Boston (U.S.) lately from Liverpool, with three of her crew in irons, for mutinous conduct while at St. Thomas's. Their names are Thompson, Watson, and Brown, all shipped at Liverpool for Boston. The American Consul was signalled aboard at St. Thomas, and certified his approval of the captain's conduct.

William Lyon Mackenzie, who took such a prominent share in the political disturbances of Canada some years since, is about to return to the Canadian legislature. The action is looked forward to with great interest in the colony, as affording a test of public sentiment.

At Porto Rico, in the West Indies, three different shocks of earthquake were observed in February. One of them lasted a minute and a half, and cracked the walls of the city hall.

From Mississippi, we learn that a negro, having outraged a white lady, and afterwards murdered her and her child, had been burned alive by the citizens, who turned out *en masse* on the occasion.

Jenny Lind left New Orleans on the 10th ult., for St. Louis, where the first ticket of her concert sold for about £30.

A letter from one of the engineers attached to the Tehuantepec Surveying Company (Central America) states, that an excellent harbour has been found at the southern coast of the Isthmus of Tehuantepec, where vessels of all sizes may find a safe anchorage. This is in the Bay of Ventosa, about twelve miles from the town of Tehuantepec. The bay is large and sheltered in its shores around 6266 feet; the bottom is partly a compact sand, partly a mixture of sand and clay, affording an excellent anchorage. Another good harbour is found in the Bay of Salina Cruz, on the Pacific shore, about two miles to the west of the Ventosa.

Venezuela advices announce the installation of Monagas as President, at Caracas, on the 5th of February. His inaugural address was pacific, and received favourably.

Mr. W. Noble has been selected by the managing committees of the subscribers to the Salford and Tamworth testimonials to the late Sir Robert Peel, to execute the statues which are intended to be erected in those towns.

Mr. Gore Langton has acceded to the requisition addressed to him by the elec ors of West Somerset, and has announced himself as a candidate for the representation of that division of the county in Parliament. As no contest therefore is to be made a similar declaration, the return of Mr. Gore Langton may be calculated on. The day of nomination is appointed by the sheriff for Thursday, April 10.

On Monday Mr. Abernethy commenced letting the water into the Great Birkenhead Dock, of fifty acres, and it is expected in a few days to be ready for stopping.

The following Post-offices during the present month are to become money-order offices: viz. East Ilsley, Berks.; re; Greenhithe, Kent; Linton, Kent; Niton, Isle of Wight, Pinner, Middlesex; Ripley, Derbyshire; Twyford, Berkshire; Watlington, Oxfordshire; West Grinstead, Sussex; Burnham, Norfolk, Donnington, Lincolnshire; Horndon-on-the-Hill, Essex; Grays, Essex; Appledore, Devon-shire; Carne, Lincolnshire; Grampound, Cornwall; Litcham, Norfolk; Rayleigh, Essex; Thaxted, Essex; Hemsbridge, Somersetshire; Sturminster Newton, Dorsetshire; Badstock, Somersetshire; Alderney, Channel Islands.

A line of packets between France and Brazil is proposed to be establi-hed: they are to start from Nantes, and sail to Fernambuco, Bahia, and Rio Janeiro

The South Wales Railway will be opened from Chepstow to Gloucester on the 18th of June next, so that there will then be a continuous line of railway for the accommodation of the public from Swansea direct to the metropolis.

The late Mrs Butler Cole bequeathed to Mr. Dixon, surgeon, of Preston, her medical attendant, the sum of £3000. That gentleman has, it is said, declined to receive the legacy, and has executed a deed of renunciation This sum will be divided among the nephews and nieces of the deceased lady.

The *Glasgow Daily Mail* announces the demise of Lord Moncreiff, and states that the vacancy thus created on the Scotch bench will be filled by Mr. Cowan

A fine salmon, weighing ten pounds and a half, was caught in the river Derwent, Workington, on Monday, by Mr. Lancelot Pearson, with the rod and fly—the first salmon caught this season.

The *Athenæum* announces that it is Mr. Thackeray's intention, during the coming season, to deliver a course of biographical reminiscences of some of the eminent writers of our country during the eighteenth century. The course will commence about the middle of May

The Liberals of Rochdale have resolved to invite Mr. Bright, one of the representatives of Manchester, to take the place of Mr Sharman Crawford at the next election, he consenting to be put in nomination for his native town.

The Trustees of the Cholmondeley Charities, through their treasurer, have presented a donation of £25 to the Royal Dispensary for Diseases of the Ear, Dean-street, Soho-square

Colonel Pew, of the Bengal Artillery, died at Singapore on the 2nd February, on his way to Australia. He was one of the greatest equestrians in India. In 1845 he is said to have been worth £250,000; in 1850 he was a bankrupt almost without effect.

An annual general meeting of the proprietors of the British American Land Company was held on Monday, to receive the Directors' report, &c. The report stated that the sales of land last year were 17,400 acres, at an average of 13s. 10d. per acre, being 1s. 6d. per acre more than the prices obtained during the previous year. No dividend was declared but the company was stated to owe now only £1000 in the colony and £750 in London, and is therefore considered, in comparison with former periods, to be in a satisfactory position. The report was agreed to.

The free handicap at Newcastle races has just been published, and contains no less than weights for 868 animals of all grades, commencing with Glance at 9 st., and ending with Turpentine at 4 st. Such a specimen of handicapping is really worth a place in the "Great Exhibition."

A deputation from the hotel and tavern-keepers of the metropolis had an interview with the Chancellor of the Exchequer on Monday, and presented a memorial praying for a repeal of the window-tax on their coffee and sitting-rooms, also the tax on their servants, so as to be placed on the same footing as shopkeepers and other traders.

CHESS.

TO CORRESPONDENTS.

DERBYENSIS.—A Pawn need not take a Pawn in the position specified. See some modern treatises, where you mention are quite out of date as authorities.

J. A. Sh.—Many thanks for your communication, which we have answered the same week, you should let them reach us on Tuesday at latest, or earlier, indeed, if you can

DECIMUS.—Any person may play at the Simultaneous Chess Meeting on the proper label and signature being affixed to parchment. The next week's new instances, of very inferior material and workmanship. Where did you procure them?

J. B.—I am afraid I took your letter before writing. If, in Problem 374, White gives check with his Bishop at Q B 7th, what is to prevent Black from taking the Bishop with his Queen? 2. Send the addresses of all means to Professor Staunton, 2 Cavendish-square, and he will, no doubt, return you a prospectus and list of names.

SAMUEL CLARK.—Place the Bishop at K's 4th

T. F. P.—The last is a great improvement on the former one

CAPE TOWN.—In consequence of some alteration in our arrangements for going to press, it is necessary that all communications to be answered the same week should reach us at the latest early on Wednesday morning.

BETA.—1. There is such a rule in Chess as that a player, making a false move, may be compelled to play his King. 2. A player touching a piece must move that piece, unless he touch it to adjust or to adjust its position, and at the moment crie *J'adoube*

C. HAMILTON.—No, we must see the solution.

R. R.—1. It is near enough, but the principle is a very old one. 2. You may have two White or Black Queens on the board at the same time in a problem

ALPHA.—1. For reasons in Chess you cannot apply to a more competent master than Mr Horwitz—his address we believe to be 30, Agar-street, Strand, London. 2. Your problem is impracticable.

M. P.—We must refer you to the *Chess Player's Chronicle* of the 1st of this month. In that number you will find the whole of the correspondence in question, and what to every unprejudiced person will, we believe, be considered a satisfying answer to the paltry objection which has been raised to the Manning Committee of the Tournament, and the mode in which they are discharging the troublesome duties they have undertaken.

PHILIP VELL.—In what does the idea of sending an e.sy position consist?

LOUIS LAFRENCHMEN.—The two amended Problems can be examined

NEOPHYTE.—Love Chess while you have time and too well. There is no more dangerous mistake for a young player than to suffer his whole time and attention to be absorbed in the study and practice of what after all is only an amusement: an amusement, no doubt, of a most intellectual character, but still an amusement only. Depend upon it that the man whose ambition is limited to the attainment of the highest excellence in Chess alone, must have a mind so puny that he will reach to mediocrity only even in that.

SAXTON.—There is a highly flattering club at Ryde, in the Isle of Wight, the President of which is Major Robertson, of the 52nd

F. A. Bath.—Your Printer has inadvertently made Black Castle on Q's side, in our game last week. Black's 5th move was Castle on K's side. You will find every move correct

E. B.—As we have said above, Black's 12th move in the game between Mr Staunton and the Honorary Secretary of the Reading Club should be R takes on K's 4th

TIRO.—The two kings can never approach within an open square of each other

SOLUTIONS OF PROBLEM No 373, by M. P., G. S., W. P. W., are correct

SOLUTIONS OF PROBLEM No. 374, by Jack of Shrewsbury, Cape Town, Staple Simon, Valley field, R. H., Calvacon, Inverary, F. of Graham's Town, are correct

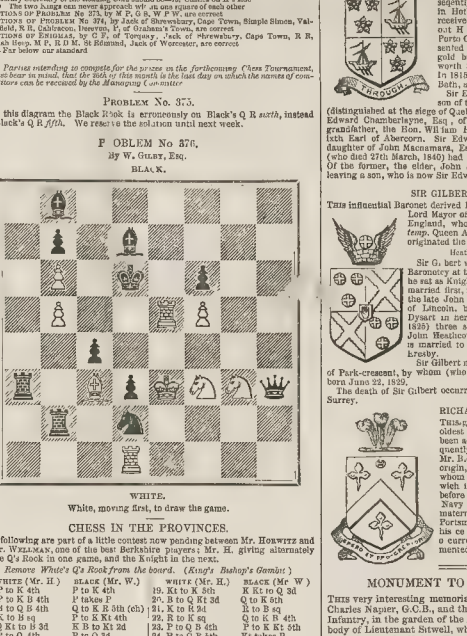
SOLUTIONS OF ENIGMAS, by C. P., of Torquay, Jack of Shrewsbury, Cape Town, R. R, Uvah Beep, M. P., R. D. M., St Edmund, Jack of Worcester, are correct

M. S.—Far below our standard

*** *Parties intending to compete for the prizes in the forthcoming Chess Tournament, must bear in mind, that the 30th of this month is the last day on which the names of competitors can be received by the Managing Committee.*

PROBLEM No. 375.

In this diagram the Black Rook is erroneously on Black's Q R *sixth*, instead of Black's Q R *fifth*. We reserve the solution until next week.



F OBLEM No 376.
By W. GILBY, Esq.
BLACK.

WHITE.

White, moving first, to draw the game.

CHESS IN THE PROVINCES.

The following are part of a little contest now pending between Mr. HORWITZ and Mr. WYNNE, one of the most Berkshire players of Mr. H. giving alternately the Q's Rook in one game, and the Knight in the next.

Remove White's Q's Rook from the board. (King's Bishop's Gambit.)

WHITE (Mr. H.)	BLACK (Mr. W.)	WHITE (Mr. H.)	BLACK (Mr. W.)
1. P to K 4th	P to K 4th	19. Kt to K 5th	K Kt to Q 3d
2. P to K B 4th	P takes P	20. B to Q Kt 3d	Q to K 6th
3. B to Q B 4th	Q to K R 5th (ch)	21. K to R 2d	B to Sq
4. K to R sq	P to K Kt 4th	22. R to K sq	Q to K B 4th
5. Q Kt to B 3d	K B to Kt 2d	23. P to Q B 4th	P to K Kt 5th
6. P to Q 4th	P to Q 3d	24. P to Q B 5th	Kt takes P
7. K Kt to B 3d	Q to K 4th	25. B to Q 6th	B to B sq
8. P to K 5th	P takes P	26. Kt takes B	Kt takes Kt
9. Q Kt to Q 5th	K to Q sq	27. B takes K B P (c)	K to Kt sq
10. P takes P	Q B to Q 2d	28. B to K Kt 6th	Q takes Q B P
11. P to K R 4th	P to K R 3d	29. Q takes R	P to K Kt 6th (ch)
12. P to K sq	Q to K 3d	30. K to R 3d	P to Q B 3d
13. P to Q Kt 4th (a)	Q Kt to B ■	31. R checks	K to B 2d
14. Q B to K 2d	K Kt to K 2d	32. R to K 8th	Q to her 3d
15. P to K R 5th	Q to B 3d	33. Q takes Q	Kt takes Q
16. Kt to K B 6th	B takes Kt	34. R to K 7th	P to Q B 4th
17. P takes B	Kt to Q B sq	35. P to K B 7th	Resigns
18. P to Q Kt 6th	Q Kt to his sq		

(a) This is a novelty The object appears to be twofold. In the first place to enable him to play his Q B as to his Q Rook's diagonal, speedily; and, in the next, to prevent the adverse Q Kt's occupation of the Q B's 3d square.

(b) The mistake is admirably sustained throughout

BETWEEN THE SAME PLAYERS.

In this game Mr. Horwitz gives his Q Kt, which must be removed from the Board

(Evans Gambit.)

WHITE (Mr H.)	BLACK (Mr. W.)	WHITE (Mr. H.)	BLACK (Mr. W.)
1. P to K 4th	P to K 4th	11. B to Q Kt 3d	K B takes Q B P
2. K B to Q B 4th	K B to Q B 4th	12. R to Q sq	B to his 3d
3. P to Q Kt 4th	B takes Kt P	13. R to K sq	Q B to K Kt 5th
4. K Kt to B 3d	Q Kt to B 3d	14. P to K R 3d	B takes Kt
5. P to Q B 3d	B to Q R 4th	15. P takes B	B to K R 5th
6. Castles	Kt to Q B 3d	16. R to Q B 5th	Q to K B 3d
7. P to Q 4th	P to Q 3d	17. B to Q B 2d	Q R to K sq
8. B to Q B 3d	Castles	18. B to Q Kt sq	B takes K (ch)
9. P takes P	K Kt takes P	19. Takes R	Q takes P
10. P takes P	Kt takes Q P	20. R to Q B 3d	Q to K B 3d

And after a few moves, White resigned.

CHESS ENIGMAS.

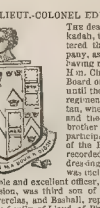
White to play, and mate in three moves.

TESTIMONIAL TO MR. BRASSEY, THE RAILWAY CONTRACTOR.—On Wednesday, at the settlement dined at the London Coffee-house, Ludgate-hill, to celebrate the presentation of a testimonial to Mr Brassey, the eminent railway contractor. Next week we shall engrave the superb present—a silver-gilt vase—and append a report of the festival.

On Thursday week, while hunting in the Vale of Belvoir, the Marquis of Granby was kicked by a gentleman's horse inside the left leg, just below the knee. The animal's shoe cut through his boot and flannel drawers, and stripped the flesh off to the bone. Up to Sunday morning Lord Granby suffered severe pain in consequence of the injuries inflicted, but on that day the symptoms assumed a favourable aspect, and it is hoped that in a few days he will be able to leave his room

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

LIEUT.-COLONEL EDWARD SAUNDERS LLOYD.



THE death of this distinguished officer occurred at Nesbadan, in India, on the 24th of January. He entered the military service of the East India Company, as Ensign in the 65th Bengal Native Infantry, having received his ensigncy from the late Right Hon. Charles W. W. Wynne, then President of the Board of Control, and on joined in the same corps until the period of his decease. He commanded his regiment with great distinction at the siege of Moolt.an, where he was brigaded with her Majesty's 32d and the 72d N.I., the latter commanded by his brother Major Hugnes Lloyd; and valuably assisted by participated in the arduous and brilliant military exploits of the Punjaub On its termination, Lord Gough recorded his sense of Colonel Lloyd's services by addressing to him a letter of t anks, and the Colonel was distinguished in the general brevet promotion

The amiable and excellent officer, gifted with talents of no ordinary promise in his profession, was third son of the late Richard Hughes Lloyd, Esq., of Plymog, Gwercelas, and Bashall, representative in the male line of the ancient Denbighshire family of Lloyd, of Pyrnog; and, in the female, of the Bayns, of Gwercelas, Barons of Kymmer-yn-Edeirnion, and the Talbots, of Bashall, county of York

He was born at Gwercelas, 23rd February, 1806; and married, 16th April, 1844, Catherine-Anne, daughter of the Rev. Robert Wynne. Mayow, by whom he leaves two sons—Edward Wynne, born at Benares, 19th March, 1845, and Edward, born at Simla, 24th September, 1848.

ADMIRAL SIR EDWARD HAMILTON, BART.

THE career of this naval Commander was highly distinguished. So far back as 1780 he served as midship man of the *Hector*, in Cornwallis's action; and in 1793, with this gun hundred seamen and one marine under his command, besieged for eight days and captured the martello tower of Genalata. He was subsequently in the Mediterranean at the siege of Bastia, and also in Hotham's action. In 1800 he was knighted, and received the gold medal for his gallantry in cutting out H M S. *Hermione* from under the batteries of Porto Cavallo, in South America. He was also presented with the freedom of the city of London in a gold box value fifty guineas; and with a sword, worth 300 guineas, by the inhabitants of Jamaica. In 1818 he was made a Knight Commander of the Bath, and in 1848 created a Baronet.

Sir Edward was born 19th March, 1772, the second son of the late Captain Sir John Hamilton, Bart., R.N. (distinguished at the siege of Quebec), by Cassandra Agnes his wife, daughter of Edward Chamberlayne, Esq., of Maresbury, co. Gloucester. His great-grandfather, the Hon. William Hamilton, of Gilliston, was brother of James, 8th Earl of Abercorn. Sir Edward married, 1st November, 1804, Frances, daughter of John Macnamara, Esq., of Langford Castle, co. Brecon, and by her (who died 27th March, 1840) had two sons, both deceased, and two daughters. Of the former, the elder, John James Edward Hamilton, Esq., died in 1847, leaving a son, who is now Sir Edward Archibald Hamilton, second Bart.

SIR GILBERT HEATHCOTE, BART.

THIS influential Baronet derived his descent from Gilbert Heathcote, an opulent Lord Mayor of London, one of the projectors of the Bank of England, who represented the metropolis in Parliament, *temp.* Queen Anne, and purchased those broad lands which originated the line of the pres-

ent baronet himself and each large-sized men

Sir G. bert was born in October, 1773, and succeeded to the Baronetcy at the decease of his father in 1795. For some time he was a Knight of the shire for the county of Rutland. He married first, in 1793, Catherine Sophia, fourth daughter of the late John Manners, Esq., of Grantham Grange, county of Lincoln, by Louisa Tollemache his wife, Countess of Dysart in her own right, and had by her (who died in 1835) three sons, the eldest of whom is now Sir Gilbert John Heathcote, fifth Baronet, M.P. for Rutlandshire, who is married to the eldest daughter of Lord Willoughby de Eresby.

Sir Gilbert married secondly, August 10, 1825, Mrs. Elden, of Park-crescent, by whom (who died October 21, 1842) he had a son, Arthur, born June 22, 1829.

The death of Sir Gilbert occurred on the 27th ult., at his seat, Durdans, in Surrey.

RICHARD BLOFIELD, ESQ.

THIS gentleman, at the time of his decease, was the eldest practising solicitor in the metropolis, having been admitted of Furnival's Inn in 1788; he consequently was the father of the entire metropolitan profession. Mr. Blofield came of an ancient family, of Norman origin, in the county of Norfolk, several members of whom have frequently represented the city of Norwich in Parliament. The deceased in early youth, before he was articled to the law, entered the Royal Navy as a midshipman, under the auspices of his maternal uncle, Sir Charles Saxton, Governor of Portsmouth, and was with Lord Howe in most of his celebrated victories. Mr. Blofield's death, which occurred recently, in his 85th year, is generally lamented.

MONUMENT TO LIEUTENANT SITWELL.

THIS very interesting memorial has lately been erected by General Sir Charles Napier, G.C.B., and the officers of the 31st Regiment of Native Infantry, in the garden of the Fort of Kohat, in the Punjab, over the body of Lieutenant Sitwell, who last year fell in action with the Affredee tribes, in the Kohat Pass. It is a plain altar-tomb, and bears upon one of its sides the following inscription:—

Here lies the Body of Lieutenant WILLIAM HENRY SITWELL, 31st Regiment of Native Infantry, who died on the bed of honour, 12th February, 1850, aged 20; young, handsome, brave, good; his spirit high and full of hope. Life was before him, with all its dreams, but they vanished as he rose gallantly charging the enemy, sword in hand, he fell; and with him Havildar Doongar Ditchiz, Naick Mahdo Sing, and Sepoys Meer-Wan Opedia and Deobund Paudy, of the 31st Regiment of Native Infantry. These soldiers retreated to bear their wounded leader, and all were slain together. Together let their memory be honoured by comrades who saw their deeds, and to their glory raised this tomb. General Sir Charles J. Napier, G.C.B., Commander-in-Chief; Lieutenant-Colonel W. R. Cor fied, commanding 31st Regiment Native Infantry, Bengal, Captains, Henry J. Guyon, W. R. Dunmore, W. P. Hampton, W. B. Legard, George Swetenham, Samuel Rice Tickell; Lieutenants, Thomas G. Birch, E. C. Roberts, Harman B. Hopper, T. Hunter Smallpage, Henry Finch, Frederick Paynter, William Davis, C. M. Fitzgerald, R. H. Price, H. W. Norman; Ensigns, Arthur Ellis, F. A. Deakins, C. J. Nicolson, F. John Gully.

On the reverse of the Monument is a black marble tablet, bearing an epitaph by Lieutenant Sitwell's family

In a letter to the Governor-General of India, Sir Charles Napier bears this touching testimony to Lieut. Sitwell's bravery:—

The Havildar was killed, the two Sepoys desperately wounded; they were rescued by their comrades afterwards, and are now in hospital. The Naik Hosaia Khan went four times up the hill in face of the enemy, encouraged by Subedar Khan, and brought away two wounded men each time. These were great deeds of valour and self-devotion done by soldiers of humble rank; and I claim for these four men, Hosaia Khan, Subha Khan, Bahadur Khan, and Subedar Khan, the "Order of Merit" at your Lordship's hands. Alas! young Sitwell is beyond human reward. He fell, rushing against the enemy, and calling on his men to follow, and they obeyed him. When he fell, he tried in vain to make them leave him to an unsparing foe, and save their lives; they obeyed not *then*, but died with him! Heroic was the young spirit that inspired such deeds! The lieutenant who commanded the party has been struck down, and has proved himself with admirable judgment, coolness, and courage; and the enemy were defeated in this desperate combat. There was noble leading and intrepid following!

Brigadier C. Campbell, in a letter to the Adjutant-General of the Army, says

Ensign Sitwell, together with several of his men, was struck down and wounded by the first discharge; and so sudden and impetuous was the attack of the Mountaineers in which Ensign Sitwell lost his life, that it was with the greatest difficulty the brave sepoys of his regiment succeeded in rescuing the body of this intrepid young officer, remarkable alike for his amiable qualities and promise as a soldier, and whose loss on this occasion is so deeply to be deplored.

THE PRUSSIAN WAR-STEAMER "NIX."

OUR Engraving shows the Royal Prussian war-steamer *Nix* firing the long 8-inch guns, of which she carries an effective armament, more than double the power of any vessel of her size in the British navy. This vessel and her cognates, of 160 horse-power, have been constructed by Messrs. Robinson and Russell, of Millwall, to the order of the Prussian Navy Board, at the head of which is placed an officer distinguished by his intimate acquaintance with naval affairs, his Royal Highness Prince

MONUMENT RAISED AT KOHAT BY SIR CHARLES NAPIER, G.C.B., AND THE OFFICERS OF THE 31ST NATIVE INFANTRY, BENGAL, OVER THE REMAINS OF LIEUTENANT W. H. SITWELL.—(SEE PRECEDING PAGE.)

Adalbert of Prussia. The *Nix* is only 550 tons burden, and carries four long 8-inch guns, mounted on slides, with Colonel Colquhoun's pivots, and Mr. Ferguson's gun-carriages; she is also fitted for four additional 32-pounder broadside guns. For this new system of armament, a patent has been granted to one of the constructors of the *Nix*; and by it the effective armament of a paddle-wheel steamer is rendered double that hitherto used; while she is enabled to fire two of her midship-guns, each way, parallel to the keel.

On Thursday, the 27th ultimo, the war-steamer *Nix* was tried on the Thames, both as to her rate of steaming, and the effectiveness of her armament, in the presence of his Excellency the Prussian Ambassador and suite; and of M. Devrient, of the Prussian Naval Commission. With his Excellency were Madame Bunsen and a party of friends. Sir Roderick Murchison, who has long taken an interest in this peculiar system of construction, was also present; as well as several experienced officers of the Royal Navy, Captain Codrington, Captain Key, and Capt. Elliott, who were desirous of seeing whether the new system of armament could be effectively used.

On passing down the Thames, the vessel was tried at the measured mile; and it is to be observed that she was deep laden with all her armament, ammunition, stores, and water on board. She was tried with the tide and against the tide, and realised a mean velocity exceeding 14 English miles an hour. When light, her speed is 15½ English miles per hour. As soon as she gained the open sea, her firing commenced. Two of the long 8-inch guns were fired simultaneously, without producing any sensible concussion on the vessel. They were fired repeatedly with a charge of 10 lb. of powder and an 8-inch ball. But the important experiment consisted in seeing whether the guns could be fired parallel to the keel. This was done repeatedly, with perfect success. The experiment was then pushed to the extreme; and two guns, pointed at an angle of convergence of 2½ degrees with the keel, were fired at the same instant, and the shot converging crossed each other at a distance of 186 yards from the bow.

It is to be observed, that these vessels carry coals for ten days' consumption, on less than 8 feet of water.

The *Nix* is the second vessel of the same class which has been constructed by Messrs. Robinson and Russell for the Royal Prussian navy: the former vessel, the *Salamander*, sailed to Prussia during extremely hard weather last winter, with her full armament, and deeply laden with coal for the voyage; and was proved, by a naval commission at sea, in addition to her great speed and heavy armament, to possess all the qualities of a good sea-boat.

CAST-IRON LIGHTHOUSE FOR BARBADOES.

WE lately had an opportunity of inspecting minutely one of Mr. Alexander Gordon's Cast-iron Lighthouses, as temporarily erected by and at the iron-works of Messrs. H. Grissell and Co., Eagle Wharf-road, New North-road. We believe Mr. Gordon to have been the first engineer to introduce cast iron for this useful purpose; the advantages of which, in point of economy, durability, and rapidity of execution, are unquestionable. Seen at a short distance from the above-mentioned works, it forms a handsome column of good proportions, the lantern and gallery at top giving a complete finish to the design. The figure of the column is conoidal, its lower external diameter being 18 feet 6 inches, and that of the top part under the gallery, 10 feet 10 inches. The height of the column is 82 feet 6 inches from the lowest flange to the underside of the lantern floor. The outside gallery is supported by twenty open cast-iron brackets. The shell of the tower is constructed of cast-iron concentric plates, having vertical and horizontal flanges inside, which are bolted together throughout; the meeting surfaces having been previously planed, and the whole made perfectly water-tight by a thin seam of red-lead. The lower plates are 1 inch thick, while those of the upper part of the column are reduced to ⅞ of an inch in thickness. The flanges throughout are 4 inches wide, and 1½ inches in thickness, except those which are at the top of the upper plates, and likewise those which are at the bottom of the lower plates; in these cases the flanges are 6 inches in width. In twenty-one of the plates, window spaces or openings have been left, with proper return flanges to receive the frames, which are of East India teak wood, fitted with polished glass ⅜ of an inch in thickness. All the windows are hung with strong hinges and fastenings, so as to be opened and secured closely at pleasure. The external door, which is also of East India teak wood, and 3 inches thick, is hung with hinges of gun metal,* and is furnished with a stout lock and other fastenings. In the centre of the column is a vertical hollow cylinder, to be used as a channel for the weight of the revolving machinery of the lantern, and also for raising and lowering provisions, stores, &c. It is 1 foot 4½ inches diameter in the clear, and composed of six lengths of cast-iron pipe or tube, connected together by means of horizontal flanges, bolted together as described for shell. There is a small door in each of the upper lengths of the cylinder corresponding to the respective floors. The floors are of wrought iron, 5-16ths of an inch thick, resting partly on cast-iron beams, of ½ an inch thick, with top and bottom flanges, and also on the horizontal flanges of the shell. In each floor an opening or well-hole is left for the staircase: the stairs are fixed radially round the internal columns, by means of wrought-iron stringings or carriages, the risers of the same material; the treads are of teak wood, 1¼ inch in thickness, and 9 inches in width. Wrought-iron balusters, ⅝ths of an inch in diameter, and hand-rail of the same material, and 1⅜ths inch wide, and ⅝ths of an inch thick, complete the staircases.

The external gallery is inclosed by wrought-iron balusters 42 inches in height, and 1¼ inch diameter, riveted into hand-rail of the same material, 2½ inches wide, and ⅜ of an inch thick; the lower ends being screwed into the brackets which support the floor-plates of gallery.

CAST-IRON LIGHTHOUSE, FOR BARBADOES.

The living-rooms, which are towards the top of the column, are lined throughout with 8-inch close boarding, having skirtings and cornices, which, together with all the wood-work, except that of teak, has been prepared by Payne's process, which, in many instances, has been found to be of a preservative character.

Ventilation is provided for by the introduction of four circular open-

* Copper and tin, in the proportion of about 9-10ths of the former and 1-10th of the latter.

THE "NIX," PRUSSIAN WAR-STEAMER.

THE GREAT EXHIBITION BUILDING—COLOSSAL STATUE IN THE FOREIGN NAVE.

ings, of five inches diameter, covered with copper wire net-work. From these four openings as many copper tubes are conducted to the ventilators, also four in number, which are fixed in the lantern floor; valves similar to those used in ventilating stoves complete the necessary arrangement.

There is also another important provision worthy of being mentioned. Two lightning conductors of copper wire rope will be conducted from the top of the Lighthouse down into the rock on which it is to be erected.

It now only remains to describe the lantern, which is of polygonal form in plan, consisting of sixteen sides, being 11 feet in external diameter. The frame of the lantern, including the stanchions, or uprights, the sill, the top plate, and also the cross-bars, is of gun-metal, and 4 feet 9 inches high. The glass is of the best polished plate, half an inch thick, secured to the frame by means of gun-metal fillets. The roof consists of stout riveted plates of copper, which are riveted to cast-iron rafters, resting on a gun-metal plate. The roof is surmounted by a copper cowl, with vane and spindle complete; the opening or mouth of the cowl being covered with a strong copper wire grating. The plinth of the lantern, forming the light-room, is constructed of cast-iron plates, 5 feet high, and sixteen in number; being three-quarters of an inch thick, and having vertical flanges, perforated for the bolts by which they are secured together.

The revolving machine is furnished with twelve lamps, and as many powerful reflectors, which are of a paraboloidal form. The two principal wheels are each of 18 inches diameter. The driving-shaft is so arranged, that, by means of a clutch at top, the lamp and reflector frame may at pleasure be put into or out of gear as respects the machinery, which is inclosed in a neat mahogany case. The brass lamp belonging to each reflector is furnished with an argand burner, having a spiral motive arrangement for elevating the cottons when required.

The whole of the iron ternally, is covered with

pt the floors, both internally and ex- ats of paint.

THE GREAT EXHIBITION.

M. Jean du Seigneur has rapidly advanced his colres nave of the foreign division, representing St. Michael, the I of France, overthrowing Satan. The subject is from the des... Milton's "Paradise Lost." The group, when complete, will stand 19 ... high, the figures being 9 feet each in proportion. It is a bold and original conception. With this solitary exception, the French department exhibits a listless and culpable want of activity and provision for the opening on the 1st proximo. Little but talk seems to have resulted from the repeated meetings and confrences of the contributors; indeed, at one of those lately held it was solemnly discussed whether a sufficiently adequate guarantee to the value of the French goods *could* be provided by the Royal Commissioners, and as solemnly decided in the negative, and that, too, with Prince Albert, the Duke of Buccleuch, Lord Overstone, Mr. S. M. Peto, and Alderman Thompson amongst the members of the Commission.

THE "ABERGELDIE."

This first-class clipper-built ship, of 600 tons, has lately been launched from the building-yard of Messrs. Walter Hood and Co., of Aberdeen. The vessel is named from the estate of Abergeldie, which adjoins Balmoral, and is let under a forty years' lease to his Royal Highness Prince Albert; and, in appropriate taste, an excellent figure-head of the Prince, in full Highland costume, adorns the prow of this princely ship, which is

sidered to be the finest model that has yet been launched by her nt builders. It is the opinion of those well qualified to judge, that *rgeldie* will combine the properties of sailing and carrying in a hitherto unapproached by any of the fine vessels of a similar con- n which have been built at the port of Aberdeen. The vessel property of Mr. George Leslie, and is now on her voyage to

has lately been said of the feats of the *Oriental*, American ship, ons, which, carrying a cargo of about 1100 tons, has made the e from Canton to London in 98 days. There appears to have been some unauthorised boast about the matter. At the time of the *Oriental* arriving, her voyage was contrasted with that of the *Reindeer*, an Aberdeen clipper, of 328 tons, which sailed from China about the same time, and with her copper hanging loose about her, and carrying 500 tons of cargo, was only beaten five days in the passage from Anjeer; and also with that of the *John Bunyan*, another Aberdeen ship, which, in the previous spring, when perhaps more favourably situated as regards the monsoons, made the voyage from Shanghae—three days' sail farther than Canton—in 99 days; and which, though registering only 470 tons brought about 720 tons of cargo.

The *Reindeer* was built by Messrs. A. Hall and Co., and the *John Bunyan* by Messrs Walter Hood and Co.; thus showing that these great ship-building firms have attained to a high degree of perfection in their business. The *Reindeer* and the *Oriental* are now both on their way to China, and great interest is excited as to the result of their respective voyages

We are happy to learn that the ship-builders of Aberdeen are fully employed: two very large vessels are being built under cover, as in the Government dockyards, and they will very shortly be launched.

THE "ABERGELDIE," ABERDEEN CLIPPER.

BANQUET TO LORD STANLEY.

On Wednesday evening, a grand banquet was given at Merchant Tailors' Hall, Threadneedle-street, to Lord Stanley, by a numerous body of the most influential noblemen and gentlemen of the Protectionist party, to inaugurate by a marked demonstration of honour their acceptance of the noble Lord as the acknowledged leader of the Country party.

The number of guests invited was upwards of 260, and the magnificent old hall, which was crowded with rank and fashion, presented a most animated appearance; the exhibition of plate was superb; and many beautiful specimens of the new invention of silvered glass, in mirrors, globes, vases, cups, &c., the amethyst, ruby, emerald, and other brilliant colours, gave an unusual splendour to the display

The band of the Coldstream Guards, stationed in the gallery opposite the chairman, played throughout the evening. The gallery immediately over the chairman was filled with elegantly-dressed ladies.

The chair was filled by Mr. Thomas Baring, M.P.; at whose right hand were placed Lord Stanley, Sir E. Sugden, Marquis of Exeter, Mr. Herries, Marquis of Salisbury, Earl of Wilton, Earl of Eglinton, Colonel Powell, Earl of Delaware, Sir C. Knatchbey, Viscount Combermere, Mr. G. A. Hamilton. On the left of the chairman were—The Duke of Richmond, Mr. Disraeli, the Duke of Northumberland, Earl of Lonsdale, Mr. Croker, Earl of Hardwicke, Mr. Henley, the Master of Mercers' Hall, Earl of Jersey, Lord Redesdale, Mr. Walpole, Lord Willoughby D'Eresby, Mr. C. C. Bruce.

The presidents of the other tables were the Earl of Malmesbury, Mr. Forbes Mackenzie, M.P., Earl Nelson, and Major Beresford, M.P. The remainder of the company was as follows:—Viscount Lewisham, Viscount Stratisford, Gen. Warren, Mr. H. Baillie, Earl Somers, Lord Southampton, Mr. Sotheron, Viscount Hereford, Lord Sandys, Mr. Grogan, Earl of March, Marquis of Waterford, Mr. Christopher, Lord Ross, Mr. Wigram, Mr. Maitland, Mr. Goddard, Earl of Verulam, Lord Burghley, Colonel Brown, Mr. Ker Seymer, Mr. Davies, Col. Sibthorp, Mr. R. C. Hildyard, Col. Lowther, Colonel Wyndham, Marquis of Chandos, Col. Chatterton, Lord G. Manners, Lord Castlemaine, Lord Bayning, Earl of Sheffield, Lord Sondes, Mr. Gladstone, Mr. Halsey, Earl of Aylesford, Lord Talbot, Earl of Kinnoull, Captain H. Wynn, Mr. Waddington, Lord E. Hill, Mr. Arkwright, Hon. F. Scott, Earl of Selkirk, Lord Sinclair, Mr. W. Miles, Viscount Bernard, Mr. Hodgson, Mr. Baskett, Hon. Col. Legge, Mr. Hall, Mr. Sheriff Spooner, Mr. Wilby, Earl of Caledon, Mr. Deedes, Mr. Stephenson, Mr. Tollemache, Earl of Winchilsea, Earl of Falmouth, Ore Ward, Mr. Neeld (Gippenham), Earl of Rodenden, Lord John Manners, Mr. Powell Young, Mr. P. Miles, Mr. Cobbold, Mr. Newdegate, Mr. Banbury, Mr. Sotheron, Viscount Maidenly, Lord Charles, Mr. Clive, Mr. Long, Viscount Barrington, Mr. Mainwood, Hon. G. Neel, Captain Somerset, Earl of Sandwich, Sir W. Jolliffe, Mr. Bennett, Hon. H. Cole, Lord Walsingham, Lord Saltoun, Hon. A. Dunscombe, Mr. Deb, Mr. Rolfe, Mr. Charles, Mr. Clive, Mr. Long, Viscount Barrington, Mr. Mainwood, Hon. G. Neel, Captain Somerset, Earl of Sandwich, Sir W. Jolliffe, Mr. Bennett, Hon. H. Cole, Lord Walsingham, Lord Saltoun, Hon. A. Dunscombe, Mr. Deb, Mr. Rolfe, Mr. Charles, Mr. Bickford, Mr. Duppa, Mr. Adderley, Lord Colchester, Lord Sherborne, Lord Douglas, Earl of Bradford, Earl of Glengall, Mr. Farnham, Hon. W. Bagot, Lord Teignedon, Mr. Cubitt, Mr. Pole Carew, Colonel Gilpin, Mr. Du Pre, Mr. Portal, Sir J. Boyd, Hon. J. P. Maxwell, Lord Bravourbrake, Earl of Bandon, Sir G. Tyler, Lord A. Lennox, Viscount Newport, Mr. T. Hildyard, Mr. Baldock, Sir John Tyrell, Mr. Fellowes, Mr. Scott, Hon. E. Stanley, Col. Seymer, Mr. Wagner, Earl of Darnley, Marquis of Drogheda, One Warden, Earl of Macclesfield, Earl of Longford, Lord C. Hamilton, Lord Feversham, Mr. Colville, Sir R. Gore Booth, Lord Kenlis-ham, Mr. Wodehouse, Lord Kilmaine, Sir W. Wynn, Mr. Baronet, Sir F. Palmer, Captain Bolden, Mr. Dodd, Marquis of Blandford, Earl of Beauchamp, Mr. Repton, Sir J. Trollope, Marquis of Worcester, Colonel Knox, Sir W. Verner, Mr. W. Dod, Lord Downes, &c. &c.

The bill of fare presented a most sumptuous entertainment.

The usual loyal toasts and sentiments having been duly honoured, the Chairman proposed the toast of the evening, coupling his remarks with the words: "My Lords and gentlemen, I do not ask you to join, but I ask to be allowed to be united with you in drinking, not as a mere toast, not as the merely unanimous expression of our feelings, but as the expression of a national blessing, 'Health, long life, and happiness to Lord Stanley.'

The toast was drunk with the most enthusiastic demonstrations of applause and cordiality, all the company standing, and the cheering was several times renewed after the noble Lord had risen to respond to the compliment.

Lord Stanley then rose, and, when the cheering had subsided, spoke as follows: Mr. Baring, my Lords, and gentlemen, so far from being ungrateful for the distinguished honour which you have this day conferred on me by the presence of this great assembly, and by the eloquent and touching speech of my honourable friend near me, and by the enthusiastic reception which was given to that speech, were indeed feebly to express those feelings by which I am at this moment excited—oppressed—as though overwhelmed. I am conscious that a few public men, to still fewer holding no official station, has it occurred to meet with such a testimony of political confidence from such an assembly, and may I venture to add, after the language of the chairman, such an expression of personal regard (Cheers.) And if any thing could enhance the deep feeling with which I receive these high marks of honour—if anything could enhance the gratification of applause and cordiality, all the company standing, and the cheering was several times renewed after the noble Lord had risen to respond to the compliment.

Lord Stanley then rose, and, when the cheering had subsided, spoke as follows: Mr. Baring, my Lords, and gentlemen, so far from being ungrateful for the distinguished honour which you have this day conferred on me by the presence of this great assembly, and by the eloquent and touching speech of my honourable friend near me, and by the enthusiastic reception which was given to that speech, were indeed feebly to express those feelings by which I am at this moment excited—oppressed—as though overwhelmed. And if any thing could enhance the deep feeling with which I receive these high marks of honour—if anything could

THE CHURCH OF ENGLAND.

The following address has been published —

We, the undersigned Archbishops and Bishops of the provinces of Canterbury and York, do most earnestly and affectionately commend the following address to the serious consideration of the clergy of our respective dioceses.

C Cantuar	G Redensis	Lichfield
T Ebor	J H Glocestrensis and Bristol	T Ely
C J London	C Roffen	J Exon
E Dunelm	E Sarum	T W St Asaph

H Bangor	H Wigornien	A Llandaff
H Carlisle	A Z Oxoniens	Bickford, Sodor and Man

Beloved Brethren, — We have viewed with the deepest anxiety the troubles, suspicion, and discontents which have of late years prevailed, accompanied the introduction of ritual observances exceeding those in common use amongst us.

We long indulged the hope, that, under the influence of charity, forbearance, and a calm estimate of the small importance of such external forms compared with the blessing of united action in the great work which is before our church, these heats and jealousies, caused by mutual concessions, would be allayed. But since the evil still exists, and in one most important feature has assumed a new and more dangerous character, we feel that it is our duty to try whether an earnest and united address on our part may not, under the blessing of God, to promote the restoration of peace and harmony in the Church.

The principal point in dispute is this — whether, where the letter of the Rubric appears to warrant a measure of ritual observance which, not by long and possibly by unbroken practice, has not been carried out, the clergy are either in conscience required, or absolutely at liberty, to act each upon his own view of the letter of the present rubric than by the rule of common conformity. Now, as to this question, we would urge upon you the following considerations: First, that any change of usages with which the religious feelings of a congregation have become associated is in itself of no light matter. If it is not to be introduced without the greatest caution; secondly, that beyond this any change which makes it difficult for the majority of such a large body as the service is still more to be avoided; thirdly, that any change which suggests a fear of still further alterations is most injurious; and, fourthly, that, according to the rule laid down in the Book of Common Prayer, where anything is doubted or diversely taken concerning the manner how to understand, do, and execute the things contained in that book, the parties that so doubt, or diversely take anything, shall always resort to the bishop of the diocese, who by his discretion shall take order for the quieting and appeasing of the same, so that the same order be not contrary to anything contained in that book!

The fair application of these principles would, we believe, solve most of the difficulties which have arisen. It would prevent all sudden and startling alterations, and it would facilitate the reception of any change which was really lawful and desirable. We would, therefore, first rely upon our own clergy, upon the affectionate earnestness the adoption of such a rule of conduct. We would beseech all who, whether by excess or defect, have broken in upon the uniformity, and restricted to rules the discretion of our ritual observances, to consider the importance of unity and order, and by common consent to avoid whatever might tend to rekindle them. In recommending this course we see the best under present circumstances. We do not shut our eyes to the evil of even the appearance of any discrepancy existing between the written law and the practice of the Church. But there are many cases where the law may be variously interpreted; and we believe that we are best carrying out her own principles in urging you to have recourse, in all such cases, to the advice of her chief pastors

But beyond mere attempts to restore an universal strictness of ritual observance, we have to deal with a distinct and serious evil. A principle has of late been avowed and acted on, which, if admitted, would justify far greater and more grievous changes. It is this: that, as the Church of England is the ancient Catholic Church settled in this land before the Reformation, and was then reformed only by the casting away of certain strictly defined corruptions; therefore, whatever form or usage existed in the Church before the reformation, may now be freely introduced and observed, unless there can be alleged against it the distinct letter of some formal prohibition.

Now, against any such inference from the undoubted identity of the Church before and after the Reformation, we feel bound to enter our clear and unhesitating protest. We believe that at the Reformation, the English Church not only rejected certain corruptions, but also without in any degree severing her connexion with the ancient Catholic Church, intended to establish one uniform ritual, according to which all her services should be administered. But it is manifest that a license such as is contended for is wholly incompatible with any uniformity of worship whatsoever, and at variance with the universal practice of the Catholic Church, which has never grown to its full proportions without necessary deviations from the Church's rule

Such harmony of action we are persuaded would, under God's blessing, be far towards restoring peace of the Church. This happy result would more clearly exhibit her spiritual character. The mutual relation of her various members would be more distinctly perceived; and our present divisions would readily acknowledge the special trust committed to us, as stewards of the mysteries of God, "for the edifying of the body of Christ." They would join with us in asserting, and, if need be, defending the rights and liberties of the Church, as true spiritual freedom of the Church. They would unite with us in a more trustful spirit, and, therefore, with a more ready will, in enlarging her means and strengthening her power to plant the great work she has to perform among the swarming multitudes of our great towns at home, and of our vast dominions abroad; and that Church which has so long received from the hands of God such mighty talents ought continues to be, yea, and become more and more, "a praise in the earth."—March 29, 1851

EARTHQUAKES AT RHODES.—Letters from Rhodes of the 8th ult. furnish details of the great earthquake which took place on the 26th of February. Rhodes has suffered considerably; the fortifications were completely destroyed, and scarcely a house was left without a trace of the calamity. Along the Anatolia more powerful villages have been destroyed, and several more have completely disappeared. At Marmorice five hundred houses were said to be a heap of ruins. Marmorice all the stone buildings have been knocked down. Two Turks have met and was lowed up. The village of Menteshe; and at Izendjik a mountain was removed into the port. The casualties are estimated at about one thousand souls. It is stated that earthquakes took place at Satalia and Tarsus

The first manufactory for spinning by machinery in Austria has just been founded at a place called Eipel, on the frontier of Bohemia and Silesia.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

Consols, after opening at the closing prices of the preceding week, and remaining unchanged during M nday, became rather firmer at a slight advance, on Tuesday. A partial cessation of speculation in the Share Market after the last account has tended to increase activity in the English funds, and has produced this result. Consequently, on Wednesday, another improvement of ¼ was realized, Consols having been dealt in from 99¾ to 99⅞ for Money. The latter quotation was steadily maintained on Thursday, with a firmer supporting to show firmness until the close of business. Exchequer Bills have slightly improved, and India Bonds are also rather in advance of last week's prices. Next to the official lists, the last prices were:—Consols, 99⅞; India Bonds, £1000, 99 dis.; under £1000, 63 p.; Consols for Account, 99⅞; Exchequer Bills, £1000, June, 53 p.; Small, June, 57 p.

Although operations have been numerous in the Foreign Market during the past week, fluctuations have been but trifling. Spanish and Mexican are the only stocks in which anything like a speculation has occurred. Mexican, on Monday quoted 21⅞ ⅞, on Tuesday received in 2-3, and on Wednesday declined to 20⅞ to 21⅛, quoting only 21 for money on Thursday. The arrival of lower prices from Madrid has been the cause assigned for this reaction. Mexican, on Monday, opened at 33¾, and continues to firmly maintain that price, quoting 34 in advance for Account. Peruvian has improved to 85¼ ex div. The Market appeared firm at the close of the week's transactions, 87¼ ⅞ quotation being offered for—Danish Bonds, 1825, Three per Cent., 76¼ ex d; Do., Five per Cent., 101; Russian Bonds, 38; Do., Deferred, 4½; Mexican, Five per cent., 1845, Ex Jan Coupons, 33¾; Do., Account, 34; Peruvian Bonds, Four-and-a-half per Cent., Account, 85¾ ex d.; Do., Deferred, 39½; Portuguese, Four per Cent., 35¾; Do. Account, 36; Do., Small, 35½; Russian Bonds, Four-and-a-Half per Cent., 98½; Spanish, Five per Cent., 1840, 21; Do., Account, 21¼; Do., Passive, 5¼; Do., Three per Cent., Account, 39¾; Dutch, Two-and-a-Half per Cent., 12 Guild., 58¾; Do., Four per Cent. Certificates, 90 ex d.

Shares have declined, speculation having for the present reached its limit. An improvement in the dividend-paying ones occurred, however, towards the close of the week, upon the revenue returns being published, showing an increased traffic. Foreign Shares have not receded in proportion, the low priced English Lines having, as might be anticipated, been the cause of, and first sufferers by, the reaction. The last prices are:—Aberdeen, 15½; Ambergate, Nottingham, Boston, and E. Junction, 8¾; Bristol and Exeter, 82; Caledonian, 13¾; Chester and Holyhead, 22¾; East Anglian (£25, l. and S. and D.), 4¾; Eastern Counties, 7¾; East Lancashire, 93; Great Northern, 97½; Do., Halves, A, Deferred, 58; Do., Halves, B, Six per Cent., 122; Great Western, 87¾; Lancashire and Yorkshire, 89½; Do., Quarter Shares, 18; Do., Fifths, 7⅝; Leeds and Thirsk, 17; London and Blackwall, 8¾; London, Brighton, and S. Coast, 85½; London and N.-West., 128; Do., Do., New Quarters, 29¾; London and S.-West. 88; Manchester, Buxton, and Matlock, 1⅝; Manchester, Sheffield, and Lincolnshire, 33; Midland, 61½; Ditto, £50 Shares, 21¾; Newmarket, 3½; North British, 10; North Staffordshire, 10½; Oxford, Worcester, and Wolverhampton, 18½; Shrewsbury and Birmingham, Class A, 3¾ dis.; Ditto, Class B, 2¾ dis.; Shrewsbury and Chester (Oswestry), 14½; Shropshire Union, 3¾ x d; South-Eastern, 25½; South Wales, 34; South Yorkshire and River Dun, 14½; York, Newcastle, and Berwick, Lancaster, 16½; Ditto, G.N.R., Purchase or Preference, 7⅝; York and N. Midlands, 26½. Lines Leased at Fixed Rentals: East Lincolnshire, Guar. Six per Cent., 3¾; Hull and Selby, 103; Leeds and Bradford, 98; South Staffordshire, 6¾; Wear Valley, Six per Cent. guar., 3¾. Preference Shares:—Aberdeen, 2 dis.; Ambergate, 1¾; Boston and Eastern Counties Extension, Five per Cent., 1¾ pm.; Ditto, No. 2, 1 pm.; Eastern Union, Scrip, Guar. Six per cent., 1½; Manchester, Sheffield, and Lincolnshire guar. shares, new, £10, 12; North British, 3¾ x d; Shrewsbury and Chester (New W. Mer.), Eight per cent., 1¾; York and North Midland R. and S. Pref., 9; Oxford, Worcester, and Wolverhampton (£15), Six per cent., 3¾. Boulogne and Amiens Railway, 4¾ pm. Orleans and Corbeil, 19; Rouen and Havre, 11¾; Versailles, Left Bank, 4¾; Luxembourg, 1¾. Ditto, 3¾; Orleans and Bordeaux, 4¾; Paris and Strasbourg, 16½; Rouen and Havre, 11¾; Sambre and Meuse, 3¾; Tours and Nantes, 6¾.

THE MARKETS.

CORN-EXCHANGE.—Up to our market this week the arrivals of English wheat, constwise as well as by land carriage and sample, have been on a very moderate scale, and greatly out of condition. Fine dry qualities have supported terms steadily, at an advance in the quotations of ¼ per quarter; and the value of the middling and inferior kinds has been well supported. The best foreign wheats have moved off freely, at extra rates; but the value of low samples has been well supported. Barley and seed barley has sold on rather higher terms. Oats, beans, and flour have moved steadily. The same may be said of malt. The current has run d first, at 6d to 1s per quarter more money. In beans and peas very little doing, but Indian corn and flour have commanded an improved inquiry.

English: Wheat, Essex and Kent, red, 36s to 44s; ditto, white, 38s to 5 s; Norfolk and Suffolk, red, 34s to 42s; ditto, white, 36s to 46s; grinding barley, 20s to 23s; distilling ditto 23s to 26s; malting ditto, 23s to 26s; Norfolk and Lincoln malt, 47s to 49s; brown ditto, 42s to 46s; Kingston and Ware, 50s to 56s; chevalier, 52s to 56s; Scotch and Lincolnshire feed oats, 18s to 21s; potato ditto, 19s to 23s; Youghal and Cork black, 15s to 16s; ditto white, 16s to 18s; cork beans, new, 25s to 28s; ditto, old, 28s to 30s; grey peas, 25s to 28s; maple, 29s to 32s; white, 24s to 28s; harlers 28s to 32s per quarter. Tares—Seeds for 31s to 40s; Suffolk, 28s to 32s; Stockton and Yorkshire, 26s to 32s per sack.—*Foreign.* Dantzig red wheat, 40s to 44s; white, 44s to 48s; Baltic, red, 38s to 42s; white, 42s to 46s; Pomeranian and Prussian, 40s to 44s; Danish and Holstein, 40s to 44s; Mecklenburgh, 40s to 44s; Petersburgh, 40s to 44s; Archangel, 38s to 42s; Marianopoli, 40s to 44s; Taganrog, 38s to 42s; Egyptian, 34s to 38s; Salonica, 36s to 40s; Smyrna, 38s to 42s; Trieste, 40s to 44s; Ancona, 40s to 44s; Leghorn, 40s to 44s; Genoa, 40s to 44s; Marseilles, 40s to 44s; Odessa

HANS CHRISTIAN ŒRSTED.—FROM A PHOTOGRAPH BY CLAUDET.

Spirit in Nature; being a Popular Contribution towards Illustrating the Spiritual Influences of Nature;" and in 1851 a second edition of the first part was published.

"Œrsted," writes a friend of his from Copenhagen, "was loved and esteemed by every one who knew him. Men of the highest rank were happy to associate with him, and held it an honour to be admitted to his family circle. He was learned, of the highest morality and honour, and the best spouse and father."

Œrsted did not long live to enjoy his beautiful residence; after a short illness, he died, surrounded by a numerous family, on the morning of the 9th of March, at the age of seventy-four, at the residence so recently conferred on him by his Sovereign. He married, May 17, 1814.

TESTIMONIAL TO MR. C. MITCHELL.

On Friday (the 21st ult.), a massive silver tea and coffee equipage and salver were presented to Mr. C. Mitchell. The testimonial was purchased by upwards of 200 authors, proprietors, and editors of the provincial press, with a few private friends. The subscription [illegible] amounted to £170) was originated by some gentlemen connected with the "country press," who felt deeply sensible of the services Mr. Mitchell had rendered their order in various ways, particularly by the "Newspaper Press Directory," and in establishing a "Literary Agency," by means of which a regular intercommunication between London authors and publishers, and the proprietors and editors of the provincial journals, is kept up. It was also intended to mark their sense of his personal urbanity and kindness.

The presentation took place at the Essex Hotel, Bouverie-street, Fleet-street, in the presence of a select circle of friends; and the day appropriately chosen was Mr. Mitchell's birthday. Mr. T. Henderson, of the *Portsmouth Guardian*, occupied the chair; and the testimonial was presented by Mr. F. G. Tomlins, honorary treasurer, with an address in very good taste; to which Mr. Mitchell replied in feeling acknowledgement.

The Plate, which is of excellent design and manufacture, by Mr. Joseph Angell, Strand, consists of a silver coffee-pot, tea-pot, sugar-basin, milk-jug, and cream-ewer, all richly chased in arabesque style, displaying foliage, flowers, and acanthus scroll; also a silver tea-kettle and stand to match; and a nineteen-inch salver, surrounded by a light Grecian pierced border, and enriched with an engraved centre bearing the following inscription:—

Presented, with a tea and coffee service and kettle, to Mr. CHARLES MITCHELL, of Red Lion-court, Fleet-street, and Edith-grove, New Brompton, by upwards of two hundred authors, proprietors, and editors of the newspaper press of the United Kingdom, and a few private friends, in testimony of their high appreciation of his zealous aid, and of his commercial talents and probity.—March 21st, 1851.

PLATE PRESENTED TO MR. C. MITCHELL.

The same inscription is engraved upon a shield on the side of the tea-kettle. The weight of the entire service is upwards of 270 ounces.

INTERIOR OF THE NEW CORN-EXCHANGE, NORTHAMPTON.

In our Journal of last week, we described the suspicious circumstances which led to this handsome building having been erected for the corn trade and the people of Northampton, in the heart of which it is placed.

The front, which is devoted to the purpose of a Corn Exchange, consists of a Hall, nearly of the same dimensions as the Music Hall at Birmingham; the length being 140 feet, and the width 65 feet. The height is 59 feet—6 feet less than the Birmingham Hall. The roof is elliptical, an improvement in appearance, and probably also in respect of sound—no unimportant matter in a building likewise destined for musical meetings on a large scale. No galleries, as in the case of the Birmingham Hall, mar the general effect, which is light and cheerful.

The Building was opened last week for business, and a sort of housewarming took place on Wednesday evening, when M. Jullien, with his attractive corps of performers, gave a concert, which drew together a crowded audience. But a more imposing inauguration of the Exchange is contemplated, in the character of a Musical Festival, on Tuesday and Wednesday in Easter week, under the able superintendence of Mr. Charles M'Korkell, the organist of All Saints Church, Northampton. It is to comprise the performance of the "Creation, the "Messiah," and a miscellaneous concert, on a scale hitherto unattempted in Northampton. Upwards of thirty years have elapsed since an oratorio was performed in this town, when the Church of All Saints was then used for the occasion. Objection has of late years been made to the appropriation of a sacred edifice for such a purpose; and the present magnificent Building now affords an opportunity for the revival of first-class musical performances, which it is to be hoped will not be overlooked.

The architects are Mr. Hull (not Hall, as stated last week), of Northampton; and Mr. Alexander, of London.

MR. CALVERT, LATE M.P. FOR AYLESBURY, FROM A PHOTOGRAPH BY KILBURN.—(SEE PRECEDING PAGE.)

THE ILLUSTRATED LONDON NEWS

No. 478.—VOL. XVIII.] SATURDAY, APRIL 12, 1851. [SIXPENCE {WITH SUPPLEMENT, GRATIS.

THE AMENDED BUDGET AND THE INCOME-TAX.

THE Chancellor of the Exchequer has amended his intolerable Budget, and patched it into a tolerable one. The House of Commons, with no great love either for the Minister or for his financial projects, has so far yielded its confidence to him as to affirm, by a majority of 278 against 230, that the Property and Income-tax, which expired on the 5th of April, should be re-imposed upon the country for another period of three years. The Executive and the Legislative powers are therefore to be considered as once more in harmony with each other upon the great and essential question of Finance, and to have no differences except on matters of detail. It so happens, however, that these matters of detail are of such urgent public importance—notwithstanding the political complications which render it inexpedient for the Protectionists to come into office, or for the Whigs to go out—as to demand for the Budget a more rigid scrutiny than men in Parliament seem disposed to give it.

The Protectionists, with a view to the ultimate adoption of their policy by the next Parliament, resolved to oppose the re-imposition of the Income-tax. They allege, what all men feel, that it is an unfair and oppressive burden—that it was placed upon the neck of the property and income of the country for a specific purpose—that that purpose has been fulfilled—that there exists a surplus of revenue over expenditure—and that, therefore, it ought to be forthwith repealed to such an extent as the surplus will allow. Such was the sense of the motion of Mr. Herries on Monday night. The Government, on the contrary, maintained that, although the tax was grievous, it was necessary; that the purpose for which it was imposed was still incomplete; that the remission of import duties, which, without a Property-tax, could not have been effected, had operated so advantageously as to justify further experiments in the same direction at the same cost; and that, therefore, the Income-tax ought to be retained. The House of Commons, to this extent, agreed with the Ministry; and the Protectionists have been told in a decisive manner that the policy of the late Sir Robert Peel is not to be reversed; and that not even the unpopularity and injustice of the Income-tax, as at present levied, are sufficient handles to screw the country back again from a syste of partial Free Trade into one of Protection.

But although, by this division, the Ministers have settled matters with their Parliamentary opponents, they have not settled matters with the country, and their Budget remains open to criticism, and, it is to be hoped, to amendment. The Chancellor of the Exchequer, in introducing it, expended much time and trouble in declaiming against the cruelty and injustice of breaking faith with the public creditor, and broke heaps of straw lances against the imaginary giant of a National Repudiation, which was not present to any one's fancy but his own, and which had no existence even in his own sober thought. Our over-prudent and over-scrupulous Minister thinks it right, it would appear, that the nation should begin to pay off the capital of its debt, and would rather devote his surplus to this purpose than to any other. When the Funds are at 96¾, he would rather pay a million or two borrowed when the Funds were

THE FIRST CAST-IRON HOUSE ERECTED AT NEW YORK.—(SEE NEXT PAGE.)

Ans 22 april

BRIDGEWATER BRIDGE.—VIEW TOWARDS MOUNT [illegible].—(SEE NEXT PAGE.)

at 7s. than repeal such taxes as the Excise duty upon paper, and many others which impede the industry of the people. The impolicy, not to say the downright folly, of such an investment of the surplus, is apparent to every man who is engaged in any trade, profession, or business in the country, but is not visible to the consummate wisdom of Sir Charles Wood.

But Sir Charles, retaining all the while his own conviction, that the present generation should bear all its actual taxation, not simply to pay the interest of the debt, which it can afford to do, but the capital, which it cannot, has so far yielded to the voice of public opinion as to consent to some reduction of the public burdens. The Window-tax is to be abolished, and a House-tax of ninepence in the pound on the rental on private houses, and of sixpence in the pound on shops and farm-buildings, is to be substituted. Considered with relation to the public health, this concession is a great boon. The most oppressively burdensome of house-taxes would be preferable to the hateful and cruel Window-tax, and so far all classes will be ready to admit that the Chancellor of the Exchequer has acted wisely. But why he should, in this respect, claim credit as being the friend of the people, "in the ordinary sense of the word," we are at a loss to understand. "He had," he said, "sought to give the masses cheap food and cheap clothing, and, those objects having been accomplished, he had sought to improve their dwellings. For their sakes he had, last year, reduced the duty on bricks, and this year he had proposed to reduce that upon foreign timber and upon windows; and when that should be accomplished, he should consider that he had closed his career well." That the "people" are much, if any, the better for the peddling abolition of the Excise duty on bricks, we greatly doubt; or that they—taking the word in the sense in which the right honourable gentleman himself employed it—will be any the better for the abolition of the Window-duty, we still more positively deny. Unfortunately, the great mass of the "people" of these realms live in houses too small to be taxable. Even the Window-duty—which only fixed itself on houses having more than eight windows or openings—allowed the dwellings of the multitude to go free; and hundreds of thousands of houses or hovels were built for their occupation, with less than that number of windows, on purpose to avoid the duty. These houses will not be rebuilt, because the Chancellor of the Exchequer has substituted a house-tax for a window tax; and the benefit to the people in this repect will be best expressed by the simple word that the utterly bankrupt trader inserts in his schedule of effects—"NIL." And while the new house-tax has in this respect no merit, it has a serious defect in the exemption from duty of all houses of an annual rental below £20. "There needs no ghost," and no great power of prophecy, to predict, that after the passing of the Budget, the rental of £20 houses will fall one shilling, and no more. If the masses of the people were the owners of their own houses, this exemption would be a boon; but house property of this kind is owned by rich men, and often pays a better return for the money invested than houses of a more expensive character. Instances are not rare, in which the owners of the filthiest courts, lanes, and alleys, swarming with vice, crime, and beggary, derive large incomes from such property. They will have reason to thank the Chancellor of the Exchequer for his liberality in taking them from a burden which he has imposed upon others; but the gratitude will rest with them, and not extend to any other section of the community.

The people of this country were accused by Lord Castlereagh of "an ignorant impatience of taxation." Succeeding Ministers have repeated the complaint; and Sir Charles Wood, if he have not exactly expressed it in words, has shown—on more than one occasion since he has held the post which he is incompetent to hold with honour or efficiency—that he has fully participated in the feelings of his predecessor. The truth is, that the people of this country do not, and never did, object to a fair and necessary taxation, and are only impatient of it when it is unjust, and prevents the due expansion of their trade and industry. The justice of the principle of a direct tax upon property and income is universally conceded by those who pay it; and it is only the obstinacy of the Government, which persists in confounding realised property with precarious income, that causes the tax in its present shape to be so hugely unpopular. So fair is the principle of a property-tax, that, if the Government proposed to add 5 to all income-taxes whatsoever, without reference to the arbitrary line of £150 per annum drawn by Sir Robert Peel, the country would cheerfully consent to the burden, upon two conditions. The first would be, that a difference should be made between realised property and uncertain income; and the second, that the large revenue thus raised should be used as Sir Robert Peel proposed to use it, in untaxing the necessaries of life, and in removing impediments to the profitable employment of the people. It is because Sir Charles Wood is not equal to this task, that we object so strongly to his amended Budget, and consider it to be—although much superior to his first financial abortion—utterly unsuited to the wants of the people, and to the state of the country at the present time. It is in vain for him to boast that his principle has been to benefit the mass of the working classes, "remembering that Government was instituted for the advantage of the many, and not of the few;" or to assert that this has been the key of all his acts, and that he has never sought to study class interests. He has egregiously failed as a financier; and the sooner he retires into a position in the Ministry better suited to his talents, the better for the Ministry, and the better for the country. He has no business to talk of paying off a fraction of a farthing in the pound of the National Debt, when a quarter of a million of people are deprived of remunerative employment by the Excise duty on paper, and when, perhaps, as many more are prevented from getting work by the Excise duty on soap. He has no business to retain the Income-tax without at least attempting to make it just; and he has no right to call or think himself an able and wise Minister, when a surplus, which would have been another man's opportunity, has only proved to him an annoyance and an embarrassment.

IRON HOUSE-BUILDING IN NEW YORK.

ALTHOUGH the construction of houses with iron originated in England, the Americans appear to open a market for our specimens of this novel mode of building. Several cast-iron houses, we learn, have recently been erected in New York, some of which are as high as seventy feet from the street pavement to the roof. Some are of handsome design, and so contrived that a lawn can be removed at pleasure.

We have engraved the great Iron-house Factory in New York, described as "the first Cast-iron House erected and invented by James Bogardus, builder of cast-iron Houses, and manufacturer of the Eccentric Mill, &c., corner of Centre and Duane-street." It consists of four floors: the windows are slightly recessed; between each is a column, supported by a kind of fascia; the upper floor being surmounted with a bold entablature. The panels throughout the building bear the Transatlantic star-emblem.

A Correspondent, who has just returned from New York, states that the price of Iron House-building in that city is about £20 per ton; whereas the cost in London is much higher in England.

Among the large specimens shipped last year, was a large hotel for Fort Natal; two spacious houses for California, from Manchester; and another for the new land of gold, from Birkenhead, in one of the rooms of which 200 persons could dine.

BRIDGEWATER BRIDGE AT HOBART TOWN.

THIS Bridge has lately been constructed across the river Derwent, in Van Diemen's Land, and serves to connect the line of communication between Hobart Town and Launceston, which had previously been effected by a tedious, and at times a dangerous, ferry. The river is spanned to a length of 2300 feet by an earthen embankment or causeway, which was constructed by the gangs of refractory prisoners during the administration of Sir George Arthur. Early in 1847 Messrs. Thomson and Blackburn submitted designs for the bridge to the Government, when their tender to perform the work for £9500 was accepted. The remainder of the year was spent in procuring timber, most of which is whole—that is, each piece has been a separate tree; and when it is known that upwards of one thousand such timbers, exclusive of the sawn timbers of small scantling, have been consumed in the structure, many of them from 70 to 100 feet long, and procured chiefly from the Dromedary Mountain, at a level of 1500 feet above the sea, and seven miles from the works, the amount of labour and skill which has been employed in procuring them will be in some degree estimated.

The works were of the most laborious description. First, roads had to be cut into the gullies on the steep sides of the mountain, where the proper timber was to be found; so that when felled it might be removed. In two gullies, the bottom and sides were lined with timber, forming a trough or shoot, into which the timber was laid at the top, and conveyed by its own gravity to a level shelf on the mountain side at the bottom. The timber was then placed on carriages and drawn along a steep and irregular road for about one mile, to another shoot made on the face of a very steep spur of the mountain: here the trees were dislodged from their carriages and placed in the shoot; and again set in motion and carried by their own gravity to the bottom of this second shoot, a distance of half a mile, and through a level of about 800 feet. The passage of the trees down these shoots has been described as a very grand sight. They were then on a road sufficiently flat to admit of the working of bullocks, who conveyed them to the water's edge, a further distance of about three miles, whence they were towed by boats to Bridgewater, a distance of about three miles still further. But to get them on shore at this point was now to cut a channel through a mud flat of about half a mile, so as to procure a sufficient depth of water.

On the 1st January, 1848, the works were commenced at the Bridge, which was finally completed and opened on the 26th April, 1849.

The bottom of the river across its whole width is composed of mud, varying from 5 to 15 feet deep, and under it is a bed of clay of unascertained thickness. The depth of the water, in the channel, or deepest part of the river, is from 20 to 26 feet.

The anticipated difficulty of the work lay in driving the piles so that they should not shift their position; but, after a month or so, they became perfectly firm and still, the clay bed in which they were placed adhering close to them; it, in the first instance, having been disturbed by the process of driving. In nearly all instances, the depth of driving was 40 feet, and in some as much as 60 feet.

The supports of the Bridge consist of piers, 8 feet broad, composed of 12 piles each in a double row, 10 of which carry the platform, and 2 are for the purposes of fender-piles. The intervals form 22 bays, of 30 feet span each, of an abutment of 28 feet long, on the southern end adjoining the causeway, of 28 piles; and on the northern end, of a pier, carrying the moving parts, or rolling bridge, of 100 feet long, consisting of 98 piles. The total number of piles driven in the Bridge is 362. The roadway is borne on longitudinal beams, five in breadth, carried from end to end by the heading-pieces secured on the piles, and strengthened by a system of strutting between the several bays or openings.

At the third bay from the northern shore, which has been made 35 feet in the clear opening, the navigation of the river is secured by the adoption of a moveable platform, or rolling bridge, which is readily removed, whenever occasion requires, to allow a vessel to pass through. It opens in the following manner:—On the pier provided for the purpose are fixed a series of large flange wheels, carried on strong timber framing; upon these the moveable part of the Bridge is run in or out. Iron rails being fixed on the underside of the longitudinal beams, which traverse upon the wheels as they turn. The space which is thus occupied by the rolling bridge, when run in, is filled up when it is run out of across the opening, by platforms upon wheels, working laterally on railways at each side, right and left. The breadth of the roadway through these moving parts is considerably narrowed, being only 12 feet, and admitting but of one vehicle to pass at a time. The method adopted for moving this Bridge is by powerful crab winches fixed on the framing below, and working moveable toothed racks, which draw the platforms apart.

The rolling bridge is formed by large timber trusses placed on either side, and further strengthened or stiffened by suspension chains from a centre tower or framing erected on the Bridge for the purpose. A double row of fender piles is driven (in addition to those already described as belonging to the Bridge) at this opening, extending up and down the stream for a distance of 175 feet, upon which is placed a stage, which answers the purpose of a towing or guiding-path for vessels while passing through the opening.

The length of the Bridge from the end of the causeway to the northern shore is 1010 feet, with a breadth of roadway of 24 feet. The height of the roadway above the level of high water mark is 6 feet, while the greatest variation in the level of the neap tide is about 3 feet. The whole work, extending to a length of 3310 feet, or nearly three-quarters of a mile, is the largest ever attempted in the Australian colonies. The cost of the Bridge completed, including incidental expenses, has been £7580

NAVAL AND MILITARY INTELLIGENCE.

THE COMMAND OF THE WINDWARD ISLANDS.—Major-General Wood, C.B., proceeds by the packet of the 17th instant to Barbadoes, to assume the command of the troops in the Windward and Leeward Islands. Captain G. Black, half-pay Retired Staff Corps, is to be retained in his present appointment as military secretary; and it is rumoured that Captain Deshon, of the 48th, will proceed with him as aide-de-camp.

THE CANTEEN AT THE HORSE GUARDS.—We announced a short time since that the canteen at the Horse-Guards had been abolished, and the rooms appropriated for the use of the recruiting department. We now find that the field-officers of the Foot Guards, who had a vested interest in the letting of the building, are to receive a compensation of £314 for the ensuing year, for the loss sustained on account of rent.

Captain Tulloch will leave England on the 12th instant, for Canada, for the purpose of becoming superintendent of the pensioners resident in North America. The Commander-in-Chief has declined to promise him to a majority, but has no objection to local rank being conferred upon him.

The Lieutenant-General commanding the forces in Ireland has been pleased to approve of the county of Mayo, in the Dublin district, being added to the Limerick district

AUSTRIAN OFFICERS IN ENGLAND.—Certain officers of this army were presented at the last levee by the Austrian Minister, who had been ordered by their Government to inspect into the interior economy of the British army, as regards barracks, rations and other matters, with the view of ascertaining what amount of improvement system is susceptible of improvement. The officers have received every assistance from the military authorities in this country.

COMMANDS VACANT.—The death of Major-General Sir Dudley Hill leaves vacant one of the divisional commands of the Indian army. There are among the best staff offices in the gift of the Commander-in-Chief, the salary being about £6000 a year, and the tour lasting for four years. The duty is of a nature to require the services of active officers, of whom, thanks to the delayed brevet, there are not too many now available. There are now at the disposa. of the Commander-in-Chief three regiments—the 37th, vacant by the death of Sir Alexander Duff; the 76th, by the death of Sir Dudley Hill; and the 77th, by the death of Sir John Macleod.

DEATH OF THE CAPTAIN OF THE SOUTH ATLANTIC.—Letters dated Washington, March 10, publish the following passage from a letter of Lieutenant John R. Goldsborough, United States navy, formerly assistant in the coast survey. It is dated United States steamer *Saranac*, Cape Town, Cape of Good Hope, December 26, 1850.—"During our passage from Rio de Janeiro to Saldanha Bay, Cape of Good Hope, being in lat. 26 21 S., and long 29 17 W., we sounded, and obtained bottom at the depths of 3100 fathoms, or five and a half miles. Our sounding apparatus was a 32 lb. shot, slung with wire, and attached to a small line of 9000 fathoms long, and sufficiently strong to bear a weight of 60 lb. The soundings were as good and fair as any I have ever seen obtained, the line up and down and as taut as it could be; and, when attempting to haul it on board, after ensuring soundings, it parted about 25 fathoms from the surface. The time occupied in sounding is as one hour and five minutes."

REVENUE OF THE DUCHY OF LANCASTER.—The gross income of the Duchy of Lancaster for the year ended Michaelmas, 1850, was £37,124 6s. 11d. The following are the principal items of disbursements:—Salaries, and allowances of principal officers, £2340 7s. 10d.: ditto agents, £193: stewards and bailiffs, £381: annuities and retired allowances, £848: donations and other charities, including stipends and eleemosynary allowances, £1230: law charges, £1519: surveys, 1857: labourers' wages and office expenses, £3772 11s. 8d.: purchase of stock, £1673: payments made out of the revenue to her Majesty's private purse, £19,000: balance, £9402.

EXPENSES OF PROSECUTIONS.—On Monday, the Government bill, as amended in committee and on re-commitment, to amend the law relating to the expenses of prosecutions, and to make further provision for the apprehension and trial of offenders in certain cases, was printed. There are now 21 clauses in the intended Act, which is only to extend to England and Wales. Several new clauses have been added, one of which is to give parties costs in cases of common assault as in cases of felony. It is provided that clerks of the peace may be paid by salaries instead of fees.

FOREIGN AND COLONIAL NEWS.

FRANCE.

This week has again witnessed ineffectual attempts on the part of Louis Napoleon to construct an Administration of a permanent character. The last combination of political leaders mentioned consisted of the former Ministers, MM. Baroche, Fould, and Rouher, with MM. Bernard Say, de Crouseilhes, and other Legitimists. Various reasons, all different from each other, and some of a very improbable nature, are assigned for this (the fifth) failure to form a Ministry. A cowardly fear of consequences in case they should be unable to prevent the Reds coming into power, seems, however, to be the real cause why public men shrink from office, at a time when the political horizon appears clouded, menacing, and uncertain. An opinion seems to gain ground that the President, after so many unsuccessful endeavours to form a Parliamentary Ministry, will re..ll the Barochs Government to power. One cogent reason for this opinion is, that those who had office provisionally have expressed a great disinclination to retain their portfolios much longer; because the stagnation of trade, and consequently the number of operatives out of employ, arising out of this unsettled state of things, threaten confusion and danger, the responsibility of which they do not feel disposed to share, as they were no parties whatever to the circumstances which have placed the country in its present critical condition.

It is said that the mutual friends of the President of the Republic and General Changarnier are endeavouring to effect a reconciliation between these two individuals, which is likely to prove successful.

The publisher and printer of the report of the banquet of the French refugees in London, on the 24th February, have been condemned, the one to six months', the other to three months' imprisonment, and 1000 francs fine each.

The *Moniteur* contains a decree for the nomination of a committee of thirty-two persons to attend the London Exhibition. This committee will adjudge prizes to the best French productions, and its duty will be to draw up a report of the advances made by other nations in different branches of manufacture, with suggestions as to the means of meeting them by French competition.

The bill for organising the National Guards passed its first reading on Tuesday evening, by 433 to 276.

The Assembly is to be adjourned from Saturday, the 12th inst., for eight days.

A Socialist, of the name of d'Angellers, formerly editor of the *People*, the *Réforme*, and the *Vraie République*, died in the maison *de santé* of Dr. Dubois, rue du Faubourg St. Denis, on Monday last.

M. Napoleon (Jerome) Buonaparte has sent in his resignation of the command of the second legion of the National Guard of Bastiea.

SPAIN

Advices received by telegraph announce that the Queen of Spain dissolved the Cortes on Monday last, the 7th inst. A new election is to take place in three months. M. Bertran de Lys, Minister of Foreign Affairs, is appointed Minister of the Interior *ad interim*. The circumstances which led to this important resolution of her Majesty are not communicated.

GERMAN STATES

After all the negotiations and threats of war which have attracted the attention of Europe, for the last six months, the proceedings of the German Powers in their attempts to construct a practical Federal Constitution for the whole of "Fatherland," matters have ended just where they began, and the vicious circle has been completed according to true German theory. Prussia at last consents to return to the old Diet of 1815. The question of the Presidency of the Confederation, which was pending, is settled by a reference to the fifth article on the Bundesact, which awards the presidency to Austria.

At Berlin, a police ordinance, dated the 5th of April, and signed Hinckeldey, has been issued, and addressed especially to the Minister of Westphalia, commanding of the conduct of strangers, especially literary men (Germans), who, having permission to reside in Prussia, endeavour by their writings to excite the people against the Government. The police threaten these persons with prompt dismissal from Prussia, by virtue of the edict of June 22, 1817, or of Dec. 31, 1842, if they abuse their privilege of residence.

EGYPT.

Recent accounts from Alexandria state that a revolt had broken out in the Sennaar; the Pacha who commanded in that district, and the Egyptian troops under his orders, have been massacred. Great preparations were making at Cairo to despatch troops to put down the disturbance; but the enterprise appears to be difficult, from the state of exhaustion of the country, and the difficulties which have arisen with the Porte. As to the latter, Abbas Pacha hopes to succeed more down by the mission of Izmir Emin, who has recently been despatched to Constantinople. He will, however, have to struggle against the active and intelligent influence of Artim Bey, the disgraced minister of the Pacha of Egypt, and since his most implacable enemy.

The immediate formation of a railway across the Isthmus of Suez is officially announced. Abbas Pacha, who is said to be very much under the influence of the Con-ul-General of England, has just positively declared that he will commence the work immediately. Half the people employed on the line are to be English.

UNITED STATES

The accounts from New York this week communicate the occurrence of another of those fata. catastrophes which we notice lately as happening with extraordinary frequency at present. Upon the Ohio, the steamer *Lexell*, when twenty miles above Louisville, came into collision with the steamer *Pilot Boy*, on the 24th ult. The *Lexell* sank fifteen minutes after the accident, and fifteen of those on board were drowned. The *Pilot Boy* sustained but slight injury. The *Lexell* was loaded with 150 tons of hemp and rails, and with her cargo is a total loss.

The Hon. Mr. Morris, Postmaster-General of Canada, has arrived at Washington, for the purpose of negotiating a postal arrangement with the United States Postmaster-General, for the free passage of letters both ways across the lines, whether prepaid or not.

The Indian war still continues their depredations throughout northern Mexico, the inhabitants being entirely unable to cope with them.

By this arrival we have also late accounts from the Pacific; but the only news of interest from that remote region is given by the *Alta Californa*, which states that the commander of the French frigate *Serveuse* had demanded from the Government of the Hawaiian Islands the payment of 25,000 dollars, as communication for certain collected as the French authorities aver, contrary to treaty stipulations. It is the King (Kamehameha) refused to pay, and declares that he knows himself under the protection of the Governments of Great Britain and the United States. The French squadron, consisting of three vessels, landed its men, and marched them through the town, which act he repeats daily. He has prevented several Hawaiian vessels from proceeding to sea, but does not disturb the commerce of other nations. This is the substance of the information, for the perfect accuracy of which the *Alta California* does not vouch.

FRENCH REFUGEES IN ENGLAND.

The following letter has been published:—

"71, Dean-street, Soho-square, London, April 7.

"We, the undersigned French Republicans, refugees resident in London, lay before the English people the following declaration:

"The expulsion of the Republican exiles from Switzerland on the threats of Russia, Austria, and Prussia is now sought to be accomplished, as regards England by trickery on the part of these Powers.

"But England who had no idea of such a proceeding, would be in this case ruled by the foreign Powers.

"There is a coincidence, however, which is very remarkable. At the moment when the Governments of Europe demand of the British Cabinet that we shall be put out of the pale of humanity, the mercenary journals of the counter-revolution of France reckon its leader accustomed violence against us; and two individuals of the most equivocal antecedents accuse us of its basest and most detestable designs

"Who are these two individuals? One of them is a Frenchman, who is not a political refugee, although he has assumed that title, and whose coming to this country has not, to our knowledge, been satisfactorily accounted for. This individual, after having published a series of police articles against us, those of a most odious character against us, has since, in an official examination made by order of the superior authorities, been obliged to deny their truth, which denial has been officially recorded in a formal report addressed to the Government.

"The other is a native of this country, who has forfeited the confidence of the people, party whose cause he pretends to espouse, and who seeks to recover his lost popularity by circulating the most revolting and recently forgotten intersations. hatreds. The antecedents of this individual were, however, so well known to us, that not one among us would enter in to any communication with him, notwithstanding all the advances he made to that effect, after which we no doubt our inexplicable crime in his eyes; but the English public will have no difficulty in divining that, without our being either aware ins or incor diaries, we may be thankful to be justified in the eyes of honest men such a false democrat as Mr. Feargus O'Connor

"We, therefore, declare in the most solemn manner, that whosoever attributes to us, the French Republicans, refugees, now residing in London, designs such as those individuals have attributed to us, or in any manner similar to them, is a vile slanderer.

"We make this solemn declaration, not because we dread to be driven from the refuge we have found in this country, for the revolution which has had power in France may rely upon a great portion of the people shedding a drop of blood, without committing an act of violence, without imprisonment, and without confiscation—the world will never believe that we are assassins or incendiaries.

IMPERIAL PARLIAMENT.

(Continued from page 281 of the Supplement.)

HOUSE OF LORDS.—Tuesday.

THE EAST INDIA COMPANY.

Lord Montegle asked, if any objection would be made to the production of the correspondence which had taken place between the Government and the East India Company, with reference to the claim by the latter for the payment of £400,000, alleged to be due on account of expenses incurred in the late Chinese War.

Lord Brougham said there would be no objection.

COUNTY COURTS

Their Lordships went into committee on the County Courts Further Extension Bill.

The Lord Chancellor objected to several of the clauses, which imposed upon the County Courts duties which they were wholly incompetent to perform. The effect would be to introduce great variety in the law, as administered in different parts of the kingdom. This combined the blunder of making the Judges of County Courts arbiters of causes which required all the learning and experience of Masters in Chancery

Lord Brougham defended the clauses

Lord Cranworth gave a modified assent. He thought there were many matters which could be equitably and satisfactorily decided by the Judges of the County Courts.

Ultimately some of the clauses objected to were withdrawn, and one (the 30th) was rejected on a division. The other clauses passed through committee, and their Lordships adjourned to-day minutes to nine o'clock.

HOUSE OF COMMONS.—Tuesday.

ST. ALBANS ELECTION

On the motion of Mr. E. Ellice, jun., it was ordered, that two witnesses, named Shaw and Birchmore, whose evidence was required by the St. Albans Election Committee, and who had absconded, having been thereby guilty of a breach of privilege, the Speaker's warrant do issue for their being committed to the custody of the Sergeant-at-Arms.

THE ADULTERATION OF COFFEE.

Mr. T. Baring begged to ask the Chancellor of the Exchequer whether he proposed to withdraw or make any change in the Treasury minute of the 31st of August, 1840, sanctioning the adulteration of coffee?

The Chancellor of the Exchequer said it was not his intention to alter the Treasury minute, or the practice of the Excise with respect to the mixture of chicory with coffee.

THE EASTER RECESS.

In answer to a question by Mr. H. Baillie, Lord John Russell said he did not find that there was any order of the day standing for Wednesday the 16th inst., and he should therefore, on Tuesday the 15th, move that the House be adjourned until Monday the 28th.

CHURCH RATES

Mr Trelawny moved for the appointment of a select committee to consider the law of church-rates, and the difference of practice which exists in various parts of the country in the assessment and levy of such rates, and to report their observations to the House. The hon gentleman spoke at some length in support of his motion, but was quite inaudible in the gallery.

Mr. Hardcastle seconded the motion.

Lord John Russell said he thought it highly desirable that the question of church-rates should be settled; or, if that could not be done, that at all events the law upon the subject should be improved. With these opinions he certainly should not oppose the motion for a committee of inquiry upon the subject.

Sir R. Inglis looked upon the motion with great dislike, although he would not go the length of dividing the House upon it. He defended the charge of persecution alleged against the system of church-rates, and regretted that Lord J. Russell had not explained the motives which actuated him in agreeing to the committee

Mr. Baines contended that the system was one of persecution, and referred again to the circumstances connected with the seizure of the furniture of a meeting-house belonging to the Society of Friends in Bishopsgate-street as a proof of the fact

After some observations from Mr. A. Hope, Mr. L. Heyworth, Mr. Leonard, Mr. Cowan, and Mr. Fox Maule,

The motion was agreed to.

LODGING HOUSES FOR THE WORKING CLASSES

Lord Ashley moved for leave to bring in a bill to encourage the construction of lodging houses for the working classes. The noble Lord referred to several documents to show the extent to which fever and other complaints prevailed in the badly-ventilated rooms in which the lower classes of the people reside in the densely-populated districts of the metropolis and other large towns. The accommodations for the migratory portion of the population were still more detestable. To remedy such a deplorable state of things he proposed the adoption of a bill precisely similar to the Baths and Wash houses Bill, which had proved such immense benefits to the working classes. A majority of two-thirds of the parishioners would have the power of bringing the bill into operation in their parish; and with the power of borrowing the requisite funds, houses in correct the evils he complained of, and also to sell those houses, should they at any time become unnecessary. The houses to be built on the plan of the model lodging houses, which were found to yield a fair remunerative, all rents rather less than those paid for the filthy and ill-ventilated rooms now occupied by labourers. While the physical condition of the people was so low, it would be impossible to improve their moral condition materially; and he did not anticipate that they could effectually improve their physical position until they should finally succeed in sweeping away altogether their present residences: for as long as they remained standing people would be found to flock into them

Mr. Slaney seconded the motion.

Mr. Hume also supported the motion, contending that the Legislature should take shame to itself for not having long since directed its attention to the subject.

Sir G. Grey gave a very willing assent to the introduction of the bill, although, as being permissive only, they could not hope it would effectually cope with an evil of such magnitude. The noble Lord had, however, himself suggested a means of co-operation by associations, which he believed would be a means of effecting more than they could hope to do by any direct legislation.

After some observations in support of the measure from Mr Stafford, Mr. W. J. Fox, Lord G. Hamilton, and Mr Labouchere, leave was given to bring in the bill, and at a later hour it was introduced by the noble Lord and read a first time

STATE OF DISTRESS IN IRELAND.

Sir H. W. Barron moved that the House should resolve itself into a committee, to take into consideration the state of Ireland, with a view to relieve the distress there existing. He proceeded to contrast the state of Ireland in 1845 with its present condition, and said, that, in the former year, the poor-rate amounted only to £310,000, which last year it amounted to £1,871,000. This was not the worst of the matter, for he found, since the year 1845, that 1,100,000 acres of arable land had gone out of cultivation, and the exportation of swine and sheep had decreased by £1,500,000 sterling in value. The very land itself, which, in 1845, would have sold for 24 years' purchase, would now scarce y bring 14, while the value of house property in towns had fallen 60 per cent. Trade was utterly destroyed, and death and emigration thinned the land of its inhabitants. All this distress, incredible by Englishmen as to its fearful extent, was entirely the result of bad legislation. The facts he had stated fully justified the appointment of the committee for which he asked

Sir I. O'Brien defended the chairman of the union of Kilrush from the attacks made upon him in that House, and also from the attacks made upon the same gentleman by the Rev. S. G. Osborne in the *Times* newspaper.

Sir W. Somerville contended that within the last two or three years there had been a progressive improvement in the miserable condition of Ireland, as was sufficiently evident from the poor law returns. In 1848, the expenditure for the poor was £425,000; in 1849 it was £905,000; and in 1850 it fell to £247,000 By a reference to the numbers on the relief list, a similar result was discernible for in 1848 the number was 585 000; in 1849 it was only 250,000, and in 1850 it was reduced to 200,000. With respect to the amount of cultivated land in Ireland, he quoted the returns of Captain Larkin to show that, in point of fact the total amount of stock land had increased within the last year. He wished he could state that Ireland was in a prosperous condition, but this he could not. He could only say, that within the last two years there were strong symptoms of improvement. In consequence of the letters of the Rev. Mr. Osborne, he should feel it his duty to lay on the table the reports of the poor-law inspectors, and also the returns of the poor-law guardians with respect to the attacks he had made upon them. They had already every information it was possible to obtain as to the state of Ireland, and he therefore hoped the House would negative the motion of the hon Baronet, the only effect of which would be to raise hopes which never could be realised.

Mr Reynolds supported the motion.

Mr. M. J. O'Connell was sorry that the right hon. Secretary for Ireland had refused his assent to the motion, though he could not agree with the extreme views taken by Sir H. W. Barron and Mr. Reynolds on opposite sides of the question.

Mr. S. Crawford moved as an amendment that words should be added to the effect that the committee should specially consider the law relating to landlord and tenant.

Sir H. W. Barron said he would not object to the amendment.

Lord J. Russell was desirable that a committee of the whole House could entertain the motion as amended, and he was quite sure that no useful result could follow.

After some observations from Mr. French and Sir H W Barron in reply, The House divided, and the numbers were—

For the motion	.. ..	.. 129
Against it	.. ..	.. 138
Majority against it	.. .. ..	.. —9

The announcement of the division was received with loud cheering from the Opposition benches.

SEVERAL AMENDMENTS LATING ACT AMENDMENT BILL.

Upon the motion of Mr. J. A. Smith, this bill was read a second time. Adjourned at half-past twelve o'clock

HOUSE OF COMMONS.—Wednesday.

The House sat from noon to six o'clock.

SMITHFIELD.

Sir J. Duke moved the second reading of the Smithfield Market Enlargement Bill.

Mr Christopher objected to the plan embodied in the bill, which was drawn up under the auspices of the London corporation. The area proposed to be added to the site of the market he believed to be altogether insufficient: the dangerous passage of droves through the streets would still be continued; while the enlargement, such as it was, would cost more than a million, and must be paid for out of the pockets of the farmers and graziers from the country. He moved that the bill be read a second time that day six months.

Mr. Fitzroy seconded the amendment

The second reading was supported by Sir G. Knight sy, Mr. K. Seymer, Sir J. Duke, Mr. Alderman Sidney, Mr. Hume, and Mr. Wakley; it was opposed by Sir H. Verney, Mr. W. Miles, and other members

Sir G Grey submitted that it was improper to throw the responsibility of selecting b tween two conflicting schemes. The commissioners had reported as last retaining the market within the metropolis, and it was for the House to choose between adopting that report, or allowing the plan of the corporation to take effect

Sir B Hall denied the right of the corporation to favour. They had waited until the last moment, and then brought forward a rival scheme to thwart the Government proposition; but the bill, if passed, contained no compulsion upon them to carry their plans into execution. He added some remarks upon the constitution of the London corporation; the absence of responsibility rendered its members unworthy to be trusted with any extensive powers.

Mr. Mackinnon opposed the bill

Mr. Masterman thought the Government measure would seriously damage private interests, and supported the bill.

Lord J. Russell vindicated the impartiality of the commission on whose report the Ministry had drawn out their plan. Private interests had been considered in the fairest possible spirit. All that the Government bill enacted was the removal of the market from its present central situation to the suburbs; but the selection of the actual site or sites was left for the select committee, who would examine into the particulars of every eligible locality. The noble Lord added, that even by the corporation scheme large expenses would be incurred, involving a necessary increase in the market tolls, and a consequent enhancement in the price of meat. No such rise in the tolls would be permitted in the new suburban markets. The question had besides a public importance, and must not be decided upon narrow and personal grounds.

Some further discussion followed, in which Mr. Mowatt, Sir H. Halford, and other members took part.

The House then divided—For the second reading, 124; against, 246: majority against the second reading, 122.

The corporation bill is consequently lost.

The motion that the Metropolis Bill, entitled "The Smithfield Market Removal Bill," be read a second time, and referred to a select committee, excited some miscellaneous opposition, during the course of which various explanatory statements were offered by members of the Government. A division was ultimately called, when the second reading of the bill was affirmed by a majority of 230 to 98 (!!!)

A warm conversation followed this division; but at length the motion, that the bill should be referred to a select committee, was agreed to

The Expenses of Prosecutions Bill, as amended, was considered, and a clause added

On the motion of Mr. C. Lewis, the Annual Indemnity Bill was brought in and read a first time.—Adjourned.

HOUSE OF LORDS.—Thursday.

EQUITABLE JURISDICTION OF COUNTY COURTS.

Lord Brougham presented several petitions in favour of an extension of the power of the County Courts. He would now introduce a bill giving these courts original jurisdiction in equity, as was prayed for by some of these petitioners. The most respectable solicitors and the members of the Law Reform Society had stated that they could not advise a suit in equity where the matter in dispute was under £1000, and therefore this was proof that some such extension of the jurisdiction of County Courts was necessary.

DESIGNS ACT EXTENSION BILL.

On the motion of Earl Granville, the Commons' amendments to this bill were agreed to.

PATENT AMENDMENT BILL

Earl Granville introduced a bill for the amendment of the law of patents.

AGRICULTURAL DISTRESS

Lord Stanley presented several petitions complaining of agricultural distress. The noble Lord complained that no promise had been done to relieve this distress, and complained that the Chancellor of the Exchequer had withdrawn even those offers of relief which were included in the repeal of the duty on Malt. The House was now discussing the question of the expense of maintaining lunatic asylums, thus aggravating the feelings of the agricultural community

MERCHANT SEAMEN'S BILL

The Earl of Ellenborough wished to know whether it was the intention of the Government to introduce any measure for the amendment of the Merchant Seamen's Bill. That bill had given great dissatisfaction, and he wished to know whether any further measure was to be introduced to amend the act, or to regulate the distribution of the Merchant Seamen's Fund.

Earl Granville said that he admitted the necessity for alteration in the laws regarding the Merc. ant Seamen's Fund. The Government intended to introduce a bill on this subject immediately after the Recess. The subject of the amendment of the act last session had occupied the most attentive consideration of the Government.

EASTER HOLIDAYS.

Earl Grey gave notice that on Monday next he should move that the House do adjourn to Thursday, the 1st of May

Their Lordships then rose.

HOUSE OF COMMONS.—Thursday.

PUSEYISM.

Sir B. Hall gave notice that he should shortly after Easter call the attention of the House to the conduct of the archbishops and bishops with respect to the Tractarianism which has been prevalent with many clergymen in the Church of England.

THE GERMAN CONFEDERATION

In reply to Mr. Anstey, Lord Palmerston said, a communication was made to the Government some time ago with respect to the intention on the part of Prussia and Austria to propose the incorporation of territories not hitherto belonging to the German Confederation, and, as that was a measure contrary to the provisions of the Treaty of Vienna, her Majesty's Government immediately stood forward, and anticipating France in the matter—said essed, as early as the 3d of December last, a remonstrance to Prussia and Austria on the subject. The Government, in fact, protested in a formal manner against the proposed alteration, and the remonstrance was communicated not only to Vienna and Berlin, but to each and all of the States composing the Germanic Confederation. But knowing, as they must all do, the fine feeling which existed between Austria and Prussia have always attached to the Treaty of Vienna, and to the strictness with which those Governments ought in principle to obey their engagements; and seeing, moreover, the great importance it was necessary to those two Powers, that the Treaty of Vienna, by which so many of the states of Europe held their present possessions, should be respected, he could not himself entertain a doubt, that, in the result, that treaty would be obeyed, and that those intentions, which seemed to have been hastily and lightly adopted, probably, without sufficient attention to the stipulations which were contravened, would not be pursued in or carried into effect (Hear)

Mr. Anstey wished to know whether the noble Lord would have any objection to lay the papers before the House.

Lord Palmerston said he was sure the House would agree with him, that it would be inconvenient and injurious to the public service to lay the papers on the table with regard to a pending negotiation.

THE CATHEDRAL.

In reply to a question from Mr. Hume,

Sir G. Grey said, that arrangements had been made for opening St. Paul's Cathedral free of charge, and no order in Council would be necessary, but in the meantime he understood that the Dean and Chapter had thrown open the cathedral to the public.

OUR COLONIAL POLICY.

Sir W. Molesworth moved the following resolutions.—

1. That it is the opinion of this House, that steps should be taken to relieve this country, as speedily as possible, from its present civil and military expenditure, on account of the colonies, with the exception of its expenditure on account of military stations not connected with them.

2. That it is expedient at the same time, to give to the inhabitants of the colonies which are neither military stations nor convict settlements, ample powers for their local self-government, and to free them from that imperial interference with their affairs which is inseparable from their present military occupation.

Mr. Urquhart seconded the motion.

Mr. B. Hawes said the Government could not adopt the policy proposed by the hon. Baronet. They had already effected considerable reductions in the expenditure for the colonies, and were prepared to effect whatever could be further done in that respect with safety. As, however, the motion was not carried by a spirit of hostility to the motion of the hon. Baronet, he would meet it by moving the previous question

After considerable discussion, in the course of which Mr. Cobden supported the motion, and Lord J. Russell opposed it, the debate was adjourned

The House shortly afterwards rose, at a quarter past one o'clock.

A return to Parliament has been printed, showing that on the 7th of March, last year, there were 27,251 boys in the workhouses of England and Wales, and 22,838 girls, making 50,819!

IRELAND.

The Roman Catholic University.—The most Rev. Dr. Cullen, Roman Catholic Primate, in the names of the committee of the proposed University, has issued an address "to the clergy and people of Ireland," thanking them, "in the name of their religion and country, for" the prompt and noble generosity with which they responded to the appeal on behalf of the Catholic University," on the 16th of March last. The address, which is signed "Paul Cullen, Archbishop, &c., chairman," contains the following passage in reference to the debates in Parliament on Papal Aggression:—"A glance at the Parliamentary debates on the penal bill which now occupies the attention of the Legislature, would be sufficient to show the necessity of an institution such as we here contemplate. To behold an assembly that represents the intellect, rank, and property of the three kingdoms, rivalling the lowest arena of polemical controversy in its fanaticism and acrimony; echoing the ravings of Exeter Hall as the maxims of political sagacity; citing as historical facts what all the great critics of modern times have long since exploded as fal e and untenable; libelling the fairest characters that ever adorned the page of history, though already vindicated by the most distinguished Protestant scholars of the age; heaping up the pyramid of calumny in the face of all that can give weight to human testimony or satisfy oaths and declarations; to behold such a spectacle as much as age, must arouse the coldest and most apathetic to a sense of the obligations we are under of providing, in de ence of our holy religion, every intellectual bulwark which an enlightened zeal can suggest. Against such a host of opponents, is it not absolute y necessary that we should have a Catholic institution, where the science of theology be expanded and defended by all the resources of learning where a literature may be created free from the alloy of sectarian prejudice or calumny, and where the Catholic youth of the country, who may be hereafter destined to protect her interest or maintain her rights, may receive that higher species of religious instruction that not merely elementary and catechetical, but scientific, literary, and historical knowledge of religion, which we dread enable them hereafter, when the occasion might call for it, to vindicate the truth of its dogmas, and the purity of its doctrine? But such an institution is not only necessary as a measure of self-defence it is imperatively required to give completeness and perfection to the system of Catholic education. You behold the educational systems of other religious denominations in these countries perfect and harmonious, each according to its respective creed. The Presbyterian, Episcopalian, and Dissenting patron of our fellow-subjects have each an uniform and peculiar system, from the elementary school to the university. In the whole course of their educational training, all is characteristic, consistent, and accordant; and in the vast majority of instances, where the State has made such ample provision for these institutions, care has been taken to consult not only the spirit, but the letter of their respective tenets. But, of course, the numerories of superstitious" denounced by us such fostering care. These it must be not only the dictate of policy, but the duty of conscience, to destroy and eradicate, and that, too, in the most ingenious and effectual manner."

Representation of Cork.—Mr. W. F. Fagan, M.P., has signified his intention of resigning his seat for Cork this week. Mr. Maguire, proprietor of the *Cork Examiner* who was lately beaten in the Duke of Devonshire's borough of Dungarvan—will solicit the votes of the electors.

Longford Election.—The *Freeman's Journal* announces that Mr. Serjeant Shee—the choice of the council of the League, as a candidate for Longford—has himself constrained by private arrangements to forego the honour intended for him by the electors of Longford."

Representation of Galway.—The *Galway Mercury* contains the following paragraph, that Captain French, whose return to this county was recently announced, will stand as a candidate for the representation of this town at the next election. He has filled several public employments in India with credit, but was not aware of the political principles which he professes"

Representation of Clare.—The *Limerick Examiner* says—"Colonel Crofton Moore Vandeleur, of Kilrush-house, Care, will, it is said, again offer himself as candidate for the representation of his native county at the next expected vacancy occurs. The friends of Cornelius O'Brien, Esq., who was unseated by Sir Lucius O'Brien, M.P., also speak of his intention to come forward."

Mr. More O'Ferrall, the ex-governor of Malta, has been selected by the Liberal club of Longford as their candidate for the county, Mr. Serjeant Shea having declined the honour. The election commences on Monday.

Emigration.—The tide of emigration, say the Drogheda papers, is beginning to flow from this neighbourhood, and we are likely to have few labourers left except those who are more fit for a poor-house asylum than for labourers of the field. About 400 persons, many of them respectably dressed, passed through Drogheda in one day. Some took shipping at Liverpool, but the major part proceeded to Dublin, to take shipping from that port.

Russian Investment of Capital in Ireland.—His Excellency Baron de Schopping, the Chargé d'Affaires for Russia at Lisbon, has transmitted to Ireland £50,000, to be laid out in the purchase of encumbered estates. The Baron is a great-grandson of Field-Marshal Count George Browne, Governor-General of Livonia Riga; and has appointed his cousin, William Browne, his solicitor and law-agent, to approve of such investments, title.

Fatal Epidemic among Horses.—The Cork papers say:—"During the last few days several valuable animals, the property of gentlemen in this city, have died apparent y suddenly. The horses of several jingle drivers have also died. The disease is an epizootic of a very fatal character, and has been prevalent for some months."

Revenue of the Duchy of Cornwall.—It appears by a Parliamentary paper, printed on Wednesday, that the income of the Duchy of Cornwall in the year ended the 31st of December, 1850, was £50,059 3s. 2d. The disbursements include the following items:—Payments made to the use of the Prince of Wales, £35,000; salaries of officers and officers of the Duchy, including charges of management of estates in Surrey, Hertford, Lincoln, Norfolk, and Suffolk, £2483; salaries to officers engaged in management of other estates, £1000; expenses of collecting revenue, £1000; superannuation allowances, £1000; expenses of mineral property, £703 1; superannuation allowances and annuities, £2895; "donations and charities, £345 1s. 2d.;" "repairs and improvements, £1170 7s. 10d.;" balance in the Bank to the credit of the Prince of Wales, £8603 15s 8d

THE KAFFIR WAR OF 1851.

(To the Editor.)

Cape Town, 11th January, 1851.

Presuming that it will be inquired how it is that another war should have broken out, when so short an interval has elapsed since an enormous expense was incurred to subdue these formidable foes of our South African possessions, and when the abilities of Sir Henry Pottinger and the generalship of Sir H. G. Smith were exerted to free the colony from their aggressions, I will endeavour briefly to give an explanation of the occurrences which have caused this new disaster, for a long time past expected by the most experienced frontier farmers.

Sir Henry Pottinger, at the close of the last year, had reduced the Kaffirs to the last extremity of distress, and they were literally starving in the bush. Among those chiefs of influence, Sandilli, the chief of the Gaikas, how our Beda amagazabis, was a prisoner. What steps Sir H. Pottinger would have taken to secure the permanent peace of the frontier districts cannot be said, as he was relieved from his command by Sir H. Smith, one of whose first proceedings was to release the captive Kaffir chiefs, with sund y personal haunts which none of them have forgotten. The peculiar situation of the Kaffir people, in the immediate vicinity of the English and Dutch farmers, whose wealth consists almost exclusively in their flocks and herds (the only possessions which the Kaffirs covet), renders the mana ement of our relations with them exceedingly difficult. It is easy for persons who do not know the Kaffirs, who cannot understand their simplicity, believe in their perfectibleness, nor appreciate their dogged adherence, in spite of insurances, to their own customs, to recommend their civilisation; but the question is, how a is this to be accomplished?

It may be urged that the early settlers of America defended themselves against the Indians without any assistance; and we know that some of the lonely blockhouses in which stout harderers held their own against the dusky warriors of the Far West still exist. But the circumstances of the American farmer were differe. t from ours; their flocks and herds were few, they were easily collected in their homesteads; they had not to be driven many miles for a drought of water; and these were not the only means of subsistence of their owners. The Kaffir at every successive war has had the range of his cattle still more limited; and, unless he turn his attention to the cultivation of the ground, a pursuit new to his habits, and hitherto left wholly to his wives, he must starve. The late drought caused much suffering, and perhaps induced Sandilli to speculate upon the effect which might be produced by the prophet, who, there is little doubt, he encouraged to predict the expulsion and overthrow of the white man by Sir H. Smith was perfectly aware of the treacherous character of the Kaffirs; yet he entrusted a number of these men with arms, treated them, and set them to watch their fellow-men, and to follow the spoor of cattle stolen from the colony. This step was viewed at the time with great alarm, by many of the old frontier farmers, which has been justified by the discretion of about 1000 of them, a day or two after the attack on Colonel Mackinnon's detachment, in a gorge of the Amatola mountains, compelled to retreat with severe loss from the attack of an invisible foe. The remainder have been accordingly disarmed; but many who deserted must be reckoned equal at least to three infantry soldiers, from his local knowledge and peculiar training.

While the Kaffirs were aware that there was a body of men like the Rifle Regiment among them, these wily savages were peaceable enough; and the vaunted frontier system worked passably well. In less than three months after, troops were withdrawn, and the number left was reduced to about 1600 rank and file of regiments of the line, which Sir H. Smith had stated publicly in Cape Town, and no doubt also in his despatches, were quite sufficient for the security of the colony; but there soon appeared unmistakable symptoms of a fresh outbreak. The warnings were, as usual, slighted by the military authorities. Sir Andreas Stockenstrom, shortly after the Governor had pledged his life, in his proclamation, for the safety of the farmers, removed his cattle from his farm, and secured his books and furniture. He is now urged to remain in the colony to head the farmers, who will follow him with confidence and zeal; and if they are left entirely to his direction, they will do far more good than they will if they are fettered by the orders of military officers, who neither understand their language nor their mode of warfare.

The actual state of the eastern districts is most critical: the utmost the troops

BUSH-FIGHTING IN KAFFRARIA.

at present in Kaffirland can do is to keep their position, a great portion of them being cut off from any direct communication with the colony, except by sea, they are maintaining the line of the Buffalo River, which Sir Harry says must be preserved, "*coûte qui coûte*," from East London, at the mouth of this river, is a long day's march (30 miles) to King William's Town. From King William's Town, Fort Cox must be provisioned, and that very soon; but this operation, it is feared, will not be effected without loss, as the country near the fort is favourable for Kaffir warfare.

Sir H Smith has only with him at present about 700 men, the rest of the troops being garrisoned at Forts Peddie, White, Hare, and Cox; and the towns of the colony and the farmers are left entirely to themselves as to their defence. Behind this line of forts, and much nearer Graham's Town, the Kaffir chief, Hermanus, who was suffered to remain in the Blackwater district, within the borders of the colony, is plundering and murdering the farmers in his vicinity; and, unfortunately, there is no available force near to crush him.

Major Burnaby, at Graham's Town, has guns, but no men. The Hottentot levies from the west, and the volunteers, are dispatched by steamers to Buffalo Mouth and King William's Town. They amount to nearly 2000 men, used to the climate, and are a remarkably fine soldier-like corps; and on their arrival at King William's Town Sir H Smith will be able to assume the offensive. In the meantime, the inhabitants of Fort Beaufort, Alice, and other places on the frontier, are exposed to great danger from the possibility of a large number of the Gaikas making their way into the colony, as they have done before, and carrying ruin and desolation in their track.

20th January, 1851.

Since writing the above, intelligence has been received of the death of Hermanus, who was killed in an attack on the town of Fort Beaufort on the 7th instant: about fifty of his people also fell. The Fingoes and the civilian volunteers fought bravely; the small detachment of the 91st Regiment in the place do not appear to have been engaged. This success is of the greatest importance just now. The Government steamers *Ibis* and *Hermes*, and the *Phœnix*, which runs to Algoa Bay, have all sailed within a day or two of each other, carrying 1500 Hottentot levies. It may here be remarked, that the musket and bayonet with which they are armed appear singularly ill-adapted for bush fighting. The Kaffirs are not likely to wait for a charge of bayonets, and our auxiliaries will not have to form in squares to resist cavalry: whilst it seems ridiculous, though quite according to precedent, to furnish a Hottentot, five feet high, with a musket, to him heavy and unwieldy, and though some of them are fine, tall fellows, a short rifle and sword, or rather cutlass, would be a more suitable equipment for the service they are engaged in. It is expected that nearly a thousand more of these native troops, a great part of whom have volunteered from the missionary stations where their families reside, will be ready here and at Mossel Bay in about ten days.

In conclusion, the reported march of the Zulu warriors to threaten the Kaffir tribes with an attack from the side of Natal, is also a circumstance which may lead to consequences of great importance.

EDITORS.

[The Supplement published with the present Number contains a view of the mouth of the Buffalo, and of Waterloo Bay, with a sketch of a Zulu Warrior; and the accompanying Illustration shows the mode of Bush-fighting in the Kaffir country, and also the character of the district through which Sir Harry Smith had lately to force his way.]

EMIGRANT'S COTTAGE IN NEW ZEALAND.

THERE are few instances of self-denial in the life of an emigrant that are more striking than the facility with which he becomes reconciled to change of habitation, in his transit from the luxurious accommodation of the mother country to the bare location of her newly settled colonies. The accompanying Illustration is of the latter phase, representing, as it does, the Cottage (*warri*) of a gentleman who has recently located himself upon the banks of the beautiful Molyneux River, in the district of Otago, New Zealand.

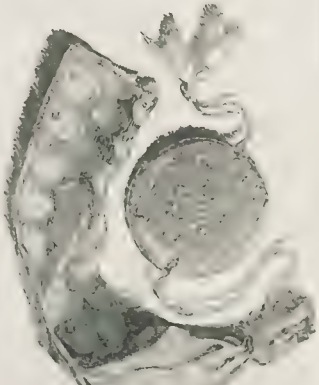
On the extreme right (says our Correspondent) is the large *fatta*, containing all our boxes of wearing apparel, hardware, and, in short, everything but eatables. The extraordinary looking tree next to it represents the ti-palm, with the stems of which the walls of the house are made. Next is the hen-house and dog-kennel. In the centre is the dwelling-house, the walls made with the trunks of the ti-palm, split up the middle and placed standing on end. Instead of lime, moss is used to fill up the interstices between the slabs, which has a very neat and picturesque effect. On the right of the house is the large chimney of the kitchen: the dimensions externally 12 feet by 8 feet, internally 10 feet by 6½ feet. At present, the house is only divided into two compartments, but ultimately a third will be added. The dimensions of the house are 43 feet by 14 feet; height to the ceiling, that is, the cross-beams, 7 feet. The walls internally are lined with totara bark, intended to look like oak paneling. The tree on the left of the house is a good representation of the fern-tree, which in New Zealand grows to a considerable size, and is one of its most graceful productions.

The background shows the splendid "bush." The trees are of immense size, and nearly all totara, with here and there a few black pines. The girth of some of these trees runs from 14 to 18 feet, and an occasional one is met with of even greater dimensions. The foliage is all towards the top, leaving the trunk perfectly clean and bare. In the foreground, on the left, is the famous flax-plant, which grows in such abundance throughout New Zealand. At present, the only mode of cleaning and rendering it fit for any purpose of manufacture is that adopted by the natives, and consists in merely scraping it with a shell. If a more wholesale mode is ever invented for attaining this object, New Zealand may become the largest exporting country of flax in the world. The natives make beautiful mats of it, which they wear as shawls: the common mats make first-rate carpets. The trees lying in front of the house are to be cleared, when the ground will be laid out as a garden.

EMIGRANT'S COT

SEAL OF GOOLAB SING.

THE accompanying is a sketch of a "khureetah," or letter of congratulation, sent by Goolab Sing, the ruler of Cashmere, to the Governor-



GOOLAB SING'S SEAL.

General of India. The letter itself, written on gold besprinkled paper, [illegible] in the case shown in the Engraving. This case is formed of "kinkob," or gold tissue, and is generally covered with a piece of white muslin. Goolab Sing's seal of state is attached: the centre writing is in the Persian character, and contains the words "Sri Ram Jee Sudahi Maharajah Goolab Sing," which means, "May an all-wise Providence watch over Maharajah Goolab Sing." The seven words are written round the edge, in the Nagree character. These letters are sent in all cases of state from one native Prince to another, and the letter is obtained by cutting open the case at the end, opposite to that to which the seal is attached. The accompanying "khureetah" has been forwarded to us by an officer of the Indian army, lately returned from Cashmere. The seal bears the impression only on one side. The date which [illegible] corresponds to our 1848.

PARLIAMENTARY PORTRAITS.

ROBERT AGLIONBY SLANEY, ESQ., M.P. FOR SHREWSBURY.

The honourable member, eldest son of the late Robert Slaney, Esq., of Hatton Grange, near Shepnal, in Shropshire, a country gentleman, and for many years magistrate of the county, was born at the Grange in the June of 1792; received his first education at home under a private tutor; in 1810 entered Trinity College, Cambridge; in 1812 married his cousin Elizabeth, only child of the late W. Hawkins Maccleston, Esq., M.D.; quitted the University; spent the greater part of a year in travelling over the Continent; on his return entered as a student at Lincoln's Inn, in 1817 was called to the Bar, joined the Oxford circuit, and continued to practise until 1826. At the general election under the Liverpool Administration, which took place that year, in the midst of severe distress, and after the orders in council admitting all corn in bond duty free, Mr. Slaney, at the desire of a considerable number of its constituents, became a candidate in the Liberal interest for the representation of Shrewsbury, the chief town of his native county; and, after a severe contest, in which the poll was kept open for four days, was returned with Mr. Panten Corbet—the numbers being, Corbet (T.), 627; Slaney (W.), 387; Bigcute (T.), 263.

On entering Parliament, Mr. Slaney at once gave his support to the Whig party, then led by Mr. Ponsonby, Mr. Tierney, and Henry Brougham. He was not, however, a mere party politician, and beyond his vote took no part in political questions; his attention was from the first devoted to social reforms. On the 12th of June, 1827, he made his first speech in the House, in which he brought forward an unanswerable array of facts and figures in condemnation of the then state of the Poor-law, pointing out that the depressed condition of the labourers in the southern counties of England arose, in great measure, from making up the wages of able-bodied men to a fixed amount, paying the rent of cottages, and making various illegal allowances from the rates, which tended to depress wages, to increase intemperance, and encourage imprudent marriages at the expense of the rate-payers. The speech, in that session, had no Parliamentary result. It, however, opened the eyes of members to the subject; and, in the following year, Mr. Slaney obtained a select committee to consider the abuses of the Poor-law. The committee went at length into evidence; and, in accordance with the views of the committees of 1817 and 1819, reported the existence—especially in twenty-six counties south-east of a line drawn across the kingdom from the Humber to the mouth of the Severn—of the abuses urged by Mr. Slaney, to which, however, no remedy was applied until the amended law of 1834.

He supported Lord John Russell's motion of the 26th of July, 1828, and which was carried by a majority of 44, for the repeal of the Test and Corporation Acts; and, subsequently, for Catholic Emancipation.

In May, 1829, Mr. Slaney moved for a select committee to consider the restrictions on malting, and the sale and supply of malt liquor to the working classes. He entered into long and elaborate statements to show the impolicy and injustice of the heavy duties and restrictions on the second necessary of life; pointed out, "that, whilst wealth and numbers increased rapidly, the consumption of malt liquor scarcely augmented at all; and called on the country gentlemen to aid (for their own sakes) in assisting their humbler fellow-subjects. Mr. Goulburn, then Chancellor of the Exchequer, promised a committee should be granted. This was afterwards done, and led to facilities for the supply and sale of malt liquors, the improvement of the licensing system, and the removal of many restrictions.

Early in 1830, Mr. Slaney moved for a committee on the fluctuations of manufacturers' employment, and made a long statement showing of what consequence it was, that artisans, manufacturers, and others should have facilities afforded them to provide and insure themselves, from high wages which they gained at one period, against low wages and want of employment at another; and that such facilities would often prevent riot and disorder, as well as misery and suffering. The committee was granted; Mr. Slaney was Chairman, and was much assisted in it by Lord Spencer (then Lord Althorp). The report suggested facilities for the end desired, and stated that there was evidence to show that in the three great manufactures of England (cottons, woollens, and hardware), the wages on an average of several years were ample to provide the workmen employed with all requisite comforts, but there was no means by which they could safely provide from the high wages at one period against half employment or the want of work at another. Self-supporting societies for this purpose were suggested; but legal obstacles and jealousies have hitherto impeded them.

At the general election following the death of George IV., the June of this year, Mr. Slaney was again returned for Shrewsbury, after a contest which kept the poll open for three days, the numbers being—Jenkins (T.), 754; Slaney (W.), 563; Corbett, 445. This Parliament met for the despatch of business on the 2nd November, 1830. On the 12th, the Ministry were defeated on their plan for the settlement of the Civil List. On the following day the Duke of Wellington announced their resignation. Earl Grey was sent for, and within a week completed his Administration. On the 1st of March in the following year, Lord John Russell, who at that time held the office of Paymaster-General, and was not in the Cabinet, brought forward the Ministerial measure of Parliamentary Reform; the 299 votes for, and 291 against, showed that the measure could not be carried in that Parliament. The excitement, both in the House and out of doors, necessitated a dissolution. On the 10th of May the King in person prorogued, and on the 11th dissolved Parliament. Mr. Slaney supported the Reform measure, and had again, there being this time two Whig and two Tory candidates, a hard fight for Shrewsbury, but was returned (the election lasting but one day) at the head of the poll; the numbers being—Slaney (Whig), 178; Jenkins (Tory), 175; J. Pugent (Tory), 124; Potter (Whig), 103.

MR. R. A. SLANEY, M.P. FOR SHREWSBURY.—FROM A PHOTOGRAPH BY KILBURN

In 1832 came the general election after the passing of the Reform Bill. Mr. Slaney had again to stand a contest; the numbers polled were—Sir J. Hanmer, Bart. (Tory), 808; Slaney, (W.), Pelham, 6[illegible]

In the session of 1833, still occupying himself with questions of the increase of comfort, health, and the means of enjoyment of the people, Mr. Slaney obtained a committee on the establishment of public walks in the vicinity of populous cities. The committee went fully into the subject. The report dwelt upon the insufficient provision made in the existing West-End parks for the increasing population of London, and suggested several appropriate sites for public walks on the north, east, and south of the metropolis. Of these, Primrose-hill and Victoria-Park have since been established; Battersea-Park is in course of formation; and several of the large provincial towns have followed the recommendation of the report, and purchased ground, and laid it out in parks for the people.

By 1835, the Reform Ministry, supported in 1832 by an unprecedented majority in the House, had, from its neglect of practical measures, fallen into disfavour. Various changes had occurred, amounting almost to a break-up of the Cabinet. The death of Earl Spencer, and consequent removal of Lord Althorp to the Lords, necessitated Ministerial changes, instead of sanctioning which, William IV. informed Lord Melbourne that he had resolved upon a change of Ministry. Peel (then in Rome) was sent for, his first Administration formed, and Parliament dissolved. At the general election of 1835, Mr Slaney found that party politics were more popular with his constituents than measures of social amelioration, he was for the first and only time defeated at Shrewsbury. Sir J. Hanmer and Mr Pelham were both again candidates, and, at the close of the poll, the numbers stood—Hanmer, 760; Pelham, 627, Slaney, 584.

At the general election of 1837, following the break-up of the Peel Administration, Mr. Slaney was again returned for his native county town. There were four candidates, and the numbers were—Jenkins, 700; Slaney, 697; Pelham, 685; Dashwood (a new Whig candidate), 537.

In the session of 1837 Mr. Slaney obtained a committee on the state of education of the working classes in large towns, and which, after hearing much evidence, reported that adequate education for the children of the working classes in great towns was lamentably deficient; that in Manchester, Birmingham, and Leeds, instead of one in eight of the population being furnished with education, only *one in twenty-five less than one-third* of the requisite number) was so provided. The evils of this neglect were pointed out and lamented, but the difficulties of improvement were found very great from religious and political differences, and all that could be done was to recommend greater facilities and extended grants of public money through the existing school societies, chiefly the national and British systems.

In February, 1840, Mr Slaney moved for a committee on the health of towns and densely-populated districts. This was granted; and, after hearing much evidence, a report was produced stating the extensive and severe evils suffered by the inhabitants of great towns, especially the *working classes*, from the neglect of reasonable provision for their health and comfort, in cleansing, draining, and a good supply of water. The loss of life and strength thence arising was insisted on, and the true economy to all classes pointed out from adequate well-considered reforms. This report excited general sympathy at the time, and laid the foundation of important sanitary reforms.

At the general election of 1841 Mr. Slaney did not come forward as a candidate, and Mr. Disraeli was returned in his stead for Shrewsbury. Mr. Slaney's proposals, however, were not forgotten. His report of 1841 was followed by that of Mr. Chadwick in 1842, and by a general awakening of public attention to the condition of the working classes; and in 1843 the late Sir Robert Peel, who in 1842 had returned to office, issued a Royal Commission—naming the Duke of Buccleuch, Lord Lincoln, Mr. Slaney, Major Graham, and nine other gentlemen—"to inquire into the causes of disease, and the best means of securing the public health in great towns." On this commission, as an unpaid member, and without any cost to the country, Mr. Slaney served with the most assiduous attention for about three years.

It was determined by the commission that some of the members should personally examine the state of the largest and most unhealthy towns, and report on their condition. This was done: fifty of the largest towns were examined (containing near three millions of persons), and it was found that of these *above forty were lamentably wanting* in all adequate provisions for cleansing, drainage, and a supply of water requisite for the health and comfort of the people. Of these towns, Mr. Slaney examined personally and reported on the state of fifteen, comprising Birmingham, Wolverhampton, and other large towns of the Midland districts. This report was printed, with the other Local Reports, at the end of the Second Report of the Commissioners, in vol. 1., p. 197 *et seq.* Two long and laborious Reports issued from this Commission—the first, in 1844, "On the Causes of Disease;" the second, in two volumes octavo, in 1845, "On Remedial Measures." From these reports there has since resulted the Health of Towns Act, and many local acts have led the way to extensive improvements.

At the general election in 1847 Mr. Slaney again came forward for Shrewsbury; the other candidates were Mr. E. Holmes Baldock and Mr. George Tomline, and the numbers polled were—Baldock, 769; Slaney, 748; Tomline, 732.

In 1848, Mr. Slaney moved for a "standing committee, or unpaid commission, to consider measures (apart from political subjects), from time to time, likely to improve the condition of the working classes." His statement went to show the great increase of crime and suffering, and the necessity for some impartial tribunal to weigh suggestions for improvement. In 1849 the same subject was brought forward. Being disappointed of success, in 1850 he moved for a committee to suggest means for removing obstacles and giving facilities to investments of the middle and working classes. This committee was granted, heard evidence, and reported (in July) in favour of such facilities being given. A strong opinion is expressed in the report, that existing legal obstacles to the sale or mortgage of land should be removed; that industrial combinations of peaceful workmen should be free from unfair legal disabilities; and that charters should be given to limit the liability of partners in useful undertakings with more facility and much less cost. Some of these recommendations appear to be approved, and will probably be carried out.

In February, 1851, he moved for a committee on the law of partnership, and the propriety of introducing limited liability in certain cases, "with a view to encourage useful enterprise and the additional employment of labour." This committee is granted, but has not yet assembled. The hon. member by his statement seemed convinced that the existing state of the law is unfair and hostile to all combinations of capital of the middle and working classes, fetters their industry, and forces capital into great towns and the hands of the few, at the cost of the many.

We hope the hon. member may be able to succeed in some of the subjects which have engaged his attention; but he must be content, if he meets the usual exciting topics of party warfare to wait long and be often neglected before any success will attend him. Yet we trust that the *attempt* to benefit others is itself a source of consolation amid disappointment, or in the evening of life. Mr. Slaney has also published a few works, most of them on subjects identical with those which have busied him in public life—an "Essay on the Employment of the Poor,"* an "Essay on the Beneficial direction of Rural Expenditure," a "Plea to Power and Parliament for the Working Classes." Besides these, he is the author of an "Outline of the Smaller British Birds."

The hon. member has thus, during a period of thirty-four years (thirty of them in Parliament), devoted himself to the advancement of the people, labouring to disclose and have removed the causes injurious to the public health, and to increase the means of instruction and healthful recreation of the working classes. Free Trade and political reforms have had his constant support; but he has preferred to all party contest on the amelioration of the social condition of the people.

Our Portrait is from a photograph by Kilburn.

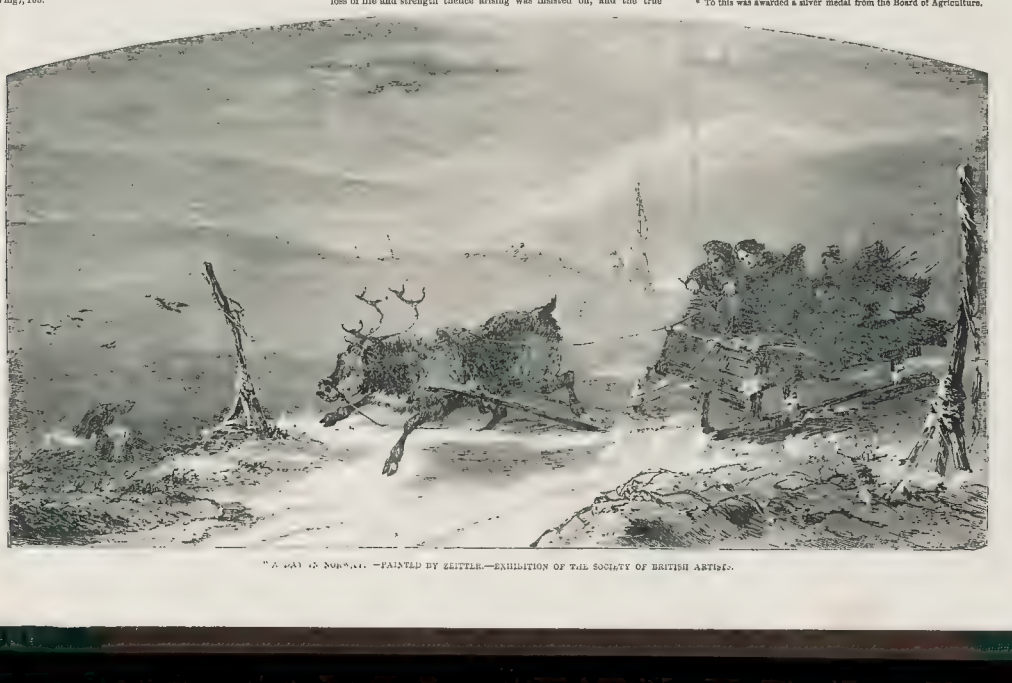
EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

"A DAY IN NORWAY." Painted by J. ZEITTER.

This is one of Mr. Zeitter's fifteen contributions to the present Exhibition, which are mostly painted with great spirit and startling reality. The present scene is a landscape of dreary winter—a snow-clad roadway, denoted by poles, along which a reindeer speeds with a rude sledge at a fearful rate, though the family party are at ease, as the snow is ever and anon whirled up as they proceed.

The benefits of the reindeer to man have not been overrated. The weight which it can draw, when harnessed to a sledge, is said to be 300 lb., but 240 lb. form the general limit of the burthen. The tales told of its swiftness when thus employed would appear almost incredible, if

* To this was awarded a silver medal from the Board of Agriculture.



"A DAY IN NORWAY."—PAINTED BY ZEITTER.—EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

not so well attested as they are. In a race of three bear, with light sledges, started by Rietet, who went to the north of Lapland in 1769, the first performed 3089 ft. 8 in. and 56-100ths in two minutes, making a rate of nearly 19 English miles an hour; the second went over the same ground in three minutes, and the last in three minutes twenty seconds. Journeys of 180 miles in 19 hours are said not to be uncommon.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 12, 1851.

FOR upwards of thirty years the question of the removal of Smithfield Market from the heart of the old City of London has been before the public. For upwards of thirty years the continuance of the nuisance has been condemned by everybody except by the ancient Corporation of the City, and by those having a direct pecuniary interest in the market. Corporations, as a great legal authority remarked, have no conscience; they have nearer souls to be saved, nor bodies to be castigated, and their members, in a collective capacity, do or sanction deeds, which, as individuals, they would blush to be concerned in. Their opposition to the removal of the Market is, therefore, not surprising. In the same way the opposition of those who have a money interest in the abominations of Smithfield, was natural enough; but so strong and obstinate has been the defence which has been made against a measure which the public health and the public convenience, the public decency and the public safety, have alike demanded, that the first decisive step which has ever been taken to make the London of the nineteenth century as wholesome and decent, in this respect, as the London of five hundred years ago, was taken latately as Wednesday evening last. The plan of the Corporation of London for enlarging the present market, and for perpetuating the nuisance with a slight reform, was rejected by a large majority of the House of Commons. Upon this occasion Lord John Russell, although member for the City of London, did not forget that his duties extended to the whole Metropolis and to the whole kingdom, manfully opposed the scheme of an influential portion of his constituents. So decisive was the opinion expressed by the House of Commons, that the public may now reasonably anticipate that the first great parliamentary step for the removal of the Market will be an effectual one. A majority of 122 against the bill of the Corporation for enlarging the Market, and of 165 in favour of the measure of the Government for removing it altogether, is a fact of no slight significance for the public of the ultimate result. It is to be hoped that the Government will use its victory with sufficient vigour to carry their bill, in all its stages, during the present session.

THE REVENUE.

The usual abstract of the Revenue accounts of Income and Expenditure for the year and the quarter ending April 5, 1851, have been published. We thus learn that the amount of the Income for the year just ended was £50,939,365, and for the quarter £11,072,191; and that the increase of income for the year over the income of the year ending April 5, 1851, is £446,119, while the increase on the quarter, as compared with the corresponding quarter of 1850, is £288,851.

The various branches of the Revenue exhibit the following comparative results; viz.—

Customs an increase on the year of £195,299, and on the quarter of £115,682

Excise, an increase on the year of £332,811, and on the quarter of £121,067.

Stamps, a decrease for the year of £248,805; while on the quarter there is an increase of £3883.

Taxes, an increase on the year of £17,752; but a decrease on the quarter of £9447.

Property-Tax, a decrease on the year of £62,869; but an increase on the quarter of £20,342.

Post-office, an increase of £58,000 on the year, and of £41,000 on the quarter.

Under the head *Crown Lands* there is no return; and under the *Miscellaneous* head there is a decrease of £45,844 on the year, and of £25,986 on the quarter.

THE NATIONAL DEBT.—The Lords Commissioners of her Majesty's Treasury having certified to the Commissioners for the Reduction of the National Debt, in pursuance of the Act 16th George IV., c. 27, sec. 1, that the actual surplus over the charge for the Consolidated Fund, Great Britain and Ireland beyond the actual expenditure thereof, for the year ended the 5th day of January, 1851, amounted to the sum of £2,978,[illegible] and the Commissioners for the Reduction of the National Debt have given notice that £41,701 10s. 9d. (being one-fourth part of the said surplus) will be applied under the provisions of the act above-mentioned between the 7th of April, 1851, and the 5th of July, 1851, to the following purposes, viz

To be applied to the purchase of Stock	£644,701 10 9
Add Interest receivable on account of Donations and Bequests, to be applied to the purchase of Stock ..	2,036 15 5
	£646,809 6 2

The notice is signed "A. G. Spearman, Comptroller-General. National Debt Office, April 2, 1851."

PUBLIC REVENUE AND EXPENDITURE.—A valuable Parliamentary paper obtained by Mr. Cardwell has been published by order of the House of Commons. It contains an account of the public income and expenditure for each year since 1822, showing the amount received into the Exchequer, the expenditure under its several heads, the surplus or deficiency of income; the amount of taxes repealed, reduced, or imposed, distinguishing the principal items; the total capital of debt, funded or unfunded; and the balance in the Exchequer at the close of the year. Since 1822, taxes have been repealed or reduced to the amount of £36,848,503, and taxes have been imposed to the amount of £9,864,756, leaving a balance of taxes reduced or repealed to the amount of £27,083,747. Between 1822 and 1850 the net reductions amounted to £17,078,409; between 1830 and 1849, to £5,2586,03; and between 1840 and 1850, to £4,746,730. The total revenue for the year 1822 was £54,180,743; and for 1850, £52,810,680. From a statement of the value of our imports and exports during the same years, it appears that in 1822 the value of imports into the United Kingdom, calculated at the official rates of valuation, was £30,520,663; and of exports, £38,464,122. In 1849 the value of the imports was £105,874,607; and that of the exports, £130,101,394.

COURT AND HAUT TON.

THE COURT AT BUCKINGHAM PALACE.

We have much pleasure in announcing that her Majesty the Queen, with a laudable desire to give an impetus to the trade of the metropolis, has caused an announcement to be made in the *London Gazette* of the Royal intention to hold three Drawingrooms more during the ensuing month. The days fixed are—Tuesday, the 6th of May next; Thursday, the 15th of May next; and Saturday, the 31st of May next, to celebrate her Majesty's birthday. The Knights of the several Orders are to appear in their collars at the Drawing-room on the 31st of May Her Majesty has also announced her intention of holding a Levee, at St. James's Palace, on Wednesday, the 18th of June (Waterloo Day). And we have also authority to announce, that it is her Majesty's intention that State Balls shall take place on Monday, the 5th of May, and on Monday, the 19th of May; and a concert on Monday, the 12th of May.

On Monday last the Queen and Prince Albert, accompanied by the Prince of Wales and Prince Alfred, visited the Exhibition Building in Hyde Park. Her Majesty and his Royal Highness were attended by the Countess of De arr, the Hon Flora Macdonald, Colonel Buckley, and Lieut.-Colonel the Hon. Alexander Gordon.

Her Majesty and the Prince Consort have had frequent dinner parties during the week, at which her Royal Highness the Duchess of Kent has generally been a guest.

On Tuesday morning her Majesty and his Royal Highness Prince Albert, accompanied by their Royal Highnesses the Princess Royal and the Princess Helena, were received by appointment at Holmes, at the residence of Karl Wood. On the same day the Queen and the Prince inspected the engravings, by Mr. Lewis (life size), of her Majesty and his Royal Highness Prince Albert, from Winterhalter's picture, which were submitted by Mr. Moon. In the evening her Majesty and his Royal Highness Prince Albert, accompanied by their Royal Highnesses the Prince of Wales and the Princess Royal, honoured the Italian Opera with their presence.

The Marchioness of Douro has relieved the Countess of Desart in her duties as Lady in Waiting to the Queen.

The alterations to the front of Buckingham Palace being now completed, all guests and visitors to the palace will enter through the iron gates next the centre gate of the enclosure to the east of the Palace. The entrance gate will be that to the eastward of the centre; and that of exit, to the north.

The Queen will hold a Privy Council on Monday next, at Buckingham Palace.

His Excellency Count Schimmelpennink, Minister for the Netherlands, left London last Saturday week for the Hague, in consequence of which his Excellency was unavoidably absent from the Drawing-room. The Count is expected to return to Claremont in the course of the present week.

The marriage of Viscount Goderich, son of the Earl and Countess of Ripon, with Miss Henrietta Vyner, eldest daughter of Mr. and Lady Mary Vyner, was celebrated on Tuesday morning, at the residence of Earl De Grey, grandfather to the bride and uncle to the bridegroom, in St. James's square. The youthful and beautiful bride is 18 years of age, and the noble bridegroom is in his 24th year.

We understand, that, in the course of the season, the Earl of Kintore will lead to the hymeneal altar, his cousin, Madeleine Louisa, second daughter of Captain F. Hawkins, brother of the late Countess of Kintore.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

LOUISA EMMA, MARCHIONESS OF LANSDOWNE.

THE death of this lamented lady took place at Bowood, in Wiltshire, on the 3rd instant. The Marchioness, who was born June 27, 1785, and had, consequently, now completed her 66th year, was fifth daughter of Henry Thomas, second Earl of Leicester, and co-in to Charles James Fox. Her marriage to the Marquis of Lansdowne (then Lord Wycombe) took place in 1809, and its issue consisted of two sons and one daughter; viz. 1. William Henry, Earl of Kerry, born March 24, 1811, who married, in 1834, Lady Augusta Fitzmaurice, daughter of the present Earl of Besborough, and died August 21, 1836, leaving an only child, Mary. 2. William Thomas, born March 15, 1816, Charles A. Grey. 2. Henry, born March 2, 1819, who married in 1849, and his
